

# About The Author

Avtar Singh Bhasin (b.1935) B.A (Hons); M. A in History. Initially he had short stint of service in the National Archives of India and the Ministry of Defence before joining the Ministry of External Affairs where he served for three decades, retiring in 1993 as Director of Historical Division. He has served in the Indian missions in Kathmandu, Bonn, Vienna and Lagos. He travelled to several other countries in the discharge of his duties in the Ministry. Some of the countries visited were USA, China, South Africa, Kenya, Zambia, Malawi, Botswana, Russia, Ukraine, Belarus etc. He was member of several ministerial and official delegations for discussions with various countries both in India and abroad.

Since his retirement he has taken to academic research. He was Senior Fellow of the Indian Council of Historical Research from 1994 to 1996. He was Honorary Fellow of the Institute of Contemporary Studies, Nehru Memorial Museum and Library from 1997 to 2001. He has authored and edited several books on South Asian affairs. He also contributed several articles in newspapers on developments in the neighbouring countries. His seventy-five pieces on Partition and Freedom were published in the Asian Age consecutively from June 1 to August 14, 1997 coinciding with the Golden Jubilee celebrations of the Indian Independence.

## PREFACE

The series India's Foreign Relations, showcasing, as the name implies, documents on India's foreign relations is published annually. Since its launch in 2005, volumes for 2002, 2003, 2004, 2005 and 2006 have made their appearance. The present is, therefore, the 6<sup>th</sup> in the series. It is published in cooperation with the Public Diplomacy Division of the Ministry of External Affairs, Government of India.

A look at the Contents would show that the debate on India – US Civil Nuclear Energy Cooperation Agreement dominated the foreign policy discourse during the year. The position taken by the Left Parties on the subject was an important element in this debate. Since the Left Parties provide outside support to the Government in Parliament, their stand on this vital policy matter, impacted the domestic politics of the country. The Bharatiya Janata Party, as the principal opposition party and the party which initiated the process of strategic cooperation with the United States when it was in power, under the innocuous heading “Next Step in the Strategic Partnership” also found fault with the proposed agreement on several counts. To give a comprehensive picture of the developments during the year, it became necessary, therefore, to deviate from the past practice of including only the official documents in the compendiums in this series. As would be observed, the statements and resolutions of the Left Parties and the BJP on the subject have been given a place in the Appendix attached to Section-II on Civil Nuclear Energy Cooperation. To complete the picture, editorials in the national newspapers and views of the intellectual community on both sides of the spectrum have also been included.

As relations with the United States were dominated by the debate on Civil Nuclear Energy Cooperation, readers are advised to look at this section also when looking for documents on India – United States relations and *vice a versa*.

The documents have been arranged thematically, region-wise and chronologically. A large number of agreements of diverse nature were signed with various countries during high level visits abroad and in India in the course of the year. Considering the increasing bulk of the collection, agreements that have bearing on strategic and foreign policy issues alone have been included here. However, in the case of neighbouring countries, as per past practice, all agreements even of non-political and non-strategic nature would be found, since India's relations with its neighbours need to be covered comprehensively.

In reproducing the documents every care has been taken to adhere to the original text in every manner including in terms of spellings of proper nouns and punctuations.

For many years, I have been making use of the library of the India International Centre. and received a large measure of logistical support from the officers and staff of the Library. I owe a debt of gratitude to them.

As in the past, preparation of this volume, in such a short time after the close of the year, needed the cooperation of a large number of officers of the Ministry of External Affairs. The list is too long and I express my apologies for not being able to list them individually in expressing my gratitude. However, the names that must find mention are those of Shri Amit Dasgupta, Shri Narender Singh and Dr. Kajal Bhat. My thanks to them. Shri TCA Rangachari has been generous with his time to fine tune the introduction. Thank you, Sir. However, the views expressed in the introduction are only mine and I take full responsibility for them. I too own the responsibility for any deficiency or inadequacy that may be otherwise found in this work.

February 20, 2008.**

## INTRODUCTION

The year 2007 was momentous in the history of India's foreign relations since independence in more ways than one. It was for the first time that an issue of foreign policy— the Civil Nuclear Energy Cooperation Agreement with the United States— dominated the discourse of domestic politics and evoked interest on a wide spectrum as never before. It divided the public opinion both vertically and horizontally. It is not only that some political parties differed with the Government on the desirability or otherwise of the agreement, it threatened to upset the ruling coalition government as well. The intellectual community too stood divided vertically. All this, in turn, found expression in large-scale media analysis of the issues involved, for several months. Nuclear scientists, strategic and security experts and political analysts came out with a plethora of articles in the media.

2. The trend of the discussions on civil nuclear energy cooperation with the United States since the Joint Declaration of July 2005, both inside and outside of the parliament, left one with the impression that the proposal was sailing rather smoothly, through the rough waters of Indian politics. The public opinion, particularly the nuclear scientists, appeared enthusiastic at the prospects of the nuclear apartheid that India suffered and endured since the Pokharan – I, nearing its end. There were indeed some hiccups now and then. The government's deft handling by explaining the nuances helped to clear many a cloud, both grey and dark. There were certainly occasions when some pronouncements in the United States Congress and media on the question of proliferation and accusing the US Administration of rewarding India for violating the Nuclear Non-proliferation Treaty, raised eye brows in India but it did not take much time for the government to clarify the position. The United States establishment too extended a helping hand with its assurances and it assuaged the ruffled feathers.

3. Nonetheless no major roadblocks were anticipated in tying the formal knot and sewing up the agreement. The Hyde Act passed by the US Congress and assented to by the U. S. President in 2006, amending the US Atomic Energy Act, 1954, was only an enabling legislation that paved the way for Washington to enter into negotiations with India for cooperation in the civil nuclear energy cooperation. Given the sensitivities of the issues involved on both sides, it took several rounds of discussions between the senior officials of the two countries before an acceptable draft of an agreement emerged, initialed and frozen for final signatures at appropriate levels of the two governments but after the necessary constitutional procedures and other pre-conditions had been gone through. To Prime Minister Dr. Manmohan Singh, the Agreement was a harbinger of great change. In his speech at the dedication ceremony of the Units 3 & 4 of the Tarapur Atomic Power Plant on August 31, he said: "India cannot afford to miss the nuclear bus," and added "There is today talk the world over of a nuclear renaissance, and we cannot afford to miss the bus or lag behind these global developments."
4. The draft, soon after it was made public after Cabinet approval, saw dissenting voices being raised on some fronts. The nuclear establishment and the scientific community by and large were supportive of the agreement and even euphoric that the lifting of the curbs on nuclear cooperation would give a fresh impetus to nuclear research in the country.
5. The point to underline here is that the initialed draft was meant not only to make the path smooth for future cooperation with the United States alone but also with the other 45 countries constituting the Nuclear Supplier Group (NSG) for the civil nuclear energy trade. It is pertinent to point out that the sanctions regime that was imposed on India in the aftermath of the Pokharan- II in May 1998, did not take much time to

fizzle out. However, the denial regime of the Pokharan - I continues to trouble us particularly our nuclear establishment till this day.

6. The official team that negotiated the final draft of the 1 2 3 agreement felt satisfied for having accomplished a difficult task successfully. It was convinced that all the essential Indian concerns were taken care of, even as some adjustments were made to meet the concerns of the other party. An Agreement by its very nature is a compromise document of the sovereign interests of sovereign powers putting their seal to it.
7. In anticipation of the end to the nuclear denial regime, both France and Russia, keen on nuclear cooperation with India, had signed in-principle agreements of intent to help New Delhi with its civil nuclear energy development programme. In doing so, both left New Delhi in no doubt that the actual implementation would have to wait, until India signed the India-specific safeguards agreement with the International Atomic Energy Agency (IAEA) and successfully negotiated with the NSG countries for withdrawal of the restrictions on nuclear trade that were in place, the pre-requisite of the now negotiated 1 2 3 agreement too.
8. In the clutter of the debate that followed the publication of the 1 2 3 agreement on the India-US Civil Nuclear Energy Cooperation, the critics lost sight of the fact that in the post-Second World War, concept of sovereignty as an absolute factor, stood heavily eroded. The war itself had shaken notions such as citizenship, national sovereignty and the nation state. Assumptions accepted in pre-war world were swept away by the avalanche of the war. In more than half a century since then, the shape of the world has changed. There was no purpose in clinging to a world that had gone away. As for the horrors, they continue to spill over into distant corners of the globe in new forms devastating civil societies.

There are new challenges which need new responses.

9. Today, we swear by the *mantra* of interdependence. We pride ourselves as living in a global village. The violation of human rights, and undermining of democratic institutions in any country, invites the ire of civil society every where. The governments routinely take position on violation of these norms in any part of the world. Unlike in the past, such expression of concern is considered as legitimate. The erring governments today cannot get away by taking the plea that the issue falls in their domestic domain. They do defer to expression of such concerns. It is not uncommon for governments to amend their labour laws, under pressure of civil society and international organizations because of the concern shown by them on some aspect of their operation, like employment of child labour in manufacturing. Environmental concern is another issue on which nations are being called upon to formulate legislations in line with global needs and requirements. Apex international and national entities such as WTO, EU, chambers of commerce and industry, even voluntary organizations and NGOs, play no less important role in shaping responses to issues of foreign and economic policies and some times the policy itself.
10. In an inter-dependent world, cooperation among nations is possible only on openly and freely negotiated and mutually accepted terms based on give and take. The high growth and social progress, hitherto the attribute of domestic politics have today assumed international ramifications. Neither is possible without foreign investments and modern technology. Narrowing the gap between the rich and the poor, maintaining economic vitality and efficiency, attracting greater foreign investments and enhancing the competitiveness of indigenous industry against globalizing trends, promoting mega projects and at the same time helping the smaller

entrepreneurs to stand competition and survive, are the challenges which no longer can be met in isolation and standing aloof. All these challenges have global dimensions and could be met only in concert with the international community on terms acceptable to all.

11. We, in India, because of our historical experience, are paranoid with the idea of multinational and trans-national entities gulping Indian industry and business and perhaps us, as a nation, politically. We need to get out of the East India Company syndrome. India has come a long way in the last six decades since independence. We are today witness to a phenomenon where Indians are buying out multinationals and transnational conglomerates. This is happening because our national entities have come out of the cocoons in which they were wrapped for too long. They have torn themselves away from the apron strings of the government. They are now playing in an international environment and competing with the best in the world.
12. The strategic need for clean energy, given the new found global concern for environment, poses a new challenge to the foreign policy establishment. India's economic resurgence demands far greater interaction with external factors than before. We need access to international markets, new sources of energy, advanced technologies, and foreign investments on a scale much larger than in the decades following independence. This calls for increasing the bandwidth of our political engagement with the outside world. This means evolving newer responses to the ever-changing ground realities in a world full of uncertainties. In this scenario our response in terms of instruments of policy, tactics and strategy could not be the same as it has been till the other day.
13. In the 21<sup>st</sup> century there are new and diverse challenges. Each challenge generates a new opportunity and *vice-a* –

*versa*. We find ourselves at the threshold of an era full of new opportunities. But opportunities run after those who know how to grab them and make best use of them. The Political, economic, environmental and demographic challenges impinge on intra-state conduct of relations. As the complexity and intensity of these challenges dawn on us, the realization of greater interdependence of peoples and nations requiring collective action becomes indeed urgent and critical. It is the acceptance of these basic urges of the globalized world that the World Trade Organization was established that stands tall today. Since development and democracy are mutually reinforcing, the rule of law is equally critical for ensuring economic progress and human development, which in turn contributes to the consolidation of peace.

14. As stated above, interaction among sovereign countries is essentially a matching of sovereign but competing interests. It involves living with contradictions. No written document of any nature can spell out every thing on earth in black and white. There are grey areas which are left vague and unexplained. Reconciling those calls for ingenuity of the highest order. It is the outcome of this interaction that constitutes international relations called diplomacy. Great nations have diverse interests and contradictory challenges to meet. There cannot be a strait jacket or a single approach to them. What is good in one situation may not answer the needs of another since the ground realities may differ. Reconciling these contradictions is an attribute of diplomacy too.
15. A treaty or an agreement is only a statement of broad principles. The taste of the pudding lies in its eating. In the ultimate analysis it is how we conduct ourselves and what benefits we draw out of it, to strengthen ourselves socially and economically would determine the course of our destiny

and not merely a piece of paper on which an agreement may be written.

16. It was to emphasize these positive attributes of the 1 2 3 Agreement that the Prime Minister in his speech in the Lok Sabha on August 13 said:

“...the Agreement is about civil nuclear energy co-operation. It is an Agreement between two States possessing advanced nuclear technologies, both parties having the same benefits and advantages. The significance of the Agreement lies in the fact that when brought into effect, it will open the way for full civil nuclear energy cooperation between India and the United States. We have negotiated this Agreement as an equal partner, precisely because of the achievements of our scientists and technologists in overcoming the barriers placed around us in the past. This is an Agreement based on the principle of mutual benefit.”

17. Assuring the nation through the Parliament, the Prime Minister in the same speech, left no body in any doubt that India cannot be made to compromise on its independence of action. He said:

“...the pursuit of a foreign policy that is independent in its judgement is a legacy of our founding fathers and an abiding commitment of our Government. India is too large and too important a country to have the independence of its foreign policy taken away by any power. Today, India stands on the world stage as an influential and respected member of the international community. There is independence in our thought and independence in our actions.... I would like to reiterate that our engagement today with all global powers like US,

Russia, China, EU, UK, France, Germany and Japan is unprecedented. Engagement with West, East, South East and Central Asia has been significantly stepped up with visible results. We are building new frontiers in our ties with Africa and Latin America. In South Asia we seek to develop a peaceful environment, one which is conducive to ambitious developmental targets. I urge those who question our commitment to an independent foreign policy to display the same degree of confidence in India, as others from outside do...”

18. In appealing the Parliament to support the agreement that the Government had worked out with the United States, the Prime Minister said:

“...there is no question that we will ever compromise, in any manner, our independent foreign policy. We shall retain our strategic autonomy. At the same time, we must not forget India's long-standing commitment to the noble ideas of nuclear disarmament and our refusal to participate in any arms race, including a nuclear arms race..... Our negotiators deserve credit for delivering to the nation an Agreement, which can potentially transform the economic prospects of our country. It is an Agreement that will enable us to meet the twin challenges of energy security and environmental sustainability, and remove the technology denial regimes that have, for decades, been a major constraint on our development. At the same time, it will bring India the recognition it deserves thanks to the outstanding achievements of our scientists in nuclear and space sciences as well as other high technology areas.”

19. The assurances extended by the Prime Minister and the External Affairs Minister both in and outside of Parliament did not take the edge off the criticism of the coalition partners in Left Parties and the main Opposition Party, the Bharatiya Janata Party. For different reasons they remained skeptical of the agreement and the assurances extended to them by the Government.
20. The Bharatiya Janata Party's opposition was predicated mainly on three counts—(i) the Agreement compromised India's nuclear deterrent and future weaponization programme; (ii) compromised India's foreign policy and (iii) made Indian foreign policy subservient. Many found the BJP's opposition ironic, in that it was the party, which when in power had authored the programme. Prime Minister Dr. Manmohan Singh, when he initially explained the contours of the agreement to the BJP leadership, including the former Prime Minister, had said: "I have accomplished what you had initiated". That Party's appreciation of the official team for accomplishing a difficult task successfully did not go unnoticed.
21. The Left parties saw the agreement in a different perspective. They appeared to be paranoid by past prejudices. They were afraid that the Agreement would bind India in an unholy alliance with the United States to sub-serve its global foreign policy goals. In this context India's attitude to Iran's nuclear programme was touted as an example. The Left, too had convinced itself that nuclear energy was not the best and only option to meet the ends of energy security. It was expensive as compared to thermal and hydro power, they claimed. Invoking the National Common Minimum Programme, agreed upon between the United Progressive Alliance and the Left Parties at the time of formation of the Government, following the 2004 general elections, the Left said it was not on its agenda. They further argued that the

Agreement did not meet the assurances held out by the Prime Minister in the past with regard to (i) uninterrupted nuclear fuel supplies; (ii) certain dual use technologies which were barred under the Agreement; and (iii) the 1 2 3 Agreement can be terminated at the discretion of the USA but India would assume certain obligations in perpetuity under the IAEA Safeguard Agreement.

22. The External Affairs Minister in his speech in the Lok Sabha on August 16 assured the nation that there were no grounds to raise doubts about India's ability to maintain its independence of action in respect to both foreign and nuclear policies. He too tried to convince the unconvinced that the agreement did not bar India from conducting a nuclear test, if it became necessary. Mr. Mukherjee said:

"India has the sovereign right to test and would do so if it is necessary in national interest. The only restraint is our voluntary unilateral moratorium on nuclear testing, declared by the previous government and being continued by the successor government. There is nothing in the bilateral agreement that would tie the hands of a future government or legally constrain its options. A decision to undertake a future nuclear test would be India's sovereign decision, resting solely with the Government of India.

Nowhere in the bilateral agreement on Cooperation for Peaceful Uses of Nuclear Energy with the United States of America is testing mentioned. The bilateral cooperation agreement contains elaborate provisions in Articles 5 and 14 to ensure the continuous operation of India's reactors. These include fuel supply assurances, the right to take corrective measures, and a strategic fuel reserve for the life-

time of India's reactors in case of cessation of co-operation."

23. The Left Parties though not part of the ruling United Progressive Alliance were nevertheless important allies, standing in support of the Government, from outside. Their opinion could not be brushed aside. The Government felt obliged to take them on board. To reconcile the differences separating the Alliance and the Left on this issue, a Committee consisting of leaders of both the sides is making efforts to create the necessary consensus that would enable the government to fulfil its international commitment. Meanwhile the Government has commenced negotiations with the International Atomic Energy Agency for an India specific safeguards agreement for the civil nuclear cooperation.
24. As the year 2007 came to a close, the negotiations with the IAEA remained inconclusive. It is hoped that the final agreement would meet the concerns of all and a national consensus would emerge which would enable India to go ahead with the agreement with the United States. Meanwhile several countries principally Russia and France are waiting to extend their helping hand to India to meet its quest for clean energy.
25. Having said that, one might hasten to add that India remains committed to the goal of universal disarmament, particularly nuclear disarmament on a universal basis. The Foreign Secretary Shivshankar Menon in his speech at the International Institute of Strategic studies said as much on May 3<sup>rd</sup>. He said:

"As for the threat from weapons of mass destruction to international security, we believe that general and complete disarmament including nuclear disarmament must remain on the international

agenda. India's status as a Nuclear Weapon State does not diminish its commitment to the objective of a nuclear weapon free world. Aspiring for a non-violent world order, through global, verifiable and non-discriminatory nuclear disarmament continues to be an important plank of our nuclear policy that is characterized by restraint, responsibility, transparency, predictability and a defensive orientation. We maintain our voluntary moratorium on tests, are ready to engage in negotiations in a non-discriminatory Fissile Material Cut-off Treaty, and we enforce strict and comprehensive export controls, which have now been harmonized with those of the Nuclear Suppliers Group and the Missile Technology Control Regime. We have scrupulously not transferred enrichment and reprocessing technologies to countries that do not have them, and have supported international efforts to halt their spread. Recent events have shown that a new global consensus on non-proliferation is required, based on an equal partnership of responsible states. As a responsible nuclear power with impeccable credentials on non-proliferation, we are ready to be a partner against proliferation, working closely to create a new consensus on which to move forward."

## II

26. In the recent years, India's 'Look East Policy' has taken firm roots. Relations with East and South-East Asia received a shot in the arm by New Delhi deciding to integrate the economic development of the States of the North-East India with the region. This part of India on the periphery of the Southeast Asia is a natural bridge between India and Southeast Asia. The essence of this policy was articulated by the External Affairs Minister Pranab Mukherjee, on October

31 at a meeting in New Delhi, participated among others, by Minister for Development of North Eastern Region Mani Shankar Aiyar and Chief Ministers of all the North Eastern States besides the Union Ministers of Home, Defence, Finance, Road Transport and Highways. Mr. Mukherjee said:

“Essentially, what we are looking at here is a new paradigm of development whereby our foreign policy initiatives blend seamlessly into our national economic development. Given that we have, over 15 years of pursuing our Look East Policy, put in place certain diplomatic and political structures, there is need now to make these structures work for our North Eastern Region. Diplomatic initiatives urgently need to be converted into commercial opportunities. For this purpose, MEA will work in close cooperation with the Ministry for the Development of the North Eastern Region, the Planning Commission, all economic ministries and the State governments.”

27. The interventions made by the Chief Ministers of North Eastern States at the meeting focused primarily on the present state of connectivity and of infrastructure available in the North Eastern States, capacity building, future potential for export and tourism, the possibility of institutional cooperation in training and research and on-going action being taken by State Governments with a view to dovetail national development strategies with various foreign policy initiatives. Mr. Mukherjee on his part assured that the Ministry of External Affairs “will take all the necessary initiatives in the pursuit of Look East Policy, as would especially benefit the North East region of India. The development policies of the northeastern region should also be directed to attain greater connectivity with the region next door.”
28. The Public Diplomacy Division of the Ministry of External Affairs during the course of the year organized seminars and

discussions in the northeast to get the input from a larger body of public opinion in its push to the Look East Policy. This was a new experience, particularly for the people of the Northeastern region, who in the past found themselves at the margins in the formulations of foreign policy. It marked a paradigm shift from the standard practice whereby the foreign relations were treated as an esoteric subject for discussion among a few occupying the official hierarchy, academia and the intellectuals. The Public Diplomacy Division is, to that extent, the harbinger of a change in mindset. There is realization that the issues, even of foreign policy, have a bearing on the lives of the people at large, and they needed to be involved in the debate and discussion to formulate an inclusive policy.

29. Bilateral ministerial visits to some of these countries and the East Asia and ASEAN Summits participated in by the Prime Minister himself had helped to project the invigorated image of India in the region, where the subtext is the pending challenge in negotiating bilateral and multilateral free trade agreements. Another dimension of this policy in the coming years would be the ability of New Delhi to go along with the initiative of quadripartite forum of major Asia-Pacific Democracies given the Chinese discomfort.
30. It is the ancient links of India to the greater East Asian region that highlighted the overarching cultural setting in the year 2007. The exhibition "On the Nalanda Trail" in Singapore that coincided with the ASEAN Summit and the revival of the Nalanda University, was a reminder to the East Asian countries of the links that ancient India had with them. It sought to emphasize the cultural homogeneity of the region with India.
31. In this context it would be relevant to recall the remarks of Singapore Prime Minister Lee Hsien Loong at the reception hosted by him for the EAS leaders: "The ancient university

in Nalanda was not just devoted to Buddhist studies. It was also a first-class educational institution and the most global university of its time. ... The new Nalanda (university) should strive to perform a role consistent with this original ethos and vision. It should be a great intellectual centre, an icon of the Asian renaissance. ... It should also be a centre of civilisational dialogue and inter-faith understanding as the original Nalanda once was. In this way, the Nalanda project can be an inspiration for the future of Asia.”

32. The success of Northeast as the cutting edge of our Look East Policy, could pave the way for similar developments in other bordering areas as well. The problems of development and of administration of areas bordering Bihar and Nepal have a lot in common; Indian Punjab with the Pakistani Punjab, Tamil Nadu with Sri Lanka and West Bengal with Bangladesh. As the political situation in the neighbouring countries stabilizes in course of time, the State Governments in India could be counted upon to spearhead a new policy momentum towards these regions. Until then, it would be fruitful for these regions to be conscious and aware of the developmental trends across their borders. As the classic diplomacy develops new shibboleths under the pressure of globalization, the foreign policy establishment too needs to look for new instruments in the coming decades. This could perhaps be one of them!!

### III

33. In the year 2007 several milestones in bilateral relations between India and China were reached. The high point of this relationship was the new area of cooperation in the defence sector. The first defence dialogue under the MOU on Defence Cooperation signed in 2006 took place in November. General JJ Singh, Chief of the Army Staff visited China in May and received a warm welcome. In

June the Defence Minister during his visit to Singapore to take part in the Security Dialogue met with the Chinese Deputy Chief of General Staff Gen. Zhang Qinsheng. The first ever joint military exercises between the armies of the two countries were held in the third week of December in the Chinese province of Yunnan. The Spokesperson of the Chinese Ministry of Foreign Affairs in Beijing described the exercises as “helpful in building mutual trust and promoting cooperation” and favoured an increase in such activities to improve stability and security in the region. External Affairs Minister Pranab Mukherjee described them as part of security strategy and said they would continue. It was indeed a new and important chapter in Sino-Indian relations.

34. As a confidence building measure, the Foreign Ministries of the two countries have been linked by a hot line. New Consulates have started operating in Guangzhou in China and Kolkata in India. The Chinese airlines have added new air-routes and flights between the two countries. China and India also mutually hosted the Year of Culture in each others countries.
35. To find a solution to the boundary question three rounds of dialogue between the Special Representatives of the two countries took place in 2007. Altogether eleven sessions of boundary talks, in the four years since the Special Representatives were appointed for this purpose in 2003, have been held.
36. On October 25 the External Affairs Minister told a press conference in Harbin, on the sidelines of the India-China-Russia Trilateral Summit that at the 11<sup>th</sup> round of boundary talks held in September, it had been decided to set up a Working Group to prepare the framework for the resolution of the boundary question. He expected some thing positive

to come out of this new exercise and said: “Let us wait for the recommendations of the Working Group.”

37. In recent months the un-demarcated Line of Actual Control (LAC) held by the two countries on the ground, gave rise to some misunderstanding. The media reports said that the Chinese were guilty of intrusions into the Indian territory in the Eastern Sector. The Government of India in trying to allay these apprehensions said in Parliament on November 22 that this was necessarily due to “the perceptions of the LAC,” which overlapped “at many places”.
38. Despite this, the reports of ‘intrusions’ persisted and the Defence Minister on December 1 assured the suspecting media: “There was no incursion by the Chinese troops in Indian territory, be it in Sikkim or Arunachal Pradesh.” He however added that there might have been isolated incidents on the borders arising out of the difference of perception on territorial jurisdiction between the two countries and expressed confidence that all minor problems and differences of perception would be resolved through negotiations. He described China as “our strategic partner”.
39. At the political level there were several high level meetings between the leaders of the two countries. The Prime Minister met the Chinese President Hu Jintao in Berlin on the sidelines of the G-8 Outreach Conference. He utilized this opportunity to allay Chinese apprehension that India by joining the United States, Japan, and Australia in a quadrilateral cooperation was ganging up against China. He assured Beijing that the quadripartite was only for exchange of views on developments from their experiences as democracies. It had no security implications and the Chinese President was satisfied with this clarification.
40. The Prime Minister met the Chinese Premier Wen Jiabao twice—once in Cebu (Philippines) in January and second

time in Singapore in November on the occasion of the India-ASEAN Summit. At the Singapore Summit the two leaders reiterated their readiness to take the India-China Strategic and Cooperative Partnership for Peace and Prosperity to a new level. Premier Wen conveyed that friendship with India was the strategic and long term objective of China. The Prime Minister reiterated to Premier Wen that India attached great importance to its partnership with China, and was resolved to ensuring the comprehensive development of bilateral relations for mutual benefit and on the basis of mutual sensitivity to each others' concerns. Both the leaders reiterated their readiness, to see a fair, reasonable and mutually acceptable solution to the Boundary Question. They too expressed satisfaction at the progress that is being made by the Special Representatives in this regard.

41. The Chinese Foreign Ministry described the meeting between the two leaders as marking "long-term friendship, mutually beneficial cooperation and common development between the two countries (which) will have a profound impact on Asia and the world at large. Facts prove that the development of friendship and cooperation between China and India has brought pragmatic benefits to the two peoples and has promoted South-South cooperation as well as peace and development in the world". On the question of border talks, Prime Minister Manmohan Singh said it was his Government's political will to settle the border issue and his country "will make joint efforts with China to overcome difficulties and push forward the negotiation over it, under the political principles reached by the two countries."
42. According to the Indian officials, Mr. Wen was "supportive of international civil nuclear energy cooperation with India." It may be added in parenthesis that the visit of Dr. Manmohan Singh to China in January 2008 provided an opportunity to the leaders of the two countries to take the friendship to still

higher levels and help in resolving the outstanding question of the boundary to the satisfaction of both the countries.

43. On the question of expansion of trade and other economic relations, External Affairs Minister Mr. Mukherjee, speaking on June 16 to journalists on the sidelines of a seminar on “Look East Policy,” organized by the Public Diplomacy Division of the Ministry of External Affairs in Shillong, underlined the role of trade in the promotion of bilateral relations and said issues such as trade and commerce with China could not be kept pending till the resolution of the border dispute. Bilateral trade is galloping forward. In 2006, the trade volume between the two countries had crossed 25 billion US dollars, a rise of 33.8 per cent over 2005. That in itself was an increase of 37 per cent over 2004. The bilateral trade in 2007 has galloped to \$ 38.5 billion thus almost touching the target set for 2010 of \$ 40 billion two years in advance. It is the vision of the leaders of the two countries that this figure would surpass 60 billion US dollars by 2010. It is another matter that India which had a surplus balance of trade with China only a few years ago is now running a deficit. The deficit which was around US \$ 1 billion in 2001, touched \$ 11 billion in 2007. The other disquieting feature of this trade for India was that while Chinese exports were mostly capital and manufactured goods, India’s export basket consisted mostly of primary goods. Along with the rising trend in trade, there was an increase in the presence of Indian business and industry, banks, consultants and law firms in China.
44. China is pressing a reluctant India for a Regional Trade Agreement as well as for recognition of China as a market economy. New Delhi is shying away from both because of the suspicions of the Indian business and Industry that there were hidden subsidies in Chinese pricing system and it lacked transparency. These issues would form part of the India-China economic agenda in 2008.

## IV

45. With Japan there is an all-round relationship covering several fields of activity. Apart from strategic and global partnership that India enjoys with Japan, the economic relationship has several hopeful features. A major project already under execution is the Delhi Metro. Those on the anvil are dedicated freight corridors – Delhi-Mumbai, Delhi-Kolkata; and a Delhi-Mumbai industrial corridor. The bilateral trade is expected to touch the level of US \$ 20 billion by 2010. During the visit of the Japanese Prime Minister to New Delhi in August, after the successful visit of Dr. Manmohan Singh to Japan in December 2006, the importance of delivering a high-quality and mutually beneficial EPA/CEPA that reflected the strategic importance of bilateral relations and fully harnesses the potential of the economic relationship, was reaffirmed.
46. Prime Minister Shinzo Abe presence in New Delhi in August provided the opportunity to further strengthen the strategic partnership and cooperation in various fields. The visit set forth a road-map for “New Dimensions to the Strategic and Global Partnership” between the two countries in fields, like maintaining the safety and security of sea lanes in the Asia Pacific and the Indian Ocean regions, and fight against transnational crimes, terrorism, piracy and proliferation of Weapons of Mass Destruction.
47. A system of annual strategic dialogue between the foreign ministers of the two countries, starting with the talks held in March 2007, injected a new dynamism in the bilateral relations. A new chapter in this direction was the series of decisions between the two prime ministers, to continue to hold regular dialogue between the National Security Advisor of India and the Japanese counterpart, commencement of bi-annual Foreign Secretary/Vice Minister level dialogue and the launch of an exchange programme of young diplomats in order to promote mutual understanding between the two Foreign Offices.

48. The new paradigm shift was the recognition of the two prime ministers that “common interests of the two countries in the defence and security fields require steady and qualitative up-gradation of cooperation between the two sides, including inter alia the expansion of the annual calendar of cooperation and exchanges relating to defence and security, regular Defence Policy Dialogue, cooperation in sharing of experience in international peace cooperation under the aegis of the United Nations and counter-terrorism, information sharing in important areas of mutual interest, technical exchange, joint exercises and training and talks between the services. The two leaders welcomed the participation of the Japanese Maritime Self Defense Force in the multilateral maritime exercise ‘Malabar’ ” held in September 2007 in the Bay of Bengal along with the navies of the US and Australia.

## V

49. The vibrancy in India-Russian relations was marked by the exchange of visits by Russian President and the Indian Prime Minister during the year. The year 2007 also marked the 60<sup>th</sup> anniversary of the establishment of diplomatic relations between the two countries. President Putin was also the Chief Guest at the Indian Republic Day celebrations in New Delhi. The visit provided the opportunity to the two countries to reconfirm their resolve to enhance mutual cooperation to promote the use of nuclear energy for peaceful purposes. Recognising that Russia “remains indispensable to the core of India’s foreign policy interests,” Dr. Manmohan Singh sought a “comprehensive re-engagement (with Russia) that would impart new momentum and carry our strategic partnership to new heights.” All this was manifest in several agreements negotiated during the year between the two countries such as joint development of Multi-role transport aircraft, fifth generation fighter aircraft, cooperation in high technology sectors like space, science and technology,

information and communication, cooperation in Russian Global Navigation Satellite System etc.

50. The Foreign Office Consultations between the two countries in April offered an opportunity to the two countries to discuss such issues as Afghanistan, Iran's nuclear programme, Iraq and the Middle East, Central Asia, India-Russia-China trilateral cooperation and cooperation with EU and NATO, and reforms of the UN, international and transnational terrorism and narco-trafficking etc. External Affairs Minister visited Moscow in October for the Inter-governmental Commission meeting. It discussed major areas of bilateral cooperation relating to trade, commerce, investment, energy, science, technology, services, metallurgy, and culture, besides discussing high technology. The annual trade which is around four billion US dollars was agreed to be still below its potential and hence it was agreed to take steps to boost it further.
51. Although the Joint Commission is a government-to-government forum, enlarging its scope, it discussed the role of private sector in furthering economic cooperation between the two countries. The first India-Russia Forum on Trade and Investment was held in India in February. The Joint Study Group set up to analyse the bilateral trade and economic cooperation, finalized its report in July. There is significant collaboration among the hydrocarbon, power and energy related organizations in the two countries and there was agreement to increase it further. The integrated Long Term Programme for Scientific and Technological Cooperation completed its twenty years. For functional reasons it was decided to set up a new Working Group on Science and Technology and to re-designate the existing Working Group on Technologies as the Working Group on Information and Communication technologies. The India-Russia cooperation in Defence is on a trajectory to reach new heights with the

signing of the Agreement for development and production of Multi-role Transport Aircraft in October during the visit of Defence Minister. There was of course some misunderstanding on the cost of refurbished Admiral Gorshkov, and its supply schedule, which it is hoped would be resolved after discussions.

52. The high point of the India-Russia relations was the visit of Prime Minister Dr. Manmohan Singh to Russia at the end of the year. Before his departure for Moscow the Prime Minister described the India - Russian relations as “an enduring bond of friendship” and as a factor “of peace and stability in the region and beyond”. The Prime Minister expressed his extreme satisfaction on his discussions with President Putin. The Foreign Secretary Shivshankar Menon told the media that the restricted meeting between Prime Minister and President Putin that preceded delegation level talks went on for more than two hours, which was unprecedented for such interactions, and was marked by “really warmth” and “real meeting of minds.” Expressing dissatisfaction at the present level of trade between the two countries, the Prime Minister declared that the two leaders have approved the report of the India-Russia Joint Study Group to enhance the bilateral trade to ten billion dollars by 2010 and set up a Joint Task Force to implement the recommendations of the Study Group. President Putin himself sounded euphoric when he referred to the signing of the agreement on the development and production of multi-role transport aircraft on the heels of another agreement on the joint construction of a futuristic fifth generation fighter plane and said “The two agreements open up new prospects for our cooperation in a highly sensitive area of defence.” The two countries also agreed to mount a joint space mission to the moon, to combat drug trafficking, and utilize rupee debt funds for Russian investments in India. Both the leaders voiced support for trilateral cooperation between India-China and Russia and

declared that it had been put on permanent basis with possibility for “expansion and deepening in various directions.”

## VI

53. The India-Russia-China Trilateral cooperation made concrete progress when the foreign ministers of the three countries met twice during the year in stand-alone meetings. The first stand-alone meeting was held in Vladivostok on June 2, 2005. Earlier there were three other meetings, which were held on the sidelines of UN General Assembly session in 2002 and 2003 and one in Almaty in 2004 on the sidelines of the Conference on Confidence Building Measures in Asia. The Summit Meeting among the leaders of India, Russia and China took place on July 17, 2006 in St. Petersburg on the sidelines of the G-8 Outreach Conference.
54. It may be recalled that in the Joint Declaration issued at the end of the Summit meeting between Russian President Putin and Chinese President Hu Jintao in March 2006 a call was made by the two leaders to set up an institutional framework between China, Russia and India for trilateral cooperation. The Declaration said: “The two sides favour an early establishment of a mechanism of trilateral cooperation in the Russia-China-India format in the belief that this will contribute to a fuller realization of their potentials for economic development and will strengthen international efforts to stand up to the new threats and challenges.” During the visit of Hu Jintao to New Delhi in November 2006 the concept of trilateral cooperation too found expression in their Joint Declaration. It said: “The two sides positively assess the trilateral dialogue mechanism among India, China and Russia and agree that exchanges and cooperation under it should be further substantiated.”
55. The Joint Communique issued at the end of the New Delhi

Trilateral meeting of the three foreign ministers on February 14, 2007 “reaffirmed that trilateral cooperation was not directed against the interests of any other country and was, on the contrary, intended to promote international harmony and understanding and find common ground amidst divergent interests. They also emphasized the strong commitment of India, Russia and China to multilateral diplomacy.” In 2007 the second meeting was held in Harbin (China) on October 24 at which the three foreign ministers “positively assessed the important role played by the Foreign Ministers’ meeting mechanism in enhancing mutual trust and understanding and increasing trilateral exchanges and cooperation.”

56. Believing that the trilateral cooperation had excellent prospects for development they reaffirmed yet again that “trilateral cooperation is not targeted against any other country or organization and is intended to promote international harmony and mutual understanding and seeks to broaden common ground amidst divergent interests.” In their deliberations the foreign ministers discussed issues ranging from reform of the UN to climate change and world terrorism. Taking the cooperation among the three a step further from political to real issues, they decided that “working-level mechanisms of Division Head/Director-General should be established between the Ministries of the three Governments looking after agriculture, disaster management, medicine and health to explore concrete ways and methods of cooperation to the development of agricultural resources, processing of agricultural produce, research and development, capacity-building and application of technology in disaster risk mitigation, exchange of information on the prevention and control of contagious diseases and in traditional medicine, etc.”.

## VII

57. India, Brazil and South Africa have put together a unique forum, (IBSA) that brings together three large multi-cultural

democracies from three different continents facing common challenges of development on a common platform. Formed in 2004, their first Summit was held in Brasilia in 2006 and the second in Pretoria (South Africa) in October 2007. It stands for enhancing cooperation in areas such as science and technology, education, agriculture, energy, culture, health, social issues, public and revenue administration. All the three countries have strongly urged for reform of the United Nations and expansion of the Security Council to represent contemporary realities and not those of the year 1945 when it was formed immediately after the Second World War. All the three are aspirants for membership of the Security Council and coordinate their efforts in that direction.

58. India had strategic partnership with both the countries on bilateral basis as well. Apart from the Summit meeting of the three Heads of Government/State, the foreign ministers of the three countries gathered in July in New Delhi for the 4<sup>th</sup> meeting of the IBSA Trilateral Commission. In September the editors from the three countries met in New Delhi. The three foreign ministers met again in New York on the sidelines of the UN General Assembly session. That meeting provided an opportunity to exchange views on a number of issues on the international agenda, topics relating to the IBSA Dialogue Forum and the IBSA Fund for Alleviation of Poverty and Hunger. They affirmed their determination to strengthen IBSA's political segment by enhancing coordination among their delegations in international fora. They once again underlined the need for reforms of the UN and expansion of the Security Council.
59. At the Pretoria Summit in October Prime Minister Manmohan Singh pointed out that "economic growth cannot happen in isolation". He said that unless all sections of society derive benefits from such growth and develop a stake in the growth process, "we will be courting social and political instability".

He was convinced that “disparities of any type – regional, gender, inter-community, inter-group – harm the growth process in the long run.” The Summit in its Tshwane Declaration recommitted itself “to vigorously pursue the deepening of South-South cooperation for sustainable development... to eradicate poverty through sustained and inclusive economic growth.” The Summit emphasized the goal of the “complete elimination of nuclear weapons and expressed concern over the lack of progress in the realization of this goal.” The Declaration pleaded for time-bound programme for elimination of nuclear weapons and “prohibit their development and production, acquisition, testing, stockpiling, transfer, use or threat of use, and to provide for their destruction.” The declaration touched subjects like climate change, security and stability in Africa, and need for settlement of conflict in areas afflicted by violence such as Sudan, Afghanistan, etc. The Summit ended with the signing of seven agreements ranging from cooperation in Customs and Tax Administration to public health, education, social issues, cultural cooperation etc. It was decided to hold the third Summit in New Delhi in 2008.

## VIII

60. Environmental pollution has become a matter of great international concern and part of international discourse like other questions of war and peace. India too is concerned with the hazards of environmental degradation. In response to our national commitment to clean environment, New Delhi has taken major initiatives including adopting a National Environment Policy, 2006. It synergies environmental and economic policies and appropriate institutional mechanisms, to support the integration of three pillars of sustainable development: economic development, social development and environmental protection. It recognizes that the environmental management cannot be treated separately

from other development concerns and that the poor are seen not as a problem but as a part of the solution. The policy is bringing in new models of partnerships between the Government and the civil society.

61. As a signatory to the United Nations Framework Convention on Climate Change, India is committed to climate-friendly sustainable development. Clean energy and energy efficiency have become essential elements of our industrial policy. The Energy Conservation Act, 2001 set the energy consumption norms for each industry, energy labeling and standards for all electrical appliances, and energy-efficient building codes. The Bureau of Energy Efficiency has been established under this Act. India also has an active renewable energy programme.
62. India, in response to the problem of green house gases has been willing to join the other nations of the world to share the burden of green house gases. India's emission of green house gases is miniscule being only 4 percent of the world's emission. It, therefore has been taking the position at international fora that action by India alone would have a marginal effect on the overall emissions unless the major industrial countries took full responsibility commensurate with the emission generated by them. India was determined that its per-capita GHG emissions did not exceed those of developed countries even while pursuing policies of development and economic growth.
63. "The process of burden sharing must be fair", reminded the Prime Minister to the industrialized countries at the Berlin Outreach Conference of the G-8, and added "It should take into account where the primary responsibility for the present levels of GHG concentration rests and not perpetuate poverty among possibilities of accelerated social and economic development." Dr. Manmohan Singh had no doubt in his mind that the developing countries could cut their emissions only

at a great cost to their development which was not fair. He therefore made it clear at Berlin that “the time is not ripe for developing countries to take quantitative targets, as these would be counter-productive for their development processes.”

## IX

64. The adoption by the United Nations General Assembly unanimously of a resolution on ‘International Day of Non-Violence’ piloted by India with the co-sponsorship of 142 countries to annually observe and celebrate Mahatma Gandhi’s birthday, October 2, as the “International Day of Non-Violence”, was particularly satisfying to New Delhi. The idea of promoting such a resolution originated from the Declaration adopted at the international conference on “Peace, Non-Violence and Empowerment – Gandhian Philosophy in the 21st Century” convened in New Delhi in January of 2007 to commemorate the centenary of the *Satyagraha* Movement launched by Mahatma Gandhi in South Africa. Attended by 91 countries and 122 organisations besides many eminent personalities, including philosophers and Nobel laureates, the participants in that conference solemnly vowed to nurture the values espoused by Mahatma Gandhi and articulated the collective yearning for a new way forward to address the problems of hunger and de-humanizing poverty, which continue to plague humanity, to build a just and equitable world where people live with dignity and in peace and harmony with each other in diverse and pluralistic societies.
65. Mrs. Sonia Gandhi who delivered the keynote address at the United Nations on October 2 to mark the first Observance of the International Day of Non-violence underlined the philosophy of the Mahatma thus: “that strength comes from righteousness, not force. Power comes from truth, not might. Victory comes from moral courage, not imposed submission.

He held that means and ends are inseparable and that in fact the means themselves shape the ends. He believed unworthy means can never produce worthy ends.”

## X

66. India hosted the 14<sup>th</sup> Summit of the South Asian Association for Regional Cooperation (SAARC) in New Delhi on April 3-4. It was after some year that the summit took place as per the schedule and went through its agenda smoothly. Afghanistan having been admitted to the SAARC last year participated in the Summit for the first time. It was represented by its President Hamid Karzai. Three of the “observer countries” - China, South Korea and Japan, were represented by their Foreign Ministers. The other two observers — United States and the European Union (E.U.), sent high-level representatives.

Prime Minister Manmohan Singh in his inaugural address put forward new initiatives to make SAARC a more meaningful regional organisation. He offered “zero duty” access to goods from Bangladesh, Afghanistan, Nepal, the Maldives and Bhutan. He said India would no longer insist on “reciprocity” on trade issues from many of its neighbours. (Trade issues with Pakistan, however, remained unresolved because of Pakistan’s insistence on maintaining a positive list of prohibited articles for bilateral trade.)

67. Prime Minister Manmohan Singh announced some other steps to accelerate the process of economic integration in the region. He hinted at visa liberalization procedures for scholars, journalists, students and those in need of medical help from SAARC countries. He spoke of the “compelling vision” he had of a rapidly developing South Asia playing an important role on the world stage. He noted with satisfaction that SAARC member-states had started resolving their bilateral differences, which had prevented it in the past from realizing its full potential.

He said that the time had come for all South Asian countries “to join hands to realize our shared destiny”.

68. Similar sentiments were echoed by other leaders too. Bangladesh Chief Adviser Fakhruddin Ahmed said that the larger and comparatively more advanced member-states had a special responsibility to aid the less developed ones. President Mahinda Rajapaksa asked for a collective response to the issue of terrorism from the member-states. He was in favour of adopting speedily a “common currency” to speed up the process of regional integration. The Pakistan Prime Minister said that the political atmosphere in South Asia still remained “vitiating by disputes and mistrust”. Mr. Shaukat Aziz highlighted the need to promote an environment of genuine peace and security in South Asia which would help reduce the “trust deficit” among member-countries. In his maiden speech President Hamid Karzai of Afghanistan focussed on the issue of terrorism. He favoured the Turkmenistan-Afghanistan-Pakistan-India (TAPI) gas pipeline.

[However both India and Pakistan remained committed to the Iran-Pakistan-India gas pipeline. A meeting between the Indian and Pakistani Prime Ministers led the two sides to announce that they would pursue the Iran – Pakistan – India gas pipeline project sincerely. They expressed satisfaction over the progress made so far at the technical-level talks amongst the three sides.]

69. Having said that, there was an undercurrent of feeling that SAARC had not yet managed to achieve its full potential. Pakistani Prime Minister Shaukat Aziz, in his interaction with the media as well as in talks with the Indian Prime Minister, did not shy away from stating that Kashmir was the most important issue standing in the way of durable peace between the two countries. During his luncheon meeting with the Indian media, he said that high-level, back-channel talks to resolve outstanding issues were making progress but the two

countries still had to traverse a long distance before a lasting solution could be found.

70. Pakistani resistance to India's suggestion for a SAARC treaty to fight terrorism and organized crime was a pointer to the "trust deficit" afflicting the organization. Other SAARC member-states such as Afghanistan and Sri Lanka, battling terrorism in their countries, were naturally supportive of the Indian initiative. However, Pakistan believed that problem of terrorism could be better tackled through bilateral arrangements. Nevertheless the New Delhi Declaration issued at the end of the summit had a clause mentioning India's initiative to prepare a draft for a SAARC Convention on Mutual Assistance in Criminal Matters. Prime Minister Manmohan Singh's concluding speech exhorted the SAARC member states to implement in a meaningful and sincere manner the commitment and pledge made to root out terrorism in order to create an environment for "our endeavour to succeed". SAARC had made a commitment to fight terrorism through the SAARC Regional Convention on Terrorism of 1987 and the Additional Protocol in 2004.
71. The 14th SAARC summit, in the words of External Affairs Minister Pranab Mukherjee was "the least contentious" held so far. The summit ended with agreements to establish a multi-campus South Asia University with its main campus in New Delhi and a SAARC Food Bank. The New Delhi Declaration highlighted the need to develop a road map for a South Asian Customs Union in "a planned and phased manner". The Declaration also stressed the speedy implementation of the South Asia Free Trade Area (SAFTA) agreement. The statement said that the "successful implementation of SAFTA will catalyse other areas of regional economic cooperation". It was decided to accept Iran as another "observer".

72. A South Asia Development Fund was operationalised with an initial corpus of \$300 million. The Fund would undertake specific poverty alleviation projects. The non-members would be free to contribute to the SAARC Development Fund without participating in the decision making on its utilization.
73. In his concluding remarks the Prime Minister reminded the member states that they had agreed to expedite progress on four main issues - water, including flood control; energy; food; and the environment. The year 2008 was designated as the "SAARC Year of Good Governance". Dr. Manmohan Singh said that he could "feel a new sense of purpose and determination among the leaders of SAARC". He emphasised that the "touchstone" in the efforts to revitalise SAARC had to be the difference made to the lives of "the poorest of the poor".
74. SAARC had been in existence for more than two decades. Much of its activities have been confined to the official meetings at various levels besides the annual summits. It has yet to catch the imagination of the common people in these countries in a big way. The travel procedures between the countries of the grouping remain as cumbersome as ever. Neither have the modes of travel improved. The decision by India to host a SAARC cultural extravaganza at the end of the year in New Delhi brought for the first time the youth of the SAARC countries at one platform. The experiment was a great success in that it gave an opportunity to thousands of people not only to realize how culturally the people of South Asia are bound together in a common strand but also to witness the cultural richness of the member countries.

## XI

75. Last year the Prime Minister had spoken of his vision of relations with Pakistan to be so friendly and of an atmosphere of trust and confidence "that the two nations would be able

to agree on a Treaty of Peace, Security and Friendship” overcoming all hurdles. Carrying his wish and hope a step forward he hoped that by cooperating with each other we would be “releasing our collective destiny and the basis for enduring peace and prosperity in the region”.

76. With that background, the year 2007 opened on a positive note in regard to the India – Pakistan relations. External Affairs Minister Pranab Mukherjee visited Pakistan in January. In February the Foreign Minister of Pakistan Mehmood Kasuri came to New Delhi for the Joint Commission meeting. During this round the two countries signed an agreement to reduce risks from accidents relating to nuclear weapons. This, together with the practice of exchanging annually lists of nuclear installations would go a long way in reducing the risk of any nuclear war between the two countries by accident. New Delhi was saddened by the bomb blast on the Samjhauta Express on its journey from New Delhi to Pakistan in February, which spilled the blood of innocent people. New Delhi not only assured but actually extended all possible assistance to the injured and in the return of the passengers to their homes.
77. The first meeting of the Anti-terrorism Mechanism took place in Islamabad in March. Other meetings under the Composite Dialogue arrangement were held as per schedule. However towards the later part of the year the momentum got somewhat slackened because of domestic troubles in Pakistan causing a lot of political instability. The assassination of former Prime Minister Benazir Bhutto in December was source of a great deal of anguish to New Delhi. The President, the Prime Minister and the External Affairs Minister sent messages of condolences on her death. The Prime Minister and External Affairs Minister visited the Pakistan Mission in New Delhi to offer condolences. One only hopes that the elections in early 2008 would throw up a stable regime in

Pakistan and the momentum of the dialogue would be restored.

78. As already stated above, the SAARC Summit gave an opportunity to the prime ministers of India and Pakistan to meet on its sidelines. Kashmir, terrorism and the Iran pipeline were the important items on their agenda. Dr. Manmohan Singh assured his Pakistani counterpart that India would share with Pakistan the results of the probe into the Samjhauta Express fire-bombing of February 19. He reiterated Government of India's decision to pay compensation to the victims of the terrorist incidents. It was also agreed to increase the number of flights between the two countries.
79. During the year, Pakistan too came under terrorist attacks in which valuable lives including that of the former prime minister were lost. The fundamentalism and religious obscurantism that had in the past received succour from the Pakistan State, now unleashed the turbulent and brutal forces that threatened to consume not only the civil society but the State of Pakistan itself. There was for once a refreshing realization in Pakistan that the forces, which in the past hurt only India, could boomerang and cause inverse damage too. Under the circumstances it is hoped that the Anti-terrorism mechanism, agreed upon between the two prime ministers in 2006, would be an effective forum for cooperation in rooting out this menace from both the countries.
80. Bhutan, with the blessings of the monarchy is taking measured steps towards a fully democratic state. It elected its 15-member National Council or the upper house of parliament in December. The elections for the lower house are now scheduled in March 2008. It may be recalled that Bhutan's transition to democracy began in 2001, when King Jigme Singye Wangchuk handed over the power of daily governance to a Council of Ministers. In 2006 he abdicated

the throne in favour of his Oxford educated son Jigme Khesar Namgyel.

81. The signing of a new Treaty of Friendship in February during the visit of the King of Bhutan was an “exemplary model of good-neighbourly relations”. The new Treaty, which is an update of the Treaty signed by the two countries in 1949, reflects the contemporary nature of Indo-Bhutan relations, and lays the firm foundation for their further development in the 21st century. It creates a framework for continued mutually beneficial cooperation in a manner that is responsive to and serves each other’s national interests.
82. In contrast, other countries in the neighbourhood continued to grapple with the problem of democratization. In Nepal the elections for the Constituent Assembly were thrice postponed for one reason or the other. Before the year 2007 closed the Maoists goaded the government to accept their demand for abolition of monarchy by adopting an amendment to the Constitution. This enabled the Maoists to return to the government as the year was ending, which it boycotted for almost three months.
83. In Bangladesh too the goal of “full restoration of democracy through peaceful, free and fair elections” still seems a little distant. In Sri Lanka the solution to the ethnic problem does not appear to be too close either despite a lot of blood letting. As the year closed the ceasefire agreement of 2002 between the government and the LTTE was in tatters, both sides paying only lip service to it. (In January 2008 the Government of Sri Lanka finally put an end to the fiction of cease-fire, by deciding to scrap it altogether)
84. In Burma, where democracy was victim of the stratocracy for a long time, fresh harsh measures caused greater distress to the people and pushed the goal of democracy far a field. In Afghanistan, where government’s efforts to restore

normalcy were thwarted by the forces of terrorism, development is the casualty along with democratic institutions.

85. In South Asia, India has emerged as an oasis of comparatively secure and stable political system providing the necessary wherewithal for peaceful, inclusive economic and social change. If in spite of this, there are signs of social unrest, it is the symptom of a society in transition undergoing dynamic changes, which the revolution of rising expectations has unleashed. To that extent, this ferment has to be viewed positively. The success of the Indian experience to manage the contradictions and diverse aspirations of a plural society peacefully is fundamental to spreading its message in its periphery, where the forces of instability are undermining democratic institutions and economic and social justice for some time. Political instability in the periphery, in turn, undermines all round development of the entire region. This is cause for concern, particularly when old sources of conflict are being compounded by new threats of nuclear proliferation, environmental degradation, terrorism, dangers to public health from sources like HIV/AIDS and Avian Flu etc.

## XII

86. In the fast and ever changing global scenario, the task of the Indian diplomatic service was underlined by the External Affairs Minister Pranab Mukherjee while inaugurating the building of the Indian Foreign Service Institute in New Delhi on the birthday of the founder of the Indian foreign policy, Jawaharlal Nehru (November 14). He said:

“...from my perspective, an essential priority for the world today has to be a new consciousness, not just among the political elites, but also among the peoples of the world, that their choices and their

actions affect all others on this planet. This consciousness is what would break down the barriers to greater global cooperation and lead to the structure and processes that are needed to address international challenges, such as climate change and energy security. And this is where the voice of India's diplomats can best be heard. However, this is a subtle task. A narrow consciousness can hardly be best communicator of a global consciousness. Therefore I would call upon our future diplomats to reflect the best of Indian civilization when interacting with the world."

# **INDIA'S FOREIGN RELATIONS - 2007**

## **SECTION - I**

### **GENERAL**

# Blank

## **001. Address by Prime Minister at the Pravasi Bharatiya Divas.**

**New Delhi, January 7, 2007.**

I should begin by wishing you all a very happy new year! I am delighted to welcome delegates from different lands to this blessed land of their ancestors. We feel truly proud that in this hall we find today the entire world represented. This gathering, ladies and gentlemen, truly symbolizes the ancient Indian yearning for "Vasudhaiva Kutumbakam" - the whole world is one family.

We are one family. The whole world is our home. That is why I have often said that while the sun has set on many great empires of the world in the past, the sun will never set on the world of the Indian diaspora! From Fiji in the East, to Los Angeles in the West, from Cape Town in the South to Toronto in the North, the people of Indian origin are the world's most globalised community.

Each time we have met we have had the honour and privilege of hosting as our Chief Guest an eminent Pravasi. This year I am delighted to welcome amidst us Professor S. Jayakumar, the Honourable Deputy Prime Minister of Singapore. Singapore is a special friend of India. Our engagement with the countries of South East Asia holds a great deal to the support we have consistently received from the Government and People of the friendly country of Singapore. We are all greatly pleased, therefore, to have Professor Jayakumar in our midst. His life and his work are a role model for younger generations.

We are truly committed to work with Singapore and other like-minded countries to strengthen our links with South East Asia and East Asia. Our destinies are truly inter-linked. We are committed therefore to explore all options to foster closer, multi-faceted links with South East Asia and East Asia to usher in a new arch of prosperity in this extended region and extended neighbourhood of India.

The Pravasi Bharatiya Diwas is a celebration of the global Indian. It is also a celebration of the home-coming of the global Indian. That is why we meet here in India in January. It is on the 9th of January nearly hundred years ago that the "Greatest Pravasi" Mahatma Gandhi returned home from South Africa and inspired us to wage a non-violent peaceful struggle for freedom from foreign rule.

Our freedom struggle and the process of our nation building after independence have been one of the great adventures of humankind cutting across race, language, religion and ethnic identities. India's civilisational pluralism has made it possible for us to reach out to the world and seek its support in our struggle for freedom and for Independence.

When I went to South Africa last year I was deeply moved by the deep bond that unites the peoples of India and Africa. In the past, this was the bond of our shared struggle against colonialism and against apartheid. Today, it is the bond of our combined effort to regain our due place in the comity of nations.

When I meet Heads of State and Government and business leaders in distant lands they tell me very proudly that the Indian community in their countries, is a great asset, that people of Indian origin are highly creative, productive, enterprising, peace-loving and devoted to their families, their communities and their neighbourhoods.

I would like to take this opportunity today to express a special word of thanks to the Indian American community. We are happy that the United States has adopted a legislation that will enable the US to engage in cooperation with India in the field of Civil Nuclear Energy. This is an important step forward not just in India-US bilateral relations and also as an essential first step that will enable India to engage in cooperation in the Civil Nuclear field with other countries that are members of the Nuclear Suppliers Group. This process will increase the range of options available to secure our country's growing current and future energy needs. This initiative is therefore a vital input to the critical process of enlarging our developmental options. And I thank the Americans of Indian origin for the stellar role that they played in ensuring that this legislation was passed through the US Congress.

I thank the overseas Indian community and its leaders who played a very significant role in highlighting the importance of this important initiative in the US and elsewhere.

I take this opportunity to thank the nonresident Indian communities in West Asia and other parts of the world for the handsome contribution their remittances make to the strengthening of our economy.

This year the theme of the Pravasi Bharatiya Diwas is "Rooting for the Roots". Let me, however, suggest that your being here is not just about

"roots". It is also about "branches". Even as you discover and nurture your ancient 'roots', I urge you to extend your 'branches'.

We in India wish to see you engaged in India's great adventure of building an India free from the fear of war, want and exploitation. India has now emerged as one of the fastest growing economies in the world. India's growth process creates enormous opportunities for promoting cross border flows of trade, capital and technology. I would like overseas Indian communities to take full advantage of these exciting opportunities that are now on the horizon. I would like you to reach out and invest in a new India. Invest not just financially, but intellectually, socially, culturally and, above all, emotionally. Your roots are what bring you here. Your branches are what will keep you engaged year after year here in India's great development saga. Come engage with the new India.

I am conscious of the great importance of enhancing educational opportunities for persons of Indian origin for study in our country. I want Indian universities to be more open to children of overseas Indians. India is the land of the ancient universities of Takshasila, Nagarjuna and Nalanda, to which students came from far off places. I am delighted that Singapore, along with China, Japan, South Korea and other countries in the region, is supporting us in the Nalanda Project to which Professor Jayakumar made such a handsome reference. I agree with the sentiments expressed recently by Hon'ble Mr. George Yeo, the Foreign Minister of Singapore, that the Nalanda Project should emerge as "an icon of Asian renaissance", and "a centre of civilizational dialogue and inter-faith understanding", as indeed it was in the ancient times.

In this gathering last year I had spoken of the proposal to establish a University for Persons of Indian Origin. This proposal has been under active consideration in the past year. We envisage the proposed University as oriented to meet the needs of the overseas Indian community in the most sought after disciplines such as Science, Engineering and Management. Our aspiration would be to impart quality education at par with the best Universities in the world. The challenge now is to create the requisite enabling framework that will adequately meet these aspirations. We hope to do this in the coming months.

A proposal to establish an Indian Overseas Facilitation Centre is presently being developed and examined. This is envisaged as a source of investment advisory services for overseas Indian investors. This proposal is being developed on the understanding that an Indian entity, independent of the

Government, though supported by us, and set up in partnership with industry, could be an effective instrument to liaise with members of the Indian Diaspora on matters related to investment in our country.

To ensure that we reap India's demographic dividend and benefit from the significant labour supply gaps emerging in countries with ageing populations, we must take a strategic medium to long-term view of overseas employment opportunities.

It is time for the overseas Indian worker to move up the wage chain and India to be perceived increasingly as a provider of skilled manpower in diverse fields. A suggestion has been made that a professional body should devise an appropriate strategy to give shape to this idea. Towards this end the constitution of a Central Council for the Promotion of Overseas Employment has been mooted. This proposal is also being examined by the government.

I wish this interaction between overseas Indians and the people of India to inspire Indians at home to take a broader view of the world. When I was in Mauritius I said to some of the Mauritian people whose ancestors hailed from Bihar that they should go to Bihar and inspire the people there to make a Mauritius out of Bihar. I could say the same thing about other parts of the country. When we Indian farmers creating agricultural wealth in California and in the trying climes of Canada, I wonder how much more our own farmers in India are capable of achieving.

I sincerely hope that we in India can work together to create an environment in which the best of every Indian can find his or her fullest expression. I want every Indian living and working in India, to aspire for the global recognition that a Zubin Mehta, a Lakshmi Mittal, an Indra Nooyi, an Amartya Sen and our chief guest Prof. Jayakumar or a Kalpana Chawla gets when they go overseas.

India is known for its pluralism, for its inclusiveness, for its willingness and ability to provide a home for all faiths. Every great religion of the world has found a home here and is practiced in peace here. This pluralism, this sense of "live and let live", this mutual respect and celebration of diversity helps us to live in peace in distant lands and among different cultures. That is why I say that every person of Indian origin is an embodiment of the message, the idea of India. India is an ancient civilization but we are a young nation. I believe India's efforts for social and economic transformation in the framework of an open society and an

open economy, committed to the rule of law committed to the respect for all fundamental human freedoms is of great historical significance. Our success will have a profound influence on the course of human civilization in the 21st century, when we see strife and tension building up everywhere. I invite you to be active participants in this great saga of adventure and enterprise of building a new India.

I once again wish you all a very happy, peaceful and prosperous new year.

**002. Speech by External Affairs Minister Pranab Mukherjee at the Pravasi Bharatiya Divas on "Developmental Challenges of the States: Partnership Opportunities".**

**New Delhi, January 8, 2007.**

My colleagues from the Cabinet,

Chief Ministers,

President CII, Shri Seshasayee,

Ladies and Gentlemen,

I am happy this morning to be in the midst of this distinguished gathering of overseas Indians from across the world. The observance of Pravasi Bharatiya Divas in the first week of January has gained a prominent place on all our calendars. There could probably not be too many better ways to begin a new year than such an occasion that provides us the opportunity to meet, compare notes and generate fresh ideas that all of us gathered here could harness to mutual benefit. The overseas Indian community today constitutes a significant economic, social and cultural force in the world. In the recent past, the community has also made its presence felt by gaining positions of political leadership and public authority. Professionals and business leaders of Indian origin are already playing a role in the economic growth story of India. I have no doubt that this role will continue to strengthen and grow in the future.

I am also happy that the Chief Ministers of ten major states are participating in this plenary session. To my mind, this session and the next in which the state Chief Ministers interact with all of you are perhaps the most important

part of this conference. The states of India today constitute the theatre of India's development effort. State Governments are at the cutting edge of this effort and their agencies are the ones most closely involved in it. While the pace of development in different states has been varied, there is no doubt that, if the benefits of growth are to reach larger and larger sections of our population, all the states of India will need to redouble their efforts and fashion their policies accordingly.

**Ladies and Gentlemen :** India stands at a definitive threshold insofar as her developmental experience is concerned. All the 'miracle economies' that demonstrated phenomenal growth and prosperity and today rank as major economic powers in the world made that transition when the size of their working age population as a proportion of the national population was the highest. Over the next decade, India's demographic structure will be a similar one. Even today, India is a country of young people, with 54 percent of its population in the age group below 25 years. This will be a time when it will have the potential to dramatically enhance labor supply and productivity. It will also have the ravenous appetite to maintain high rates of saving and investment that only a 'young' work force can.

There is a caveat, however. In the ensuing years, we will have to invest in considerable measure in social and human capital, in innovation and in physical infrastructure as well. The future growth prospects for the country will be predicated substantially on what the states of India do over the next decade. There is, clearly, a need to ensure that good governance and fiscal prudence are brought center stage.

Many factors work in our favour as we seek this outcome. We are an outstanding example of a large working democracy. Home to over a billion people, India with 28 states and seven union territories is also an example of a successful federation. The rest of the world sees India as a continent, if not in size, surely in the diversity of its people and its numerous contrasting states. We are also firmly set on an impressive economic growth trajectory of around 9 % per annum. Experts estimate that in a decade from now, India is likely to be the third largest economy in the world. A significant proportion of world's output in areas such as information and communication technologies, automotive manufacturing, light engineering, biotechnology and pharmaceuticals is likely to be generated in India.

Most of what we witness today would not have been possible without the reform process initiated in 1991, by a Government with which I was then associated. Although Governments of different political parties held power in between, the reform process has continued. This is because rapid growth is essential to raise

the incomes of the mass of our population to bring about a general improvement in living conditions and to generate the resources needed to provide basic services to all our people.

As we approach the Eleventh Plan, we are fully conscious of the fact that the economic growth so far has failed to be sufficiently inclusive. Agriculture lost its growth momentum after the mid-1990s. Employment generation continues to be slow. Far too many people still lack access to basic services such as health, education, clean drinking water and sanitation facilities. Women have increased their participation in the workforce but continue to face discrimination and are subject to increasing violence, one stark example of which is the declining sex ratio.

With this in view, the 11th Plan is being designed to reduce poverty and focus on bridging the various divides that continue to fragment our society. It will seek to reduce disparities across regions and communities by ensuring access to basic physical infrastructure as well as health and education services to all. It will recognize gender as a cross-cutting theme and commit to respect and promote the rights of the common person. It will also reach out to many groups that may still remain marginalized. These include adolescent girls, the elderly and the disabled who lack family support, children below the age of three and others who do not have strong lobbies to ensure that their rights are guaranteed.

As I said earlier, there is little doubt that future prospects for economic growth in the country will depend in large measure on all the States acting in tandem and all performing reasonably well. While Government of India has been consistent in reforming and liberalizing, the States in India have shown wide variance in adapting to the changes. Some States have been quicker and more responsive than others. As a result these States have grown faster than the others, and continue to do so. If this trend persists, the lopsided development within India could pose grave problems for the country in the future. Therefore, it is essential that the States lagging behind carry out the needed reforms so that they can attract investments which are essential for growth and poverty alleviation.

In this context I am thankful for the stalwart response of the overseas Indian community to India's call to be a catalyst for development and contribute in nation-building activities back home. The creation of the Ministry of Overseas Indian Affairs by the Government acknowledges the fact that this community will be an important partner in the emergence of India and play a role similar to the one being played, for example, by overseas Chinese in the growth of China. You have the knowledge, expertise, experience and capital and can

contribute in a big way towards not only enabling India to be on the path of development and reforms, but also towards balanced development within India.

I would accordingly appeal to all the State Governments to create a conducive atmosphere within their respective States so that interested overseas Indians and companies run by them are attracted to be part of the development process through the now very successful public-private partnership model. State Governments should take specific initiatives and devise their own strategies to benefit from the creativity, the talent, the enterprise, the enthusiasm and the commitment of the members of the overseas Indian community.

**Ladies and Gentlemen :** Let me mention a few broad areas where the potential for such partnerships exists. I would focus first on the social sector. There is an urgent need in India for developing participative models for sustainable development in the rural areas. I know most of you still have very strong links with the soil of this land and can work out public-private partnerships to transform lives and rural economies. Civil society organizations in India have gained strength and are trying new experiments to reach sections of society that have hitherto not seen the fruits of growth and remain vulnerable. I see a great role for all of you in bridging the digital divide and taking basic services like education, health, drinking water and sanitation to our villages.

Secondly, there remains a large infrastructure deficit in the country. For example, Indian ports still take a much longer time to make a turnaround than some of our neighbouring countries. The condition of our highways, airports, transport and most of all, urban infrastructure, conveys the same story. There is an urgent need for aggressive investment to improve the country's infrastructure through higher levels of foreign direct investment and technology infusion. According to UN statistics, while FDI inflows to India have risen by more than 20% to reach \$6.59 billion in 2005, this remains a fraction of the total global foreign investment of \$916 billion. There is definitely a lot of scope for investment in infrastructure for our friends from overseas.

Thirdly, a large proportion of India's population continues to depend on agriculture for its livelihood. Unfortunately, as statistics reveal, the contribution of agriculture towards India's GDP has been declining over the years. The negative fallout of this, like suicides by farmers, is a worrisome trend. Surmounting the vagaries of weather and processing and marketing

of agricultural products at remunerative prices are the main problems for the Indian farmer. There exists immense potential for investments in irrigation, food processing and marketing of agricultural products and I feel many of you would have the advantage of understanding better the cultural moorings of the Indian farmer.

Fourthly, given its demographic structure, educational requirements in India are stupendous. Many States of India have yet to achieve even a 70% literacy rate. To ensure that a young India is able to keep pace with globalization, education is of critical importance. While Government has taken several measures through policy and legislative frameworks, there is need for all of us to work together for ensuring and enhancing the quality as well as broader coverage of education for all Indians.

Fifthly, our competitive edge needs to be maintained and enhanced. India's competitive advantage has been on account of the highly skilled manpower that the country has been able to produce. Many sitting in the audience are shining examples of this, of whom we are very proud. More investment in research and development (R&D) and providing more opportunities for innovation and technology development will enable us to harness the full potential of our skilled man-power. Some of our friends from overseas are in a position to bring together the R&D efforts of the countries in which they reside with those of India for better synergy for both sides.

Finally, for a growing economy, and for a country of India's size, energy security assumes great importance. Not only are cleaner and renewable sources of energy required to be tapped, efficiency in the existing use of energy is essential to release additional amounts for development purposes. New and innovative methods of addressing the energy deficit become important. Our friends from overseas, having the knowledge, expertise and experience in this area, can contribute immensely in meeting the requirement of energy security in India.

I hope that after this plenary session, representatives of the various State Governments present here and our distinguished overseas friends would be able to work out meaningful partnership roles for the development requirements of the States. My Government is always present to provide the helping hand.

### **003. Interview of External Affairs Minister Pranab Mukherjee with the weekly *India Today*.**

**New Delhi, January 12, 2007.**

[The quintessential politician and a veteran of many a political battle, Pranab Mukherjee, as external affairs minister, is typically in the thick of things. Not only does he continue to head a dozen important government committees but is now on a hectic tour of India's neighbours including Pakistan and the ASEAN summit at Cebu to promote India's foreign relations. Before he left, he sat down for an hour-long interview with INDIA TODAY Editor Prabhu Chawla and Associate Editor Saurabh Shukla in the executive drawing room of South Block. Excerpts from the interview.]

**Question:** As part of your tour of India's neighbours you would also be making your first visit to Pakistan as foreign minister. What is your agenda?

**Answer:** I am going to Pakistan, firstly, to extend an invitation to President Musharraf to attend the 14th SAARC Summit. That is the official purpose. And surely we will not discuss the weather, we will discuss issues which are there. We will discuss SAFT with all other SAARC countries, tariff reduction has been finalised. But with Pakistan this has to be done still. Similarly, we would also like to review at the foreign ministers' level the third round of Composite Dialogue that just got over.

**Question:** The biggest impediment to the peace process is the issue of terrorism. Will you be seeking an assurance from General Pervez Musharraf that all terrorist acts against India will stop?

**Answer:** The assurance was obtained by Atal Bihari Vajpayee on January 6, 2004. President Musharraf assured him that Pakistani territory or Pakistani-dominated territory will not be allowed to be used by terrorists. The question is not of assurance; the question is how these assurances are actually implemented.

**Question:** You said General Musharraf's promises on terrorist camps are not being implemented. You used the word "unconvincing".

**Answer:** What I stated is that infrastructure of launching terrorists has not been dismantled. His (Musharraf's) pledges have not been implemented.

**Question:** But do you think that the peace process will be affected if terrorism continues from across the border?

**Answer:** That is the issue which has been flagged at the foreign secretary-level meeting. We will flag it again.

**Question:** Do you think we can trust Musharraf now?

**Answer:** We have to deal with the head of a state. The basic presumption would be that we would trust each other.

**Question:** What about Jammu & Kashmir? Do you have any package solution?

**Answer:** I don't have any readymade solution.

**Question:** But are we discussing a Kashmir solution on the lines of the four-point formula that General Musharraf has been suggesting?

**Answer:** We are trying to resolve the issue of Kashmir in the context of Shimla Agreement, Lahore Declaration, and the series of talks which have taken place; we are having a composite dialogue of which resolution of the Jammu and Kashmir issue is a part. In that context we are going to discuss it. These are the issues that have been raised from time to time and the responses are there; you have heard the response of the prime minister in Amritsar.

**Question:** Are your allies constraining you on foreign policy choices, be it Sri Lanka, the US or Iran? Your allies are dictating foreign policy choices now.

**Answer:** No, not at all.

**Question:** But you have to do a lot of explaining to them.

**Answer:** Yes, as I have explained to my Left allies, I have equally explained it to the BJP leaders. Because parliamentary democracy demands that when there is a broad consensus in respect of foreign policy we should try to maintain that consensus. Keeping that in view, we apprised them of the developments which took place in our neighbourhood.

**Question:** There have been reservations over the Indo-US nuclear deal. Even the scientists have opposed the deal.

**Answer:** No, only a section of scientists have opposed it. They have expressed their concerns. But these concerns will not be ignored.

**Question:** So are you saying that you will go for 123 agreement only if those concerns are taken care of?

**Answer:** Of course, that is the commitment we have made.

**Question:** Are you also saying that in the current form the deal will not go through, unless your concerns are sorted out?

**Answer:** Unless certain issues are taken care of, certain concerns are addressed, it would not be possible for us to go with it.

**Question:** The Congress is heading a coalition for the first time since Independence. So is handling coalition conflicts a major problem?

**Answer:** Of course, running a coalition government in a country like India is a difficult task. More so when Congress leads the coalition, since most of the political parties were anti-Congress. To have a coalition, to run a coalition government, you require a lot of adjustments, a lot of flexibility. But the success of the coalition Government to a great extent is the contribution of UPA Chairperson and Congress President Sonia Gandhi and Prime Minister Manmohan Singh.

**Question:** You could have done better if it was only a Congress-led government?

**Answer:** That would be a value judgement right now because we do not have the majority.

**Question:** But have you also compromised on your ideology?

**Answer:** Sometimes compromise is not bad. Sometimes absolute power creates problems. There is an old saying that power corrupts and absolute power corrupts absolutely.

**Question:** Don't you think that most national political parties are getting marginalised? Rather, people are looking up to industrialists and entrepreneurs.

**Answer:** I would not put this as marginalisation of politicians or political system. I would put it as the recognition of other sections. Earlier it was monopolised by politicians only. Now there are other sections of the society-industry, sports, academics, judiciary-which are important too. They too have roles to play.

**Question:** Your 1991-96 economic policies and the present ones are almost the same. But you lost the election then.

**Answer:** Compare my Budget of 1982 with Manmohan Singh's Budget of 1991. The policies which I proposed were almost the same but Indian

industry strongly resisted my proposal for NRI portfolio investment. In 1991 it was welcomed because conditions had changed.

**Question:** In the reforms process, you have not been able to fulfill certain things like FDI in telecom and insurance. Labour reforms are also stuck. Is it because of coalition compulsions?

**Answer:** We have done whatever was possible through the administrative route. But where you require legislative support, you need the backing of others.

**Question:** Has the Left been more of a hindrance than an asset for you?

**Answer:** No, not at all. We are getting the support of all their 60 members solidly.

**Question:** But you are paying a price for it.

**Answer:** For everything, you have to pay a price. You are not running a single-party government.

**Question:** You have always been the number one minister. Weren't you upset when Manmohan Singh, whom you once appointed as RBI governor, became prime minister?

**Answer:** I am neither number one nor number two. I am just one of them.

**Question:** Don't you have prime ministerial ambitions?

**Answer:** Thank you for coming.

**004. Address by External Affairs Minister Pranab Mukherjee on the occasion of National Launch of Global India Foundation: "India and the Global Balance of Power."**

**New Delhi, January 16, 2007.**

It is with a feeling of expectation and pleasure that I am here today to participate in the national launch of the Global India Foundation, an initiative which is conceptualized and premised on promoting national resilience, economic prosperity and liberal values and the principal of social commitment in national life. That the Foundation would exemplify these values in its policies, priorities and programmes is important in today's age of globalization, closer interaction between Governments and non-government bodies and institutions. The inputs that we receive from such initiatives to complement those taken by official and government channels are welcome.

2. Think tanks for policy formulation draw upon experience of specialists from diverse fields and provide for long-term perspective planning and research. It is with such expectation that I endorse the objectives and scope of the Global India Foundation and it is my hope that the Foundation will undertake activities ranging from analytical research to informal bridge-building among diverse views as well as provide a platform for informal debate.
3. Friends, the international landscape today is significantly different from what existed even 15 years ago. How do we look at India's vision for the future? Our foreign policy since the time of independence has essentially been to expand India's strategic space. Our policy of non-alignment is our ability to judge and to act on our own judgment on the basis of enlightened self-interest. We do not wish to be passive observers and recipients of the actions of others, but would like to be one of the powers contributing to the shape of a global order which emerges and which allows us to pursue our vital interests. It also encompasses the policy of nurturing and increasing our activism in traditional constituencies in the developing world.
4. As we approach the sixtieth anniversary of our independence, India's international prospects have never looked better. The new optimism about India's future, within the nation and the wider world, is not necessarily an irrational exuberance. It is based on sustained high

economic growth rates that have touched eight per cent and more per annum in recent years. It recognises that for the first time in the last sixty years, India's relations with all the major powers are improving simultaneously. Our engagement with our extended neighbourhood -- from South East Asia to Southern Africa -- has become at once intense and broad ranging. India's ties with countries as far apart as Latin America and East Asia are rapidly expanding. Our relations with our neighbours, including China and Pakistan, are poised for a positive transformation.

5. Today I wish to share with you my assessment of the international situation and the many foreign policy opportunities that beckon India. Any survey of the global situation today must deal with a simple fact. More than sixty years after the Second World War, the structure of international power bears no resemblance to that which obtained amidst the Yalta settlement. The defeated powers, Germany and Japan, which had to accept many imposed conditions on them are today fully integrated into the international system. The once warring European states have integrated themselves into an economically powerful Union. The victorious powers of the Second World War, America and Russia, which went through a Cold War for 40 years, now confront a vastly altered global landscape, which has multiple power centres.
6. Much of the developing world has liberated itself from colonial rule and imperial oppression. Many developing nations have turned in an impressive economic performance in the last few decades. And some of them, especially China and India, are now poised to break the old paradigms that animated us so much in the past: developed versus developing countries, North versus the South, and East versus the West. The new wave of globalisation has begun to accelerate the redistribution of power in the international system. The unfolding rise of China and India has resulted in more than a resurgence of Asia. The consequences of rapid growth in China and India are being felt in Africa and Latin America.
7. Yet, the global institutions -- for the maintenance of international peace and security and the promotion of economic prosperity -- designed at the end of the Second World War continue to dominate our thinking. Resistance to change is natural in all institutions. But change is inevitable. In the current debate on reforming the United

Nations, India has repeatedly underlined the urgency of restructuring global institutions -- both political and economic -- to reflect the new power realities on the ground. The potential for failed states, terrorism and religious extremism, and the spread of weapons of mass destruction demand a new global consensus on a number of issues. These include when and where to use force against new security threats, the norms for international legitimacy, and the relationship between national sovereignty and external intervention. For now, there is no international agreement on the very definition of new threats, let alone on the means to deal with them.

8. Where does India stand in the unfolding global order? And what should be our foreign policy priorities in a world that is changing in so many different ways? The biggest challenge for our foreign policy, however, lies in changing our own mindsets. The Indian strategic community must come to terms with our increasing weight in the international system. Today's India is not a bystander to the actions of other powers. The choices India makes today have the potential to change outcomes on issues ranging from global environment to
9. From a practical reading of the current world situation, it is not impossible to see that balance of power politics of the kind seen in 19th century Europe makes little sense in today's globalising world. Today, there is unprecedented engagement and cooperation among major powers. The prospect of a war -- either cold or hot -- between the great powers is rather remote. Their economies are ever more intertwined and there is unprecedented political cooperation among great powers that were once rivals.
10. What the world needs, then, is not old style balance of power but a well-crafted system to promote a "balance of interests" among the major powers. No structure of international security will endure if it does not take into account the interests of all the major powers. That is also true of regional security arrangements. To be credible, such a structure must also ensure a balance of interest among states in different regions. Above all, amidst the breakdown of traditional territorial barriers and the growing impact of the information revolution, diplomacy is no longer limited to states. To be successful in the modern age, we need a balanced approach to the interests of the rich and poor, privileged and under-privileged cutting across national boundaries.

11. In our immediate neighbourhood, Indian policy has often been misconstrued as a search for hegemony. We have also often been accused of treating South Asia as an Indian sphere of influence. India's primacy in South Asia is based on demography and geography. We have borders with all the other South Asian countries, while only Pakistan and Afghanistan among the SAARC states share a frontier with each other. That reality will not change. India's commitment to develop political relations with its South Asian neighbours on the basis of sovereign equality and mutual respect is underlined by our recent decision to upgrade the 1949 friendship treaty with Bhutan and our willingness to review the 1950 treaty with Nepal. Amidst the increasing globalisation of South Asian economies and polities, there is no question of India pursuing the outdated idea of an exclusive sphere of influence. India's strong support to the entry of China and Japan into the SAARC as observers underlines India's commitment to open regionalism in the Subcontinent.
12. The real opportunity in South Asia today is the prospect for shared prosperity between India and her neighbours. For too long we in South Asia had little to share but poverty. Today, amidst high growth rates across the Subcontinent, we are in a position to advance together through free trade, open borders, and regional economic integration. Trans-border transport and energy corridors would not only link the Subcontinent within itself but also with the abutting regions of South East Asia, Central Asia and the Persian Gulf. On its part, India is determined to open its markets to the neighbours. India is conscious that no South Asian nation can succeed on its own. We must create a stake for every nation in the economic success of the other. As we prepare to host the next SAARC summit in New Delhi, India will take the initiative in accelerating regional economic and political cooperation. We will also play a positive role in the deepening Asian economic integration as well as the establishment of new trans-border transport networks and energy pipelines with our eastern neighbours. In this context, the "Look East" policy has become central to our new strategy to intensify the development of our North Eastern region.
13. We hope to replicate our success in the east with a similar diplomatic thrust towards our western neighbours. Developing liberal trading regimes, better connectivity and economic integration with our north-western neighbours, Pakistan and Afghanistan, Central Asia, West Asia, and Africa are now high priorities for my government. Africa

has always enjoyed a special place in our foreign policy since independence. India is determined to become a long-term partner in African growth and is ready to contribute to more enduring capacity building on the continent.

14. As West Asia confronts dangerous turbulence and political fragmentation, India is prepared to contribute fully to the peaceful resolution of various conflicts in the region. Finding a balance between divergent interests of regional forces has become more urgent than ever in West Asia. We know from our own experience that stability and prosperity to our west accelerates our own economic growth. India has a long record of contributing to peacekeeping missions in this region. We would like to build on this record and help structure a cooperative security order with our many friends and partners in this region.
15. The end of the Cold War has liberated India to simultaneously deepen our relations with all the major power centres. We are no longer bound by the Cold War paradigm where good relations with one power automatically entailed negative consequences with its rivals. No great power today pursues exclusive cooperation with others. Nor is any one great power asking us to limit ties with others. India has learnt that increased cooperation with one power opens the doors further with others. For the first time in India's independent history, it is now on an upward spiral of improving relations with all the great powers. For all the gains we have made in recent years, our relations with the U.S., China, Russia, Japan, and Europe are all way below their full potential. It is our task in the coming years to deepen cooperation with them all. We will endeavour to inject real political content into the strategic partnerships that we now have with all the major powers.
16. As a confluence of many civilisations, it is only natural that India has consistently rejected the notion of a "clash of civilisations". Unfortunately, the idea of a "civilisational war" has, however, gained some salience in recent years. India, on its part, is ready to join the various international efforts to promote a more intensive engagement among different civil societies, religions and civilisations. Located at the cross-roads of different civilisations, India has for centuries been home to many religions and cultures. We are ready to share our experience with others to promote diversity and tolerance in the world.

17. We are in the middle of an extraordinary technological revolution that promises to radically improve the human condition and accelerate the redistribution of power among states. States that are capable of adapting to the new technological revolution and are in a position to contribute to the new knowledge economy will prosper in the new age. India, with its favourable demographic profile and recognised strengths in the emerging knowledge industries, must take full advantage of the new opportunities to reposition itself in the global order. Our efforts, impressive as they have been so far, have run into a whole range of high technology sanctions imposed on India collectively by the advanced countries since the mid 1970s. Removing these restrictions, set up in the name of non-proliferation, and the associated "catch-all" provisions barring the sale of most advanced technologies in the areas of space, computing, communication, etc., has been a major objective of Indian foreign policy for decades. Success is finally at hand with the on-going implementation of our nuclear agreement with the United States signed in July 2005. We are now on the verge of liberating ourselves from this high technology blockade. The prolonged scientific isolation coupled with political scare-mongering has whipped up much confusion on the provisions of the Indo-U.S. nuclear deal. The initiative of the U.S., backed by other major powers including Russia, France, Great Britain, as well as our partners in the developing world, including Brazil and South Africa, acknowledges the importance of resuming civilian nuclear cooperation with India and the centrality of India in the construction of a credible non-proliferation system. Our track record on this issue has been accepted and vindicated.
18. As the world comes to terms with a rising India, we must, in turn, bear the burdens that come with being an important power. I would like to assure this august gathering that our government will not fall short of the expectations from our own nation as well as the world. Whether it is in addressing the new global challenges -- from trade to environment to international security -- or in the new regional opportunities for peace and prosperity, India is ready to fulfill its obligations.

Jai Hind

## **005. Inaugural Address by External Affairs Minister Pranab Mukherjee at the Petrotech Conference - 2007.**

**New Delhi, January 16, 2007.**

My colleague & friend, Shri Murli Deora, Hon'ble Minister for Petroleum & Natural Gas, Excellencies, Distinguished delegates, ladies & gentlemen,

It is a great privilege and pleasure for me to join you here at the Inaugural Session of Petrotech-2007, the 7th International Oil & Gas Conference and Exhibition.

During these last 12 years, the Petrotech series of conferences and associated events have periodically brought together a wide-ranging array of major players in the field of energy and hydrocarbon, from both India and abroad. The event has proven its success and usefulness in showcasing India's advances in energy sector, as also the challenges and opportunities before her, enhancing our interaction with the rest of the world for mutual benefit, and in addressing some of the major topical global concerns. Renowned, erudite, and eminent policy-makers, administrators, scientists & technologists, managers, and traders, who congregate biennially for these events, have endorsed their support and approval through their increasing and stronger participation progressively.

A most welcome feature of the Petrotech this year is the conclave of 11 distinguished petroleum ministers from countries representing OPEC and other producers as well as consumers. To the visiting dignitaries, as well as to all distinguished delegates here, I extend my greetings and welcome.

I also wish to take this opportunity to congratulate Shri Murli Deora, and his collaborators from India's hydrocarbon sector, and in particular Oil and Natural Gas Corporation, for organising such an impressive mega international event, in a sector of over-arching importance, along with a series of other focused deliberations on some specific themes, and organizing an international exhibition and a Buyer-Seller Meet.

Excellencies, ladies & gentlemen,

The Petrotech themes have been topically relevant, just as the contemporaneously apt theme this year is, 'Energy, Economy, Equity, & Environment'. Energy is a prime mover for the world's economy, indeed for the mankind and the society as a whole. For the continued well-being and growth of economy of a country or society, energy is the most critical factor.

Equity among countries at various stages of development, equity among producing and importing-consuming economies, equity among various users be they industry or the common man, is a sine qua non for our collective benefit. And in this age of ever growing threats to our fragile environment, the imperatives of sustainable development can be ignored only at our own peril. Each of these four areas impinges on the others, in a complex matrix as it were. The theme of Petrotech-2007 interweaves these four major areas of global concern in a balanced and integrated approach. The challenge is to meet the energy needs of all segments of people in an efficient and affordable manner ensuring long-term sustainability and environment protection.

From the primeval age when man discovered to make fire, energy, in its myriad forms, has been vital to us, and therefore subject of complex interplay. Its intricacies and exigencies have now grown manifold. In our globalising world today, given energy's crucial place in the scheme of things, global cooperation and understanding in energy, for all its facets, and at all its levels, is essential and inescapable. 'Oil diplomacy' must remain harnessed with a view to balancing and harmonising various interests, occasionally somewhat or seemingly contradictory, such as those between producers and consumers. I say 'seemingly' advisedly, for there is in reality a natural alliance between the producers and the consumers, both being two sides of the same coin, in a relationship of mutual dependence and cooperation.

The presence here of several oil ministers from a range of countries, including OPEC, as well as other distinguished representatives, is an encouraging evidence of these concerns, thoughts, and the spirit of mutual cooperation being shared widely.

Excellencies, ladies & gentlemen,

With accelerating economic growth rates, particularly in this part of the world, including India, the global energy consumption pattern is set for a significant evolution with attendant wide-ranging repercussions. Our own economy is now growing at 8-9 percent annually. We aim to raise it to double digits within the next five years. This would translate into our energy needs growing many times in the years to come. Hydrocarbons already account for about 45 percent of India's total energy requirement, and 70 percent of this is imported. By 2025 India's hydrocarbons requirement is set for a 4-fold increase. The need for rapidly increasing imports, coupled with a trend of robust price escalation, is therefore an area of paramount importance and concern to a country like India.

Wider and more intensive exploration for new finds, more efficient and effective recovery, a more rational and optimally balanced global price regime - as against the rather wide upward fluctuations of recent times, and a spirit of equitable common benefit in global energy cooperation, are major instruments in a strategy towards this objective.

In recent years, particularly starting with the launch of our major economic reforms process in 1991, India has made concerted efforts to build a vibrant and efficient oil sector in the country. Our UPA Government's policy pertaining to energy and the hydrocarbon sector clearly prioritised, and I quote, "... (to) immediately put in place policies and enhance the country's energy security particularly in the area of oil. Overseas investments in the hydrocarbon industry will be actively encouraged. An integrated energy policy linked with sustainable development will be put in place." Unquote.

Sustained efforts are accordingly being undertaken to strengthen the energy sector with petroleum & natural gas at the forefront of the policy initiatives. Our 'India Hydrocarbon Vision-2025' laid down the framework for this, with a view to achieving country's long-term energy security. The policy has triggered a more definitive paradigm shift towards free market and competition, with increasing private sector and overseas participation in all important segments of our hydrocarbon sector. Ever more areas and opportunities for investment, technology and entrepreneurship are now open for the global players as well as for India's own public and private sectors. Bulk of the oil & gas potential of the Indian basins still remain locked up. The resounding success of these policy measures was already evident in the interest and confidence shown by the variety and numbers of participation in our recent new exploration licensing round.

With time hydrocarbons has evolved from being a consumer industry to now a high-tech industry. Technological innovations and upgradations are vital for improved exploration, conversion of prognosticated resources into in-place resources, and for more efficient and effective recovery. Equally, affordable availability widely of new technologies needs to be facilitated deliberately. Besides spurring economic development more universally, a collaborative and inclusive approach will benefit all partners, such as by environment protection.

In India, too, like elsewhere, we need to ensure that our current accelerating economic growth process is not constrained by energy paucity. Energy security must remain a prime objective of our policies and all-round efforts. We are moving towards this through intensification of indigenous

exploration, bringing in more 'equity oil' from overseas, improving the recovery by leveraging advances in technologies and professional management, and tapping emerging areas like coal gasification.

Greater availability of energy resources must be accompanied by equally sustained efforts for their more efficient use. Conservation through more rational use, application of innovative technologies, and a fundamental rethinking of energy strategy are the need of the day in the face of ever-higher energy consumption levels.

Yet another challenge before us is to reduce and manage adverse environmental impact of enhanced production and consumption of oil & gas. The alternative is disruption of the balance in nature and ecosystems, a sobering prospect of doom. The growing levels of air pollution, adverse climate change, and global warming already pose a threatening spectre. Besides, the environmental damages also otherwise impact the economy adversely - assessed to an extent of 10 % of GDP. This too calls for global cooperation, by way of bridging the knowledge gap, active interaction and cooperation between energy and environment agencies, and adoption of environmental technologies, as a matter of serious urgent attention for restoring and retaining our world as a 'green planet'.

Even without the adverse environmental impact of burning fossil fuels, hydrocarbons are but a perishable, finite source of energy. Redoubled, sustained efforts are required to develop new, alternative, and renewable sources of energy at an affordable cost. Wind, solar, geo-thermal, biomass, hydrogen, and nuclear energy sources are already at various stages of development. The scenario for some of these sources evolving to a level where they can effectively supplement, even supplant, hydrocarbons is distinctly on the horizon, and we need to considerably enhance our investment and efforts for their materialization. As a country with tremendous and growing scientific and technological R&D capability, India will continue to play an ever important role in shaping the future course of energy science globally, and in particular in the development of alternative sources of energy. This capital city of India is a justifiably boastful pioneer in operating the world's largest environment-friendly CNG-run public transport system.

Excellencies, ladies & gentlemen,

This Petrotech series of oil & gas conferences and exhibitions has come a long way in providing a global platform to all stake-holders for interaction and sharing of knowledge and experience, in a collegial approach to

addressing some of the most vital global concerns. These are major challenges of our times, but it is for us to grab them as opportunities with both hands. The present forum provides such an opportunity. I am confident the deliberations and interface at the event this year will progress very significantly towards its objectives.

I wish the Conference all success. With this I declare Petrotech-2007 open.

Jai Hind.

**006. Address of External Affairs Minister Pranab Mukherjee at the 86th annual function of ASSOCHAM: 'March Towards 10% Growth'.**

**New Delhi, January 17, 2007.**

Mr. Anil Agarwal, President of ASSOCHAM, the incoming President, Shri Venugopal Dhoot, Excellencies, Ladies and Gentlemen,

It is a pleasure and honour for me to attend this 86th Annual Function of the Associated Chambers of Commerce of Industry. It is a matter of pride that ASSOCHAM, born in the pre-independence era, has successfully adapted itself to the changing times and continues to be vibrant and dynamic. I understand that in this month of January alone, they are organising six events on a variety of subjects including defence industry, leadership, mutual funds, corporate taxation and education.

I wish to compliment Shri Anil Agarwal, President of ASSOCHAM and his team for their leadership, which has raised the profile of the organization.

The ambitious theme of this Conference '**March Towards 10% Growth**' is a reflection of the paradigm shift in Indian economy and in the Indian mindset. Not very long ago, both Indians as well as foreigners used to describe the slow growth rate of India as 'Hindu rate of growth'. Experts used to compare India unfavourably with the high growth economies including some in Asia. Today, the scenario has completely changed, and India has emerged as the "fastest growing free market democracy in the world". What makes India's achievement distinct is that we have managed to increase growth rate despite the large population, enormous challenges and diversity of our country.

The credit for India's new status goes to the policies of the government, entrepreneurship of the businessmen and the new mindset of the people who have a new vision and determination to create a new India that will find its rightful place in the comity of nations.

There is no doubt that the Indian economy has undergone a fundamental and irreversible transformation. From an economy that suffered shortages of foodgrains till the seventies, we have now become self sufficient and got even exportable surplus. After having gone through embarrassingly low levels of foreign exchange reserves in the past, today we have ample reserves of 180 billion dollars. After having been an aid-recipient for many years, India has now become an aid-giver to many developing countries. From an 'agricultural economy', India has now transformed into a 'service' economy with over 50% of contribution of services to the overall GDP.

India's economy registered an average rate of growth exceeding 8 percent during the last 3 years. In the first six months of the current fiscal year, the GDP growth was 9.1 percent, which is a record in itself. India's industrial production grew at 10.3 percent and manufacturing sector at 11.2 during the current year (up to October), which is the fastest pace in a decade. Exports are growing at three times the growth of GDP at around 25 percent during the last four years.

Given the strong foundation of macroeconomic fundamentals and the accelerating growth in recent years, it is perfectly logical to aspire for a double-digit growth in the coming years. It is an achievable target and realizable goal.

The march of the high growth will put India among the top economic powers of the world. According to Goldman Sachs report, India could become the third largest economy in the world by 2040 in terms of GDP. But the growth is not just quantitative. India is positioned at the vanguard of the emerging new Era of Information and Knowledge Society, thanks to the IT revolution. It is in this context that India is moving up fast in the value chain of global perception.

The economic reforms have unleashed a new entrepreneurial energy and spirit. The Indian manufacturing sector, which needed protection in the past, has now become globally competitive and is seeking opportunities outside India. In 2006, the outgoing FDI exceeded the incoming FDI. Who would have imagined in the pre-reform days that Tatas would manufacture commercial vehicles in Korea, Mahindra & Mahindra would make tractors

in USA, Ranbaxy would produce pharmaceuticals in China and TCS would employ 3500 people in Latin America to develop software in Spanish and Portuguese?

The Information Technology has come as a blessing to India and the Indians. The Indian IT companies have established a new benchmark and a global brand image. Today an Indian name has become a plus point in attracting venture capital in USA. There is a new recognition and respect for Indians around the world. Lakshmi Mittal and Indra Nooyi have made the global corporate world take note of the heights to which Indians could rise even in the old economy.

The youth of India who form over fifty percent of the population have become the new asset of India. The young generation has a totally new mindset with confidence and optimism, ambition and determination. They have been empowered by the IT that has enabled them to connect, communicate, collaborate and compete with the world, transcending the frontiers of nations. This asset of young human resources would fill the shortage of skilled persons expected to reach around 40 million in the developed world by 2020. The new Indian mindset is not afraid of globalization. On the other hand it is seeking opportunities arising from the globalization. Some people have started talking about "Indianisation of the Globe".

While we are excited about the prospects of high growth and prosperity, we are conscious that the benefits of this growth should flow to all sections of the population. While we seek more growth, we also want growth for more. Inclusive growth is essential for sustainable and balanced development of the country. We need to uplift the lives of the people in the villages who form seventy percent of our population. There is need for a second generation Green Revolution. Agriculture has to be transformed from subsistence model to a sustainable business model with value addition from food processing, supply chain, cold storage and marketing. The government is investing in rural development improving infrastructure, connectivity, education and health care. The *panchayati raj* has empowered the rural folk who have shown a sense of responsibility and vision for the development of their villages. The reservation of one third of local body administrations for women has added a new force for development of homes and communities in the rural areas.

We are glad to note that the corporate sector also shares the Government's perspective and has started focussing on business in the rural areas. The bottom of the pyramid is seen by the corporates as a new business opportunity.

The other concern in the context of the high growth is environment. We should ensure that the rapid growth is environment-friendly and sustainable. We have to protect the quality of air and water and maintain the equilibrium of nature.

If the economy grows by ten percent, there will be corresponding growth in energy demand. But our energy situation does not look good. We are at present importing seventy percent of our crude oil requirements at a high cost. We need to intensify our efforts to make use of non-conventional energy resources including bio fuels, wind energy and solar energy. We should look at the example of Brazil, which has reduced oil consumption and pollution through the use of ethanol as fuel. Our companies should go out and acquire oil and gas assets abroad. They should also acquire mines, forests and agricultural land in Latin America and other areas where such resources are available.

I mentioned earlier that human resource is our major asset. But to make use of this asset for higher growth, we need to invest in and reform our elementary and secondary education.

While some of our higher educational institutions have become world class, much needs to be done to improve the school education. Another challenge for high growth is the infrastructure bottleneck. Conscious of this, the UPA government is giving priority to expansion and modernization of roads, ports, airports and utilities. Given the magnitude of the cost and work, we believe that public-private sector partnership is essential for this task.

Excellencies, Ladies and Gentlemen,

In my current capacity as the Minister of External Affairs, I would like to mention the role of the External Affairs Ministry in the growing business engagement of India with the world. We call it as Economic Diplomacy. The Ministry and the network of Indian Embassies around the world facilitate and promote India's economic and commercial interests abroad. The Indian diplomacy works in partnership with the Indian business, Chambers of Commerce and Industries such as ASSOCHAM, contributing to the global agenda of Indian business. The Ministry of External Affairs works closely with the Commerce Ministry in promoting business with markets of developing countries through Focus-Africa, Focus-LAC, Focus-CIS and Focus-Asean programmes. The Government of India has granted over a billion dollars of Lines of Credit

to other developing countries, as part of its policy of development partnership. This has helped the entry of Indian companies in the markets of these developing countries. I take this opportunity to invite the Indian business to work in partnership with our Economic Diplomacy in achieving our common economic goals. I especially invite ASSOCHAM for collaboration with our Ministry, in the same way as CII and FICCI are cooperating with us in organization of business events and projects.

In conclusion, I wish the ASSOCHAM continued success in their mission. I share your optimism that we could achieve ten percent growth, if we put our act together.

Thank you.

### **007. Remarks by External Affairs Minister on Peace, Non-Violence and Empowerment -- Gandhian Philosophy in the 21st Century.**

**New Delhi, January 29, 2007.**

It is indeed a proud moment for me as a Congressman to be here with you today to share my thoughts on peace, non-violence, empowerment and Gandhian philosophy in the 21st Century.

2. What greater validation does one need on the relevance of Gandhiji in the 21st Century than the presence of leaders from 88 nations who have gathered here to celebrate Satyagraha Centenary and share thoughts on Gandhiji? It was exactly one hundred years ago when the mighty mind of Gandhiji forged the instrument of Satyagraha based on truth, non-violence and the power of self-suffering. This instrument helped India shake off colonialism and showed the path to many other countries suffering under the oppressive rule of colonial powers to march towards independence.
3. Gandhiji launched Satyagraha on 11th September, 1906 at a mass meeting in the Empire Theatre in Johannesburg in South Africa to resist the ordinance which the apartheid regime in South Africa sought to impose upon the Indian immigrants.
4. For Gandhiji, Satyagraha was the supremacy of moral force over

physical force. He called it the "Soul Force". Satyagraha, Gandhiji said, is a "vindication of truth not by infliction of suffering on the opponent but on one's own self. That requires self-control. The weapons of Satyagrahi are within him". For Gandhiji the cause was as important as the process. The issue had to be just, true and substantial. Driven by this conviction, Gandhiji stepped forward to take on the collective might of the State. He was the first "Satyagrahi" in the world to go to jail for upholding human rights. In his own words, Gandhiji described the evolution of Satyagraha as "I am myself daily growing in the knowledge of Satyagraha. I have no text books to consult in time of need..." This struggle in South Africa lasted for 8 years from 1906 to 1914 and ended with General Smuts accepting Gandhiji's proposals.

5. After his return to India in 1914, Gandhiji used Satyagraha on a number of occasions from the very local issue of Virangam customs to Indian Immigration Act, Champaran struggle, struggle of mill hands of Ahmedabad, Kheda struggle, Rowlatt Act and Khilafat movement. Over the years, Satyagraha evolved as a powerful expression of the will and aspirations of the people of India to win "swaraj".
6. When Gandhiji returned to India in 1914, the Indian National Congress was almost 30 years old. On the advice of Shri Gokhale, Gandhiji set out on his travels to understand and identify with the masses in India. It was during this period that Gandhiji metamorphosed into a true Indian. He adopted the austere lifestyle of a common man and learnt to empathize with his struggles, sufferings, simple joys and sorrows. With his keen intuition and sensitive heart, he understood the psyche of the nation. His great quality of first practicing in his own life what he preached to others made him "*Mahatma*". The great strength of the Mahatma was total and implicit confidence of masses in him. It was his crusade against communalism in *Noakhali* which inspired Lord Mountbatten to say "*fifty thousand soldiers cannot maintain peace on the western frontier and prevent communal elements from reckless violence while on the Eastern sector there is no ripple of violence because of one man boundary force*". He appealed both to the intellect and the heart of the masses. He again epitomized the aspirations of 400 million people of India when he uttered the two words "Quit India" which started the movement that finally led to "*Poorna Swaraj*".
7. Gandhiji evolved with time and his ideas changed but there were

"*three constants*" in his life and these were *Truth, Non-violence and self-sacrifice*. His ideas and his way of life permeated the collective conscience of India and found expression in all the democratic institutions that we have built over the years.

8. When we drew up our Constitution, concepts such as *fundamental rights, directive principles, abolition of untouchability*, rights for the under privileged and the marginalized, were all inspired by Gandhian thought and philosophy.
9. Our Foreign Policy, which is based on "*Panchsheel*" propounded by Pandit Nehru, was itself drawn from the Gandhian philosophy of peace and non-violence. The five principles of peaceful co-existence are, *respect for each other's territorial integrity, non-aggression, non-interference in each other's internal affairs, equality and peaceful co-existence*. These principles have now become accepted norms of relations between nations and have been recognized throughout the world.
10. The power of Gandhian thought is there to see in our *Panchayati Raj institutions*. Gandhiji visualized five hundred thousand village parliaments which would take power to the people. We are presently engaged in giving this vision a practical shape.
11. In India, globalization is now a fact of life but we have followed a path of *reforms with a human face* . Never for a moment have we forgotten what Gandhiji taught us, that "*the human being*" *has to be at the center of all planning* and future development. Our development paradigm is linked to this philosophy.

**008. Address by External Affairs Minister at the Inaugural session of the International Seminar on "Aerospace Power in tomorrow's world".**

**New Delhi, February 4, 2007.**

1. At the outset, let me congratulate the Indian Air Force on its platinum jubilee celebrations. The IAF has maintained very high standards of professionalism and provided dedicated service to the nation for the past 75 years. The nation acknowledges the vital role played by the IAF both during peace and war. The professionalism displayed by the Indian Air Warriors has been widely appreciated during various international exercises and in UN Peace Keeping Operations. Our aircraft have crossed different continents and participated with distinction in training exercises in France, South Africa, Singapore and the United States. Indeed, these air warriors have put India on the global map.
2. Ladies and Gentlemen, concern for the security of a nation is inherent in the very concept of a nation-state. National security implies the creation of national and international political conditions favourable to the protection and furtherance of vital national interests. The core strength of a nation lies in its ability to defend itself and maintain its freedom to employ elements of its national power to further its vital interests. Traditionally, national security has implied maintaining territorial integrity and internal cohesion. However, modern security concerns transcend mere physical security. They encompass all factors that may impinge upon the socio-economic development, global competitiveness or the overall growth of a nation, including areas such as environment, energy, food and water security. Since some or most of these aspects are in play at all times, a nation needs to constantly exercise national power to condition its environment, internal or external, to nurture its interests.
3. While conventional wisdom dictates that economic and military power are the determinants of international power projection, today the role of soft power, as an important adjunct, can hardly be overrated. A brief look at international power structures reveals that nations that wield influence are those that possess significant economic and military power. However, history, even recent history, shows that such power can be wielded effectively only when enabled by soft power. Soft power shapes perceptions of hard military power,

obviates its use and endows it with legitimacy when the use becomes inevitable.

4. India's strategic perspective has been shaped by the continental and maritime character of its geography. India's peninsular location at the base of continental Asia astride the Indian Ocean places it at a vantage point in relation to the maritime trade that takes place through this ocean. We have a strong stake in the security and stability of these waters, which is linked to energy security, since a very large percentage of Asian oil and gas supplies are shipped through the Indian Ocean. I am pleased to note that the Indian Air Force has the means and the capability to operate in areas away from our shores, if the need ever arises, and is playing its role along side the Indian Navy in ensuring the security of these waters.
5. Ladies and Gentlemen, the international scenario has been undergoing unprecedented changes. Technology and mass media have diminished the physical and psychological distance between nations. Interdependence is a striking factor of today's world. The unceasing stream of mutual influences and cooperative trade has contributed to the making of a new global arena of shared diversity. Non-state actors have increasingly begun to tread on the geopolitical space of nation states. The threat of inter state conflict has receded but there has been no let up in conflict and new non-traditional threats to security have emerged, which transcend borders and which cannot be tackled by nations acting alone. This makes it necessary to isolate factors that cause international insecurity and to work in a cooperative manner to make our societies safer and more secure. As the traditional concepts of military use are yielding to more comprehensive notions of security, we now need to elaborate international structures that facilitate tackling the global character of these non-traditional threats.
6. In recent years, the effects of terrorism have been felt all over the world. It is no longer possible to tackle this scourge in a compartmentalized manner. We are witness to the alarming growth of new linkages amongst terrorist and radical groups. While it took the tragic events of September 11 to focus the world's attention on the threat posed by global terrorism, India has had experience of this kind of terror for longer. In today's interdependent world if we have to grow together, we need to work together to eliminate terror

in its entirety. A judicious mix of hard and soft power is called for as we target the perpetrators of these crimes and their sponsors and as we work to dent their messages of violence, hate and extremism.

7. Since India commenced economic liberalization in the early 1990's our economy is growing at a rapid pace. The high economic growth rates have a natural fall out on energy consumption. India is currently the sixth largest energy consumer in the world and our requirement would increase over the years. Our energy security vision now takes in countries in Africa, Middle East, Central Asia and South East Asia. The understanding on civilian nuclear energy with the United States also flows from this strategic view of our future energy needs and their global impact.
8. Another area of significant interest today is the proliferation of weapons of mass destruction and their means of delivery, including the possibility of their falling into the hands of non-state actors. A new thinking is called for in the light of recent developments and the damage wrought by clandestine proliferation rings. India has an impeccable record on non-proliferation, a long standing commitment to disarmament and is ready to shoulder its share of responsibility in the pursuit of the objective of non-proliferation of weapons of mass destruction and their means of delivery.
9. In the light of both traditional and new challenges, and in the backdrop of the significant enhancement of military capabilities across the globe, India is also alive to the needs of its armed forces and the requirement to maintain significant defence and deterrence capabilities. Our annual defence budget is nearly US \$ 20 billion in absolute terms or a modest 2.27% of our GDP. Aerospace power is an increasingly important area for allocations. IAF's existing aircraft and helicopter fleets are being upgraded and AWACS, Air to Air refuellers, Medium Multi Role Combat Aircraft, Advanced Light Helicopters and transportable radars being procured. This should considerably enhance IAF's potential and reach, thereby permitting it to undertake its national and international responsibilities. We are also devoting resources to air defence, as a part of which we are validating various technologies. This fits in well with the defensive nature of our doctrine of credible minimum deterrence and our commitment to strategic technological autonomy.

10. I note that in your next session you are going to discuss the transition from air power to aerospace power - what you have chosen to call the other RMA. Following the Revolution in Military Affairs, there is a growing focus on space-based assets to support a variety of military force multipliers. There is an increasing tendency as well to view space-based assets as critical national infrastructure to be protected or denied to potential adversaries. Satellites play an important role in intelligence, surveillance, reconnaissance, secure communication and delivering accurate firepower on the ground at large distances. Recent developments show that we are treading a thin line between current defence related uses of space and its actual weaponisation. While the focus on aerospace power is natural in today's circumstances, it is in our common interest to preserve outer space as a sanctuary from weapons and guard it as the common, peaceful heritage of mankind.
11. India has invested heavily in the peaceful uses of space and has a well-diversified and growing civilian space programme that answers to our development needs in education, telecommunications, remote sensing, management of natural resources and other areas. The recent successful launch of multiple satellites and recovery of a re-entry capsule are illustrations of the depth and diversity of this programme. We are also playing an active role in discussions in Vienna and elsewhere on the cooperative use of outer space including through the deployment of space based disaster management capabilities. There are a number of space faring nations today and many more, especially developing countries, wish to reap the benefits of the peaceful applications of space in the future. The security and safety of assets in outer space is of crucial importance for global economic and social development. We call upon all states to redouble efforts to strengthen the international legal regime for the peaceful uses of outer space.
12. As I mentioned before interdependence is the defining characteristic of our times. The prospect of conflict between the major powers is remote, our economies and societies are more than ever intertwined and the need for cooperative and democratic arrangements to respond to common challenges has never been more keenly felt. With its abiding civilizational heritage and its growing economic and technological capabilities, India is ready to contribute significantly to

the elaboration of cooperative responses to shared challenges. We are conscious that the choices we make have the potential to effect global outcomes on a range of issues and are therefore ready to shoulder our share of responsibility for the promotion of global peace and security. The subject of your discussions, aerospace power, can play a crucial role in the elaboration and employment of collaborative structures that tackle threats to our common wellbeing. Aerospace capabilities of persistent surveillance and rapid response enable it tackle diverse threats ranging from non-state actors to natural disasters. Cooperative partnerships between nations and between civil and military forces could allow us to cost effectively develop and deploy emerging aerospace technologies for the benefit of all humanity.

13. With these words, I welcome all the Air Chiefs from friendly foreign countries and wish them a very productive and engaging seminar. I hope you have a memorable stay in New Delhi.

Thank you.

### **009. Annual Lecture by President A.P. J. Abdul Kalam at the Association of Indian Diplomats.**

**New Delhi, February 7, 2007.**

**Past meets the present and creates the future**

**"We think peace after war,**

**Now let us think, why wars have taken place?"**

I am glad to deliver the Annual Lecture to the Association of Indian Diplomats consisting of great minds in this area who had represented our country in various parts of the world. My greetings to all of you. I am happy that the years of unique experience of all of you are made available to the younger generation by way of training programmes and publications and you are keeping yourself posted with the latest serving the interest of our country. I would suggest that you should bring out specific case studies of your rich diplomatic experience and the significant contribution made by our country in maintaining world peace. When I am with you, I was thinking what I can discuss with you. As I see the experience of the experienced amidst the

current players of diplomacy with the energy of the future generation, I have chosen the topic of this lecture as "Past meets the present and creates the future".

### **Changing Phase of Diplomacy**

Diplomacy is a dynamic process. It depends upon the state of the country, the state of the world, the global technological levels and aspirations of the human society. In future we may also move towards getting material from Moon and creation of habitat in Mars. Above all we have to keep peace in space. From the earlier cold war era, the world has become uni-polar. A number of economic powers are emerging in the world such as South East Asia, Gulf Countries, Brazil, China and India apart from the existing USA, EU, Japan and Russia. The revolutions in integrated circuit technology, internet, communication and space technologies have shrunk the distances and created a global village and Genetic Engineering has created a new dimension for healthcare. Thinking globally and acting locally has become a reality. The technologies have revolutionized the communication and contact among the world citizens and large population has their realistic appreciation of situation in other parts of the world. The borderless world enables optimal utilization of talent across the world be it science, technology, industry, economy and business. India, in particular, has demonstrated its upswing in economic development, and also in the field of space, nuclear science, Pharma and auto industries on a strong foundation of its democratic process. We have become a software capital of the world and the contribution of the Indian Diaspora, business leaders and talents in arts and sports are becoming increasingly visible in various parts of the world. Multinational companies are evincing great interest in starting new joint ventures with Indian companies. However the pace of progress will further increase if the country adopts a single window clearance system for foreign investment. The interaction among the reputed academic institutions from all over the world with Indian institutions is on the increase. Indian companies based on their technological and managerial excellence are able to take over large industries abroad.

Now, I would like to share with you my personal experience in dealing with the foreign collaboration which was mainly possible by the counseling, guidance and effective follow-up on a mission mode by our diplomatic community.

### **Pan African e-Network**

During the year 2003-04, I visited African countries such as Sudan, Tanzania, Tanzania-Zanzibar and South Africa. I addressed the Pan African

Parliament on 16 Sept 2004, at Johannesburg, South Africa which was attended by Heads of 53 member countries of the African unit. Based on my study of the communication, healthcare and education needs of the African countries, I proposed the concept of Pan African e-Network for providing seamless and integrated satellite, fiber optics and wireless network connecting 53 African countries.

The proposal was to use the core competencies of our country in the field of IT for providing at least one hub in each of the African countries through which various e-services like tele-education, tele-medicine and e-governance could be provided. Pan African e-Network project brings together the terrestrial network between India and Africa through the international under sea fiber cable network and also the African satellite network services to provide education and health care services from India and Africa to the 53 Pan African nations and also connecting the 53 heads of the state. The universities and Super Specialty hospitals of Africa will also use this Pan African e-Network to provide services and content. I am happy to inform you that this offer has been received very well all over the African Continent and 20 countries will be connected in the first half of 2007 and the rest will be operationalized by early 2008 at a cost of \$100 million.

### **Role of Diplomacy in Programme Execution**

Now, I would like to give the sequence of events which took place before signing of the MoU between India and African Union for implementation of Pan-African e-network project. As soon as the project was announced, a technical committee was appointed by Prime Minister's Office (PMO) to generate the project report. The project report was evolved in sixteen weeks' time coordinated by MEA with technical experts drawn from Department of Space, Rashtrapati Bhavan and Telecommunications Consultants India Limited (TCIL). MEA had also interacted with African Union (AU) and member countries in this period. After review by PMO, MEA organized presentation of the project report by a high level team to Chairman and members of the AU. AU also constituted a Technical Review Committee consisting of members drawn from AU and International organizations. The final presentation was made by the Indian team to the Technical Review Committee which observed that this proposal is in line with the missions and objectives of the African Union and provides tremendous potential for achieving the MDG (Millennium Development Goals) through the use of innovative ICT. Meanwhile, a presentation was made at Rashtrapati Bhavan to the 28

Ambassadors of Pan African countries stationed in Delhi. They also visited ISRO and also familiarized themselves with the operational tele-medicine facilities. I have seen the active contribution of MEA team members and the Indian Ambassador at Ethiopia in coordinating various activities connected with the project in a mission mode by comprehensively addressing the technical, programmatic, financial, contractual and international relationship angle. This enabled signing of the MoU on 27th October 2005.

### **An International Joint Venture - BRAHMOS**

Similarly, I would like to recall the contribution of our MEA team in Russia in the signing of Indo-Russian Joint Venture agreement for BRAHMOS. BRAHMOS is a unique experience for design, development, production and marketing of a missile system - an Indo-Russian joint venture with equal scientific and technological and financial partnership. What we have achieved through this venture is the development and realization of a world-class product using the synergy of technological competence and consortium of industries of partner countries. The BRAHMOS missile is the first supersonic operational cruise missile existing in the world today and can be launched from any type of platform - land, sea, and air and precisely reach the targets either on land or at sea with high lethal effect. The missile has been inducted by the Indian Navy. In addition, the product being internationally competitive, it is able to service a large market with availability in time and state of the art performance at a competitive cost. This has enabled early entry of the product into the world market well before any competitor could emerge. This proves that if the core competencies of nations are combined, best of knowledge products can emanate well ahead of time. This being a new initiative, diplomacy had to play a unique role in visualizing the benefits of the programme to both sides while committing the co-operation and resources.

I am mentioning these examples to illustrate how our diplomatic community closely working with our technological and administrative segments of the Government can facilitate time bound accomplishment of mutually beneficial, multi-lateral, complex international collaborative initiative.

### **Nalanda Indo-Asian Institute of Learning**

Now, I would like to mention about another evolving international partnership as an Indian initiative. To recapture the past glory in the

modern context, in keeping with Buddha's teaching for seeking knowledge in a holistic way by understanding the interconnectedness of things in life and the Universe, it has been proposed to establish a Bodhgaya Nalanda Indo-Asian Institute of Learning in partnership with select Asian countries. I proposed this as one of the missions of Bihar to the Legislative Assembly on 28th March 2006. Bihar Government, MEA and our missions in the South-East Asian countries have a great opportunity to implement this in a mission mode. All of you, with tremendous experience in various countries may be able to support MEA in this mission. You may also be able to support the Bihar Government on the development of spiritual tourism circuits attracting tourists from the country and abroad and particularly the people of south-east Asian countries.

### **World Knowledge Platform**

During my visit to South-East-Asian countries in February 2006, I proposed a joint working programme called World Knowledge Platform. "World Knowledge Platform", will integrate the core competencies of the partner countries to develop knowledge products. This platform will enable joint design, development, cost effective production and marketing of the knowledge products in various domains based on the core competence of partner nations to international market.

Missions of World Knowledge Platform: The convergence of Bio, Nano and ICT is expected to touch every area of concern to the humanity. The "World Knowledge Platform" will take up the missions, in some of the areas given below, which are of utmost urgency to all of us to make our world a safe, sustainable, peaceful and prosperous place to live:

1. **Energy:** Leading to Energy independence using four types of energy systems; solar power using high efficient CNT solar cells, thorium based nuclear reactors and energy from bio-fuel such as bio-diesel and ethanol and hydrogen based fuel cells.
2. **Water:** Desalination, channelization and networking of rivers, layered wells for water storage in hill regions and flood control, water harvesting, water recycling, treatment and water management.
3. **Healthcare:** Diagnosis, drug delivery system, development of vaccines for HIV/TB, Malaria and Cardiac diseases, detection and cure of diabetics.

4. **Agriculture and Food processing:** Increased production of food grain in an environment of reduced land, reduced water and reduced manpower; preservation of food; food processing; cost effective storage and distribution.
5. **Knowledge products:** Hardware, Software and Networking and Storage Products including handheld micro and nano electronic devices.
6. **Transportation systems:** Fossil fuel free transportation systems using renewable energies, safety systems, Hardware and embedded software integration.
7. **Habitat:** Energy efficient, water efficient, pollution free habitat
8. **Disaster Prediction and Management:** Earth quake forecasting, assessing the quantum of rain for particular cloud condition.
9. **Capacity Building:** Quality human resource development for all the above areas including the development of personnel with world class skills.

The world knowledge platform will also evolve a virtual design centre with the participation of collaborating countries. India and partner countries can jointly take certain missions in the World Knowledge Platform. World knowledge Platform will be the launch pad for many innovations that are waiting to be unearthed only by the combined power of partnering nations. In addition to the above task, I foresee research on international peace and understanding with multi-country partnership could be a subject of common interest. This subject can encompass all areas of human development including enlightened citizenship and collective methods to combat obstacles to development particularly all forms of terrorism. I can see with your intimate knowledge of our country's cultural and spiritual heritage and your exposure to multiple nations and their culture, you can contribute by assisting in evolution of Prosperous India and peaceful planet Earth.

## Conclusion

With the above background, I would like to suggest the following missions for the Association of Indian Diplomats:

1. Publication of case studies of effective diplomatic intervention in promoting business, science and social activities for mutual benefits to India and the partner countries.

2. Strategy for showcasing the current Indian development to the various parts of the world to generate joint programmes for mutually benefits. Apart from science, technology and industry based category of products for business promotion, our diplomats can study the core competence of every one of our *Panchayats* and try to link the core competencies of rural enterprises into a marketable export product in a sustainable manner.
3. 25 million Indians living abroad are bubbling with an urge, "what I can give for India". All of you with your experience in various countries may be able to suggest how this energy can be further channelised.
4. Members of Association of Indian Diplomats can take up a task to redefine the role of diplomacy when India is progressing to become a developed nation by 2020 for consideration of the Government.
5. Development of potential of India as a meeting of minds of human thinkers from various countries to develop enlightened citizenship as part of world knowledge platform.
6. The association of Diplomats may consider making suitable recommendations for further facilitating welfare of NRIs and mechanism for solving their issues so that our Ambassadors can win the confidence of the people of Indian origin in all countries.
7. Largest remittance is coming from the NRIs in Gulf Countries. The association of diplomats may like to study the special problems of people of Indian origin in Gulf countries and make suitable recommendations for their entry, working, living and exit.

My best wishes to all the participants of this Annual Lecture of the Association of Indian Diplomats and their families for success in their mission of better international understanding.

May God bless you.

**010. Interview of Prime Minister Dr. Manmohan Singh with Italian newspaper *Corriere della Sera*.**

**New Delhi, February 9, 2007.**

[As an affirmed economic power, an emerging Nation and a new multi-polar protagonist, which is changing the world, India is turning to Italy and is exploring its enormous potential. "Romano Prodi is an old friend and will receive a warm welcome", assured Prime Minister Manmohan Singh during his interview with il *Corriere della Sera*. Yet Prodi, the four Ministers, the President of *Confindustria* and the over 500 entrepreneurs who, starting today, will begin the long Indian mission, will not find only smiles and courtesy: all the economies of the world are knocking on India's door and competition depends on proposals and concrete possibilities.]

**Q. Mr. Prime Minister, in which sectors do you believe there will be a significant increase in the India-Italy economic relations?**

"Our relations are already good and are increasing. In Italy the Indian enterprises are investing in IT, automobiles, pharmaceuticals, and textiles, while in India the Italian companies are investing in machinery, infrastructures and chemicals, just to mention a few. We can and will do more, we want to increase the complementarity between Italy's design and technology and India's manufacturing abilities. At the same time we aim to further develop, also thanks to an agreement in 2009, our already excellent relations with the entire EU".

**Q. Sometimes Italian entrepreneurs complain that the Indian market is not easily accessible...**

"The world is taking notice of us and it is easy to understand why. Our reforms are continuing, we have grown 8% in the last two years and we want to reach 10% in the next four. But we do not want to get ahead of ourselves. The regulations concerning the access to our market respect the international standards and it is in our best interest to attract as many investors as possible. We have our problems, such as the infrastructures and the production of electricity. We will therefore invest in these sectors about \$500 bln in the next decade".

**Q. Are you worried about too much demand, inflation, the increase in wages and the lack of qualified workers?**

"Each growth process creates some forms of macroeconomic imbalance, but I am not worried because our strategy is cautious enough. You

mentioned a lack of qualified workers, but this is only the case in specific sectors and we are dealing with the situation".

**Q. Those who criticise the Indian miracle say that the social inequality has increased, that more resources should be used for the fight against alienation and poverty...**

"They are both right and wrong. Since 1980 poverty has decreased, it was 50% and now we are at about 20-25% of the population. This involves hundreds of millions of people. Naturally, this is still unacceptable and we will use our new resources in the fight against poverty. Social inequality is something different, but has the same needs: education, professional training and involvement in development. It is a challenge and we will face it even though we could have done more in the past".

**Q. India has a leading role in the international scene. The nuclear cooperation agreement with the US is seen by some as a way to contain China's influence: what do you think?**

"I have heard that too, but I think this is incorrect. President Hu was just here; we have excellent relations with China and India cannot be used to contain this or that. The civilian nuclear cooperation agreement with the US will allow us to deal with the energy requirements in an environmentally friendly way and confirms the excellent relations between India and the US. We have common values starting from democracy and we also have common worries".

**Q. For example Iran, where the international community opposes the access to nuclear energy?**

"Iran is a great nation which has its sensibilities and deserves to be treated with respect. We do not encourage in any way nuclear armaments in Iran, also considering that it has signed the non-proliferation treaty. We believe that Iran's energy problems must be taken into consideration and that the Iranian nuclear issue must be solved peacefully between Teheran and IAEA. We have told the US this as well".

**Q. Mr. Prime Minister, India sends approximately half of its international funds to Afghanistan. Am I mistaken or is this a sign of wariness?**

"Naturally you are not mistaken. Many Nations are putting military and civilian effort into Afghanistan and we must all continue to do so. We

must insist because there is much at stake. India is present for the rebuilding and humanitarian aid. We believe that we must give the Afghani people more roads, energy, schools and hospitals. But it is obvious that if the local population will not see improvements also security will deteriorate".

**Q. Do you believe Pakistan could do more to stabilise Afghanistan?**

"The Taliban use Pakistan to organise themselves, certainly Pakistan could do more. Our relations with Pakistan are based on a constructive dialogue and I am attempting to solve the bilateral issues which are still to be dealt with".

**Q. Do you believe that the project, which the US does not approve of, to build a gas pipeline from Iran to Pakistan to India is a good idea?**

"We are in dire need of energy and we are keen on carrying out this project. The negotiations are proceeding".

**Q. What does the situation in Iraq suggest?**

"That democracy is not instantaneous and that it cannot be created at the push of a button or pulling a trigger".

**Q. Many believe that the war in Iraq is accelerating the return of multi-polarism, do you agree?**

"I agree, the world today is multi-polar. Above all, economically speaking, because the ascent of India and China is an irreversible fact and not only concerning the economy".

**Q. Yet a solution is still to be found for the regional crises. It is enough to think about the Middle East...**

"I am extremely worried about the Middle East. And it is obvious that there are no military solutions, nothing can take the place of dialogue. Violence, all violence, represents a danger which should be eradicated above all in the Middle East".

**Q. Mr. Prime Minister, India and Italy do not have the same opinion concerning the UN Security Council. Will this cast a dark cloud on your friend Prodi's visit?**

"India has expressed its will to become a permanent member of the Council and those who believe in our credentials are increasing. Italy has its own

ideas concerning the Council reform, but we can work together to find a solution. A cloud? No, even if it were to rain there will be no problems between Prodi and I".

**011. Keynote Address by External Affairs Minister Pranab Mukherjee at the 9th Asian Security Conference: 'Security Dynamics in Southeast Asia: Emerging Threats & Responses' organised by Institute of Defence Studies and Analysis.**

**New Delhi, 9 February 2007**

I am honoured to address the Inaugural Session of the 9th Asian Security Conference. I see that you have an exhaustive agenda. I am sure your discussions over today and tomorrow would be fruitful and would advance understanding and the search for cooperative solutions to Asian security dilemmas.

It is befitting that sixty years since the Asian Relations Conference was held in this city, this Conference with the theme of Southeast Asia is taking place in New Delhi. Southeast Asia is the starting point of India's Look East policy. This policy conceived in and pursued since the early 1990s was prompted by significant changes in the global politico-economic scenario and by initiation of economic reforms and liberalization in India. ASEAN's economic, political and strategic importance in the Asia-Pacific region and its potential to become a major partner of India in trade and investment were significant elements in our approach. Over time, this policy gradually evolved to include the Far Eastern and Pacific regions. It also facilitated enhanced links with China, Japan, Republic of Korea, Australia, New Zealand, Fiji, Papua New Guinea and Pacific Island States.

Today Southeast Asia and India are partners in harnessing our respective economic, technical and professional strengths. ASEAN countries and India also have a convergence in security perspectives, a common interest in peace and stability in the region and in the maintenance of security of sea lanes of communication. We now have regular, annual dialogue at my level and at the Summit level. These political level interactions are further enriched by meetings of Senior Officials as also specialized working groups in

functional areas - science and technology, health, trade and investment and transport and infrastructure. The signing of the "India-ASEAN Partnership for Peace, Progress and Shared Prosperity" at the 3rd India-ASEAN Summit in Vientiane in November 2004 was a key development in our relations. The 5th Summit in Cebu last month has given further momentum to India-ASEAN ties.

The resurgence of Asia in political and economic terms has been accompanied by the rise of powerful economic forces unleashed by globalization and the trend towards regional economic integration. The engagement in the political and security arena has either followed or led to progressive economic integration in terms of Free Trade Agreements and Comprehensive Economic Cooperation Agreements that have either been concluded or are being negotiated with countries of the region. Since 1990, when our Look East Policy was initiated, our trade with countries of the region has grown from US \$ 8.1 billion to US \$ 67.5 billion and the share of trade with these countries in our global trade has increased from 19.4% to 28.2%.

Following the agreement reached at the Cebu Summit, we hope soon to conclude negotiations on a bilateral Free Trade Agreement with ASEAN. Our vision, as articulated by Prime Minister during the India-ASEAN Business Summit in New Delhi on October 19, 2004, is that of an "Asian Economic Community", which would be the driver of growth and economic integration in the entire region.

The usage of the term East Asia has over time expanded from its narrow confines of North East Asia to encompass the entire region from India to Japan. The First East Asia Summit (EAS) held in Kuala Lumpur in December 2005 was a historic event that underlined this evolution. Speaking at the Summit, Prime Minister Dr. Manmohan Singh said that the long term goal of the EAS should be the creation of a harmonious and prosperous community of nations that would pool its resources to tackle common challenges. He also observed that a virtual Asian Economic Community was emerging with the Free Trade Agreements (FTAs) amongst countries of the region. However, there is a need for a wider perspective so that ongoing processes could become building blocks for a larger vision. It was in this context that we have suggested a Pan-Asian Free Trade Arrangement that could be the starting point for an Economic Community. Such a community would be the third pole of the world economy after the European Union and the North American Free Trade Area (NAFTA).

The theme of this conference - security, cannot be looked at in isolation

from these broader political and economic developments. Even in a narrower sense, a significant aspect of our "Look East" policy has been the growing cooperation and dialogue on security issues both bilaterally with ASEAN countries as well as through multilateral institutions like the ASEAN Regional Forum (ARF), which also brings in significant non-ASEAN players in the Asian region. Our focus, including in our bilateral dialogues and cooperative activities with neighboring states in Southeast Asia and East Asia, has been on issues like border security, maritime security, counter terrorism and energy security. I am delighted to note that your agenda broadly reflects the priorities we have chalked in our dialogue with countries of the region.

Asia's security environment is unique given its geographical expanse and the political, economic and cultural diversity of the region. Our view has been that in Asia, a pluralistic security order based on a cooperative approach to security is the answer. For one, such a polycentric security order would be accommodative of the diversity of the region. It would also be a reflection of the growing strength and confidence, manifested either individually or through organisations such as ASEAN, of the various economic and security players in the region. In today's increasingly interconnected world, each participant has an equal stake and responsibility. Only a pluralistic security order working through a network of cooperative structures can have the legitimacy as well as the wherewithal to deal with the security challenges of the 21st century. This vision has guided our approach to Asian security right from the Asian Relations Conference of 1946 to the recent initiatives including the "Look East" policy.

Our participation in the ASEAN Regional Forum (ARF), which we value, flows from this vision, the 'look-East' policy and closer links with ASEAN as a full-dialogue partner. We consider ASEAN as the driving force of the ARF and believe that the ASEAN way of 'dialogue and consensus' should remain the ARF's guiding principle. Participation in the ARF also enables us to engage with a broader range of countries beyond the ASEAN underlining India's commitment and goal in ensuring regional peace and stability. It also underscores our belief that from India's perspective cooperative security can be looked at only in a broader context going beyond Cold War notions of sub-regions. I am happy to note that there is a greater recognition today of India's stabilising role in the region born out of our restraint, our economic dynamism and potential, the history of our civilisational engagement and our role as a firewall against destabilising ideas and influences. Encouraged by this we will continue to seek in our interaction with countries of the region greater political and economic

convergence, closer people to people links through cultural cooperation and educational exchanges and meaningful security cooperation to meet common challenges.

May I conclude by wishing you success in your deliberations.

Thank you.

## **012. Speech by National Security Adviser M. K. Narayanan at the 43rd Munich Conference on Security Policy.**

**Munich, February 11, 2007.**

I am delighted to have the opportunity to speak before this distinguished audience on an issue that is of direct relevance to India's security. I propose to address the issue of financing of terrorism in the context of a sustained and multi-pronged combat against international terrorism.

International terrorism is recognized today as one of the gravest scourges facing mankind. Terrorism is not a new technique, and the view of many experts is that it may never be fully eradicated. What has made terrorism more lethal and widespread is the adoption of 'suicide' tactics, the availability of modern instruments, and global communications. The effectiveness of terrorism is often enlarged by the elements of theatre in it, magnified further by the reactions of targeted societies. The temptation to employ terrorist tactics is often derived from the comparative advantages that terrorism as a technique provides viz. the rapid spread of images, its immediate impact, and enabling communities that lie at the extreme edge of frustration to make their presence felt.

Admittedly, there is no one monolithic source of terrorism. The diversity of motivations becomes clear from an analysis of different geographical areas.

Undeniably, faith-based terrorism, which is sustained by strong external linkages and connectivity, is the defining global threat today. Intricate networking, connects vast numbers of radical Islamist terrorist groups, though any notion that Islam, the religion, is responsible needs to be categorically rejected.

World-wide, operations of terrorist groups reveal dangerous patterns. An entirely

new breed of terrorists has emerged. Terrorist outfits today have a trans-national reach. New cells and new franchises are evolving. New support structures and financing mechanisms are being created. Passing of messages is becoming more sophisticated. Terrorist outfits are no longer tethered to geographical locations, or for that matter, even to political ideologies. Captured militants reveal that it has been possible to acculturate recruits coming from different climes, backgrounds, skills and countries. Such cross-cultural compatibility is paving the way for deadly attacks in unexpected locales in the future.

The fight against international terrorism is thus likely to be a long drawn out, and sustained, one. There are two major areas on which to concentrate: First, the hard-core of terrorist planning where actual operations are conceived and implemented; and Second, the manner in which sympathy is generated for the objectives of particular cells, where recruits are inspired to sign-up and where hiding places are created away from the rule of law.

For the panel discussion, I shall restrict myself to the First aspect. Reducing the flow of funds and money supply to terrorist outfits and organizations is perhaps the most vital aspect after penetration of these outfits. Reducing the flow of funds would limit terrorist capability to acquire weapons, recruit cadres, establish training facilities and state-of-the-art secure communications. The difficulty, however, is that terrorism is generally a 'low budget' enterprise. Not all terrorist acts require large funds. The need for and quantum of funds is determined by the size and area of the operation.

The more common methods employed by terrorist outfits to generate funds - as experienced in the context of South Asia - are:

**1. Voluntary contributions:** From individuals, members of expatriate communities, and organizations that sympathize with the broad objectives of the terrorist organization. The LTTE in Sri Lanka and the Al Qaeda, regularly receive sizeable contributions through such means.

**2. Forced/Compulsory donations:** Ethnic, ideological and religious terrorists are known to use the technique of forced or compulsory donations. On special occasions such as religious festivals, sending round of 'collection boxes' is fairly common, and provides anonymity as well. Compulsory subscriptions to pro-terrorist publications have laterally become an important avenue for generation of funds. The Pakistan-based Lashkar-e-Toeba's monthly, *Majalah-al-Dawana*, and its weekly magazine, *Al Ghazwa*, are two prime examples.

**3. State support/sponsorship:** The Lashkar-e-Toeba, the Hizbul Mujahideen and the Al Badr (which operate in India), are well patronized, including through provision of funds, by certain official agencies across the border. Shared objectives such as involvement in 'Low Intensity Conflict' provide the excuse for such official support. A tentative estimate of funds made available to such terrorist outfits annually is in the region of a few million dollars.

**4. Extortion and use of coercive methods:** Many terrorist outfits today imitate criminal enterprises. Intimidation of small businesses, individuals and even some State enterprises to extort funds has become common.

**5. Association with Criminal Syndicates:** Jehadi and non-jehadi terrorist outfits seek, and enter into, partnerships with Organized Criminal Syndicates, and outsource fund-raising to the latter. This is largely true of metropolitan cities. It takes many forms, but mainly bank robberies and kidnapping for ransom.

**6. Utilisation of legitimate business enterprises:** Terrorist outfits set up legitimate business enterprises viz. restaurants, real estate, shipping, etc. and utilize part of the proceeds to siphon off funds for terrorist activities. Among terrorist outfits, the LTTE has a very well-established network of legitimate businesses, which provide both funds as well as logistics for their activities. Jehadi terrorist organizations have begun to follow suit.

**7. Stock market operations:** Isolated instances of terrorist outfits manipulating the stock markets to raise funds for their operations have been reported. Stock Exchanges<sup>1</sup> in Mumbai and Chennai (India) have, on occasions, reported that fictitious or notional companies were engaging in stock-market operations. Some of these companies were later traced to terrorist outfits.

**8. Misuse of banking channels:** Legitimate banking channels are regularly

---

1. On May 15 answering questions in the Rajya Sabha it was clarified by the Government that National Security Advisor M K Narayanan did not have any specific names in mind while referring to reported incidents of terror outfits raising funds in stock markets during his address in Munich.

The Finance Minister Chidambaram told the House that the NSA had mentioned about reports of isolated incidents of terrorist outfits manipulating stock markets to raise funds for their operations. He also added that no specific names were given by him. The Minister said the government had no hesitation in examining the issue if any member provided specific names involved in any such operation. Chidambaram said the SEBI, the RBI and other agencies were keeping a close watch on such illegal activities.

being used to fund terrorist operations. Many instances of funds received via banking channels from so-called safe locations such as Dubai and UAE intended for terrorist organizations have been detected by Indian Counter-Terrorist Agencies. Each individual transaction tends to be small so as not to attract attention and to avoid detection. Use of both real, and fraudulent, ATM cards has also been resorted to at times.

**9. Narcotics:** Funds from drug cultivation and trafficking in narcotics are extensively used to fund terrorist outfits. Both jihadi outfits and the LTTE rely heavily on such funds for their activities. The sharp rise in opium cultivation in Afghanistan - which has more than doubled during the past few years - raises concerns of more funds becoming available to terrorists. According to Indian Agencies at least 1/8th of their major interdictions reveal a drugs- terrorist nexus.

**10. Counterfeit currency:** Counterfeiting of currency is currently a favourite method being adopted (by Agencies across the border) to fund terrorist activities directed at India. Large amounts of high quality counterfeit Indian currency are detected each year - the normal route being via Nepal, and Bangladesh.

**11. Charities:** An important source of funds to jihadi terrorist outfits are religious charities. Sincere believers contributing to charities are perhaps unaware that a sizeable portion of the funds go to fund terrorist activities and terrorist outfits. Many of the charities are already designated as 'Terrorist Front Organisations'; yet most continue to operate under new labels. The Al Rashid Trust went through several changes in nomenclature, while the banned International Islamic Relief morphed into the Sanabil Al Khir Foundation. Conduits through which such funds find their way to terrorist organizations include established banking channels such as the Habib Bank in Pakistan.

Moving funds for terrorist purposes to the actual locale where a terrorist act is perpetrated is a carefully executed exercise. Terrorist outfits, as a rule, employ money laundering techniques so as to evade detection by Enforcement Agencies. The most popular means employed in South Asia for laundering funds, is the 'underground and parallel banking system' which ensures placing of funds without actual or visible movement of money.

A combination of conventional money laundering techniques, with placement of funds utilizing the 'underground and parallel banking system' has made it extremely difficult to track funds utilized for terrorist purposes, since no audit or paper trail is available. The globalisation of

terror, and the ability of terrorists to exploit state-of-the-art technology, thus further enhances their capability to move 'hot money' across international borders.

Even the most optimistic forecast is that terrorism as a form of asymmetric warfare will continue for the foreseeable future. International cooperation amongst States is, hence, a sine qua non. States still command larger resources than any terrorist group, and pooling of strengths by all concerned States is critical to defeat terrorism worldwide. Cooperation is needed both in the bilateral and multilateral spheres, including collective approaches through the United Nations. While some improvement has taken place in regard to bilateral cooperation, the role of organizations such as the United Nations becomes critical as terrorism becomes global. The 1267 Committee and the Counter-Terrorism Committee of the Security Council have a key role to play in this respect.

Many countries, including India, have already in place a legal framework for tackling terrorism. Several - India included - have specific legislations to prevent financing of terrorism. India has the:

- (a) Foreign Exchange Management Act, 1999,
- (b) Narcotic Drugs and Psychotropic Substances Act, 2003; and
- (c) Prevention of Money Laundering Act, 2003 (which entered into force in July, 2005), apart from provisions in other Acts such as the Unlawful Activities (Prevention) Act of 1967 as amended in 2004, to deal specifically with the threat of terrorism.

Adoption by the UN General Assembly of the UN Global Counter-Terrorism Strategy in September last year, has enabled a global consensus to emerge on measures that States must undertake to prevent and combat terrorism. India is committed to fully implementing the UN Global Counter-Terrorism Strategy, including measures against the financing of terrorism. India has also joined the International Convention for the Suppression of Financing of Terrorism. We have established the necessary legal, regulatory and administrative framework for combating money laundering and financing of terrorism. A Financial Intelligence Unit-India is already in operation and will be the nodal agency responsible for receiving, processing, analysing and disseminating information relating to suspect financial transactions to intelligence and enforcement agencies.

## Conclusion

India has been working with its international partners and regional organizations to prevent and combat international terrorism. We have constituted Joint Working Groups with 25 States, and regional organizations like the EU and BIMSTEC, for coordinating and cooperating in our counter-terrorism efforts. These Groups meet regularly, and have proved useful in providing a forum for the exchange of information and experiences. In addition, India believes that there is need for far greater vigilance and stricter provisions so as to make off-shore jurisdiction more transparent. In addition, lifting banking secrecy and the corporate veil in terrorist-related cases would help. Some new and innovative disruption techniques could also be contemplated.

The importance of international cooperation in combating global terrorism, in all its dimensions, cannot be over-stressed. Only by showing zero tolerance to acts of terrorism committed anywhere in the world, and by working together, including sharing of intelligence on terrorist activities, can we effectively counter the terrorist threat. States must refrain from organising, instigating, facilitating, participating in, financing, encouraging or tolerating terrorist activities. They must take appropriate measures to ensure that their territories are not used for setting up terrorist infrastructures or training camps.

### **013. Remarks by External Affairs Minister at the Inauguration of the Nobel Laureates Lecture Series.**

**New Delhi, February 14, 2007.**

Professor John Nash, Distinguished Guests, Ladies and Gentlemen,

I am happy to be here for the launch of the Nobel Laureates Lecture Series of the Public Diplomacy Division of the Ministry of External Affairs. I am especially delighted that Prof. John Nash is amongst us this evening and has agreed to be associated with this inaugural edition of what I hope will become an enduring series of lectures. Many of us here have read about Prof. Nash's life; some of us are also familiar with his path-breaking work on game theory; but all of us here tonight have heard about his indomitable spirit. It is with eager anticipation, therefore, that I join everybody here to listen to his talk.

For several years, we were told that life and relationships, whether these are between individuals, between companies and corporations, or between countries, are based essentially on a zero sum game; in other words, one can win only if the other loses. But many of us, especially those who are practitioners of foreign policy, recognize that a zero sum game can never lead to sustainable relationships and that we should strive for win-win solutions. Prof. Nash's professional life has involved numbers. But his message is also one of humanity, affection, care and cooperation. Through events such as the one being organized tonight, we are attempting to create the ambience for a more informed understanding of events and relationships that shape our thinking and our lives and we are particularly happy that Prof. Nash is the first of those who will address us.

This series is also based on a straightforward idea. We believe that foreign policy cannot and should not be treated as an esoteric subject that remains a closely guarded secret and is shared and discussed only between governments. Moreover, in a democracy such as ours, I believe it is imperative that issues are debated and discussed with a wide cross-section of our public so as to get an idea of how our people react to these issues and what they feel our actions and our responses should be. The only way we can do this is by engaging civil society in a continuous process of debate and discussion. The Nobel Laureates Lecture Series offers us the unique opportunity of hearing some of the

best minds of the world on contemporary issues. Listening to them and being in their presence should energize us into thinking outside the box. Individuals like Prof. Nash have shifted paradigms, altered them and taught us new ways to approach old problem. It is their gift of thinking differently that distinguishes them and it is their genius that sets them apart. Through this lecture series, I am convinced that our own way of approaching a problem could change.

I understand that one of the issues Prof. Nash will address tonight is globalization. This could not be more timely. No nation can escape the processes of economic globalization, which increasingly binds national economies into the world economic system. The world is seeing the emergence of new players on the field and earlier structures are giving way to the new. Economic diplomacy is emerging as one of the key instruments of policy. I am therefore very keen to listen to what our distinguished guest tonight has to say on this important subject. Let me say again how proud I am to launch our Nobel Laureates Lecture Series and to be doing so with Professor John Nash.

Thank you

**014. Address by External Affairs Minister Pranab Mukherjee at the Annual Convocation of the Aligarh Muslim University.**

**Aligarh, March 10, 2007.**

Hon'ble Justice A.M. Ahmadi, Chancellor of the University, Vice Chancellor Mr. Naseem Ahmad, Members of the Faculty, Members of the Academic Council, Members of the Court, Graduates of the year, Ladies and Gentlemen,

I am most grateful for the opportunity given to me to address you from this podium which has been graced by some of the greatest stalwarts of our country.

As I stand before you, I cannot but recall the founder of this institution, Sir Syed Ahmad Khan, who with his vision, his drive, his enthusiasm and his relentless sense of purpose, laid the foundations of this University and imbued it with a unique character and personality. Because of these solid foundations, the Aligarh Muslim University is today not just a shining star

of academic achievement in India, but the impact of its scholarship is also felt in different corners of the world. This impact has emerged from the large number of its students who hold distinguished positions in different countries and from the academic and research contributions that this University and its students have made in different disciplines.

It is impossible to stand at this podium and not reflect on the influence of Sir Syed, as well as his continuing relevance. Sir Syed was truly a "renaissance" personality; his interests ranged from botany and town planning to history, religion, culture and politics. And he wrote and commented on all these subjects with extraordinary enthusiasm and vigour, setting out his views clearly and inviting discussion and debate. The thousands of pages containing his views, reflections and meditations are a treasure that scholars have pored over and, snatching out isolated sentences and paragraphs, used in an attempt to define this complex personality.

But Sir Syed cannot be defined by simplistic labels. And, as he himself would have urged - his writings should be seen, above all, in the context of the debates that were raging around him on specific issues at that time. It is true that several of his reflections have a contemporary value. But even they cannot be detached from the context in which they were originally made.

I personally believe that Sir Syed was a multi-faceted personality who did not allow his thinking and understanding to stagnate; he constantly refreshed his mind with new insights and influences. While he was deeply concerned about Muslim "backwardness" and anxious that the community take advantage of modern developments in science & technology and other aspects of western achievement, Sir Syed was himself a product of India's composite culture, which had been enriched by a variety of different influences over several millennia and which he strongly upheld.

Throughout its history, India has had continuous interactions with diverse peoples from Central Asia, the Arabian Peninsula, Northeast Asia, Southeast Asia, Egypt and Africa, in later years, with the West. These interactions have made India comfortable with the languages and cultures of foreign peoples in our extended neighbourhood. Today, the rich tapestry of our vibrant and composite culture is the product of these seamless engagements. Islam brought with it not only the message of equality and brotherhood, but also a wealth of cultural and artistic achievements.

These interactions and engagements occurred at various levels, between scholars, religious and temporal figures, poets, artists, and administrators.

They also took place between common people - farmers and labourers - who were victims of the same feudal order that left them in want and penury in equal measure. The same people, however, also shared joyous occasions - births, marriages, festivals, as well as the sorrows of drought, flood, war and loss of loved ones.

Today, we recall a few names of great rulers and warriors, but every Indian household echoes with the names of the saints, the poems and the songs of our Bhakts and Sufis - Moinuddin Chisti, Nizamuddin Auliya, Mirabai, Kabir, Guru Nanak, Dyananeshwar, Namdeo and Tukaram. This common religion of love and brotherhood is echoed in this song of Kabir:

*"O Seeker, where dost thou seek me?  
Lo! I am beside thee.  
I am neither in the temple nor in the mosque:  
I am neither in Kaaba nor in Kailash:  
Neither am I in rites and ceremonies.  
Nor in Yoga and renunciation.  
If thou art a true seeker, thou shalt at  
Once see Me; thou shalt meet me".*

This composite culture of ours impacted on all aspects of daily life, food, clothing, music and art. Muhammad Mujeeb has described that most effectively when he says:

"Religion became the religion of the people. Then, the spoken languages of the people became literary languages. We have the beginnings of Hindi, Bengali, Gujarati, Punjabi and Sindhi literature. Further, the city became the centre of culture, tailored clothing, came into general use, simplicity was discarded in favour of a life enriched and complicated by a vast increase in the articles of daily use, manners became elaborate and were, so to say, codified in the form of a recognized etiquette". Unquote.

This rich composite culture of ours continued to be nourished in succeeding decades. In our own times, the poet, Mirza Ghalib, rejected the empty ritualism of religion, and Mohd. Iqbal echoed the enduring strength of our culture thus:

*"For me, every particle of my country's dust is a deity.  
Come, let us remove all that causes estrangement,  
Let us reconcile those that have turned away from each other,  
remove all signs of division".*

It was the strength and endurance of our composite culture that laid the foundations of India's contemporary secularism, which finds expression in our Constitution. It is true that in the events that led to our freedom, discordant notes were sounded, which culminated in the partition of our country on a religious basis. Now, with the wisdom of hindsight, certain obvious truths can be reiterated and reaffirmed. *First*, that the forces promoting partition on a communal basis were consistently supported by our imperialist masters, who saw in this division a long term value in terms of their strategic interests in South, Central and West Asia. *Second*, recent history has clearly demonstrated that nationhood needs stronger and more enduring values than mere religious identity; and, *third*, in spite of consistent challenges, the Indian people have continued to adhere to and vigorously uphold the core national values of democracy and secularism to which we committed ourselves in 1947.

I would like to emphasize at this point that however pervasive our national values and however widespread the popular support to them, they still need to be repeatedly reaffirmed, nourished and reinvigorated. Every political order, but particularly a democratic political order, has within itself individuals, groups, and movements that have alternative visions of history and of the future; they march to a different beat and sing a different tune. All nations, thus, periodically pass through situations when the established order is challenged. At such times, the people of the nation have to delve deep into their minds and souls and either reaffirm their core values or accept the fact that they are no longer relevant and should be transformed or replaced. The battle for the preservation of our core and founding principles is therefore a battle that we have to fight every day.

India has not been immune to this challenge. There are those within our body politic who reject the version of our popular history which exalts our composite culture, and, instead, define our history and our nationhood in exclusivist terms that enhances the status of one particular group at the expense of others.

I do not believe in the exclusivist approach. I remain convinced that India's destiny lies in squarely facing up to this challenge to our core values. But this challenge cannot be met through emotive sloganeering: it should be taken seriously and confronted with the full force of our intellect, and our deep commitment to and our broad engagement with the political and social processes of our country. In the debate pertaining to the idea of India, we are all denied the luxury of academic detachment. We have to enter the

debating hall and vigorously combat elements preaching the exclusivist ideology with all its passionate simplification and alluring appeal.

I am aware that the assault on our secular order is taking place even as there are deep concerns about the standing of the larger Muslim community in India, which, particularly in north India, is seen as being deprived and marginalized. No nation can aspire to greatness when large sections of its population are excluded from the benefits of national achievement and progress. I would like to convey to you from this historic podium that as a responsible and responsive Government, we are deeply concerned about the status of our deprived communities, including the Muslim community, and we stand committed to ensuring that matters pertaining to their welfare and progress are addressed.

Complex issues of socio-economic development cannot be taken care of through a simplistic adherence to the so-called "trickle-down" theory of economics. What is called for is vigorous governmental action at the grass-roots level where such deprived communities exist. Our government will not shy away from this responsibility, as we know full well that we will be judged by the extent to which we bring change in the lives of our marginalized masses.

Ladies & Gentlemen,

The Western world experienced the single largest act of terrorism five-and-a-half years ago when the events of September 11 took place in the United States. Sadly, our experience in India was much older, when, more than 25 years ago, proxy wars were unleashed upon us in an attempt to alienate sections of our people who had always been deeply committed to India's traditions and its modern nationhood. We have paid a very high price in combating this externally-sponsored terror and upholding our core national values. For most of this period, we struggled alone, as the international community failed to understand the impulses and full implications of what we were combating. The realizations that have dawned today that terrorism is indivisible, that there are no good terrorists, that this scourge affects both its victim as well as its sponsor, are welcome, even though tragic in that they have come at the cost of thousands of innocent lives. To my mind, the only way forward is for the international community to avoid the trap of semantics and declare a policy of zero tolerance to terrorism, anywhere and everywhere.

However, even as we combat terrorism, we firmly reject the theses coming out of some chauvinistic quarters that any particular religion glorifies this crime against humanity. This entire proposition is a non sequitur.

At the same time, we cannot but be deeply troubled by the considerable turmoil that different Islamic countries, especially in the Middle East, are experiencing. It is doubly tragic that proponents of a hard, literalist and exclusivist brand of Islam have intervened vigorously, and often violently, in public discourse to question and attack the Islam of piety, moderation and accommodation, features that have defined this great religion over several centuries.

In times of crisis, it is useful to refresh our memories with a scrutiny of the essential message of our faiths and to draw from them appropriate lessons for our troubled contemporary times. I know this University has nurtured some of the greatest Islamic scholars of modern times who have made a significant contribution to the understanding of this great faith that has been part of India from within a few years of its inception. I do not pretend to have their scholarship but I would like to share with you my understanding of only two from among Islam's numerous essential values.

Firstly, about reason. Throughout his life, Prophet Muhammad spread his message and converted people to Islam through reason and personal example. He did not resort to force, magic or miracle; he valued intellect and stressed the importance of reason. There are numerous verses in the Quran which admonish one to shun coercion and exercise persuasion and patience.

Secondly, about knowledge. The Quran repeatedly points mankind to knowledge: ilm is the second-most used word in the Quran after the name of God. Human beings are told to use their minds in at least 300 places. The acquisition and the imparting of knowledge were highly commended by the Prophet, who said:

"The pursuit of knowledge is a divine commandment for every Muslim..."

*That person who will pursue the road of knowledge, God will direct him to the road of Paradise; and verily the angels spread their arms to receive him that seeketh after knowledge; and everything in heaven and earth will ask grace for him. Verily the superiority of a learned man over a worshipper is like that of the full moon over all the stars."*

David Lelyveld, in his seminal work on Aligarh's "First Generation", notes that, in Sir Syed's view, *ilm*<sup>1</sup> was "a kind of spiritual electricity communicated by the touch of men who possessed it." Sir Syed himself went on to say: "Ignorance is the mother of poverty."

---

1. Knowledge

Ladies and gentlemen of the graduating class; I submit to you that if you hold fast to these two principles, reason and knowledge, as the guiding lights of your everyday life, not only will you go far, but you will also render a great national service.

Friends,

I clearly see a dual challenge before us. First, the challenge of ensuring that the fruits of our national achievement are shared in equal measure by all our communities, particularly those excluded and deprived. And second, for India to play a pro-active role in addressing the challenge posed to the international community by those who reject the essential values of Islam and propagate a brand of the religion that has no justification in its history, politics and cultural values.

I had reiterated earlier our Government's unequivocal commitment to achieve, through robust governmental action, the upliftment of the Muslim community. I also believe that India, with its rich history of linkages in other parts of Asia, and its adherence to the values of democracy and secularism, is well-equipped to participate in the global effort that rejects the "clash-of-civilizations" thesis and promotes dialogue, understanding and cooperation among different role-players in the international arena.

You will all agree with me that facing these twin challenges is not the responsibility of the Government alone; all of us are participants and all of us are role players in it. The extent of India's influence and authority in the global arena will emerge from the strength of our commitment to the core values of democracy and secularism and our success in addressing the needs of the most deprived among us. Much of the discussion in India regarding secularism ultimately ends up with becoming a discussion about the nature of the secular state. However, much more important than a secular state is a secular citizen, the secular temperament of an individual. As long ago as 1948, Pandit Nehru raised this issue with the students of Aligarh Muslim University in his Convocation Address, when he stood at this podium and said:

"You are Muslim and I am Hindu. We may adhere to different religious beliefs or to none; but that does not take away from the cultural inheritance that is yours as much as mine. Do you believe in a national state which includes people of all religions and is essentially secular...or do you believe in a religious, theocratic conception of a state which regards *people of other faiths as beyond the pale?*"

The importance of the secular temperament is the weapon that citizens in democratic, multi-cultural societies have to use against attempts by motivated parties to convert religious or ethnic communities into political communities or vote banks; such politicization in time leads to the general communalization of religious or ethnic communities.

How are we to develop this secular temperament, this spirit of tolerance, goodwill and understanding? Indian tradition, suffused with lessons from Islamic tradition, provides clear answers to this. Humanism and scientific knowledge are the natural legacy of mankind; they are not the exclusive preserve of the West. Just as in the past, the Dark Ages led to the Age of Reason and Enlightenment in Europe (substantially due to the influence of Islamic science, technology and culture), we Indians too, with a modern, forward-looking spirit, can transform our lives and bridge the knowledge-gap between us and other advanced societies.

The Indian, strengthened by his enduring commitment to the nation's democratic and secular order, is now poised to respond to Iqbal's call:

*Khudi ko kar buland itna,  
ke har taqdeer se pehley,  
Khuda bande se khud poochhe:  
bata teri raza kya hai?*

[Raise yourself to such heights,  
oh man, that before writing your fate,  
the Almighty Himself asks his Creature:  
tell me What is your destiny?]

In the next few decades, the "*taqdeer*", the destiny, of India is to emerge as a knowledge super power. Indeed, the growth of India as a knowledge economy is a vindication of Sir Syed's dream, which led him to create this great institution. He had presciently observed that it is the categorical verdict of all the nations and great seers of the world that national progress depends on education and training (of the people). Partnership in the knowledge economy is something that offers prospects of a most potent partnership in the 21st century. Through support to the huge knowledge and research base in laboratories and universities in India, we can bring 'together capital and science and technology with innovation to create intellectual property and launch new economic ventures. This is another area where the role of Universities like Aligarh becomes crucial.

The last decade has witnessed accelerated Indian economic growth and

the speed continues to increase. India is slated to be the third largest economy in the world with great strength in the knowledge economy based on human resources. It will be on the basis of the strength of young people, like the many I see before me today, that India is poised to take great strides forward. It is to be the work of those of you who are graduating today to take the country on its way to greater heights.

Ladies and gentlemen,

Having been invited here in my capacity as the External Affairs Minister of India, I cannot conclude without a few words about my current charge.

India's Foreign Policy is a product of its history, geopolitical setting and the needs and aspirations of its people as distilled by its democratic institutions. This policy is inspired by the vision of our founding fathers, in particular Pandit Nehru, and is nourished by a tradition of continuity and consensus. It has also to reflect our national ethos of secularism and democracy. It has to take this message to our friends in the region and beyond. This is what we have been doing. As India grows, its message of peace and hope will echo more forcefully through the world. It is a message of harmony, peaceful coexistence, economic prosperity and abhorrence of violence. I see Indian foreign policy playing a greater role in our economic renaissance. The primary task of Indian foreign policy has to be the facilitation of India's developmental processes, so that the fruits of our success reach all our people. Towards this end, we need to leverage our international partnerships. Our focus in the coming decade should be on promoting trade and investment flows, in assisting the modernization of our infrastructure, in assuring predictable and affordable energy supplies and in securing the widest possible access to technologies.

The other major goal for Indian foreign policy is to create a new paradigm for our neighbourhood. The strength and growth of our region and its prosperity is a necessary pre-requisite for India's own rise as a major power. As the largest country in South Asia with land and sea borders with all its neighbours in the South Asian Association for Regional Cooperation (SAARC), India has to assume greater responsibility for the region's challenges. Our foreign policy has to pay particular attention to each and every one of our bilateral relationships in the neighbourhood, from Myanmar to Afghanistan, and create a mutually beneficial framework. I would like to reaffirm that India's neighbours can and should share in our drive for prosperity. A modernization of the infrastructure in the Indian sub-continent will promote freer flows of goods and services that can transform the entire

region. In more ways than simply economic, the future of the Indian sub-continent depends on whether this open mindedness prevails over the more traditional mindsets. On its part, India has indicated its willingness to cooperate with all its neighbours and to work with them for a better future.

In this endeavour, India looks to its sons and daughters all over the country, and that includes those present here today, to give a collective voice to our aspirations for peace and development, unity in diversity and of a nation on the move to take its rightful place in the world. In this, the institutions of our democracy and our educational institutions, such as the Aligarh Muslim University, are playing a critical role. I have no doubt that they will continue to do so in the future as well. I wish all success to the University and its students in their endeavour towards the noble cause of the development of the nation.

With these words, I would like to thank you again for doing me the honour of inviting me to address you today.

May the Almighty's blessings be with you always!

Thank you.

**015. Inaugural Address by External Affairs Minister Pranab Mukherjee at International Seminar: "Saving Doha and Delivering on Development".**

**New Delhi, March 12, 2007.**

**Mr. Pascal Lamy**, Director General, WTO;

**Shri Kamal Nathji**, Commerce and Industry Minister of India;

**Mr. Kenneth Valley**, Minister of Trade and Industry, Trinidad and Tobago;

**Mr. Ted Menzies**, Parliamentary Secretary for International Trade, Canada;

Distinguished participants from governments, trade industry, academia &NGOs;

Members of the media, Excellencies,

Ladies and gentlemen.

A very good morning and a warm welcome to all of you. It gives me great pleasure to inaugurate this International Seminar on 'Saving Doha and Delivering on Development'. I am extremely happy to learn that leaders from different walks of life including political, academic, professional and civil society are here to participate in this Seminar to deliberate and evolve possible ways and means of moving forward to reach a meaningful conclusion of the Doha Round. There is a saying that 'you can not cross a crevice by several small jumps; you can do it only by one long jump'. The gap between the developed countries and the rest of the world needs one such long jump. When 'Development' was scripted as the central theme of the Doha Round way back in 2000, unarguably a long jump was foreseen. That is why the Doha Round is the 'Development Round' and not a 'Market Access Round'. But then some of the members i.e. particularly, the developed members faltered, making some of us skeptical and many others cynical of the Round's delivering on its promises. We have crossed the original deadline. So, there is an additional responsibility for all of us to save the Round.

Since there were considerable divergences in the positions of WTO members, the negotiations were suspended in July, 2006. The WTO members effectively had a "time-out" to seriously reflect upon the situation,

examine available options and review their positions. Though negotiations have recently resumed in earnest, there are still many uncertainties surrounding the possibility and nature of the outcome.

India remains fully committed to the multilateral trading system, and to the successful and early completion of the negotiations under the Doha Work Programme, based on the fulfillment of the mandate agreed at Doha, the July 2004 Framework Agreement and the Hong Kong Ministerial Declaration. Development is not a question of choice at this stage. It is what was agreed at Doha and that is what we need to deliver.

We have said it earlier and I say it now that the developed countries have to recognize that the development dimension is at the core of the Doha Development Agenda. India looks forward to the developed countries taking a leadership role in moving the Doha process forward by correcting distortions in the global trading system, especially in agriculture, which would meet the aspirations of a large number of developing countries, specially LDCs.

Agriculture remains critical to our collective interest. It is imperative that the trade-distorting subsidies and protection provided by a few developed countries are eliminated as soon as possible so that a truly level playing field can be established. Export subsidies of all forms must be eliminated by a certain date and domestic support substantially reduced under the Doha Round, in order to provide market access opportunities to all.

Agriculture supports and provides livelihood to the bulk of the farming community in the developing world. The viability and dynamism of their agriculture sector remains essential to secure success in their poverty alleviation strategies. It has been acknowledged worldwide that budget-based supports of individual countries as well as aid from others cannot deliver on the targets we have set for ourselves under the Millennium Development Goals.

The bulk of the rural poor in countries like India are vulnerable to external developments. Accordingly, proposals designed to impose a disproportionately higher burden on developing countries are not constructive, and have the potential to disrupt their very social and economic fabric. Such proposals will not be acceptable. Tariffs remain the only instrument of border protection and for safeguarding food and livelihood security and rural development. Appropriate policy space must be intrinsic to any agreement through instruments such as appropriate tariff reduction formula, Special Products and Special Safeguard Mechanism.

For developing countries, the manufacturing sector contributes substantially to GDP and employment opportunities; hence, it is crucial for delivering on the development mandate of the Doha Round. While an ambitious outcome of NAMA negotiations is desirable, we need to give due consideration to the developing countries through adequate flexibility to protect their nascent industries and the vulnerable sections of their economy. Whatever may be the final coefficients in the Swiss formula, it should ensure that the developing countries undertake lower reduction commitments than the developed countries, as is the mandate.

The Services negotiations must also have ambitious outcomes. During the current round of negotiations under GATS, many developing countries including India have autonomously liberalized their service sectors and have offered to bind this liberalization in their Revised Offers. However, developed countries have to realize that enough flexibility is necessary for developing countries to pursue their development and poverty alleviation objectives.

Developed countries cannot and should not avoid liberal commitments in all Modes, particularly in Modes 1 and 4. Large scale asymmetries exist in these areas from the Uruguay Round and developing cold feet in any of these areas would completely negate the development dimension of the Doha Round.

Pro-development elements are scattered across all areas of negotiations. We must seriously attempt to consolidate the development agenda. The biggest handicap is that we have not been able to develop benchmarks to facilitate a developmental audit of the progress of negotiations. We need to ensure that the development dimension stays in clear focus.

To conclude Excellencies, ladies & gentlemen, we all are grappling with a difficult task but I am sure, and all of you will agree with me, that it is not impossible. It requires enough political sagacity and courage on the part of the developed countries to untangle the deadlock. The two days of deliberations would certainly bring out productive and creative solutions from everybody present here and these would hopefully form the basis for moving ahead for a successful conclusion of the Doha Round. I wish you all the very best for a fruitful outcome of the seminar.

Thank you, ladies and gentlemen.

**016. Speech by External Affairs Minister Pranab Mukherjee at the 42nd Professional Course for Foreign Diplomats conducted by the Foreign Service Institute.**

**New Delhi, March 14, 2007.**

I am delighted to be here at the Valedictory Dinner of the Foreign Service Institute. I would like to take the opportunity to greet the newest members of the Institute, the IFS Probationers of the 2006 batch who have recently joined, as well as the IFS Probationers of the 2005 batch, who have finished their training at the Institute and are currently doing their attachment with various Divisions of the Ministry. This evening, I am also particularly glad to be among those young diplomats from friendly countries who have been attending the Professional Course for Foreign Diplomats conducted by the FSI during the last six weeks. Being in training can sometimes feel like being back at school, with all its regimentation. Nevertheless, I hope our guests from overseas have found the Professional Course productive and useful in equipping them to better handle the external relations of their respective Countries. I also trust that their stay in India, though short, was enjoyable.

Representing one's country overseas is a great honour, as the distinguished representatives of the diplomatic corps here will testify, it is an honour that some of the trainees here may have already had and that others are about to have bestowed upon them. The senior diplomats gathered here would also be familiar with how Sir Ernest Satow, the author of probably the most used guide to diplomatic practice defined the task of diplomats. He noted more than a century ago that tact to the conduct of official relations between the governments of independent states".

Those of you about to embark on a diplomatic career would do well to carefully parse that simple statement, because in today's world, diplomacy may not be the business of diplomats alone, In a world marked by intense economics and commercial linkages, a phenomenon that has come to be known as globalization, diplomacy is also the business of large global businesses. There are today transnational corporations whose annual turnover exceeds the GNP of a fair number of countries. These corporations are increasingly having an impact on international diplomacy in fields ranging from trade and tariffs to development and climate change. Some years ago the traditional diplomat would have looked askance at the presence of business delegations, social scientists or economists at diplomatic gatherings. Today, you will have to account for the presence of all these actors jostling for the same space in which you are going to be doing your

work.. Finding a cooperative model through which to achieve national and international welfare will therefore be an additional challenge for all of you as you get down to the business of diplomacy.

The other major change in diplomacy from the era that Satow described is in the arena of technology. While the advance in technology may have rendered aspects of the job easier, they have also created attendant difficulties. As the distinguished ambassadors gathered here tonight will tell you, there are not many among them who have not been awoken in the middle of the night with a telephone call from headquarters and with their parent foreign office insisting on a report on the breaking news of the moment- first thing in the morning. Of course, getting the report out is probably the easier part. More difficult is to have to forego that morning's game of golf!!!

But on a more serious note, the media explosion and the 24 hour news cycle mean the tomorrow's diplomats need to be equally adept at handling information as well as information overload. Today, everyone has access to unfolding news in real time. With some exceptions getting information is not the problem; making sense of what you get, which is sometimes too much, is more at issue. Especially when serving overseas, you are expected to provide that additional insight that can make all the difference to policy formulation. I urge the trainees here tonight to focus especially on this aspect.

I also hope that this course that has just concluded has been of some help in not only sharpening your skills, but also in familiarizing you with India's strategic perspectives and priorities. This is a country moulded by its civilizational memory, a sense of geography, a composite culture and, naturally, geopolitical realities.

Through the centuries, Indian society has been an open system, receiving and assimilating major influences from outside its geographical boundaries, like Islam and Christianity, while disseminating its composite cultural influences outward and building abiding links with societies from the Middle-East to South East Asia. In this outward dissemination, however, we have sought to export our own ideologies. Many of our traditional links were disturbed by colonialism and Partition and their restoration was then delayed by the onset of the Cold War. In recent years however, driven by an impressive economic performance, India has at once managed to revive its traditional linkages as well as build completely new ones all over the world. Our future success, however, depends on our being able to secure a regional and global environment that protects our national security and also enables us to integrate with the global economy. Let me quickly outline to you a few of our priorities in this endeavour.

Our foremost priority is countering terrorism. While terrorism is perpetrated by non state actors in most parts of the world, in India, militants and terrorists are also sponsored and aided by agencies from across India's borders.

Secondly, India finds itself in an arc where more than one actor has been involved in proliferation of weapons of mass destruction. This has assumed particularly dangerous proportions, given the possibility of linkages such proliferation and terrorism.

Thirdly, the periodic instability in the political fabric of states in India's neighbourhood is a source of great anxiety. As an advocate of greater regional integration and connectivity, India has stakes in the political and economic well being of its neighbours and seeks their cooperation to build and area of shared prosperity in South Asia.

Fourthly, the high growth trajectory of our economy will inevitably produce a matching curve for energy demand. In this context, energy security and the security of sea lanes of communication, on which India's trade is dependent, assume great significance.

In order to meet these multiple challenges, India has sought on focus on ensuring stability and peace in its neighbourhood, developing friendly and mutually beneficial ties in its extended neighbourhood like west, Central and Southeast Asia, and establishing strategic partnerships with all the major actors in the world, particularly the United States, European Union, Russia, china and Japan. At the same time we are developing ties of great vitality and mutual benefit with many countries in Africa and Latin America.

Ladies and Gentlemen,

I would like to congratulation the foreign participant in this training course on their successful completion of the course. Again, I hope they found the programme useful. This programme is one small way for us to express our commitment to technical and developmental cooperation with friendly to technical and developmental cooperation with friendly countries. I wish the participants success in all their endeavors. I also take this opportunity to convey through you our greetings and good wishes to your respective countries and people.

Thank You.

**017. Keynote Address by Prime Minister Dr. Manmohan Singh at the *India Today* Conclave.**

**New Delhi, March 23, 2007.**

I am delighted to be once again at this annual conclave. However, I truly wish that I was here to listen, rather than speak. You have gathered an impressive group of speakers, and I would have liked to hear them all.

I am happy that this dialogue began this morning with the opening remarks of His Excellency, the former President of Iran, Mohammad Khatami. I have the highest regard for his wisdom, his scholarship and his statesmanship. He is a great citizen of the world, a great leader of the Iranian people and a great friend of India. It is pertinent that at a conclave like this we recall his wise words at the U.N. Conference on Dialogue Among Civilisations in September 2000. It was a dialogue that he had initiated. I recall his saying that:

"The ultimate goal of dialogue among civilizations is not dialogue in itself, but attaining empathy and compassion."

I believe the ultimate goal of conferences like these should also not be that they are an end in themselves, or merely commercial events, but they help open up our hearts and minds and make us more understanding and compassionate. President Khatami concluded his address to the U.N. with these wise words, and I once again quote it:

"In the domains of economics, politics and culture, problems and issues rarely remain local and indigenous. We all deeply engage in making use of each other's social, cultural and spiritual findings. The penetration of eastern religions to the West, repercussions of Western political, cultural and economic developments in the East, and, most significantly, the expansion of global electronic communication have all rendered dialogue among civilizations a reality close to home.

I fully endorse these sentiments. Today they have acquired renewed relevance in international affairs. We in India appreciate them more than any other people. Such a dialogue among civilizations has been the living reality for more than a millennium in this ancient and sacred land of ours. India is home to all the great religions of the world. India is home to scores of languages, hundreds of dialects, dozens of cuisines, a medley of races, colours, landscapes and cultures. The idea of India, as we all know, was

shaped by this notion of "unity in diversity". That is why I have often said that the success of the Indian experiment is vital to the survival of mankind.

My friend Aroon Purie has asked me to reflect today on the theme "Challenges for the Brave New World: Can India Take the Lead?" I believe India is one of the frontrunners in showing the world the way forward in dealing with one of the biggest challenges facing mankind in the modern world. This is the challenge of preventing the so-called "clash of civilizations" and enabling not just a "dialogue" between civilizations but creating a "confluence of civilizations".

India is a confluence of civilizations. In building an open and pluralistic society within the framework of a liberal and secular democracy we have shown the world a way to deal with the complex heterogeneity of modern societies. Every nation must endeavour to be an open society in which the plurality of the human experience can find full and free expression. I am not talking of majorities tolerating minorities. I am talking of all groups, big and small, living together in harmony.

In seeking to build a democratic society, the leaders of our freedom movement grappled with the challenge of a brave new world they were forced to confront. As I have often said, ours is an ancient civilization, but we are a young nation. The survival, growth and vibrancy of our nation has vindicated the faith of our founders in the democratic values of pluralism, liberalism and secularism. It has enabled us to show many embattled corners of the world a practical way forward in enabling the 'confluence of civilisations'.

If India has a message for the world, it is this. Mankind must shun all extremes and all forms of extremism. We must reject all ideologies of exclusion for nature's way has been to be inclusive. Nature had of course willed the survival of the fittest, but human societies have come to accept the idea of live and let live. Our conception of an inclusive society is based on this principle.

This is our message for the world, but it is also a message we must constantly remind ourselves of. When I see intolerance, when I see hatred and mutual suspicion, when I see an unwillingness to engage in constructive dialogue and debate, I wonder if we ourselves have forgotten the very principles on which our nation was conceived?

This conference wants us to focus on the challenge of dealing with a "brave new world". Every generation would like to believe that it is entering a "brave

new world"! That spirit is natural and welcome. It inspires each generation to seek new horizons and find new answers to problems old and new. Many, however, will rest content reinventing the wheel and pouring old wine into new bottles. But some will strike out and find new paths.

A society that encourages creativity, enterprise, innovation, and risk taking will be a vibrant society. Such a society will be capable of dealing with the challenges of a brave new world. I believe we must do all that is possible to allow the full expression of such human creativity and ingenuity. This we can do best within the framework of an open society. But such a society will have to be a literate and educated society. It will have to be a healthy and caring society. A knowledge-empowered society. A free and egalitarian society functioning within the parameters of the rule of law and civilized conduct and discourse. Above all, it will have to be an inclusive society. It has been our endeavour to make ours such a society.

But, there are no shortcuts in history. The management of human affairs requires patience and effort, not just vision and leadership. Humanity has often been led astray by those who claimed a unique vision and offered bold leadership. We live in a highly inter-dependent and complex world where dialogue and patient consultation is required to deal with the challenges we face. To appreciate this and participate in an honest and constructive dialogue is the most effective way to deal with the challenges we face today.

I have often said, both in the context of domestic politics and international conflict, that there is no issue that cannot be resolved through dialogue and discussion. The approach of seeking an eye for an eye, as Gandhiji taught us, can only leave us all blind. Violence and force have never offered lasting solutions to human problems. This consultative and consensual approach is what has kept our diverse nation together.

My friend Amartya Sen has written about the "argumentative Indian", but our real strength has always been our willingness to live and let live. It is not our argumentative nature that we must celebrate, but our assimilative nature, our consensual nature, our accommodative nature. That is what has contributed to the richness of our composite culture and durability of our civilization. This is why I also believe that India can bring to the global high table, to institutions like the U.N. and its Security Council. It can bring a new approach to dealing with global challenges, whether these be challenges of environment, energy security, food security or empowerment of the underprivileged sections of society.

Much is often made of our attitude to globalisation. The organizers of this conclave have asked me to reflect on how India views the world and the processes of globalisation. Let me say that I sincerely believe that we Indians have always been open to global influences and that ours will always be an open society. Even in the economic sphere, we are today as open as any free market democracy in the world.

The numbers of course are there to tell the story. The share of foreign trade in our national income is comparable to that of many developed market economies. But our openness is not just about these numbers. Our openness is defined by our attitudes and by our confidence in ourselves. Our media is free and open. Our popular culture has always been welcoming of outside influences. Yet, we have stood securely on our feet. As Mahatma Gandhi used to say, we have our doors and windows open to the free flow of ideas, yet we have confidence in ourselves that we will not be overwhelmed by any of them. I want more of our citizens to appreciate this reality. I am often surprised by the insular outlook of some of our political and intellectual leaders. Their narrow-mindedness betrays a lack of self-confidence in our nation. It is an attitude I do not associate with being Indian.

We must make better use of the opportunities the world offers us. We must be more open to our own neighbourhood. In a fortnight's time we will be hosting the SAARC Summit. I want India to be more open to all our neighbours. I want our neighbours to feel secure and confident that in India they have a well-wisher. We see their prosperity as a guarantee of our own prosperity. We see their progress as reinforcing our own progress. And so must they. The destiny of the people of South Asia is interlinked and inter-dependent. Our region must and can move forward through such a cooperative engagement.

I see a similar mutually beneficial inter-dependence between India and the wider neighbourhood of the Indian Ocean and the Asia-Pacific regions. For centuries our forefathers sailed westwards and eastwards - as teachers, as traders, as merchants and as monks. That is how we should once again approach the world at large.

We must rekindle this interest in the world outside and be willing to deal with the opportunities and challenges it presents. I do believe, however, that to be able to do so with greater confidence we must invest much more in our own capabilities. This is the real challenge before us. We need a new revolution in education. Our educational system has to be

modernized, made more accessible, made more relevant to our needs and aspirations. It must equip us better to deal with an ever-changing world. Science and Technology today have made it possible as never before in human history that chronic poverty, ignorance and disease do not have to be the inevitable lot of the majority of the human kind. We must therefore harness the full potential offered by the development of modern science and technology. We must be able to draw on the intellectual resources of the world and also refurbish our own resources. We need world class academic and research institutions and infrastructure. We need a more competitive industry and a more dynamic agricultural economy. Our energies must be focused on these priorities at home. We must get our act together so that we can make the best use of the opportunities presenting themselves before us.

I said earlier that every generation believes it is entering a "brave new world". Yet, one often finds that the challenges we face are after all not so new. Others have faced them and dealt with them. There is much we can learn from them. Be it in education or health care, be it in building roads or better sanitation, be it in water management or conserving energy, be it in manufacturing or agriculture - there is much we can learn from those who have been here before.

At the same time, there are challenges which are truly new. The challenge of addressing the ever-increasing consumption needs of billions of people. If all the developing countries of the world were to aim for a standard of living which is presently seen in the more developed countries, we need to reflect what the environmental consequences would be. Is our planet capable of sustaining a high consumption lifestyle for all its inhabitants? After all, all nations face a single environment and hence, the ill-effects of unbridled growth would affect all nations equally. This is certainly a new challenge for which there are no ready-made answers. As a large nation, India can certainly take a lead in showing the way to the world.

If we need to learn from each other and tread into unknown territory, we need an open mind. I am troubled when I hear people say that India is an open society with a closed mind. That is not the India I have spoken to you about so far. The India I know and I cherish has been open to ideas from across the world. The India I know values knowledge and creativity. The India I know respects learning and scholarship. If we can approach the world and our future with that kind of self-confidence, we can regain the glory of our wondrous past.

I hope your conclave and other such gatherings, encourage us to be more open minded, more willing to learn, more creative, more enterprising and more courageous. In that lies the road to a brighter future for our children and for our grand children.

Thank you.

**018. Remarks by External Affairs Minister Pranab Mukherjee at the Annual Dinner of the Association of Indian Diplomats.**

**New Delhi, March 28, 2007.**

Mr. President, Ladies and Gentlemen,

Dinner-time speaking is a hazardous venture at the best of times. My task this evening is rendered relatively easier only because I know that my audience tonight comprises fellow practitioners of this art and will, therefore, appreciate my predicament! But let me say, first of all, how pleased I am to be here this evening, among so many familiar faces, so many old friends. When one is in such a gathering, there is the unmistakable comfort and warmth of being amongst close members of a family. And when all is said and done, when the long debates about international diplomatic matters are settled, it is this spirit that remains important and gives the strength that can sustain an association like this one.

One of the clearest manifestations of this strength is the role that this Association has already been playing in ensuring continuity in foreign policy thought and practice, from the past to the present, and on to the future. The multidimensional activities of so many of the association's members - be they in the form of writings, participation in media debates, seminars and so on - have added a certain gravitas to the public debate on foreign policy matters. The value of this contribution is immense.

I do not need to detail to this gathering in what manner India's engagement with the world is different today than it was six decades ago when we gained independence. Many of you were personally involved on a day-to-day basis in the expression of India's traditional role as a leader of the developing world, as a champion of nonalignment and in the erstwhile struggle for

decolonization, freedom and equality. Many of you were also involved in the transformation that was required to give our role a contemporary hue and to add the economic and strategic muscle that has marked the coming of age of India. The confidence and enthusiasm that is so evident in our international engagement today is based not on any abstruse concept, but on real achievements. The sustained high levels of economic growth, the phenomenal achievements of our industry, particularly the knowledge industry and the strategic leaps in the nuclear and space fields are only some of the major reasons. They have been accompanied by a determined effort to improve relations with all the major powers simultaneously. We have moved quickly to try and achieve a peaceful extended neighbourhood with which we can engage intensively for the benefit of the people of the entire region. And we have also reached out to give depth to our relations with regions as far flung as Latin America, Africa and East Asia.

It is axiomatic that the challenges that India's foreign office faces today are different from those that we faced in the past, and the challenges of tomorrow will be different still. India's envoys abroad today represent a different India. It is an India that may not have yet solved all its problems, but is still resurgent and confident. It is an India that is no longer satisfied with being a spectator in any arena. It is an India willing to be heard with a voice that can make a difference to any outcome. And, as home to one sixth of the world's population, it is an India that has not only a vital stake in the future of the world - whether we view this future in political, economic or even environmental or energy terms - but also the wherewithal to play a decisive role in shaping this future.

This transformation of India's stature and role in the international system also imposes the corresponding necessity to transform our diplomacy, and indeed its most vital ingredient, our diplomats. India's envoys today represent a country which is perhaps *sui generis* in the manner in which its democratic institutions have handled a billion strong population of different faiths, ethnicities and languages. We are headed to become the third largest economy in the world and are fast becoming as attractive an investment destination as we have been a tourist destination. In terms of perception, too, India's image indicators are changing to that of a country that is both demographically young as well as the spearhead of the knowledge and IT revolutions. These are the images - and not the tiger, the maharaja, the rope trick or begging bowl images - that our envoys will meet abroad, images that they have to sustain and promote. India's diplomats therefore have to bring a multidimensional skill-set to the table. They must not only be astute

thinkers and negotiators but also hard-headed managers and savvy communicators. They should be equally at home dealing not only with politicians and other diplomats, but also with economists, CEOs and television journalists.

But as the next generation of diplomats develops new skills and new ways of thinking and working, ways dictated both by evolving objectives as well as a fast changing technological work environment, it is important that they be fully steeped in the traditions of our foreign policy. The contemporary cutting edge will derive strength only from the idealistic framework. Historical linkages are the keystones of bilateral relations between countries. Institutional and personal networks are critical channels of diplomatic discourse. That is where the Association of Indian Diplomats can continue to play the crucial role it has been already playing in not only utilizing the past but also shaping the future dimensions of our foreign policy. A close and continuous interaction between the Association and the foreign office is in my view mandatory and must be encouraged in any manner that we can. I would look forward to receiving from the Association ideas on how this interaction can be structured so that today's diplomats can make the best use of the institutional wealth that the collective experience of those present here tonight represents.

With these words, I would like to wish all members of the Association good health and productive work. I thank you for inviting me here tonight and giving me a patient hearing.

Thank You.

**019. Speech by Foreign Secretary Shivshankar Menon at the Observer Research Foundation on "The Challenges Ahead for India's Foreign Policy".**

**New Delhi, April 10, 2007.**

Prof. S. D. Muni,

Ladies & Gentlemen,

Thank you for asking me to speak to such a distinguished gathering of thinkers and opinion-makers this morning. The topic that was suggested, "The Challenges Ahead for India's Foreign Policy", lends itself to several and varied interpretations. Which challenges we choose depend upon what matters to us, i.e. our priorities. The primary task of our foreign policy is to ensure an external environment that is conducive to India's transformation and development. To oversimplify, what are the issues and what kind of foreign policy would enable us to eradicate poverty, grow at 8-10% and transform India into a moderately well off state where our people can realize their potential?

Looked at in this light, broadly speaking there would be three sets of challenges: Firstly, ensuring a peaceful periphery; secondly, relations with the major powers; and, thirdly, issues of the future namely food security, water, energy and environment.

I

The first area of focus for our foreign policy is naturally our neighbourhood, for unless we have a peaceful and prosperous periphery we will not be able to focus on our primary tasks of socio-economic development. We must, therefore, accord the highest priority to closer political, economic and cultural ties with our neighbours and are committed to building strong and enduring partnerships with all our neighbours.

When we look around us today, each of our neighbors is going through accelerated internal political transformations. Bhutan is consciously introducing a form of constitutional monarchy and democracy. Recognizing changed realities, in February this year we signed a new India-Bhutan Friendship treaty to replace the earlier one of 1949. Both sides ratified the treaty in March. The new treaty updates the legal basis of our bilateral relations and reflects contemporary reality. Nepal is undergoing a remarkable double transition: bringing into being a new democratic order while mainstreaming

the Maoists. The transition, though delicately balanced, is on course, as evidenced in last week's formation of the interim government. While the basic decisions on the direction and nature of change lie with the Nepalese people, we have given our full support to Nepal in this process and remain committed to its success. In Bangladesh too the new interim government is taking steps towards transforming the political landscape. As a friend and neighbour, India is interested in a democratic, stable and prosperous Bangladesh. While our relations with Sri Lanka continue to develop steadily, we remain concerned about continuing ethnic conflict.

It is necessary to find a negotiated political settlement to the ethnic issue within the framework of a united Sri Lanka that is acceptable to all sections of Sri Lankan society. With Pakistan, the dialogue process continues to change the relationship. The composite dialogue, the Joint Commission and the Joint Anti-terrorism Mechanism have provided a structured framework within which major issues are discussed. For us, terrorism remains a particular concern. Infiltration continues from across the border. We have stressed to Pakistan that the success of the dialogue process is predicated on Pakistan fulfilling its commitment not to permit any territory under its control to be used to support terrorism in any manner.

The challenge for us in our neighbourhood is to build inter-dependencies which not only integrate economies but also create vested interests in each other's stability and prosperity in the subcontinent. Interestingly, today India is not the issue in any of our neighbors' political transitions; rather, the countries of the neighbourhood look to the Indian market and economy as positive factors for their own economic growth. The smooth and productive course of the 14th SAARC Summit in Delhi, free of disputes or posturing, is a reflection of changing circumstances. The hope must be that as our engagement with each of neighbours increases, the value of our bilateral linkages will outweigh the attractions of sterile confrontation.

We will continue to work with each of our neighbours, through the innovative use of development partnerships, our economic and technological capabilities, the development of cross border infrastructure projects as well as our civilisational linkages, to achieve the goal of a peaceful periphery. In this process we are ready to provide benefits to our neighbours without necessarily insisting on reciprocity. Hence PM's announcement of unilateral zero-duty access to goods from LDCs in the region by the end of the year, and the reduction of tariff lines for such countries.

In addition to our bilateral relationships, we see the SAARC process as

contributing to our goal of building a peaceful and prosperous periphery. At the recently concluded 14th SAARC Summit in New Delhi, all the SAARC members including newly-admitted Afghanistan agreed to a vision of a South Asian community where there was a smooth flow of goods, services, peoples, technologies, knowledge, capital, culture and ideas in the region. As you know, South Asia remains one of the least integrated regions in the world. Intra-regional trade is less than 5 % of total regional trade. In addition, cross-border investments and the flow of ideas are at rather low levels. Starting from such a low base, greater integration among South Asian countries could bring huge benefits to the people of the region.

With present high growth rates in the countries of the region, we have an opportunity to advance together through trade, open borders and economic integration, and to bring about shared prosperity between India and her neighbors. Several practical steps were agreed, such as establishing a South Asia University, a SAARC Food Bank and operationalising the SAARC Development Fund. The SAARC Summit also agreed to work together to deal with water (including flood control), environment, energy and food security, involving multilateral organizations where necessary. It will be a challenge for India's diplomacy to translate these agreements into reality. As Chair of SAARC, it will be our endeavour to usher in a new phase of effective regional cooperation, reconnecting the subcontinent to itself and the world. We thereby hope to create a common space of prosperity in South Asia based on enhanced economic, trade and investment linkages and sustainable social and economic development.

## II

The second set of challenges is that of managing our relationship with the world's major powers. The world today is increasingly multivalent, marked by considerable political cooperation among major powers whose economies are becoming inextricably intertwined with each other. The current global economy is increasingly defined by freer and substantial movement of capital and by the technology revolution, in particular information technology. While capital is free to roam the world, other factors of production like labor and technology are not, and access to markets remains patchy. As a result of our development, we are on both sides of a range of issues such as IPRs - where we are both a supplier and consumer. We need to therefore use our strengths to create partnerships with major powers in a manner which would allow us political and economic space to grow. This will require us to strengthen relations with all the major powers of the world.

India's relations with the USA have been substantially transformed in the past few years resulting in wide-ranging engagement across many fields including defence and security issues, counterterrorism, science & technology, health, trade, space, energy, agriculture, maritime cooperation and the environment. The July 18, 2005 decision to cooperate in civil nuclear energy is a major symbol of this transformed relationship. We seek to arrive at an early agreement with the US on civil nuclear energy cooperation within the parameters laid out in the 18 July 2005 India-US Joint Statement and the 2 March 2006 Separation Plan. While cooperation in nuclear energy is no doubt a very important step, we should avoid the tendency to view relations with the US only within the narrow confines of civil nuclear cooperation. There are many diverse strands to our cooperation with the US, which are progressing well, and which will impart greater resilience to our relations in the future. Relations with the US are important to us, not just because it is the superpower, but also because of the positive effect it has on our dealings with the rest of the world, and on our access to markets, high technology and resources crucial to our future economic growth and development.

We have developed a strong partnership with the European Union covering a wide range of areas including trade and investment, culture, science & technology. Our traditional relations with Russia continue to remain strong as evidenced in the recent visit of Russia's President Vladimir Putin as the Chief Guest at our Republic Day this year. Agreements reached during the visit will significantly expand our cooperation in the fields of energy, high technology, defence and space. The strategic partnership between India and Russia is poised to deepen even further. India's relations with Japan have also developed considerably with several exchanges of high level visits. There has been a qualitative shift in India-Japan relations following our Prime Minister's visit to Japan in December 2006 and the visit of the External Affairs Minister to Japan in March 2007 and we have agreed impart a strategic and global perspective to our partnership. The visit of Chinese President Hu Jintao to India in November 2006 strengthened the process of sustained comprehensive development of India-China relations. There have been some concerns expressed about the 'peaceful rise' of China. However, as PM has said, it is our belief that there is enough space for both of us to grow. We remain hopeful about steady progress in our relations with China, and at the same time will continue to work towards a resolution of the boundary question.

As we look forward to an increasing role in global affairs we need to expand

our network of international relationships, political engagement and economic and technical cooperation with the world. We are looking today at expanding circles of engagement, starting with the immediate neighbourhood, West Asia, Central Asia, South-east Asia and the Indian Ocean region.

This is reflected in our political, economic and defence engagement with these regions. Our Look East policy and the consequent intensified engagement with East and South-east Asia has led to the rebuilding of India's historically benign and stabilizing role in these regions premised on the commerce of ideas and goods. Indian companies have long had a presence in South-east Asia. Now they are venturing farther and investing in China, Japan and Australia. ASEAN and its member states are important markets for our goods and services while South Korea and Japan are important sources of investment and technology. We need to strengthen political, physical and economic connectivity between India and East Asia and broaden the underpinnings of our quest for peace and prosperity. We are also adding important elements to our traditional ties with countries of the Persian Gulf region by leveraging economic opportunities.

If our politics can create an enabling environment, the focus of our economic diplomacy in coming years will be on promoting trade and investment flows especially in critical areas such as infrastructure, in assuring predictable energy supplies and in securing the widest possible access to technologies. We also hope to work towards significantly upgrading our economic relationship with South-east Asia, East Asia, Latin America and Africa, build new investment-driven partnerships with USA and EU, and nurture a web of cooperative energy security networks in Asia and with new suppliers in West Africa, Central Asia and Latin America.

### III

Lastly, there is a cluster of issues of the future such as food, water, energy and climate change. These are interlinked issues, and will have critical impact as our ability to address them successfully will greatly shape our future. All these are cross-boundary issues, which require us to work with others to solve them. Some, like water and flood control and energy have solutions in our immediate or extended neighborhood. Hence the Delhi SAARC Summit decision to undertake regional or sub-regional projects in these areas. Others, like the environment and climate change, are global in their nature and impact and need global solutions, and will directly affect our food, water and energy security. Our participation in drawing up those

solutions is essential if the outcomes are to be satisfactory and if our development is not to be affected.

Last year India was a net importer of food after many years. The size of our population, economic growth and prosperity have led to consumption and life-style changes. Assuming a 7-8% GDP growth rate, by 2020 we would require 340 million tonnes of food-grains. This is a challenge both for scientists as well as for the agro-management of our rain-fed and dry-land farming areas. We need a second Green Revolution, harnessing contemporary tools like bio-technology, water conservation and rain harvesting techniques and other steps which are environmental-friendly and economically sustainable. We also need to tap into the resources of developed countries. The India-US Agriculture Knowledge Initiative announced in July 2005, is a step in this direction and aims to address new challenges and facilitate agricultural research, education, and extension.

Food security is not only about food production because in India, 2/3rd of our population is dependent on agriculture for its livelihood. It is in this sense that international trade is a vitally inter-linked component. The impasse in international trade negotiations is disappointing for us. When agriculture was brought into the multilateral trade negotiations, developing countries were given a clear understanding that trade disparities created by agricultural subsidies would be phased out in a definite time frame. Unfortunately, the developed countries, so far, are reluctant to do away with their subsidies that render the playing field quite uneven.

Ensuring adequate water supply both for drinking and for agriculture and industry will also be a critical challenge for the future. While our sub-continent is fortunate to have adequate resources, we have not seen enough collaboration in its use in the past. We must reverse this. As agreed at the SAARC Summit, we will work with our neighbours in this regard.

Our continued economic growth needs increases in the supply of cheap and sustainable sources of energy. Despite our large population and GDP growth averaging over 8% in the last few years, our per capita electricity consumption continues to be as low as 1/6th of the world average. Presently 67% of our electricity comes from burning fossil fuels, and 70% of our oil is imported. To meet our future energy requirements we will build partnerships with other countries who have surplus energy. Additionally we will have to increase the share of non-fossil fuel based energy resources in our energy mix. The India-US civil nuclear energy cooperation is one step in this direction.

This brings me to the issue of climate change and global environmental degradation. We are ready to work with others on the principle of "common but differentiated responsibilities" enshrined in the UN Framework Convention on Climate Change. In our view, this issue cannot be viewed in isolation and must be seen in the context of the developmental needs of developing countries. Today India has a very low per capita level of emissions and has an energy intensity per unit of GDP which matches the best in the developed world. We look at climate change in the context of the promises made by the international community for technology transfer and additional financing since Rio, which have remained unfulfilled. Critical technologies which can have significant impact on de-carbonization, have been out of reach of developing countries because of prohibitive costs and the existing IPR regime. A related concern for us is that trade advantages should not be sought through the instrumentality of environmental treaties. This issue will be in sharp focus at the forthcoming G8 Summit, particularly after the report of the Inter-governmental Panel on Climate Change. Addressing climate change issues in a manner that also meets our concerns will be a major preoccupation for us in the foreseeable future.

I have tried to give you a sense of the challenges that our foreign policy faces and is likely to confront in the immediate future. Some of you might see a great omission in this listing of challenges. What about balance of power issues such as the military balance in our own region and the world, and issues of conventional security? These require a separate speech by themselves to do them justice. Besides they probably receive sufficient public airing. Speaking personally, I believe that there is a good realist or balance of power argument to be made for choosing precisely these issues as our major foreign policy challenges. But sadly the language of strategic discourse in India is not yet developed enough to describe what we empirically know and face as reality around us. We need to develop our own strategic concepts and vocabulary. I am repeatedly struck by the use of concepts, ideas and methods of analysis that come from other situations and interests, (such as deterrence, parity, or reciprocity), and bear little relationship to our unique circumstance. That is something that needs serious examination on its own. It is probably best left to thinkers like you by diplomats like me.

Thank you for the patient hearing.

## **020. Briefing points by Official Spokesperson on the Parliamentary Consultative Committee meeting.**

**New Delhi, April 27, 2007.**

External Affairs Minister Shri Pranab Mukherjee addressed the Parliamentary Consultative Committee today on India's "Look East" policy (including relations with Japan). In his opening statement, EAM touched upon the following points:

India's focus on a strengthened and multi-faceted relationship with ASEAN is an outcome of the changed global political and economic scenario since the early 1990s and our own march towards economic liberalization.

- ASEAN provides a land bridge for India to connect with the Asia-Pacific. India and ASEAN have a convergence of interest in the security sphere also. The India-ASEAN relationship has steadily progressed since the policy was initiated in 1991 from sectoral dialogue partners to full dialogue partnership. The political level interactions at the Summit level which began in 2002 have been steadily strengthened through multi-faceted diplomatic interaction.
- Other than ASEAN, another significant pillar of our "Look East" policy is BIMSTEC. The Mekong Ganga Cooperation (MGC) is another initiative which brings together India and five ASEAN countries viz. Cambodia, Lao PDR, Myanmar, Thailand and Vietnam.
- India also participated in the second East Asia Summit (EAS) held at Cebu, the Philippines in January last year.
- Relations with Japan witnessed a transformation following the landmark visit of our Prime Minister in December 2006. The two Prime Ministers established an India-Japan Strategic and Global Partnership that provides a vision for charting the future course of bilateral relations. During EAM's visit (March 22-23, 2007), the first high level Strategic Dialogue with the Foreign Minister of Japan was held. Important projects for joint collaboration in the economic field including the Dedicated Freight Corridors Project and Delhi-Mumbai Industrial Corridor Initiative were discussed. Negotiations have also begun on the Comprehensive Economic Partnership Agreement.

EAM also took the opportunity to brief Consultative Committee members on the 14th SAARC Summit held recently in New Delhi.

**021. Speech by Foreign Secretary Shivshankar Menon on "India and International Security" at the International Institute of Strategic Studies.**

**London, May 3, 2007.**

Dr. Chipman, Excellencies, Ladies and Gentlemen,

It is a privilege to speak at this institution which has shaped the international discourse on strategic issues so significantly over so many decades. My talk today is on India and international security. I hope to share with you how India perceives the changing international environment and how we assess its impact on our prospects.

2. At independence, it was natural that the primary task of India's foreign and security policies was to enable India to begin the process of economic and social transformation that a poor and backward country required. The immediate objectives were therefore a peaceful environment, strategic space and autonomy, free of entanglement in Cold War conflicts or alliances. Non-alignment, as this policy was called was the ability to judge issues on their merits and their effect on India's interests, or, as our first Prime Minister Nehru used to say, 'enlightened self-interest'.
3. Six decades later, we face a different world. The end of the Cold War, accelerating processes of globalization and the salience of transnational challenges characterize the current global scene. India too has undergone a profound internal change during this period. Economic growth and modernization are transforming our society at an unprecedented pace. The impact of technology is being increasingly felt. Movements of goods, services, capital and people connect us more closely than ever to once distant societies. Our engagement with the global economy is growing rapidly, with trade in goods and services now exceeding US\$ 330 billion. Our needs from the world have changed, as has our capability. And this is reflected in how India perceives its own future, its ties with its

neighbourhood and its approach to the larger international order.

4. Today, it is no longer possible for India to envisage security - internal or international - in traditional terms. A combination of greater inter-dependence, applications of technology and new vulnerabilities have created challenges that could not have been imagined earlier. The threat of terrorism, the prospects of pandemics or the damage of cyber crime are manifestations of problems faced by a more industrialized and integrated world. Allow me to illustrate this by looking at India's neighborhood, at global issues and at the international order.

### **India's Neighbourhood**

5. The first circle of our external security interests is constituted by India's immediate neighbourhood. South Asia has lagged well behind the level of inter-dependence that characterizes many other regions, particularly Europe. From India's perspective, we are acutely conscious that a peaceful periphery is a pre-requisite to sustain our growth and development. The challenge, therefore, is to encourage our neighbours to see the possible gains from a more active engagement. In the last decade, countries like Bhutan or Sri Lanka who have sought to leverage India's growth to their benefit have benefitted greatly. Our hope is that this will embolden our other neighbours. For its part, India is prepared to take a long term view of these relationships and to take unilateral steps to put them on a better footing.
6. The prospects of creating a peaceful periphery are complicated by the reality that each of our neighbours is undergoing its own political and social transformation. A brief survey would give you a feel for the challenges. The Afghanistan-Pakistan border region currently elicits the greatest concern. The regrouping and resurgence of the Taliban in a swathe of territory west of the Indus on both sides of the Durand Line threatens stability well beyond the area itself. The last year has seen the emergence of an area of anarchy under terrorist and extremist control west of the Indus. Each local accommodation with the Taliban has made the war on terrorism more disjointed and segmented. The assumption that there might be "good Taliban" who might be politically accommodated is most dangerous. Al Qaeda and the Taliban are allied with and extend reciprocal support to a host of jihadi groups

operating out of Pakistan. These groups have been responsible for much of the cross border terrorism directed against India. The London and Madrid train bombings also lead to the same networks.

7. This is not to underestimate what Afghanistan has achieved. Over 4 million refugees have returned home, elections have been held freely and fairly, and the economy is enjoying double-digit growth. India is making a long term and heavy investment in Afghanistan for the same reasons as you are. We cannot afford to see the country once again becoming a cockpit and breeding ground for extremist ideologies and terrorism. India has committed US \$750 million to Afghan reconstruction and 3500 Indians are working in Afghanistan. What is essential is to create the security that Afghanistan needs to recover.
8. The security situation in Afghanistan cannot be addressed without Pakistan's active cooperation. It is our belief that the political stability and economic prosperity of Afghanistan is in the interests of both Pakistan and India. We have offered to work together with Pakistan for Afghanistan's recovery. Afghanistan can still re-emerge as what Toynbee called a "roundabout" of history, a region where routes converge and radiate, by hosting energy corridors for oil and gas and transit routes between some of the world's great emerging markets. But this would require all of us in the region to work together.
9. A stable, moderate and prosperous Pakistan at peace with itself and its neighbours is in India's interest. In the last three years, the composite dialogue has greatly improved the atmosphere between India and Pakistan, addressing all issues including Jammu & Kashmir, bilaterally. For the first time in sixty years, over four thousand people have been legally permitted to cross the LOC. Unfortunately, however, despite a Joint Anti-Terrorism Mechanism, more remains to be done by Pakistan to curb cross-border terrorism which continues with seasonal fluctuations. For India, it is crucially important that Pakistan fulfill its commitment not to permit any territory under its control to be used to support terrorism in any manner.
10. Nepal is going through a difficult double transition, building a stable democratic political order while attempting to mainstream the Maoists peacefully. The fundamental decisions on the direction and nature of change lie with the people of Nepal. India has extended its full support to Nepal in ensuring the success of this process, and will

continue to do so. Another transformation is being attempted in Bangladesh. As a neighbour and friend, India wishes for a democratic, stable and prosperous Bangladesh. In Sri Lanka conflict, violence and terrorism continue. The recent intensification of armed conflict, which has led to renewed refugee flows to India, is particularly worrying. As the conflict continues we see the induction of new capabilities. Only dialogue can lead to a sustainable and lasting solution to the conflict acceptable to all sections of Sri Lankan society within the framework of a united Sri Lanka.

11. Despite the risks that I have outlined, taken as a whole, the subcontinent is moving in a positive direction. It is one of the fastest growing regions of the world, and a free trade area has come into existence (with only Pakistan opting out). The recent SAARC Summit in New Delhi showed that the countries of South Asia see an opportunity for benefit in India's growth and have the will to seize it. The risks and dangers are primarily political and from terrorism.
12. China is India's largest neighbour. Her rise represents a new opportunity to remake our relations and settle outstanding issues. There is space enough and opportunity for both countries to grow. The challenge for us both is to translate this understanding into action in a transparent manner taking into account the continuous development of our capabilities.
13. As we move beyond Southern Asia to India's extended neighbourhood of West Asia, Central Asia, South East Asia and the Indian Ocean region, we see other potential challenges and opportunities. West Asia is an important source of India's energy needs, an increasingly significant trade partner and home to nearly 4.5 million people of Indian origin. Yet the potential for conflict and continued instability in West Asia is high. Proliferation in North East Asia and west of India are clearly not in India's security interest.
14. From the broader perspective, we regard our security as lying in a neighborhood of widening concentric circles. It is often said that the logic of geography is unrelenting. Geography gives India a unique position in the geo-politics of the Asian continent, with our footprint reaching well beyond South Asia and our interests straddling across different sub-categories of Asia - be it West Asia, East Asia, South-east Asia or Central Asia. We share one of the longest land borders

in the world with China, Central Asia verges on our northern frontiers, we have land and maritime borders with three South East Asian countries, our Andaman and Nicobar islands are just over one hundred kilometers from Indonesia, and our exclusive economic zone spans the waters from the Persian Gulf to the Straits of Malacca.

15. It is clear that a major realignment of forces is taking place in Asia. Besides the emergence of the Indian and Chinese economies, Japan is playing a greater role in regional stability and security. The key to ensuring long-term stability and security in Asia lies in the collective ability of Asian countries to build mutual economic stakes in each other, and to construct an open regional security architecture, as ARF and other organizations are attempting to do.
16. At the risk of simplifying, I would say that India's security interests in its neighbouring regions are met by a peaceful South Asia, a stable West Asia, a dynamic ASEAN and a developing and stable Central Asia. Significantly our current engagement in security affairs in Asia in expanding circles starting with the immediate neighbourhood parallels our growing economic interaction with the same region from Sri Lanka in South Asia to ASEAN and further East to Japan.

### **Global Issues**

17. Despite some political turbulence around India, the real factors of risk that threaten systemic stability come from larger, global issues like terrorism and proliferation of weapons of mass destruction. (Hence the significance of Pakistan as these issues enter our region from Pakistan.) As the world globalizes, technology ensures that our threats also globalize. Our security planning must therefore increasingly deal with crosscutting or transnational issues: energy security, the environment, non-proliferation of weapons of mass destruction, and, most significantly, terrorism. It seems apparent that no single country can deal with these issues alone and that they require global solutions which involve all the major powers.
18. Some trans-boundary issues have the greatest part of their solutions in our immediate and extended neighborhood. These include food security and water issues. Our effort is to create a web of cooperative partnerships in areas such as water and flood control. There are others such as energy security and climate change which are global in their nature and impact.

19. For instance, let me give you an idea of the challenge that India faces in seeking energy security. The average consumption of electricity per capita each year in India is currently only 550 kWh against a global average of 2430 kWh, a US average of 13070 kWh and a Chinese figure of 1380 kWh. At a projected growth rate of 8% a year through 2031-32, the minimum necessary to eradicate poverty, India needs to increase its primary energy supply by 3 to 4 times, and its electricity generation capacity by 5 to 6 times current levels. By 2031-2, power generation capacity must increase to nearly 800,000 Mwe from the current capacity of 160,000 Mwe. And more than half of this will still have to come from coal. I must add here that even though we have been growing by over 8% there has been effective decoupling of our GDP growth from energy consumption and we have not followed the fuel fuelled growth seen in the OCED.
20. Since earlier this century most hydrocarbon exports from the Gulf region have begun to flow eastwards. The major consumers and major producers of energy are all in Asia. There are fears of a competitive scramble, spiraling prices and plummeting growth. The debate on climate change has acquired starker dimensions in this background. For India clean, convenient and affordable energy is a critical necessity for improving the lives of our people. This would imply massive imports of oil and even coal, which is not as abundant as was believed. Can India afford to follow this path? What are the other options available given that we are short of energy resources like oil, gas and uranium? What does each of these options entail? In our discussions with the UK, EU and US on energy security, we have come to the conclusion that international cooperation in civil nuclear energy can be a significant addition to our own efforts. This is the fundamental premise behind the India-US understanding on civil nuclear energy cooperation. We would need to build other partnerships as well, on technology cooperation in renewable and efficient use of energy, and on cooperative development of energy supply chains with new suppliers in West Africa, Central Asia and Latin America. The EU in particular is a valued partner in our energy dialogue. India is an active participant in the International Thermonuclear Energy Research (ITER) project to develop fusion energy as a future source of clean and cheap energy sponsored by the EU.
21. Linked to energy security is the issue of global warming and climate

change. The international community already has an instrument to deal with the challenge of climate change in the form of the painstakingly negotiated Kyoto Protocol. More than 50% of GHG emissions are currently from OECD countries. India with 17% of the world's population accounts for only 4% of such emissions. And yet the adverse effects of global warming caused by accumulated and continued high emissions by industrial countries will largely be felt by developing countries. These unsustainable patterns of consumption and production must be tackled on an urgent basis. It is imperative that the developed countries in the Kyoto Protocol urgently commit themselves to truly higher levels of GHG reductions as compared to the first commitment period and conclude these negotiations quickly. This will also spur the enlargement of the carbon market and give a fillip to private sector involvement in clean technologies and investment.

22. We all need additional paradigms for tackling climate change comprehensively. These include access to clean technologies by developing countries both through new R&D efforts, including collaborative R&D focusing on the resource endowments of developing countries, and by addressing the IPR issue. The IPR issue has been dealt with some success in the case of HIV/AIDS. A similar effort is required for clean technologies that would balance the rewards for the innovators with the common good of humankind.
23. We have recently begun hearing of linkage between climate change and international peace and security. Developed countries reducing their GHG emissions and energy consumption will considerably reduce such threats through a reduction in the need for privileged access to energy markets. Nothing in the GHG profile of the developing countries even remotely reflects a threat to international peace and security though their taking on GHG mitigation targets will adversely affect their development.
24. To meet the twin challenges of energy security and climate change India and the EU have an Energy Panel which focuses on collaboration in clean coal technologies, nuclear energy, energy efficiency and the petroleum sector. There is also a separate India-EU working group under the Joint Commission dealing with environmental issues.
25. As for the threat from weapons of mass destruction to international

security, we believe that general and complete disarmament including nuclear disarmament must remain on the international agenda. India's status as a Nuclear Weapon State does not diminish its commitment to the objective of a nuclear weapon free world. Aspiring for a non-violent world order, through global, verifiable and non-discriminatory nuclear disarmament continues to be an important plank of our nuclear policy that is characterized by restraint, responsibility, transparency, predictability and a defensive orientation. We maintain our voluntary moratorium on tests, are ready to engage in negotiations in a non-discriminatory Fissile Material Cut-off Treaty, and we enforce strict and comprehensive export controls, which have now been harmonized with those of the Nuclear Suppliers Group and the Missile Technology Control Regime. We have scrupulously not transferred enrichment and reprocessing technologies to countries that do not have them, and have supported international efforts to halt their spread. Recent events have shown that a new global consensus on non-proliferation is required, based on an equal partnership of responsible states. As a responsible nuclear power with impeccable credentials on non-proliferation, we are ready to be a partner against proliferation, working closely to create a new consensus on which to move forward.

26. Many of the challenges I have described - terrorism, peace and stability in our extended neighbourhood, proliferation of WMD, energy security and environment - are integral to our discussions with the major powers, and the European Union. The engagement between India and the EU collectively, as also with its member states, notably France, Germany and the UK, is intensifying on a number of strategic issues. With shared democratic values and as multi-ethnic plural societies, India hopes to be able to draw on the emerging cohesiveness of the European perspective on major strategic issues. India and the European Union are natural partners and factors of stability in the present world order, and the UK is India's natural bridge to the EU.
27. In sum, in our approach to emerging and larger security issues worldwide, as new transnational threats emerge, fueled in part by the informative age and globalization, a new mix of players will be central to achieving our goals. In an environment where most conflicts will be "low intensity" regional affairs, the real challenge will be "winning the peace", and marshalling and deploying soft-power assets will be as important as "hard power" assets. Beyond regional

instabilities and conflicts caused by failed or failing states, the greater problems are associated with the new set of trans-national threats that grow in importance proportionately to the progress of the informative age and globalization trends that fuel them just as they drive economic expansion. Foremost among these is the terrorist threat, from a new generation of technologically empowered, globally mobile non state actors.

### **The International Order**

28. This tour d'horizon from an Indian point of view suggests that we should judge the efficacy or otherwise of the international order by its success in dealing with terrorism, disarmament and non-proliferation, energy security and the environment. Each of these must be successfully addressed if India is to have the peace and security she seeks for her own transformation. Unfortunately, an honest appraisal suggests that the present global order has not done very well when judged by this standard. It is because the old order is not delivering that we are compelled to seek ad hoc solutions like "coalitions of the willing" to contemporary security problems.
29. It seems to us that global security issues will need multilateral solutions that are the result of a broad participatory process. In seeking an enabling global political and economic order, India has consciously sought to strengthen multilateral institutions and mechanisms, particularly the United Nations. More than 90,000 Indian troops and policemen have participated in 43 UN peacekeeping operations.
30. If our international institutions are not dealing successfully with the challenges of today, one reason is the fact that they no longer reflect current or emerging realities of power. The United Nations has a structure which is completely outdated in terms of the emerging global landscape. We are committed to the comprehensive reform of the United Nations, including the Security Council, which should reflect contemporary realities in its composition.
31. To conclude, there is a need to build new international consensus' to deal with non-proliferation and energy security. At the same time, we should make truly effective and comprehensive the existing regimes for climate change and to counter terrorism. India is ready to work to build an enabling global order, based on equity and

reflecting emerging realities. We look to Britain and the EU as partners in the shaping of the new approaches that a changing world requires.

**022. Address by External Affairs Minister Pranab Mukherjee at the closing session of the XXX Antarctic Treaty Consultative Meeting.**

**New Delhi, May 11, 2007.**

Chairman, Prof. U.R. Rao, Secretary, Ministry of Earth Sciences Dr. P.S. Goel, Executive Secretary of the Antarctic Treaty Secretariat Mr. Huber, Excellencies, Distinguished Delegates, Ladies and Gentlemen.

I am happy to be here to address you at the concluding session of a very successful and historic 30th Antarctic Treaty Consultative Meeting. Historic in the sense that India has hosted this meeting for the first time coinciding with the 25th year of its joining the Treaty. The two-week long deliberations have resulted in some significant outcomes and decisions. These mutually agreed decisions not only strengthen the Antarctic Treaty in providing good governance to the Antarctic continent, but underline the need of cooperative research and environmental protection.

The Treaty has certainly grown in stature and strength in last 48 years with newer entrants joining its fold. Adoption of the Madrid Protocol on Environment Protection in 1991 was a significant landmark for the Antarctic Treaty. It indicated the concern of Treaty Party nations about the fragile Antarctic ecosystems and their significance at global level. The Protocol is a testimony of farsightedness and a global vision of mentors of the Antarctic Treaty. It has gained further importance at a time when we are passing through one of the most critical phase of global environmental scenario, especially after the report of the UN's fourth Intergovernmental Panel on Climate Change. It is becoming increasingly clear that to counter the projected impacts of global warming, we need coordinated effort across the world.

The intensive collaborative research work that is being carried out during the ongoing International Polar Year 2007-08, therefore assumes greater importance. I am sure the policy and law makers world over will be benefiting by the research work being carried out by the Polar Scientists in Antarctica,

in taking informed decisions and remedial steps against the impacts of global warming.

I am happy to note that the Meeting has adopted a comprehensive report of the 10th meeting of the Committee for Environmental Protection, which has included a specific agenda on 'Climate Change' for its deliberations during the next ATCM. This is significant considering the report on Climate Change by the IPCC.

Detailed deliberations on the growing tourism in Antarctica and the decisions taken by this ATCM will surely help in providing necessary direction and a framework for developing a regulatory mechanism to safeguard the Antarctic environment.

The Antarctic Treaty System has become an epitome of coordinated research and cooperation, carried out by the nations and organisations represented here in this august Meeting. The path shown by the Antarctic Treaty System by forging ties in collaborative research and enforcing a strict regime of environmental protection through a detailed consultative process, is not only unique to the Treaty but needs to be followed in other areas as well.

I hope that you have enjoyed your stay with us as much as we enjoyed hosting the ATCM. You must have got some time from the hectic schedule of the Meeting, to visit some of the historical monuments and sites in and around Delhi.

Let me conclude by stating that India remains committed to scientific research and technical cooperation in the Polar Regions. Antarctica being a common heritage of mankind and the foremost symbol of peaceful use and cooperation needs to be protected for posterity.

**023. Address by External Affairs Minister Pranab Mukherjee at the All India Annual Conference for Haj 2007.**

**New Delhi, May 11, 2007.**

At the outset, I express my gratitude for organizing this programme. My colleague, Shri Ahmed was to come but he could not come due to injury to his leg. I am very glad to be with you all this morning to inaugurate the All India Annual Haj Conference. At the outset, I would like to compliment and congratulate the Government of the Kingdom of Saudi Arabia for the arrangements made for the last Haj and for its successful completion. As you know, acceding to our request, they increased our quota by 10,000. I would also like to commend the efforts made by the Haj Committee of India, the Indian Missions in Saudi Arabia, the Airline companies and all other individuals and agencies for their contribution in the smooth and successful organization of Haj pilgrimage and the arrangements made for the last Haj.

It is a matter of great pride for us that one of the largest contingent of Haj pilgrims in the world goes from India. I am glad to learn that over 1,50,000 Indian pilgrims performed the Haj last year, which is an all-time record. Indeed, under the UPA Government the pilgrim quota has been considerably increased during the last three years. In this connection, I would like to express my sincere gratitude to the Government of the Kingdom of Saudi Arabia and the Custodian of the Two Holy Mosques for acceding to the request made by the Government of India for enhancement of our quota.

For millions of Muslims all over the world, and India is no exception, pilgrimage to the Holy places of Makkah and Madinah is a cherished life-long dream and the Government of India is committed to ensure that the best possible arrangements are put in place for the comfort and well being of Indian pilgrims. The External Affairs Ministry under the guidance of my colleague Shri E. Ahamed has put in dedicated effort in bringing about perceptible improvements in Haj management during the last three years. I congratulate him, his colleagues and senior officers.

It is indeed heartening to note that our Haj Mission is working hard to fulfill the mandate given to it of serving the Hajjis and taking care of their needs and requirements during their stay in the Kingdom of Saudi Arabia. I am happy to note that our Haj Mission in Saudi Arabia has been conferred with the ISO 9001 certification.

The Government would continue to depute in sufficient numbers, administrative, para-medical and medical personnel to look after and assist the Indian pilgrims

during their stay in Saudi Arabia. Sufficient medicines and other critical medical equipment would also be made available to our doctors for helping the Indian pilgrims. We are constantly striving to bring in improvements and deal with constraints if any relating to manpower and logistics and to provide our Haj Mission in Jeddah with trained personnel as required including IT professionals.

The Government is also making all efforts to ensure that private tour operators who take pilgrims to Haj provide proper services and facilities for the pilgrims. These pilgrims also benefit from the arrangements, for medical and general assistance, put in place by the Haj Mission in Jeddah.

I am happy to learn that the Haj Committee of India has plans for the computerization of the Haj arrangements by linking all the State Haj Committees through a wide area network. The use of Information Technology in Haj Management would significantly improve the speed and efficiency of the services rendered to pilgrims. Pilgrim data is already computerized by the Consulate in Jeddah and can be accessed through the Consulate's website.

The Haj Committee of India organises regular orientation/training programmes at the State and District level for providing the pilgrims knowledge of instructions and guidelines to enable them to perform their pilgrimage in a proper manner. I am glad that the first training of trainers camp has already been held yesterday in New Delhi. In this connection, I can assure your Excellency that when you mentioned last time that our pilgrims require training, this training is a step in this direction.

The Government ensures that satisfactory arrangements have been made to facilitate the travel of the Haj pilgrims to Saudi Arabia through the 15 embarkation points in India to Jeddah and Madinah. Both Air India and Saudi Arabian Airlines have rendered service to the pilgrims in this effort. I would like to assure this gathering that the Government's objective is to bring about constant improvements and innovations in our Haj Management, both in India as well in Saudi Arabia.

You would be happy to know that the Government has constituted two Committees i.e. an Expert Group on Haj to recommend ways and means to make further improvements in our Haj management and another Committee to study measures to look into the reforms of the existing system of management of Haj pilgrimage and prepare an appropriate and viable model for Haj Management. Both the Committees have held several rounds of discussions and their recommendations will help the Government in further improving Haj Management.

Friends, the Annual Haj Conference is a very important event in Haj management as the participants jointly introspect, review and deliberate upon the experiences of the previous Haj. They also discuss inadequacies and short-comings, if any, and suggest ways and means for ensuring better arrangements in the following year. I am sure that this Conference would also provide a very strong platform to achieve the common objective of making the best possible arrangements for Indian Hajis.

As welfare and well-being of Haj pilgrims has always been a matter of utmost concern for the Government, I would urge the participants here to give high priority to the training and orientation of prospective Haj pilgrims so that our pilgrims are able to perform their holy rituals in a proper and safe manner.

I take this opportunity to flag an important area of concern that is proving as a bottle-neck to streamlining Haj Management in India. This is the delay in the formation of State Haj Committees by some States in accordance with the provisions of the Haj Committee Act 2002. I would like to urge all those States who have so far not constituted their State Haj Committees to do so expeditiously.

As part of the preparations for Haj 2007, a composite delegation of senior officials from the Ministry of External Affairs, the Ministry of Civil Aviation, Air India and the Haj Committee of India, has already met in Jeddah in March 2007 and gave final touches to the plans for next Haj. The discussions by the Composite delegation also included means to find better accommodation at affordable costs for our pilgrims. Based on our past experience in hiring accommodation it has been decided to rationalize parameters and rates for the accommodation. Discussions have also been held to plan air transport arrangements. Shri E. Ahamed, MOS, would also be visiting Saudi Arabia later this month to meet with the Saudi Minister for Haj and to conclude the formal agreements for Haj 2007.

As improvement in Haj Management is a continuous process, I, on behalf of Government of India, would like to assure you that we would very carefully consider all suggestions that would emerge from the deliberations of this Conference and try to implement them wherever feasible in the overall interest of our pilgrims.

Before I conclude, I extend my apology for the delay.

I extend my best wishes for a very successful All India Haj Conference.

**024. Address by Minister of State E. Ahamed at the All India Annual Conference for Haj 2007.**

**New Delhi, May 11, 2007.**

It's my great pleasure and privilege to welcome you all to the All India Annual Conference for Haj 2007. It is a matter of personal privilege for me to be associated with arrangements of the Indian Haj pilgrims for over a decade including during the last three years as Minister of State for External Affairs, directly in-charge for Haj Affairs.

2. I would also take this opportunity to congratulate all the agencies involved in the Indian Haj management, in particular the Haj Committee of India, State Haj Committees, Air India, Indian Airlines, Indian Missions in Saudi Arabia for the successful completion of the Haj 2006-II. The Haj 2006-II was by far the most challenging because of the record number of pilgrims from India who performed Haj. This was due to the Government of the Khadim Al-Haramain Al-Sharifain granting an additional quota of 10,000 pilgrims to India for which we are grateful. I would request the Government of Saudi Arabia to at least maintain the same quota of 1,57,000 for this year given the increasing desire of Muslims in India to perform Haj.
3. Dear Friends, the Annual Haj Conference is an institutionalized platform for all those with interest in Haj management; the political leadership, the Haj Committees, the Government departments, Indian Missions in Saudi Arabia, the Ministry of Civil Aviation, Air India, Members of Parliament and learned religious scholars to express their views through transparent discussions, frank exchange of opinions and brainstorming on all Haj-related matters. The deliberations in this forum have brought to the forefront many useful suggestions and ideas in the past, which had enabled the Government to further improve and strengthen the overall arrangements of the Haj.
4. I would like to urge various States to depute sufficient number of Khudammul Hujjaj and to give them proper orientation so that they can be of use to the pilgrims. These Khudammul Hujjaj are supplemented and supported by community volunteers mobilized by the Consulate General of India hailing from different parts of India.
5. I would also like to request the Haj Committee of India and the State Haj Committees and all others who are concerned with Haj affairs to

give highest priority to pre-departure counseling and orientation of the prospective Haj pilgrims so that they embark on their journey of lifetime with greater confidence and perform their rituals in a safe and spiritually satisfying manner.

6. During the last Haj I was fortunate to lead the Prime Minister's Haj Goodwill delegation to Saudi Arabia. During my stay there, I, along with my other colleagues, personally supervised the Haj arrangements. We also got the opportunity to take up several matters with Saudi agencies like the South Asian Moassasa and the Ministry of Haj.
7. I am planning to visit Saudi Arabia soon to hold discussions with the Saudi Haj Minister, Dr. Fuad bin Abdul Salam Al Farsi on the arrangements for the next Haj. We shall also be signing the Haj 2007 Agreement with the Saudi authorities.
8. The Government and the Haj Committee of India constantly strive to make Haj affordable and comfortable. While all possible measures are taken to cater to the diverse requirements of all our Haj pilgrims, considering the magnitude of the logistics of movement, accommodation and air transport, it is not always easy to satisfy all the pilgrims. I would, therefore, request the pilgrims to show patience and understanding. I appreciate that most of the pilgrims have been cooperative and appreciative of the government authorities.
9. I would request all the participants in this august conference to air their valuable views and suggestions so that it could inform policy decisions.
10. I would like to express my deep sense of appreciation of the contribution made by the Haj Committee of India under the leadership of Janab Iqbal Ahamed Saradgi, who has shown exemplary concern and interest in Haj matters.
11. Before ending I would like to personally thank the honourable External Affairs Minister Shri Pranab Mukherjee for inaugurating the Conference. I thank all of you for your gracious presence and extend my best wishes for a successful All India Haj Conference.

Thank you

**025. Speech of Defence Minister A. K. Antony on "China and India: Building International Stability" at the Shangri-la Dialogue-2007 of the 6th Asian Security Conference.**

**Singapore, June 2, 2007.**

Most of us gathered here today are professionally focussed on security issues. We deal with different dimensions of security - from internal and regional, to the continental and global. We also envisage the definition of security in varied ways - from the traditional hard security viewpoint to its larger and softer concepts. We have been made aware too that the nature of threats that societies face are constantly changing. Obviously, our responses which are so critical to ensuring international stability must keep pace with those changes. Today, I share India's thinking on these subjects, less as a projection of static interests vis-à-vis an external world, and more as a viewpoint of a country integrating with a larger global canvas. I hope thus to bring out how India's security policies contribute to building international stability.

For some international stability is the absence of conflict among the major powers. As was notably the case during the Cold War, international stability in this perspective is also related to a balance of power between major contenders for influence. The Cold War is gone but the concepts of deterrence, balance, arms races and arms control are still seen as important factors in international stability. This point of view may still be valid to a degree but just as our view of security has evolved so too must our view of international stability.

Given today's unprecedented globalisation in trade, technology, media, and a host of other areas, our lives are linked together in myriad ways. This interdependence is in itself a major dampener of conflict, reducing the incentive for major players to seek a resolution of differences by a show of strength. However, globalisation has highlighted new threats to international stability such as meltdown of currencies and financial markets - a new domino theory if you will - cascading protectionism, pandemics, uncontrolled migration flows and inability of states to handle change and conflict within thereby generating instability and conflict. Globalisation and interdependence have also changed radically the nature of old threats and enhanced the threat potential of non-state actors. For example, India had to cope with terrorism in the 80s. It was seen by many as India's problem. Today, post 9/11, international terrorism is seen from a very different

perspective. The old concepts of balance of power and accommodation of rising powers through slow adjustment of existing frameworks need to be updated and supplemented if we are to successfully handle these challenges to international stability.

In this background and as Minister of Defence, how do I see India's security priorities? India is the world's most populous democracy. The well-being of its billion plus citizens has to be any Indian Government's first task. This well-being is not only economic. Our Constitution embodies a host of rights and guarantees and directs us to remove social and economic disparities. When security is accompanied by such a broad sense of well being, we can be more certainly assured of stability. Meeting aspirations in the midst of substantial change is, however, a very complex challenge. Yet, it has to be seriously undertaken because mitigating grievances and addressing expectations are central to the management of such change. Values, beliefs and ideologies can make their contribution, both positively and negatively. The point I wish to emphasise is that an effective management of India's internal security at a time of rapid modernisation is itself a key contribution to international stability. When one sixth of the world demonstrates an ability to meet its wants, manage its expectations and govern itself effectively, the significance of that achievement cannot be overvalued.

India has a coastline of more than 9000 kms, 300 island territories, some of which are closer to our neighbours than our own landmass, significant and growing maritime assets and 2.5 million square kms of Exclusive Economic Zone (EEZ). The sea lanes going through the Indian Ocean are vital arteries of the global economy. We still have unresolved border issues and for more than two decades we have had to respond to the challenge of cross-border terrorism and proliferation of ballistic missiles and nuclear weapons in our neighbourhood. Our next security priority therefore has to be ensuring peace and stability on India's borders and in the regions with which we have increasing interaction - the Gulf, Central Asia, the Indian Ocean region, South Asia and South East Asia. This entails maintaining an adequate level of defence preparedness to keep the probability of armed conflict low and to respond to situations such as the 2004 Indian Ocean " tsunami". Where there are disagreements, the priority has to be confidence building and a rational and realistic approach based on peaceful bilateral dialogue.

We have taken a number of policy initiatives - both bilateral and regional - that would put our ties with immediate neighbours on a much better footing.

Our relations with China have undergone a significant improvement. As we both expand and integrate with the global economy, new opportunities offer themselves to refashion our ties. On major global issues, we often have converging positions and shared interests. We are committed to settling bilateral issues in a fair and transparent manner. With Pakistan, the composite dialogue has changed the climate of our ties for the better. With regard to bridging our differences, including on Jammu & Kashmir, we know what has not worked in the past. The challenge is to devise more imaginative approaches. To do that, it is imperative that Pakistan delivers on its commitment not to permit any territory under its control to be utilised to support terrorism in any manner. I cannot emphasise enough India's stakes in the emergence of a stable and moderate Pakistan, at peace with itself as much as with its neighbours. Our quest to strengthen regional stability extends equally to other neighbours. For example in Afghanistan, India has committed more than US \$ 750 million to reconstruction and 3,500 Indians are participating in such programmes there. With all our neighbours we are prepared to go the extra mile to encourage greater regional cooperation for mutual benefit. The recent SAARC Summit in New Delhi is a testimony of our sincerity in this regard. In security matters, India has completed a decade of engagement with the ASEAN Regional Forum (ARF), which provides a vital platform for the major security players in Asia to sit together and debate common challenges.

Since the beginning of economic reforms in 1991, the Indian economy has become increasingly integrated in terms of trade, investment and technology flows with the rest of the world. Therefore the third security priority for us is to safeguard the material, psychological and technological basis for enhanced interaction with the rest of the world. Our approach in dealing with cross-cutting threats to security is based on a realistic assessment of global trends, capabilities and our own technological options - be it in terms of energy security, the security of critical infrastructure, WMD proliferation, terrorism and maritime security. The issue of non-littoral contributions to the security of sea lanes has been discussed in this Dialogue earlier. India remains willing to work constructively with littoral States in ensuring the security of vital sea lanes.

Finally India's security priority has to be a vigorous and active participation in shaping global developments, including through strong equations with key players - US, Russia, EU, China and Japan and key regions such as the South East Asia, the Gulf and the Middle East. Contrary to some theories in that regard, we do not perceive the inter se relationships

between the major global players in zero sum game terms. Our defence and security interaction with the major powers is expanding in both scope and content. The recent naval exercises and visits that we conducted with Singapore, Vietnam, the Philippines, with Japan and USA, and with Russia and China reflect the expansion of our vision as much as our capabilities.

I have attempted to describe India's security priorities in terms of the requirements of international stability today. India's first priority may be internal, focussing on a conducive environment for rapidly improving the quality of life of our people, but when we succeed at home, given the sheer numbers involved, we also succeed in denting global poverty and in demonstrating new opportunities for developing countries to leverage the globalised economy. Equally importantly the pluralism that sustains our society at home can be a major contribution to a more stable and diverse international order. Regionally, our security interests are met by a peaceful and developing periphery. This is the aim of our current intensifying engagement with countries in South Asia, South East Asia, West Asia and Central Asia. Given the challenges to peace and long term stability in these regions, this also contributes to international stability. Globally, we are contributing actively as a responsible partner to the search for solutions to security dilemmas connected with terrorism, WMD proliferation and other non-traditional security threats. Our longstanding credentials as a good global citizen will only be further reinforced by the growing stakes that we have developed in the world economy. India's relations with the major powers - United States, Russia, China, European Union, and Japan as well as the emerging powers of Latin America and Africa are on a path of rapid expansion. This in itself is a positive development for international security and stability in a rapidly changing world characterized by multivalence, interdependence and political cooperation among the major powers. Our rise has given no cause for any apprehension with regard to regional or international stability. On the contrary this is seen as contributing to the development of a more stable world order.

To conclude, it is not merely the structure of the international system that is changing at a rapid pace. The challenges themselves are evolving rapidly. When it comes to natural disasters, pandemics, illegal trafficking in goods or people or environmental problems, traditional analysis based on national rivalries must give way to more forward looking approaches of cooperative solutions.

It will require major states, in particular, to be less tactical in their approaches to the key challenges of our times. This will also require that no single forum perhaps assume responsibility for international security related issues. Only a pluralistic security order working through a network of cooperative structures can have the legitimacy as well as the wherewithal to deal with the security challenges of the 21<sup>st</sup> century. India is ready to play its role in the shaping of this new approach to collective security.

**026. Address by External Affairs Minister Pranab Mukherjee on the celebrations of the World Environment Day and the Foundation Day of the National Museum of Natural History Organized by the Ministry of Environment and Forests.**

**New Delhi, June 5, 2007.**

It gives me great pleasure to join you all here on the occasion of the World Environment Day being organized by the Ministry of Environment and Forests and also the foundation day of the National Museum of Natural History.

The museum owes its genesis to the Late Prime Minister Smt. Indira Gandhi. In 1972, while considering the new projects to be initiated to celebrate the 25th anniversary of India's Independence, she decided that the country needs a museum of Natural History to depict its flora, fauna and mineral wealth, to provide an out of school facility for education of children and to promote environmental awareness among the masses. The vision got crystallized and the Museum was set up on June 5, 1978. I am happy that the Ministry and the National Museum of Natural History have maintained the spirit by celebrating this day every year as people's event with colourful activities such as street rallies, bicycle parades, green concerts, essays and poster competitions in schools, tree planting as well as recycling and clean up campaigns, etc.

The World Environment Day, commemorated each year on June 5, is one of the principal vehicles through which the United Nations stimulates worldwide awareness of the environment and enhances political attention and action. This day was established by the United Nations General Assembly in 1972 to mark the opening of the Stockholm Conference on

the Human Environment. The theme for this year's World Environment Day is - "**Melting Ice - A Hot Topic**". It focuses on the challenges facing the people and ecosystem that we live in, as a result of rapid environmental and climatic changes. In doing so, it also links to the wider world where glaciers are shrinking and an increasing number of extreme weather events are triggering more frequent droughts and floods, which we are also facing in India.

Climate Change is also one of the key themes of the UN decade of Education for Sustainable Development (2005 - 2014) and I am very happy to release a poster for school children on this theme, which hopefully will be used as a teaching tool.

The Arctic and Antarctica may be the Earth's climate early warning system-feeling the heat first-but we know it does not end there. Ocean circulation, the key driver of regional and global weather systems, is inextricably linked with melting and freezing processes in and around the poles. The Polar Regions are also a kind of protective shield, reflecting heat back into space that would otherwise be absorbed on Earth. There is also growing concern over the so-called 'positive feedback' including the potential release of massive amounts of the powerful greenhouse gas methane, which is stored in the Arctic permafrost. So, what happens in the Arctic and the Antarctic as a result of climate change is of direct concern to us all-from someone living in the Congo River Basin, the Australian outback and in rural China, to suburban dwellers in Berlin, Rio de Janeiro, Washington DC or New Delhi.

Human activities undertaken in the past 250 years have increased the concentrations of greenhouse gases in the atmosphere. As a result, more of the sun's energy is getting trapped in the lower atmosphere, and is heating up the surface of the earth. The impacts of climate change are going to be of particular concern to India. A large proportion of our huge population depends on climate-sensitive sectors like agriculture, forestry and fishery for livelihoods. Also, we have a huge population residing on and near the coastal belts, which will face the most immediate impacts of rise in sea-level. The enormity of the predicted impacts, such as retreat of Himalayan glaciers and changes in the monsoon, combined with poverty and vulnerability, will adversely affect India's economy, environment and development.

The actions of those living outside the Polar Regions are of direct concern to Arctic peoples. The vast majority of emissions that are contributing to

melting ice have been and are being generated on the roads and in the factories, homes and offices of the industrialized economies. We are currently locked into a vicious and ever widening circle. We need to make it a virtuous one. Therefore, steps must be taken immediately by all concerned according to our common but differentiated responsibilities and respective capabilities with the industrialized countries taking the lead as they account for the vast bulk of the emissions already in the atmosphere.

In India we have taken major initiatives including adopting a National Environment Policy, 2006. India's NEP is a response to our national commitment to clean environment. It synergies environmental and economic policies and appropriate institutional mechanisms to support the integration of three pillars of sustainable development: economic development, social development and environmental protection. It recognizes that the environmental management cannot be treated separately from other development concerns and that the poor are seen not as a problem but as a part of the solution. The policy is bringing in new models of partnerships between the Government and the civil society.

As a signatory to the United Nations Framework Convention on Climate Change, we are committed to climate-friendly sustainable development. Energy efficiency has improved in energy-intensive industries such as cement, paper and steel. Initiatives such as the conversion of public transport to CNG, enhancement of public transport through the metro rail and Bus Rapid Transport Systems, promotion of bio-fuels such as jatropha, are noteworthy for their impact in reducing emissions. The Energy Conservation Act 2001 has set energy consumption norms for each industry, energy labeling and standards for all electrical appliances, and energy-efficient building codes. The Bureau of Energy Efficiency has been established under this Act. India also has an active renewable energy programme.

The Government of India, over the last 55 years of economic development, had major programs addressing climate variability concerns. These include cyclone warning and protection, coastal protection, floods and drought control and relief, major and minor irrigation projects, control of malaria, food security measures, research on drought resistant crops, and several others. Together, they address adaptation needs of the country to Climate Change with a spending of up to around two percent of our GDP each year. The Ministry of Environment & Forests has set up an Expert Committee under the chairmanship of Dr. R Chindambaram, Principal Scientific Adviser to the Government of India while drawing leading and

credible experts on climate change from multi-disciplinary fields to study the impact of climate change on India and identify the measures that we may have to take in the future.

It should be remembered that conservation and management of the environment is not the sole responsibility of the Government alone. Individuals can also take steps to prepare themselves, their families and their communities to cope with the impacts of climate change. Awareness, as they say, is the first step to action. As students and as future leaders of this country, you can make a difference by creating awareness about climate change, its potential impacts, and the steps that can be taken to reduce climate change and its impacts. Growing and planting more trees, protecting the environment, conserving energy, reducing waste, and avoiding unsustainable lifestyles are some of the things that you can do.

I would like you all to remember what Shri Rajiv Gandhi, late Prime Minister of India said during the speech made at the 42nd Session of the UN General Assembly: "We are a part of nature and are not apart from nature. We are strand in the single fabric whose warp and weft link together all that is of the earth and the water, the air and the sky." These words are worth keeping in mind if we want to work towards a sustainable future together. Wishing you all a very Happy Earth Day 2007!

Thank you.

**027. Intervention by Prime Minister Dr. Manmohan Singh on Climate Change at the Heiligendamm meeting.**

**Berlin, June 8, 2007.**

Madam Chancellor,

I must thank you for raising this issue, of such significance for our future generations and us. Your ideas, and those of PM Blair, President Bush and PM Abe are very useful for us to have a constructive discussion today.

We all have a vested interest in making our planet secure for our children and grand children.

India's GHG emissions are among the lowest in per capita terms. Moreover, being only around 4% of the world's emissions, action by us will have a marginal effect on overall emissions.

Nonetheless, we recognize wholeheartedly our responsibility as a developing country. We wish to engage constructively and productively with the international community and to add our weight to global efforts to preserve and protect the environment.

We are determined that India's per-capita GHG emissions are not going to exceed those of developed countries even while pursuing policies of development and economic growth.

We must work together to find pragmatic, practical solutions, which are for the benefit of entire humankind.

These should include mitigation and adaptation strategies with fair burden sharing and measures to realize sustainable patterns of consumption and production.

The process of burden sharing must be fair. It should take into account where the primary responsibility for the present levels of GHG concentration rests and not perpetuate poverty among the developing countries. No strategy should foreclose for them the possibilities of accelerated social and economic development.

The principle of common and differentiated responsibility and respective capability is very important.

The time is not ripe for developing countries to take quantitative targets, as these would be counter-productive on their development processes.

Adaptation is the key for developing countries. It needs to be adequately resourced without detracting funds meant for development, which, in any case, is the best form of adaptation.

The determination of any particular stabilization goal and the time frame in which it should be achieved needs to be made at the United Nations Framework Convention on Climate Change.

This should be preceded by a scientific consensus on impacts at different levels of GHG going beyond the current IPCC findings, which still document many uncertainties. It is important that critical and promising clean technologies are made affordable for developing countries, where there is a large reliance on fossil fuels.

The IPR regime should balance rewards for innovators with common good for humankind.

We also believe that the carbon market has a significant role to play in tackling climate change and that we should spur private sector involvement in climate related technologies and investment.

The Clean Development Mechanism (CDM) has worked well and needs to be expanded to include approvals for programmatic approaches. Enhanced level of GHG abatement commitments by the developed countries would significantly stimulate CDM projects.

Let us leave Heiligendamm determined to continue our exchanges and to invigorate the existing for a where these issues are being negotiated. In the meantime, our representatives could continue informal discussions to carry forward our dialogue and to build on what we believe in common.

Thank you.

**028. Extract from the Interaction of Prime Minister Dr. Manmohan Singh with the media on board the flight from Berlin to New Delhi.**

**June 9, 2007.**

**On board Air India One**

**Opening remarks**

I regret that I was not able to interact with you on the way to Berlin. I was little indisposed. I came here to take part in the meeting of the G 8 Countries and the five outreach countries, Brazil, Mexico, China, South Africa and India. We were not active participants in the G 8 processes, in fact G 8 communiqué was issued even before our meeting and we did make the point that in future, if similar meetings have to take place, then we should get a chance to discuss issues of our concern before the G 8 meeting so that our point of view can be reflected in the thought processes of the G8. And I said we have come here not as petitioners but as partners in an equitable, just and fair management of the global comity of nations which we accept as the reality in the globalized world.

Yesterday before the meeting I made the same point to Chancellor Merkel and she recognized there was merit in what we said. I hope that next year's meeting, if we are invited, will be in a form in which we have a chance to interact with the G8 nations before they interact amongst themselves. As far as substance is concerned, the discussions with the outreach countries centered on the global economy and issues relating to management of global climate changes. As far as the issues relating to the global economy are concerned there is a general feeling that the world economy is doing quite well, certainly the people talk about the global economy, they talk of the dynamic role played by China, Brazil and India. This is a new reality which the developed countries respect and they recognize there could be no meaningful management of the global issues in which India, China and other emerging countries like Brazil, South Africa, Mexico are not involved.

Another point we said, globalization is a reality but it is certainly not the case that globalization as it is now being practiced is a win win game, Africa is a case in point. They have a feeling of being left out. Also the Millennium Development Goals which were fixed by the international community - I think there is a slippage on many fronts and the slippages in

large measure are due to lack of adequate financial resources by the world community in support of Africa's development processes.

As far as climate change is concerned, I think this was essentially a dialogue among G8 countries with sharp differences between U.S. and the EU and they have been aiming to paper over those differences. I think today there is a general recognition that global warming is a reality, that Green House Gas emissions are giving rise to increased temperatures and something has to be done to protect the integrity of the environment. And we do recognize that the whole world shares a common environment and if environment deteriorates, if essential life support systems of our planet get adversely affected, we also suffer, in some ways more than many other countries. We as global citizens have a responsibility to contribute but in accordance with accepted Kyoto Principles that countries have equal but differentiated responsibilities depending upon their capabilities. We also feel that while anybody is free to discuss issues of climate change in various fora, the central role must be that of the United Nations Convention on Climate Change and the Kyoto processes must not in any way be adversely affected.

I am glad that on that particular point, where there was some doubt that the G8 want to take this issue out of the UN, at our persistence, Chancellor Merkel reaffirmed that there is no part of their thinking to side track the UN in the management of global climate change. In that sense, it was a positive gain of our participation with other outreach countries. Of course there are demands on countries like China, India, Brazil to also accept obligations to reduce green house gas emissions and we said we have not come here to discuss targets or accept internationally enforced targets on us. We will do whatever we can. We have been doing to protect our environment, to promote energy efficiency, to promote the use of renewable sources of energy. May be we could do more, we shall do more, but the time is not ripe to fix any quantitative targets as far as we are concerned. But I did say when I was asked by Chancellor Merkel, I said well, developing countries accept their responsibilities. As an instance we could assure the world that at no time, our per capita emissions will exceed that of the Developed countries. This will act as a two way incentive. If the Developed countries do more to reduce their green house gas emissions per capita, we will also reward them by doing more. For the first time I floated this idea yesterday. In my bilateral meetings when I elaborated on this, Chancellor Merkel said, well this is an idea which has very important positive implications and which needs to be looked into. So this is important outcome of our meeting with G8.

I also used this opportunity to meet with important world leaders beginning with the recently elected President of Nigeria. We had very good discussions. I believe India and Nigeria can foster closer economic cooperation. Our Government is already very active in Nigeria. The President assured me in bilateral relations, the best is yet to come. He also expressed concern that some of our expatriates had been kidnapped and there are criminal elements at work. President assured me that the people were safe, that the Government of Nigeria will do all that is in its power to ensure that they return safe and secure.

I met the Secretary General of the United Nations. We discussed various issues such as the operations of UN Mission in Nepal, also developments in our neighbourhood - Sri Lanka, Afghanistan and I assured the Secretary General that as a founder member of UN it is our obligation to strengthen the role of the UN and its SG in dealing with global challenges that international community faces.

I had very good bilateral discussion with President of Mexico. Many of our companies are investing there. Mexico has emerged as an important market for us because they are a member of the NAFTA and therefore it is one gateway for our companies to enter US and overcome tariff barriers. Already some of our companies have taken advantage. Some of our steel companies are active in Mexico, some of our pharmaceutical companies are active. I invited the President of Mexico to visit India. I think he will soon be coming to our country.

I had a very good meeting with British Prime Minister, Tony Blair. We reviewed the state of Indo-British relations and both of us expressed satisfaction at the positive direction that our relationship has strengthened under Prime Minister Tony Blair's leadership of the UK.

I also had a brief meeting with the new French President, Mr. Sarkozy. Both of us recalled that our relations are multi faceted and were quite good. The economic content of our relationship needs to be enlarged, French investments have to come to India. Further there was defence cooperation, civil aviation cooperation and nuclear energy, and these were important dimensions of our relationship.

I also had a brief meeting on the sidelines with President Putin whom I met in India in January. We reviewed the state of our bilateral relations and touched upon our many faceted relationship - economy, defence and other areas where we are cooperating with Russia. I expressed to President

Putin our satisfaction at the interest that he has personally taken in development of relations with our country.

President Bush was not well yesterday. But he came briefly for the meeting and then he took me aside and we had a good conversation on our cooperation in the civil nuclear energy and related issues. There has been a whole lot of speculation in the press about difficulties. There are some difficulties but I think both of us expressed our determination to overcome them. President Bush was quite appreciative of our concerns. Beyond that, I wouldn't like to say more than that. He has a very positive feeling towards India and he feels a certain sense of ownership of the nuclear deal and therefore I was quite satisfied with my meeting. Mr. Narayanan had a meeting with his counterpart, the National Security Advisor.

As far as my meeting with Hu Jintao is concerned, it was a very warm meeting. We have discussed issues. I did raise the issue of border, cooperation in the management of inter state rivers, exchange of data, flood warning. Hu Jintao responded quite positively that they will sit down, they will nominate their representatives on these groups. And he also agreed that both our Special Representatives dealing with the border issue must move forward and both of us expressed that is the direction we will give to our Special Representatives . It was a very cordial meeting and President Hu was very complimentary on what has been done in recent years to bring our two countries closer to each other. So this is the sum and substance of my meetings.

Question and Answer session.

**On the India- US Nuclear deal :**

1. Let me say that I cannot assert that I got the final answer yesterday. I can only talk about atmospherics. Atmospherics at the yesterday's meetings were quite positive but it will take some more time. Some tough negotiations will be required before we see light at the end of the tunnel.
2. There are several ideas which are around . I think this is an ongoing process. I think there is nothing new. All we are interested in is the substance of the 123 agreement should conform to what I had told people of India, what I told Parliament. I think various permutations and combinations are discussed from time to time. There is no finality to these till we see light at the end of the tunnel.

3. He [Bush] took copious notes of what I said to him. With him was his deputy, Hadley, the National Security Advisor. Mr. Narayanan had also detailed talks with Mr. Hadley.
4. We did not discuss a time frame. It was too brief a meeting for me. The President was not too well yesterday. In spite of that he did us the honour of pulling me aside and discussing this issue.
5. Well, it will be immature on my part to indicate any deadline. Why September? Why not earlier?

### **On usefulness of participating in the summit:**

6. Well. Let me say that each visit is an opportunity for me to carry to the world what we are doing to develop our economy. The more I talk to world leaders, I feel today there are no international constraints to India's development. I said this before. The world is appreciative of what India has done. Yesterday, we were discussing the South Asia situation - what is happening in Pakistan, what is happening in Afghanistan, Bangladesh, in Sri Lanka - Prime Minister Blair said in that environment, it is advantageous to have a country like India, with one billion people, functioning democracy - so I think there is a great deal of appreciation of our ability to sustain the democratic process despite our poverty, despite our diversity. The world wants India to succeed. I think that is the impression I too get.
7. I said that today there are no international constraints on India's development. If there are problems, they are local. Our primary concern is to get rid of chronic poverty, ignorance, disease and the urban and rural divide. And if we do succeed in sustaining 9-10% growth rate, if we pay adequate attention to agriculture, if we pay adequate attention to Human resource development, I think nothing can stop our march ahead. In that process, India needs a favourable environment. We need peace in our region. We need a fast growing world economy. That is why international polity matter for us. I feel today that environment is certainly favourable to realization of our basic development ambitions.

### **On Opposition parties criticism of the nuclear deal.**

8. It doesn't bother me. I have always said, we should judge politicians not by what they say when they are in opposition but what they do

when they are in seat of power. I am quite sure any patriotic Indian, if she or he had reins of running this country, they would have welcomed the deal. What we are attempting would end India's nuclear isolation, preserve the integrity of our strategic programme, and at the same time, open new pathways for India to cooperate in international civil nuclear energy. Energy is our critical bottleneck. Environment friendly energies are now talk of the town. Nuclear energy happens to be one such clean energy. If we get access to International cooperation, international technology, I think that will only enhance our development objectives.

### **On India - Pakistan relations and example of German unification.**

9. I have often talked about this. Twenty years ago, who could have imagined that Berlin wall would fall and E. Germany and W. Germany would be united? What was unthinkable in international relations became a norm. So that gives us hope. Even when you are dealing very difficult issues, we should not lose hope. I think there is no solution other than peaceful negotiations to deal with difficult problems including problems in our own region. What is simply considered unfeasible, German unification was one such. It became a norm....I have the same hope that this rule will also apply to our sub continent. India and Pakistan - Our destinies are interlinked and therefore it is our ambition, it is our prayer, that we must both find pathways to live together and resolve all our bilateral issues.
10. I have an invitation and I would certainly like to visit Pakistan and at the moment, President Musharraf has problems at home. I don't want to complicate his problems. I do wish to go to Pakistan. I have an invitation which I have accepted.
11. What is going on in Pakistan is their internal matter. We don't want in any way to interfere in Pakistan's processes of governance. Whosoever is in power in Pakistan, our desire is to live in amity and peace with our neighbours.

\* \* \* \*

### **On his speech at the CII summit.**

15. No I was not talking about any Government imposed salary regime. The Industry people came to meet me. I was reluctant to go to CII. I have gone there so often. I don't want to repeat what I said earlier

on. I said you must get some new ideas, some new person. They told me, you must talk about what business can do for the country. And it was in that context that I made that speech. It was not an attempt to glorify that everything is right with government sector, and corporate sector is to be blamed for all ills. If you read my speech carefully, I paid compliments to all those who are in the process of wealth creation.

16. All these matters are subject to review by the Reserve Bank of India. I had been the former Governor of the Reserve Bank. I would not like to say anything which interferes with the autonomy of the functioning of the Reserve Bank of India. These are matters that are dealt with and controlled by the Central Monetary authority of our country.

#### **On Sino- Indian ties.**

17. President Hu Jintao quoted to me twice before using a statement which I made when I became Prime Minister, I said I do not buy this argument that India and China are in competition with each other. Both of us, if we develop in a strong way, will be a source of dynamism in the world economy and the world is large enough to satisfy the development needs of both our countries. So we have every incentive to work together in diverse ways that we can.

#### **On the Doha Round:**

18. I mentioned to whosoever asked me about Doha Round - I have a strong belief in multilateral trading system which is open, which is non-discriminatory. So we have a vested interest in the successful outcome of the Doha Round of Trade negotiations. Some countries have trading blocks, like the European Union and other Unions, we do not belong to any trading block, and therefore we have every reason to see that the world trade should expand under multilaterally set rules and that there should be no discrimination against poor countries. Our basic position is we want Doha Round to succeed. But Doha Round was advertised as a development oriented round. For 60 years, yesterday I mentioned to Chancellor Merkel, the world trading system on agriculture has violated all canons of fair trading rules which are applicable to trade manufacturers. Many developing countries have this grievance that we talk of. globalization but globalization will never be fair and equitable, if the primary producers

in the developing countries do not benefit from the rules of game that apply to world trade and agriculture. Therefore, the developed countries have an obligation to liberalize their agricultural trade, to get rid of trade distorting subsidies, to improve access for developing countries and I said that if this aspiration is met, we will also be flexible. If you look at India's record in the last 15 years, we have unilaterally reduced tariffs. We have unilaterally reduced our tariff on manufactured goods, the peak manufacturing tariff today in India is no more than 10%. So regardless of what has been happening in the trade negotiation, we have unilaterally reduced the trade barriers. India is not a part of the problem, India wants to be a part of the solution. But if the developed countries come up with sensible proposals which will satisfy the development aspirations of poor countries, we will work to make a successful Doha Round.

### **On attempt to expel Tamils from Colombo, Sri Lanka:**

21. I have been sharing my anxieties about the situation with important world leaders. Let me say that the recent act to expel, I think, citizens belonging to a particular minority in Colombo has pained me. I hope, I think, better sense will prevail among all concerned. These are not civilized ways of dealing with them. I understand the difficulties concerned but the Human Rights of citizens should not be violated. But at the same time, I am told that it has been stayed by their Supreme Court. I share the concern.

**029. Press Release of the Ministry of External Affairs on the adoption of a resolution on 'International Day of Non-Violence' at the UN General Assembly to be observed every year on the birthday of Mahatma Gandhi, October 2.**

**New York, June 15, 2007.**

The United Nations General Assembly has today unanimously adopted a resolution on 'International Day of Non-Violence' piloted by India with the co-sponsorship of 142 countries to annually observe and celebrate Mahatma Gandhi's birthday, October 2, as the International Day of Non-Violence. Addressing at the UN General Assembly [UNGA] Plenary, Hon'ble Shri Anand Sharma, Indian Minister of State for External Affairs, thanked all the UN Member States for their support to the resolution. This important decision, he said, reflected the respect that Mahatma Gandhi commanded universally and the enduring relevance of his humane philosophy. The adoption of the resolution, he added, highlights the holistic nature and the continued relevance of the Mahatma's message for our times, indeed for all times to come. The Minister also pointed out that it encompassed the rejection of violence against oneself, against others, against other groups, against other societies and against nature.

The idea of promoting such a resolution originated from the Declaration adopted at the international conference on "Peace, Non-Violence and Empowerment - Gandhian Philosophy in the 21st Century" convened in New Delhi in January this year to commemorate the centenary of the Satyagraha Movement launched by Mahatma Gandhi in South Africa. Attended by 91 countries and 122 organisations besides many eminent personalities, including philosophers and Nobel laureates, the participants in that Conference solemnly vowed to nurture the values espoused by Mahatma Gandhi and articulated the collective yearning for a new way forward to address the problems of hunger and dehumanising poverty, which continue to plague humanity, to build a just and equitable world where people live with dignity and in peace and harmony with each other in diverse and pluralistic societies.

Through this resolution, all Member States, the UN system, regional and non-governmental organisations have been invited to commemorate this day in an appropriate manner and disseminate the message of non-violence, including through education and public awareness. It also requests the UN Secretary-General to recommend ways to assist Member States in

organising activities to commemorate the Day, to take necessary measures to observe the Day by the UN system and to keep the 63rd session of the UNGA informed about the implementation within the UN system of the present resolution as regards the observance of the International Day of Non-Violence.

**030. Statement by Minister of State Anand Sharma introducing the draft resolution on "International Day of Non-Violence" at the 61st session of the United Nations General Assembly.**

**New York, June 15, 2007.**

Madam Chairperson,

I have the honour to introduce, under Agenda Item 44, the draft resolution contained in document A/61/L.62, entitled "International Day of Non-Violence". Apart from the 114 co-sponsors named in the L.62 document, I have the pleasure to inform that a further 23 Member States (listed in the Annexure to this Statement) have also joined as co-sponsors, giving this draft resolution a total of 137 co-sponsors.

Madam Chairperson,

The idea of promoting such a resolution originated from the Declaration adopted at the international conference on "Peace, Non-Violence and Empowerment - Gandhian Philosophy in the 21st Century" convened in New Delhi in January this year to commemorate the centenary of the Satyagraha Movement launched by Mahatma Gandhi in South Africa. Attended by representative leadership delegations of 91 countries and 122 organisations besides many eminent personalities, including philosophers and Nobel laureates, the participants in that Conference solemnly vowed to nurture the values espoused by Mahatma Gandhi and articulated the collective yearning for a new way forward to address the problems of hunger and dehumanising poverty, which continue to plague humanity, to build a just and equitable world where people live with dignity and in peace and harmony with each other in diverse and pluralistic societies.

Madam Chairperson,

The wide and diverse co-sponsorship of this draft resolution reflects the universal respect that Mahatma Gandhi commands and the enduring relevance of his humane philosophy. In his own words, "Non-violence is the greatest force at the disposal of mankind. It is mightier than the mightiest weapon of destruction devised by the ingenuity of man". His "novel mode of mass mobilisation and non-violent action" brought down colonialism, strengthened the roots of popular sovereignty, of civil, political and economic rights, and greatly influenced many a freedom struggle and inspired leaders like Badshah Khan, Nelson Mandela, Martin Luther King Jr. and many others.

This draft resolution seeks to declare Mahatma Gandhi's birth anniversary, October 2, as the International Day of Non-Violence. By doing so, we would be highlighting the holistic nature and the continued relevance of the Mahatma's message for our times, indeed for all times to come. It encompasses the rejection of violence against oneself, against others, against other groups, against other societies and against nature. Non violence, in his own words, "has no room for cowardice or even weakness". It also "necessitates complete abstention from exploitation in any form".

Madam Chairperson,

The draft resolution before the General Assembly is simple but significant. Tabled under the agenda item 'Culture of Peace', it reaffirms in its preambular paragraphs the universal relevance of the principle of non-violence and seeks to secure a culture of peace, tolerance, understanding and non-violence. Vide its first Operative Paragraph it decides to observe and celebrate October 2 every year as the International Day of Non-Violence. Its second Operative paragraph invites all Member States, the UN system, regional and non-governmental organisations, to commemorate the day in an appropriate manner and disseminate the message of non-violence, including through education and public awareness. It also requests the UN Secretary-General to recommend ways to assist Member States in organising activities to commemorate the Day, to take necessary measures to observe the Day by the UN system, and to keep the 63rd session of the UN General Assembly informed about the implementation within the UN system of the present resolution as regards the observance of the International Day of Non-Violence.

Madam Chairperson,

Promoting the principle of non-violence in such a focussed manner would, it is hoped, significantly contribute to the realisation of the goals set out in the 1999 UN Declaration and Programme of Action on a Culture of Peace. The designation of October 2 as "International Day of Non-Violence" would also advance the implementation of the goals of the International Decade for Culture of Peace and Non-Violence for the Children of the World [2001-2010]. Madam Chairperson, While concluding, I would like to thank each and every one of our co-sponsors and supporters for helping us pilot this resolution at the UN General Assembly. It is also the hope of the co-sponsors that this draft resolution would be adopted without a vote.

Thank you, Madam Chairperson.

**031. Remarks by External Affairs Minister Pranab Mukherjee while releasing the 12th Volume of Netaji Subhash Chandra Bose's Collected Works at a function in Singapore.**

**Singapore, June 19, 2007.**

I am very pleased to be able to release the 12th volume of Netaji's Collected Works today. The period covered by this volume is 1943-45 and it is particularly appropriate that the release of this volume takes place in Singapore, where Netaji spent those years. At the outset, I would like to express my deep appreciation to Prof. Sugata Bose who has edited the Collected Works. I join him in mourning the absence of Dr. Sisir Kumar Bose, his co-editor and Netaji's nephew. I am sure that he is with us in spirit today. I would also like to thank the Institute of Southeast Asian Studies and the Singapore Indian Association for their initiative in organising this function in Singapore.

In perusing this volume, a number of thoughts cross our minds in respect of Netaji himself, the historical significance of the struggle that he led, and the long-term impact of ideas that he so effectively articulated. The period 1943-45, as you are all well aware, represents the zenith of his endeavours. This volume, in fact, covers many of his key speeches and exhortations.

We see the different dimensions of Netaji - as a political leader, as a military strategist, as an analyst of his contemporary global scene, and above all, as a humanist who connected so uniquely with those beside him. Many of the speeches and writings are of an emotional nature, which can move a reader even six decades later. But there are others as well, which reflect Netaji's deep analysis and perceptive thoughts about India and its future. On the occasion of this release, it would probably be most appropriate to dwell on the contemporary relevance of Netaji and his message.

To my mind, the most immediate lesson that we can draw from Netaji's life and his endeavours is an understanding of the importance of the external environment in shaping national destinies. It is by now widely recognised that the collapse of the British Empire came about as a consequence of political, military and social developments in which Netaji played such a leading role. The British may have won the war in 1945, but in the process of doing so, were compelled to accept fundamental changes in how the system was run, which made the empire untenable by 1946. In his special message on 15 August 1945, Netaji had expressed confidence that "There is no power on earth that can keep India enslaved. India shall be free and before long." If within two years to that very day India attained independence, it was because Netaji leveraged a global situation to mount enormous pressure on the colonial regime. International politics offers both opportunities and risks, as much today as it did 60 years ago. Netaji demonstrated a boldness of vision and action that had great consequences for India's freedom. Today, in a very different environment, India debates the linkage between the international system and our domestic processes of change. We can draw strength and confidence from Netaji's policies as we engage the world more intensively.

The impact of Netaji on Singapore specifically and Southeast Asia more broadly was dramatic. He infused courage and determination among those who were willing to resist colonialism. His very presence provided greater confidence and self-respect to communities that had earlier simply accepted their fate. He was not just a leader of the Indian National Movement but a dominant personality in a larger anti-colonial surge that spread through the entire region. His impact on national movements in Myanmar, Malaysia and Indonesia is indisputable. If you read or re-read some of his addresses to a larger audience in this volume, the broadness of his vision and the generosity of his temperament come through very strongly. We in India are currently engaged in reconnecting the country with Southeast Asia and East Asia. This is the kernel of our "Look East" policy, which is expressed

in many dimensions and facets. To be successful, we have to draw upon the legacies of history. This may go back to the Nalanda era or the Chola period. But in its more contemporary manifestation, there is no more powerful symbol of India's brotherhood with the nations east of us than Netaji. I am sure that in the times ahead, there will be still greater appreciation of his contribution to shaping the post-War developments in this region.

In November 1944, Netaji gave a lecture in Tokyo on "The Fundamental Problems of India." It is covered in this volume and I would particularly commend that lecture to the attention of those who may not have read it before. In this speech, Netaji dispels many colonial myths about India. He does so with pride but without jingoism. He analyses the impact of other national movements on India, which buttresses the point I made earlier about his internationalist approach. Netaji also attempts what he calls a sociological analysis of modern India. He differs with Mahatma Gandhi on many issues, but does so with respect and without rancour. But the most interesting element of his talk is what he outlines as the key priorities that would have to be addressed by modern India - self-defence, poverty and unemployment and the problem of education. These are exactly the issues that we in India are grappling with in our current reforms.

In a national movement that was driven by secularism, Netaji was probably the most secular of its leaders. His commands, directives and speeches, particularly of the INA period, convey that commitment in the strongest terms. The congruence between true nationalism and secularism - which Netaji embodied - is a principle that India can neglect only at its own cost. Whether it was his choice of language, his selection of symbols, or his preference for companions, Netaji taught us that India's unity was truly in its diversity. That lesson will always be a key to our progress.

Before I came here for the book release, I visited the site where the INA Memorial once stood in Singapore. It was a poignant moment. A full appreciation of the historical significance of Netaji and his life is still underway. But I believe that this series of his Collected Works will do much to make that possible. I would, once again, like to express my appreciation to the organisers of this event. Thank you.

**032. Speech by External Affairs Minister and Chairman of the ISI Council Pranab Mukherjee at the 114th Birth Anniversary celebrations of Professor P.C. Mahalanobis.**

**New Delhi, June 29, 2007.**

**Professor Deb Kumar Bose, friends:**

The 114th birth anniversary of Professor Prasanta Chandra Mahalanobis is being organised today jointly by the ISI Administration, ISI Workers' Organisation, and ISI Club as the Workers' Day. This year, the programme has attained special significance as it is taking place in the midst of the Platinum Jubilee celebrations of ISI. In response to the request of the Institute, Dr. Manmohan Singh, Hon'ble Prime Minister of India, has already declared that from this year onwards, the birthday of Professor Mahalanobis will be celebrated as the "Statistics Day" in the country.

While paying my homage to Professor P.C. Mahalanobis, I would like to bring into focus certain salient aspects of his life and work, which pivoted around the growth and flowering of the Indian Statistical Institute. During his speech at the inaugural meeting of the Silver Jubilee celebrations of the Institute held on 17 December 1956, Professor Mahalanobis touched on a sensitive and significant issue; I quote: "I should like to touch very briefly on one aspect of the Institute's relation with Government, which has been under consideration for twenty years. We have continually pressed on Government the need of giving the Institute full freedom and autonomy in internal management. We are a non-government but public institution; and, so far, we have tried to discharge our public responsibilities not as a Government department but as an independent institution. I am myself convinced that this is desirable not so much in the interest of the Institute itself but of the country as a whole. In fact, converting the Institute into a Government department would relieve us of much worry, because things will go on somehow, but there would be the danger of losing the initiative. Therefore, I think it is important in the best interests of the country that we should continue to function as an independent public institution. I am glad to say this has been accepted in principle, and we are hoping that fairly soon it would be recognized through Parliamentary action. But it is the other side of this responsibility, which I should like to impress on my colleagues. If we claim a certain amount of freedom of action, then we must also shoulder a certain amount of responsibility, that is, we must see that our work from within is maintained at a high level of efficiency and, secondly, that we retain our

initiative --- the initiative to direct our efforts, our united endeavour, towards solving either scientific problems or problems of national development, which will be continually facing us in India". Unquote.

The remarkable achievements of the Institute, under the leadership of Professor Mahalanobis, in theoretical and applied statistical work and, particularly, in the formulation of the draft Second Five-Year Plan, motivated the Government of India to recognize ISI as an 'institution of national importance' by the enactment of the ISI Act of Parliament, which was steered by Pandit Jawaharlal Nehru in 1959. Thereafter, the Government of India began to extend almost total financial assistance to the Plan and non-Plan activities of ISI along with the concomitant reciprocity of accountability on the part of the Institute. In the process, it was ensured that the basic autonomous character of ISI as a learned society, registered under the West Bengal Societies' Registration Act, would remain undisturbed.

As regards the planning for national development, the closeness of Professor Mahalanobis with Pandit Jawaharlal Nehru can be traced to 1940, when they had the occasion to begin in-depth discussion. In one of his writings, Professor Mahalanobis notes that, after a particular day's work was over, he and Pandit Nehru started talking and continued well after dinner till past two in the morning. During the Silver Jubilee celebrations of the Institute, Pandit Jawaharlal Nehru sent a message to Professor Mahalanobis, which Shri C.D. Deshmukh, the President of the Institute, read out in the meeting held on 17th December, 1956. Pandit Nehru said, and I quote: "The Indian Statistical Institute has gained a reputation for itself not only in India but in every country where statistics are studied. It has grown in recent years and has performed important functions in connection with our planning work. Indeed, it is an essential part now of our planning organization. On the occasion of its Silver Jubilee, I send it all my good wishes". Unquote.

In India, statistics came to centre stage in national life through sample surveys consistently conducted since the 1930s by Professor Mahalanobis and his colleagues in ISI in order to understand complex problems of national development and social welfare.

This involvement was enhanced when, after independence, Professor Mahalanobis was appointed honorary Statistical Adviser to the Cabinet. In 1950, through his initiative, the National Sample Survey was undertaken for carrying out a socio-economic survey of all-India coverage on a continuing basis. This provided the Central Government, for the first time,

with a database for various developmental programmes, particularly in respect of the Five-Year Plans of the country. In 1951, the Central Statistical Organization (CSO) was set up under the initiative of Professor Mahalanobis. In 1954, Prime Minister Jawaharlal Nehru entrusted him and his colleagues in the Institute with the responsibility of preparation of the draft Second Five-Year Plan of the country.

During one of my many visits to the P.C. Mahalanobis Memorial Museum and Archives in 'Amrapali' in the premises of the Institute, I came across a rare monograph written by Professor Mahalanobis on his first impressions of a visit to China in 1957. It is well known that, after the Bandung Conference, Chou En-lai, then Prime Minister of China, came to India and visited ISI and cordially invited Professor Mahalanobis to China. I learnt from the monograph that, shortly thereafter, Professor Mahalanobis went to China and, as requested by Chou En-lai, gave his erudite views on how to implement large-scale sample survey for enriching the planning process in China. This appears to me to be a telling example when the founder of this Institute, who is also regarded as the father of statistical science in India, was reaching out to a major neighbouring country to explain the implications of the deep connection between statistics and national planning.

During the period of the Cold War, Professor Mahalanobis was perhaps the only Indian scientist who was equally welcome in the USA and USSR as well as in China and Japan. Lyndon Johnson, then Vice-President of USA, accompanied by Professor Galbraith, interacted with Professor Mahalanobis. Legendary figures like Ho Chi Minh, Che Guevara and Alexei Kosygin also visited this Institute. Professor Mahalanobis engaged, on an equal footing, these front-ranking statesmen belonging to different political ideologies. This should be a noteworthy precedent, which could have some relevance in the midst of the present cross-currents of globalization. Today, after 60 years of independence, India is self-reliant enough to feel comfortable in engaging with all countries on an equal footing.

Professor Mahalanobis had pointed out, in his well-known speech delivered to the American Statistical Association on 27 November, 1964 under the title 'Statistics as a Key Technology', that "it is not difficult to see what is wrong with official statistics in India. ... There is lack of appreciation of the need of cross-examining the data which is the first responsibility of a statistician". Unfortunately "anything which is supplied or published by a Government office is accepted as reliable. To have any doubt would be a challenge to established authority. The very idea of having cross-checks is

frightening as conflicting results arising from independent checks would be 'confusing' and must be resisted and is being resisted even today. In this situation the statistical servicing is bound to remain weak in spite of a great deal of knowledge of theoretical statistics". Unquote. Sir Ronald Fisher, while delivering his memorable speech in ISI on the occasion of the opening of the main building of the Institute on 28 December, 1951, had earlier dealt with the same problem:

"It is the organic unity of theory and practice that has given the Institute its unique status at the present time. In the course of national planning, such an institution may be either used or wasted. It will be wasted if planning consists of a dull conformity to a blue print of ready-made and foreign conception. It can only be used if planning can recognize the aptitude of this spontaneous growth (of ISI) as a national resource peculiarly fitted to the current changes of the modern world". Unquote.

The constructive participation of ISI in matters relating to national policies should be restored at the Government level, both at the Centre and in the States, particularly in the context of the recent amendments of the Indian Constitution, which have ushered in a process of decentralization with emphasis on social justice. This requirement has been stressed by the Third ISI Review Committee, as the Report of the Review Committee noted that "it is important for the Institute to keep in view its relevance in the programme of national development and decentralized planning with social justice. This also would require formulation of suitable projects for investigation... A suitable body is needed for this purpose, with members in it who are given to keeping themselves acquainted with national issues and are experienced in concretizing long-term plans. They would need to have interest in such developments like the report given by the National Statistical Commission and obtaining inputs from the central and the state planning bodies". The Third ISI Review Committee further recommended that "ISI should play a major role in upgrading the quality of data generated by the various Ministries of the Government of India and the State Governments and the development of sample survey methodology, by updating and innovating the techniques of data collection and imparting training in statistical methods to key personnel in their organizations".

While ISI should systematically take up these important tasks, it should be kept in mind that, in the context of a composite discourse to be sustained between the Government and the Institute, we should encourage the ISI's cherished tradition of free questioning spirit. We have recently formulated

the Vision Document of the Institute through deliberations in the ISI Council. We have sought to strike a judicious balance between individual academic work on truly fundamental problems and work that is directed towards a greater engagement with the social and economic problems facing the country. The ISI Council has also deliberated on the formulation of the Perspective Plan of the Institute for the coming 10 years. There we have envisaged uplifting the present Giridih Branch of the Institute to the level of a Centre in Jharkhand and have recommended the creation of a Centre at Chennai utilising our base of SQC & OR Unit already functioning there.

Obviously, we have miles to go. But in our journey, the basic philosophy of Professor Mahalanobis to perceive statistics as a 'key technology' for interdisciplinary research, in the broader context of planning for national development and social welfare, shall continue to be our guide to action.

Thank you.

**033. The Admiral A. K Chatterjee Memorial Lecture by External Affairs Minister Pranab Mukherjee on "International Relations and Maritime Affairs - Strategic Imperatives".**

**Kolkata, June 30. 2007.**

President, Navy Foundation, Kolkata, Rear Admiral Parlikar, Chief of Naval Staff, Admiral Mehta, Distinguished Officers of the Armed Forces, Ladies and gentlemen:

It is always a pleasure to be here in Kolkata, a city that has a long and well-deserved tradition of being the intellectual capital of India. Speaking for myself, it is, naturally, always good to be on home ground. However, I am especially pleased to be here today to speak on a subject that is not only of academic or intellectual interest, but also one that is vital to India's security and the sustenance of her economic development.

I am also particularly gratified at having the opportunity of delivering this lecture in the memory of the late Admiral A.K. Chatterjee. The state of affairs today with regard to the Indian maritime scenario in general and the capabilities of the Indian Navy in particular would have been a source of great joy and pride for someone like Admiral Chatterjee, who was so closely associated with many firsts in the Indian Navy.

As has been noted, Admiral Chatterjee was the first 4-star Admiral of the Indian Navy, an honour he was bestowed with following the induction into the Navy of India's first Aircraft Carrier, the INS Vikrant, which happened during his tenure as the Flag Officer Commanding Indian Fleet. He was also involved with the preparation of plans for both Naval Aviation as well as the Navy's submarine capability. In particular, he played a key role in the creation of the Navy's submarine arm and was closely associated with the induction of the INS Kalvari, India's first submarine, into the fleet. Indeed, on the day of INS Kalvari's arrival in Vishakhapatnam port on 6 July, 1968, Admiral Chatterjee was on hand to welcome it. On the same day, he also laid the foundation of the submarine base building in Vishakhapatnam. The institution of this lecture series in his memory is, therefore, a befitting tribute to a great leader, planner and hero of the Indian Navy.

The simple geographical fact that two thirds of the surface of our planet is covered with water gives rise to a peculiarly intimate relationship between international relations and maritime affairs. Yet, for far too many centuries of our history has India either neglected or devoted insufficient attention to this relationship. Fortunately, after almost a millennia of inward and landward focus, we are once again turning our gaze outwards and seawards, which is the natural direction of view for a nation seeking to re-establish itself not simply as a continental power, but even more so as a 'maritime' power - and, consequently, as one that is of significance upon the global stage.

Modern India is fortunate to have inherited a maritime heritage that is rich and diverse, dating back to 3,500 BC. It is a matter of simple and incontestable historical record that, as a civilisational entity, ancient India enjoyed active trade-links with Africa, Arabia, and Mesopotamia, the empires of ancient Persia, Greece, Rome, and China, and a number of kingdoms in Southeast Asia, including present-day Myanmar, Thailand, Malaysia, Indonesia, Vietnam, Cambodia, and Laos. Then - as now - the wide-ranging nature of this seaborne trade required the assurance of a complex and well-developed maritime strategy. Indeed, from antiquity up to the end of the 12th Century, several Indian kingdoms - especially those in the peninsula - possessed significant sea-going navies of their own.

And yet, although the maritime tradition of India certainly did manifest itself as an overseas presence, this was not a 'Territorial' but rather, a 'Cultural' and 'Civilisational' presence. This historical tradition survives to this very day. It underscores our oft-stated assertion that India has no territorial ambitions and no desire to establish any form of regional or extra-regional

hegemony. However, the absence of hegemonistic intent ought not to imply any neglect of security, for it was only when the Indian ruling elites forgot the imperatives of maritime security that ancient and medieval India's dominance of world trade was lost.

The realisation that this gross neglect of maritime security eventually led to the colonisation of the sub-continent and the consequent loss of India's very independence for nearly three centuries should make a repetition of this strategic error utterly unaffordable. These harsh lessons of history are not lost upon the modern, independent republic that is India.

'Maritime power', in its true sense, is military, political, and economic power, exerted through an ability to use the sea or deny its use to others. It has traditionally been employed to control 'use-of-the-sea' activities undertaken by States for their general economic welfare and, often, even for their very survival. Maritime power and naval power are not synonymous, the latter being a sub-set of the former. Indeed, India's maritime power includes a host of factors that are external to the navy, such as :- (i) the degree of our dependence upon the sea for our economic well-being; (ii) the maritime bent of mind of the government and of the people; (iii) the size and enterprise of the sea-faring population; (iv) our ship-building capability; (v) the size, age, and condition of our merchant fleet - both coastal, and foreign-going; (vi) the percentage of our imports and exports being carried by ships flying our national flag - as opposed to foreign flags, or flags of convenience; (vii) the number, types, and functional efficiency of our major and minor ports (viii) the infrastructure for multi-modal transport of sea-borne goods; and (ix) the state, size, and technological advancement of the coastal and deep-sea fishing fleets - and their geographic spread.

Lest you are led by this argument to assume that our Navy is peripheral to our maritime strategy, I must point out that within the larger maritime canvas, it is our nation's military maritime power -as embodied by the Indian Navy, supported by the Indian Coast Guard, - that is the enabling instrument that allows all the other components of maritime power to be exercised. It is these 'enabling' functions that provide centrality to the Indian Navy within the country's overall maritime strategy and allow it to act as a versatile and effective instrument of our foreign policy.

It is axiomatic that our maritime strategy can only be conceived in a 'maritime environment', which differs in a number of ways from the more familiar 'land environment'. In the first instance, the natural geo-political condition of the land is to be politically controlled. With the significant exception of

Antarctica, nearly all the landmasses of the world today have been politically organised by sovereign States. In sharp contrast, the natural condition of the sea is to be politically uncontrolled. Unlike the case with land, nation-states seek to 'use' the sea only for a specific purpose and only for a finite period of time. Consequently, armies most often have 'occupation' or 'eviction' goals, while Navies have 'use' or 'denial-of-use' goals.

Secondly, just as a coherent land-based strategy must maintain a close relationship to national laws and regulations, an effective maritime strategy must recognise and retain the intimacy and comprehensiveness of its relationship with International Law. This is because the oceans are an international highway, where ships of all nations ply. Thus, International Law makes it perfectly legal for ships to close the coast of another nation to as little as 12 nautical miles, which is the maximum breadth of any nation's territorial waters. Even within this 12 nautical mile belt, all ships enjoy rights of 'Innocent Passage' as long as their movement and activities are not prejudicial to the interests of the State whose waters they are traversing.

Thirdly, maritime strategy forces us to re-think the nuances of geopolitically fundamental terms such as 'borders'. In fact, for the 'land strategist', there is no border between India and, say, Oman. For the 'maritime strategist', however, there very much is, because the medium of the sea transforms every nation which has a coast-line into a "neighbouring" or a "bordering" country!

In this context, let me give a brief overview of the characteristics of our maritime environment. India's geographical location - at the natural junction of the busy International Shipping Lanes that criss-cross the Indian Ocean - has a major impact upon the formulation of her maritime strategy in support of the pursuit of her national interests. You are, doubtless, aware that in terms of shipping density, the sea area around India is one of the busiest waterways of the world, with over one-hundred-thousand ships transiting the International Shipping Lanes of this region every year. The Straits of Malacca alone account for some sixty-thousand ships annually. India itself has a 7,516 kilometre-long coastline and several far flung island territories. These include the 27 islands of the Lakshadweep chain on our western seaboard and the 572 islands of the Andaman & Nicobar chain to the east. It is of note that the southernmost island of Great Nicobar is only 90 nautical miles from Indonesia, while the northernmost tip of the Andaman is less than 9 nautical miles from Myanmar.

The 13 major and 185 minor ports that mark our coastline constitute the landward-ends of the country's sea-lines of communication. The development of additional ports is a high-priority activity and is taking place all along the western and eastern seabords of the country. The decade that is now upon us will see a mega change in the pace of development of Indian ports and harbours and add further value to what is already a critical national maritime interest. In fact, in the furtherance of this interest, India was one of only two countries of the Indian Ocean Region that became fully compliant with the provisions of the International Ship and Port Security Code by the stipulated deadline of 01 July 2004, the other being Singapore. Flowing from and to these ports is the country's maritime trade and the merchantmen that embody it. Though India's share of global trade is still quite small, it is growing steadily. We have a modest, but rapidly-growing, merchant-shipping fleet, presently comprising 756 ships and totalling 8.6 million 'Gross Registered Tonnes', with an average age of around 17 years as compared to the global average of 20 years.

In terms of foreign trade, as much as 90% by volume and 77% by value transits over the seas. Ensuring the safety and freedom of this seaborne trade of ours is, consequently, a major strategic maritime imperative. More and more of our trade is now with the dynamic economies of the Indian Ocean Region and East Asia. In fact, there have been significant changes in India's direction of external trade over the past decade-and-a-half. The UAE is today India's largest export partner. China is emerging as among India's largest trading partners and trade with South Africa, Singapore, Malaysia and Indonesia, too, is extremely significant. In fact, our trade with the countries to our East is now vital to our economic well-being and this, among other things, underscores the growing centrality of the Straits of Malacca.

After trade, the next strategic maritime imperative is energy security. Of all the cargo that moves along the international shipping lanes of the Indian Ocean, perhaps the most critical is energy, as defined by petroleum and petroleum-products. Almost 1,000 million tonnes of oil from West Asia passes close to our shores annually. Some part of this is, of course, destined for our own ports, to feed the increasing demand for energy to fuel our current economic growth. A much greater proportion, however, is destined for the oil-intensive economies of the USA, China and Japan. Today, in fact, almost 45% of all new world oil demand is attributable to the rising energy-needs of China. Over 70% of China's oil imports come from West Asia and Africa and all of this is transported by sea. We see the Indian

Navy and the Indian Coast Guard as major stabilising forces in this great movement of energy across the Indian Ocean, not just for India, but for the world at large.

Our Exclusive Economic Zone, which is set to increase to 2.54 million sq km shortly, is a repository of abundant living and non-living resources. It has enabled India to mitigate, to some extent, her dependence upon foreign sources of energy by way of crude oil, natural gas, and liquid petroleum gas, with about 20% of India's overall petroleum demand being met by offshore production. Upstream activities, such as exploration and production, are now being undertaken in ever deeper waters, and efforts are underway to exploit fairly promising discoveries in the vicinity of the Andaman and Nicobar Islands. Any disruption of these activities would impose a cost on our economy that would be adverse in the extreme, and consequently, our foreign and security policy has to ensure that such disruptions are not allowed to occur.

Another major national maritime interest that shapes our maritime strategy including its international law dimension is under-sea mineral resources. At present, India imports nearly all its needs of cobalt and nickel and some 60% of its requirements of copper. Consequently, the plentiful under-sea resources of these scarce minerals in the form of polymetallic nodules form an important national interest. India has been recognised by the United Nations as a pioneer investor in deep sea mining and has been allotted a mining area of some 150,000 square kilometres in the central Indian Ocean. She thus keeps company with such technologically advanced nations as the USA, France and Japan. It is important to note that this mining site is well outside our EEZ. In fact, it is over 1,000 nautical miles - that is, some 1,850 kilometres - from the southern-most tip of the Indian mainland. If we consider Mumbai to be the main port of India, then we are talking about distances in excess of 3,000 kilometres. It would be readily appreciated that our maritime force levels need to be structured accordingly to provide sustained-reach, sea-keeping ability, passage-endurance and staying power.

Because it is so far away and a subject of much romanticism, the importance of Antarctica as a major maritime interest of India is very often underestimated by policy-makers. In actual fact, not only is Antarctica vitally important for the environment, it is a treasure house of potential mineral resources, including petroleum. Moreover, it is an enormous marine storehouse of the foundation of the human food chain, thanks to its abundant holdings of krill. Finally, and this is of the most immediate and continuing importance to India: Antarctica determines, in significant measure, the Indian

monsoon - upon which our agriculture, and hence our economy, depends. In this context, we were privileged to host the 30th Antarctic Treaty Consultative Mechanism meeting in New Delhi recently and we continue to be actively engaged in international cooperative activities on preserving Antarctica as a unique and common heritage of mankind.

It would, by now, be obvious that the primary area of Indian maritime interest ranges from the Persian Gulf in the north, to Antarctica in the South, and from the Cape of Good Hope and the East Coast of Africa in the west, to the Straits of Malacca and the archipelagos of Malaysia and Indonesia in the east. It would be equally obvious that as India's economy and her international role grows, the area of this benign but active engagement will also grow. You only have to look at the investments ONGC Videsh is making in extra-regional but energy-rich areas such as Sakhalin, Sudan, Nigeria and Venezuela to realize how our maritime interests are growing and defining gradually an area beyond the primary one.

I have given you a broad overview of the strategic imperatives that are shaping India's maritime perspective. If there is one word that defines our current approach to the international dimension of this perspective, it is "engagement", an engagement that is both active and constructive. We are engaged with a number of nations, including major maritime powers such as US, Russia, France, UK and Japan, in addressing the complex maritime security challenges of the day. Our maritime diplomacy, like our broader diplomatic effort, radiates out in expanding circles of engagement, starting with India's immediate maritime neighbourhood. As a mature and responsible maritime power, we are contributing actively to capacity building and operational coordination to address threats from non-state actors, disaster relief, support to UN peacekeeping and rescue and extrication missions. To quote an example, in April last year, the Indian Navy undertook Op SUKHOON to evacuate 2,280 persons from Lebanon. They included not only Indian nationals but also nationals of Sri Lanka, Nepal, Lebanon, and even the odd Greek! Even while Op SUKHOON was at its peak, other ships of our Navy were simultaneously providing help and succour to the earthquake-stricken victims of Indonesia. This simultaneity and comprehensiveness of each of these operations, widely dispersed in geographical terms, demonstrate our maritime reach and versatility.

An important aspect of our maritime engagement is the creation and sustenance of international cooperation for the speedy, effective and humane application of maritime power for regional Humanitarian Assistance

and Disaster Relief operations. It took the terrible Tsunami of 2004 to drive this home with such telling effect. With the more recent example of the Yogyakarta earthquake in Indonesia, the criticality of working towards multilateral interoperability at every stage bears no repetition. This is the aim of some of the recent multinational and bilateral exercises that the navy has undertaken, including the exercise in the Sea of Japan with the US and Japan. In fact, maritime diplomacy is now an essential component of our 'Look East' policy. We have concluded bilateral arrangements with Thailand and Indonesia for joint coordinated patrols by the three navies in the Bay of Bengal at the mouth of the Malacca Straits. We are also ready to contribute to capacity building of the Littoral States in maritime security. Southeast Asian navies participate in the bi-annual MILAN exercises. Our cross border development projects with our ASEAN neighbours also have a maritime dimension. For example, the Kaladan Multi-Modal Transit Transport Facility envisages connectivity between Indian ports on the eastern seaboard and Sittwe Port in Myanmar, thereby providing an alternate route for transport of goods to North-East India.

At the multilateral level and within the maritime domain, we have launched a series of initiatives to provide an inclusive and mutually-consultative forum in which the navies and maritime security agencies of the region - whether large or small - can meet and discuss common issues that bear upon international security. Amongst these initiatives is the Indian Ocean Naval Symposium - IONS - which is being nurtured under the aegis of the Indian Navy and which will be formally launched through an international seminar planned in New Delhi in February 2008. The dialogue in the ASEAN Regional Forum, of which India has been a member since 1996, now includes regular discussions on maritime security issues.

Having elaborated our national maritime strategic interests and their international dimensions, I want to touch on a longer-term shift before concluding. The huge energy-resources of the Indian Ocean Region, the economic and demographic dynamism of countries such as India, China and Vietnam as well as their growing economic importance to the established Asia-Pacific maritime powers, such as the US and Japan, are driving particularly strong maritime connectivities between the Indian and the Pacific Oceans. Indeed the conventional limits of geographic regions are getting increasingly blurred. For example, until recently, East Asia essentially consisted of the Pacific littoral of mainland Asia and the islands of Japan, Taiwan and the Philippines. Post-Cold War, as a 'strategic' construct, more than a 'political' or 'economic' one, ASEAN countries were incorporated into

the 'definition' of East Asia. In April 2005, the ASEAN Foreign Ministers invited India, Australia and New Zealand to attend the inaugural East Asia Summit, thus widening the ambit of this strategic construct.

India is fully alive to this shift and the need to manage it not only in a non-disruptive manner, but in a synergistic one as well. Pessimists would look for seeds of conflict or at least balance of power scenarios in this oceanic shift. I for one see it as a potential stabilizer, an enabler of greater prosperity, and as another keystone in the edifice of global interdependence. India, with its growing capabilities and confidence, and its history of benign and active international engagement, is ready to contribute its maritime might to ensure such a positive outcome.

Thank you for your attention.

#### **034. Briefing Points by Official Spokesperson on the meeting of the Consultative Committee of Parliament on External Affairs.**

**New Delhi, July 18, 2007.**

The External Affairs Minister, Shri Pranab Mukherjee, chaired the meeting of the Consultative Committee on External Affairs on July 18. The meeting discussed the following two issues:

1. Progress under SAARC
  2. India's partnership with African countries.
- The External Affairs Minister briefed the Members on the developments in SAARC, in particular, the successful 14th SAARC Summit at New Delhi from April 3-4, which, for the first time, saw the expansion of the forum to eight Members (Afghanistan) and attendance by five observer countries. EAM also briefed the Members on the two important agreements signed during SAARC Summit - establishment of the SAARC food bank and South Asian University. EAM also spoke about the other initiatives within SAARC including India's offer to take up asymmetrical responsibilities including unilateral measures to liberalize trade, visa, tourism, etc. The theme

of physical, economic and people-to-people connectivity was also underlined by EAM.

- EAM also briefed the Members on India's partnership with African countries including initiatives taken in the field of technical cooperation, human resource development, investment, trade including credit lines, peacekeeping operations and support for NEPAD. EAM also spoke about the progress in implementation by India of a PAN-African e-Network project. Several Committee Members expressed their appreciation of these initiatives.
- The discussions on the two subjects would be continued at the next Consultative Committee meeting.

**035. Opening Remarks by Minister of State E. Ahamed at the special function introducing Machine Readable Passport (MRP) booklet (64 pages).**

**New Delhi, July 21, 2007.**

Shri Anant Kumarji, Honorable Member of Parliament, Shri Narayan Murthyji, Chairman, Infosys Technologies, Dear Friends from the Media, Ladies and Gentlemen,

I am pleased to be here today in connection with the inauguration of Machine Readable Passport services for jumbo booklets, a long felt need of the public. This service has been made available in the first place at the Passport Offices in Bangalore, Ahmedabad, Chennai, Delhi, Hyderabad, Kolkata and Mumbai. It will be subsequently extended to all Passport Offices.

2. The new 64-page jumbo booklet which is machine-printed and machine-readable conforms to the international specifications. This new measure is expected to be of immense help to frequent travelers including corporate executives, businessmen, sportsmen and airlines officials. I am sure people of Karnataka, particularly software professionals and businessmen in Bangalore will make full use of the new jumbo booklet.

3. With India's rising international profile, fast growing economy and our increasing integration with the global economy, the number of Indians traveling abroad has recorded a phenomenal growth in the recent years. This in turn has led to a rapid increase in the demand for passport services among the applicants. We issued more than 44 lakhs passports in 2006 and the number is expected to touch 50 lakhs this year. The Central Passport Organization and its employees have risen to this challenge despite constraints of inadequate staff in some Passport Offices. The Ministry is making all efforts to clear the pending applications in Passport Offices.
4. Allow me to point out that, RPO Bangalore provides passport services for the entire state of Karnataka, with a population of approximately 5.6 crores. The total number of passport services rendered by RPO Bangalore in 2006 was more than 3.1 lakhs, an increase of more than 40% over the figures for 2005. The increased demand for passports is likely to continue in view of Bangalore's rapid growth as an IT destination. We are actively considering further streamlining of the issuance process and augmenting the manpower and infrastructure of RPO Bangalore to cater to this increased demand.
5. With a view to decentralizing the issuance process and bringing the passport services closer to the doorsteps of the applicants, applications are also accepted at approximately 450 District Passport Centres and 1100 Speed Post Centres throughout the country in cooperation with the State Governments and Postal department.
6. Efforts are underway made to fully activate and streamline the working of the District Passport Centres. Currently, DPCs in Karnataka account for less than 4% of the applications from the State, which is a modest figure compared to other States. We are making active efforts to boost submissions through DPCs which speeds up the police verification process.
7. Speed Post Centres have emerged as a popular means of submission of passport applications in Karnataka, amounting to 21% of the total applications. We are working with the Department of Posts to increase the number of such centres to ensure a wider coverage.
8. The residents of Bangalore have the additional choice of approaching the Bangalore-One centers for passport services, an initiative which I had the privilege to inaugurate in June last year. I am told that the

service which is available at 15 Bangalore-One centers is quite popular. It has also helped to decongest Passport Office premises to a certain extent. Till date, Bangalore-One centers have received more than 50,000 applications. I am given to understand that Government of Karnataka is setting up more such centers in Bangalore and plans to introduce a similar service in Hubli-Dharwad and Mysore in near future. We look forward to working together with the State government in this new initiative in other cities also.

9. As part of our initiatives to improve the public interface of the passport offices, we have updated the content of our websites to provide up-to-date information as far as possible and implemented e-mail based grievance redressal systems for speedy resolution of complaints. RPO Bangalore is also working on kannada website to cater to needs of the people of the State.
10. In addition to conducting regular passport camps and adalats for the public, RPO Bangalore has also taken lead in taking initiatives to cater to the specialized needs of large corporate based in Bangalore. They have undertaken "passport service camps" for large IT companies based in Bangalore, in a spirit of Public-Private Partnership. The camps organised for some of the large software houses have been very well received. I am sure that the Passport Office will continue with this initiative in future.
11. The Passport Office was shifted from Bruton road to this new building in April 2007. The new premises are a state-of-the-art modern building with large and comfortable public area and a separate parking area. I notice that there is a fair amount of green cover within the premises, along with fountains and water bodies which provides a cool and refreshing ambience. I am hopeful that the new premises will contribute to an improved work-flow and greater productivity among the employees.
12. Given these positive trends, I am convinced that we are on the right track and that we will be able to rise up to the challenge of meeting the expectations of the public in the years to come.

Thank you.

**036. Briefing Points by Official Spokesperson on the three-day Conference of Heads of Mission.****New Delhi, July 24, 2007.**

- A three-day Conference of Heads of Mission in SAARC countries along with Heads of Missions in China, Iran and Myanmar would conclude in New Delhi today. This Conference is part of the regular process of interaction between Heads of Missions in various regions and the Ministry of External Affairs.
- EAM Shri Pranab Mukherjee addressed the HOMs Conference on 23rd July. He stressed that India's foreign policy must contribute to the process of development by putting in place a conducive external security environment and by utilizing every opportunity for economic and commercial cooperation. The process of globalization has led to far-reaching changes in international affairs which require constant examination and flexibility to optimize results.
- EAM also pointed out that while there are aspects of relations with neighbouring countries which are exclusively bilateral, there is also a need to evolve mechanisms that can take the region forward on a collective basis. The recently-concluded SAARC Summit had underlined our collective vision of an inter-connected South Asia where there is a free flow of goods, people and ideas. He underlined that it is now the time to take the SAARC process ahead to implementation phase and in this context important projects such as the South Asian University, the SAARC Food Bank and the SAARC telemedicine network are examples of the initiatives that had been taken on regional cooperation.
- EAM also urged the HOMs to deliberate on emerging political, social, economic and cultural patterns in the region to work towards putting in place a web of cooperative relationships.

HOMs also called on the Prime Minister today.

**037. Inaugural Lecture of Gandhi Lecture series by the Congress President Mrs. Sonia Gandhi: 'Relevance of Gandhian Philosophy in the 21st century' at the Cape Town University.**

**Cape Town, August 23, 2007.**

**Vice Chancellor Professor Ndebele,  
Distinguished faculty members,  
My young friends,  
Ladies and Gentlemen,**

I

I feel privileged to inaugurate the Gandhi Lecture Series being organized by the Government of India in major universities of the world.

It is indeed an honour to be here at this esteemed centre of learning situated amidst such breathtaking beauty.

I stand before you in a spirit of humility to speak about one of the greatest figures of history, whose experiments with truth began in your country. For me as an Indian, a visit to South Africa is a pilgrimage.

The world knows greatness in many forms. There are the great, who won celebrated military victories. There are the great, who have deepened our knowledge of the physical universe. There are the great who have helped us understand the workings of the human mind. There are the great who by their inventions have transformed the way we live.

Mahatma Gandhi stands in a category of his own. He too was an inventor but of a different kind-an inventor of a unique way of protest, of struggle, of emancipation and of empowerment. His generalship lay not in making war but in waging peace. His weaponry was not arms and ammunition but "truth force", "satyagraha" as he called it. The moral universe was his field of action. He explored a whole new dimension of the human psyche-its capacity to willingly accept suffering, even unto death, not to attain the kingdom of heaven, but a better world here and now, by bringing about social and political change.

II

On June 7, 1893, a young Indian barrister, Mohandas Karamchand Gandhi, was evicted from a train at Pietermaritzburg station for being a non-white.

"I have never understood", he later remarked, "how any man can derive pleasure from the humiliation of another". A spark was lit which was to change the course of world history.

On September 11, 1906, Mohandas Karamchand Gandhi launched the first satyagraha campaign from the Empire Theatre in Johannesburg . He issued a clarion call for nonviolent resistance against racial discrimination, oppression and injustice. He described satyagraha as "a force born of truth and the love of nonviolence", a moral equivalent of war.

After 21 years in South Africa where his views took shape and were tested and refined, he carried the torch of satyagraha to India. The world saw with amazement how this unique technique energized millions of men and women to bring a mighty empire to its knees.

### III

Mahatma Gandhi, the person was a many-sided personality to an unusual degree.

He was a man of peace who did not hesitate to fight for what he believed to be right.

He was a political strategist who shunned conventional politics and held no office.

He was a thinker and a philosopher who was, first and foremost, a man of action.

He was extraordinarily pragmatic and adapted himself to changing situations without compromising or abandoning his basic values.

Mahatma Gandhi respected tradition. Yet, he was also an iconoclast.

He was deeply religious. But his was a religion that drew from every faith, a religion that was all-inclusive.

He embodied spirituality. But his was a spirituality rooted in an abiding concern for the poor and the deprived, of service to and empowerment of the disadvantaged and underprivileged.

He was impatient for cataclysmic change. Yet, he shunned violence in any form as an instrument to force the pace of change. In his own words "nonviolence is mightier than the mightiest weapon of destruction, devised by the ingenuity of man".

The popular picture of Gandhi is that of a highly solemn and earnest person. His mission was indeed a lofty one but his personality was full of lightness and humour. Once, reacting to criticism that he was wearing merely his usual loin cloth, sandals and shawl when invited to tea by King George and Queen Mary, he said, "The King had enough on for both of us."

Although Mahatma Gandhi was a true revolutionary, he was that rare exception - a revolutionary who could laugh.

#### IV

A common response to Mahatma Gandhi - to Gandhian thought, word and deed - is that it was extraordinarily effective given the times in which he lived. Today's world, it is often argued, is dramatically different, and while Mahatma Gandhi is certainly worthy of continued admiration and awe, it would be naïve and unrealistic to expect his methods to be effective today.

I beg to disagree.

I am glad to say that an increasing number of young people in India and elsewhere are today turning to him to seek solutions to contemporary concerns through individual and collective action.

Here in South Africa, Nelson Mandela is a shining embodiment of that vision. The whole world celebrates the achievement of him and his fellow freedom fighters.

It is true that the world of today is vastly different from the world of Mahatma Gandhi. The fundamental issues he was confronted with, namely colonial subjugation, has disappeared from our world. Racial discrimination too has been blunted significantly.

At the same time, new threats to peace, harmony and stability have emerged. And it is one of the paradoxes of the 21st Century that while the establishment of peace has become the world's single greatest imperative, the traditional instruments of preserving peace have been found to be increasingly ineffective. Whether it is ethnic nationalism or religious chauvinism, economic inequality or military might -- all of them powerful drivers of conflict in today's world -- there is no doubt that we are in great need of a new paradigm for solving conflicts.

Today, we face the challenge posed by continuing confrontation in the name of religion and ethnicity. At its worst, this is terrorism, which inflicts untold suffering on innocent women, men and children.

We confront also the challenge of growing inequality both within and amongst nations. Economic disparities are accentuated by lack of access to education, health and food security. To these are now added the new threat of environmental degradation and climate change, as well as new diseases like HIV-AIDS.

The question to ask is not whether Mahatma Gandhi is relevant or not. The real issue is whether we have the courage and strength of mind to follow in his footsteps, whether we are prepared to live our lives by what he preached and most importantly, practiced.

The simple truth is that instead of diminishing in relevance, Mahatma Gandhi has actually become all the more pertinent in the 21st century. Whichever the challenge we confront, you can be sure that the Gandhian way is a real, live option, an option that informs and illuminates.

But we would be doing him great injustice if we didn't interpret, in contemporary terms, what he spelt out in the context of his times. He would have wanted us to experiment and find our own way without compromising our fundamental beliefs.

Mahatma Gandhi bequeathed to us three guiding principles: Ahimsa (or nonviolence), Satyagraha (or the force born of truth and nonviolence) and Sarvodaya (or upliftment of all). It is the value of these principles that we have to rediscover if we want to deal effectively with today's challenges.

## V

Let me take the challenge of inequality first.

The essence of Mahatma Gandhi's political philosophy was the empowerment of every individual, irrespective of class, caste, colour, creed or community. To him, extreme poverty was itself a form of violence.

Democracy has become the preferred form of government in the 21st century, yet sadly his "notion of democracy" is far from being universally accepted.

We now recognize that political liberty must go hand in hand with economic progress. But to be truly meaningful, this growth has to be equitable. As with political power, a few cannot enjoy the gains of economic progress, while the many do not get their due share.

Economic growth has also to be consistent with the imperatives of environmental conservation and stewardship. But sustainability does not mean that vast numbers of people are denied better material well-being and living standards.

What is the Gandhian perspective on economic growth?

It is that wealth created and generated must contribute, first and foremost, to a larger social purpose and cause. By stating this in today's world, we do not negate the principles of profit and commerce. But we do underline the need to use a part of the wealth created, to better the quality of life of those whose voices remain unheard.

Observing the rush to consumerism that is so evident today, Mahatma Gandhi would also most likely have reminded us that a modicum of austerity would not be out of place.

For many, Mahatma Gandhi was and continues to be the ultimate touchstone of moral authority. This means judging all our actions - in word and deed - on the touchstone of public purpose. Public purpose itself has to be judged against the yardstick of the welfare and well-being of the poorest and most deprived in the land.

## VI

Let me now turn to conflict.

Here I would straightaway say that Mahatma Gandhi would give primacy to the search for the underlying causes of conflict. Violence can be wanton and senseless. But often, conflicts can be symptoms of a deeper malaise that needs to be understood. This is not to romanticize violence-Mahatma Gandhi never did. But it is to analyze why it occurs and address it at its very source and root.

The political discourse, these days, is centred on a global war on terror. And indeed, terrorists who target innocent men, women and children deserve no quarter.

But today's enemies are not just individuals, they are also ways of thinking and perceiving the world itself. Countering violence with even more violence does not provide a durable solution. Whatever else Mahatma Gandhi may have done in our circumstances, surely strengthening the well-springs of discourse and dialogue must play a central part in it. And he would have gone even further. He would have looked within himself. For him, external engagement went hand in hand with internal interrogation. In reaching out, he would first and foremost have asked himself the question - "to what extent am I myself responsible"?

If democracies are going to wage a war against terrorism, the measures that are adopted, should be consistent with and not contrary to the values

of democracy. This is in keeping with the Gandhian consonance of ends and means. "There are many causes that I am prepared to die for", he said, "but no causes that I am prepared to kill for".

What would the Gandhian perspective be on the so-called "clash of civilizations" about which we hear so much these days?

I am reminded here of his response to the query of a foreign journalist who asked what he thought of Western civilization. "It would be a good idea", he answered.

Actually, Mahatma Gandhi would straightway and summarily reject the very idea of such a clash. He never accepted the exclusivist approach to religion, culture or civilization.

Mahatma Gandhi fervently believed in the pivotal role of religion in everyday life. He saw it as an ethical and moral mooring to all our actions - private and public. But his was a faith that drew from every religion, a faith that was all-inclusive. When asked about his religious belief, he said, "yes I am a Hindu. I am also a Christian, a Muslim, a Buddhist and a Jew".

## VII

Ladies and Gentlemen

And what of the future?

Conflict and inequality seem an inevitable part of the human condition. Mahatma Gandhi's greatest lesson to the world was that this need not be destructively so. Conflicts can be resolved and inequalities can be contained. But without worthy means, worthy ends can never be attained. Will the 21st century see the fulfilment of Mahatma Gandhi's vision? Or will non-violence be viewed as outdated and utopian? All around us, we witness that violent means do not bring about lasting change, that violence cannot bring about peace. Violence only begets violence and spirals on.

It is my fervent hope that the world will embrace Gandhian truth and action and that you, my young friends here, will be among its torchbearers.

Thank you

**038. Address by External Affairs Minister Pranab Mukherjee on the occasion of the foundation laying ceremony of the New Children's Hospital at Tirupati.**

**Triupati (Andhra Pradesh), August 25, 2007.**

Hon'ble Chief Minister Dr.Rajasekhar Reddy and His Cabinet Colleagues, Deputy Speaker, Dr.Kuthuhalamma, Dr. Chinta Mohan, M.P. and Special Invitees, Distinguished Members of the Legislative Assembly & Dignitaries Present, Ladies & Gentlemen.

I am extremely happy to be present here with you all in the Foundation Laying ceremony of this New Children's Hospital and Maternity Ward in this temple town of Tirupati under the blessings of Sri Lord Balaji.

I am glad to know that Sri Venkateswara Ram Narayan Ruia Government Hospital, Tirupati, constructed at the foot of the seven hills of Tirumala, the abode of Lord Venkateswara, has made tremendous progress. What began as a small hospital with a paltry donation of Rs.5 lakhs from Sri Radha Krishna N. Ruia, a philanthropist from Bombay and a generous grant of 15 lakhs from Tirumala Tirupati Devasthanams (TTD) in 1962, has risen to become a big hospital with a bed strength of 750 beds having super-specialty departments like Neurosurgery, Neurology, Plastic Surgery, Pediatric surgery, Nephrology & Surgical oncology. I am also happy to note that this hospital has become the main referral hospital in this region serving the people belonging to low socio-economic status, scheduled castes, tribes, backward classes & other underprivileged sections of the community.

With the establishment of the New Children's hospital, I sincerely hope that the aspirations of the people of this region will be fulfilled and this public institution will serve for the improvement of the child health especially the provision of much needed sophisticated care for the high risk new born children.

Under the mandate of the National Common Minimum Programme of the UPA Government, health care is one of the seven thrust areas. In keeping with this perspective, the National Rural Health Mission (NRHM) was launched throughout the country in 2005 with special focus on improving health status of vulnerable population by ensuring accessibility and availability of quality primary health care and family welfare services to them.

The main aim of NRHM is to provide accessible, affordable, accountable, effective and reliable primary health care especially to poor and vulnerable sections of the population. The Mission addresses the issue of health in the context of improvement of sanitation, hygiene, nutrition and safe drinking water as basic determinants of good health in order to have greater convergence among the related departments like Women & Child Development, Sanitation, Elementary education, Panchayati Raj and Rural Development. It seeks to build greater ownership of the programme among the community through involvement of Panchayati Raj institutions, NGOs and all stakeholders in pursuance to the National Health Policy which includes reduction of Infant mortality rate to less than 30 per 1000 live births, maternal mortality to less than 100 per 1 lakh live births and to see that 80% and above deliveries are conducted in institutions by trained personnel.

The Millennium Development Goals representing commitments by governments throughout the world in the area of development and reduction of poverty & hunger place 'health' at the heart of development; 18 of the 48 indicators of progress are health related and many of the goals are related to improvement of maternal & child health. The Government of India has committed itself to achieve the main goals like reduction of three quarters of maternal mortality rate, reduction of two thirds of under five mortality rate and to reduce the prevalence of malnutrition among under five years children and infant mortality rate significantly by 2015.

The achievements of the National Rural Health Mission are highly encouraging. There has been a significant reduction in Infant mortality and Maternal Mortality since the onset of the programme. I am glad to note that the State of Andhra Pradesh has made remarkable progress in the field of Maternal and Child Health with the Infant Mortality rate being brought down to 57 per 1000 live births and Maternal mortality rate to around 290 per 1 lakh live births which by all standards is commendable. The State has registered a decadal growth rate of 14% compared to 21% for All India. The Sex ratio is favourable to the women compared to the All India figures. Thus, appreciable achievements have been made in many health & development parameters in the state of Andhra Pradesh. The setting-up of the New Children's Hospital under NHRM is another significant step in this direction.

I wish all success to this new hospital and hope that this institution provides all the medical facilities required and also serves as an effective partner in

promoting medical research & training to all the health care providers. I am sure; this new hospital will be a boon to the improvement of Child health care services in this region.

Thank you.

**039. Speech by External Affairs Minister Pranab Mukherjee at the inauguration of the Sri Padmavati Mahila Visvavidyalayam [Women's University] Silver Jubilee Celebrations.**

**Triupati (Andhra Pradesh), August 25, 2007.**

**Dear Shri Chinta Mohan, Dear Vice-Chancellor, Distinguished members of the Legislative Assembly & Dignitaries present, Ladies & Gentlemen,**

It gives me immense pleasure to be present here at the inaugural of the Silver Jubilee Celebrations of Shri Padmavati Mahila Visvavidyalayam, an important and vital seat of learning in the country.

Education is a process of learning which awakens and develops the conscience of people and communities towards rational thinking and it is the very basis for social development. It is a process of learning leading to acquisition of knowledge. Knowledge is power and liberty accrues from power. Thus, Education emancipates. It is an evolutionary force for liberation. It is indeed impressive that the motto of this university is "jnanam nirmochanam streenam", that is, Women's emancipation through acquisition of knowledge. The establishment of Women's Universities symbolizes the affirmative and reformative action by the government in order to secure equitable access to women for higher education, check the imbalances in the field of higher education with an ultimate goal of gender mainstreaming.

The education system in any developing country will always be innovating, facing challenges and making paradigm shifts. Our heritage records expounding Vedic literature by 32 women compilers. The establishment of universities in our civilization dates as early as 6th century B.C. However, the growth of institutionalized education system was slow and sluggish during British period. The First three Universities based on Macaulay and Wood's Dispatch (1854) was set up in 1857.

Pandit Jawahar Lal Nehru said *"You can tell the condition of a nation by looking at the status of its women"*-.

At Independence, the number of institutions of higher learning and infrastructure and human resources devoted for the same were tiny when compared to the present position. From around 20 universities at the time of independence it has grown to more than 350 universities by 2006. The number of colleges registered a growth from around 500 in 1947 to about 18000 in the same period which includes more than 1000 women's colleges. The student enrolment increased from half million to more than 11 million thus making India have one of the largest network of tertiary education system. Series of educational policies and catena of programmes of action adopted by the government were responsible for such a growth.

First two five year plans referred to the problems of women in relation to education and tried to link higher professional education and occupations. The Report of the Committee on the Education of Women, 1959 laid more focused measures for the development of women's education. There was marked growth and paradigm shift from 5th Five-Year Plan (1974-'78) onwards in the approach for women's issues from welfare to development. The 6th Five-Year Plan specifically advocated a strategy for women's development that included education as its focus. The National Policy on Education, 1986 underscored the need of education in empowering women and in over coming inequalities. The National Policy for the empowerment of women indicates equal access to education for women and girls and special measures to eradicate discrimination. None the less much is desired to be done.

One can not be complacent when the system of education itself is in transition from industrial society based educational needs to needs in the context of globalization and liberalization. The Change is towards information society which is termed also as knowledge based society. Indian leadership envisions at making India a knowledge superpower by 2020. This can be achieved only when high level competitive competencies are promoted, capabilities are strengthened and vulnerable sections of the society including women are empowered.

It is indeed amazing to note that the rate of progress at which women develop is in no way less than men in any field. But the harsh reality is that the Gross Enrolment Ratio of women in higher education is still low. It is only 4% when compared to boys whose GER is 12%. The GER belonging to disadvantaged groups is still worse. Low GER results in depressingly

low representation of women in policy making and governance. Till 90's there appears that choice of women fell on general disciplines rather than on professional courses for varied reasons. It is only a recent phenomenon that women are attracted towards special, specific professional courses competing with men. In societies where women's educational opportunities are denied based on socio-economic and cultural reasons, women's universities cater to their needs which give them an additional advantage in addition to competing with men in co-educational institutions. These universities may also offer women interested courses, besides other courses, which may not find place in co-educational universities.

Development of competitiveness is directly related to quality of education we offer. Quality assurance requires standardized promotion of appropriate skills and capabilities. The aim should be towards excellence. In this context one should also note that the education we offer should be meaningful and useful in obtaining work and job opportunities besides giving scope for contributing to the development of the country.

Changes pose challenges and they require preparedness. The changes that are witnessed in recent years are fast, swift and rapid, thanks to unparalleled, trend setting developments bringing the information and communicative technology to the door steps of the people. Mores and attitudes of the people are changed sub-consciously. The result is that the paradigm of education system based on '*one size fit for all*' has given place to personalized, need based development of curriculum and implementation thereof. The norms governing education through teaching, learning and evaluation, creation of knowledge resources, development of infrastructure facilities and learning environment and management of strategies of education should all be converged to meet the challenging needs of the present scenario. Knowledge has economic dialect in the context of globalization.

This University may act as a catalyst to bring in attitudinal changes towards gender mainstreaming and towards that, the university can plan learning process integrating curricular and out reach programmes. Young women try to enter the portals of the places of higher learning at a crucial and transitional age. The limitations, irrational inequalities should be removed and it is societal responsibility. The future of India as a giant of human resources depends on how best we can extend higher learning to women and harnesses her competence and capabilities and I am sure the access to education for women will lead to success in every field.

I congratulate the eminent personalities, patrons, faculty, staff members and students of this prestigious University for having served as a leading institution in imparting knowledge in the last 25 years with dedication and success.

Thank you.

**040. Inaugural Address by External Affairs Minister Pranab Mukherjee on the occasion of the opening of the Branch Secretariat of the Ministry of External Affairs at Chennai.**

**Chennai, August 27, 2007.**

Hon'ble Thiru M. Karunanidhi, Chief Minister of Tamil Nadu, My colleague Shri E.Ahamed, Minister of State for External Affairs, Members of Parliament and the State Legislative Assembly, Senior Government Officials, Representatives of Press and Media, Distinguished Guests, Ladies and Gentlemen.

I am indeed delighted to be in this beautiful city of Chennai for inaugural of the Branch Secretariat of the Ministry of External Affairs. In October last year, Thiru Karunanidhi had written to me on the need to open a Branch Secretariat of the Ministry of External Affairs in Chennai, to which I had readily agreed. I am happy that this has become a reality today. This is the third Branch Secretariat of the Ministry of External Affairs, the other two being in Kolkata and Hyderabad. We hope to open similar offices in some more States.

I share the vision of the Hon'ble Chief Minister that the presence of MEA Secretariat in Chennai will help Tamil Nadu and other southern states in facilitating and promoting their contacts with the foreign governments, overseas investors and business leaders, non-resident Indians and other important players abroad, thereby contributing to the overall economic development and well being of the people.

During the last 15 years, since the opening of the Indian economy in 1991, India has recorded an impressive economic growth. This has naturally generated considerable interest among overseas investors in India. Engagement of foreign business community in the Indian economy has increased considerably in the recent past. Given the abundance of skilled

manpower and favourable government policies, the State of Tamil Nadu has been able to attract an increasing flow of overseas investment, technology transfers, joint-ventures and foreign collaborations. Tamil Nadu, in fact, is one of the largest recipients of Foreign Direct Investment among Indian states. A large number of business delegations, accompanying the visiting foreign dignitaries, have been visiting Chennai regularly. Opening of the Branch Secretariat would further accelerate this process by identifying suitable investors and business partners through Indian Missions abroad and by facilitating their visit to the State.

The Branch Secretariat will also serve as a window for interaction with a large number of foreign consulates and honorary consulates located in Chennai. These consulates will now onwards be able to submit their requests on various issues of day-to-day functioning directly to the Branch Secretariat; rather than approaching the Ministry of External Affairs through their Embassies in Delhi. This will render their functioning more productive and efficient.

The State of Tamil Nadu is also a cradle of ancient Indian civilization. The Ministry of External Affairs has an extensive programme of cultural exchanges with various countries abroad. The Branch Secretariat, together with the Office of the Indian Council for Cultural Relations in Chennai, will, I am sure, help Tamil Nadu in promoting cultural exchanges with various parts of the world and projecting its rich cultural and civilizational heritage abroad. This will also contribute to attracting a larger number of tourists to the State.

Though most of the consular and passport services to the people of the State are rendered directly by the Passport Offices located in Chennai and Tiruchirappalli, certain services, such as attestation of documents, are mandatorily required to be provided only by the Consular Division of the Ministry of External Affairs. With the opening of the Branch Secretariat, these services could eventually be provided in Chennai itself, thereby avoiding inconvenience to the people of the State.

I am also happy to announce on this occasion that we expect to open two more Passport Offices at Madurai and Coimbatore before the end of the year. These will bring passport services closer to the people of Tamil Nadu. Presence of the Branch Secretariat in Chennai will also facilitate many other routine tasks such as political clearance for state government delegations visiting abroad and logistics during visits of foreign dignitaries to the State. The opening of this office in Chennai is, therefore, a major step towards more effective and productive interaction between the Ministry

of External Affairs and the Government and people of Tamil Nadu.

Before I conclude, I must thank Thiru Karunanidhiji and his colleagues for their whole-hearted support in making the establishment of the Branch Secretariat possible. The State authorities promptly identified suitable office space which was renovated in a record time. I would also like to extend my profound thanks to Thiru Karunanidhiji for his gracious presence in our midst today despite his busy schedule.

With these words, I would like to dedicate MEA's Branch Secretariat to the people of Tamil Nadu and assure the Government and people of Tamil Nadu that the Secretariat will make all possible efforts to assist the Government of Tamil Nadu in its objective of economic, social and cultural development as also the well being of the people of this beautiful State.

Thank you all.

**041. Address of Special Envoy of Prime Minister Shyam Saran at the Institute of South Asian Studies: "60 Years of Independence: India's Foreign Policy Challenges".**

**Singapore, August 30, 2007.**

I am delighted to join you all this morning at the commemorative event organized by the Institute of South Asian Studies to mark sixty years of Indian independence. This is a commendable initiative, one particularly appropriate to Singapore whose historical ties with us have become even closer in recent years. Let me express, at the outset, my appreciation to Mr. Gopinath Pillai, Chairman of ISAS, for organizing this Conference and to Second Permanent Secretary Bilahari Kausikan, who has been gracious enough to inaugurate it.

2. Sixty years ago, when India gained independence, it joined the international community as a polity fractured by the Partition and as an economy shattered by two centuries of colonialism. The challenges that it faced were so fundamental that they would have been daunting for even a seasoned leadership. Only one which had so determinedly waged an independence movement over half a century could have

assumed the responsibilities of governance so seamlessly and articulated a coherent national agenda. It is not my intention to dwell on these domestic challenges except in so far as they are relevant to the formulation of our foreign and security policies.

3. There were three major constraints that India faced on the foreign policy front in its early years. The first was to undertake the internal political consolidation and the economic reconstruction of India. The former process occupied the first decade and the latter is still ongoing. The second, an inevitable consequence of Partition, was a reduction in India's size and reach. There was not only a disruption of many of its historical connectivities but an adversarial relationship with Pakistan which arose from the circumstances of the Partition. The third constraint was the structural rigidity in the international system emanating from the Cold War which significantly circumscribed India's freedom to exercise choices as it set about the task of nation building. Non-alignment was a response to this reality. Six decades later, each one of these factors has in some measure, changed to our advantage, leading to a more optimistic vision for India's future.
4. Let me now focus on India's political and economic achievements since Independence and what these portend for the future. Our consolidation as a national polity has been impressive and no one really doubts India's stability today. This is important to state because that was not how international opinion always perceived us. In the 1960s, for example, there was a considerable body of analyses that predicted very alarming scenarios arising out of the growth of regionalism. Our ability to reconcile competing demands was also questioned, particularly during times of economic difficulties. But today, there is a broad appreciation that the Indian political ethos is accommodative of diversity and respectful of federalism. Indeed, the inherently pluralistic culture of India has actually provided the basis for the working of complex coalitions at both central and state levels.
5. Similarly, internal contradictions and differences - not unnatural in a large, varied and democratic society - have often been misinterpreted. Observers unused to the complexity of our socio-political matrix sometimes tend to believe that this negatively affects the efficiency of our development process. But if there is one lesson out of the last sixty years, it is that the culture of debate that

accompanies decision-making is central to the management of the Indian political process. In many ways, the world is revisiting the debates of 'democracy versus development' and 'pluralism versus homogeneity.' India is increasingly recognized for its successes in simultaneously building an open society and an open economy. That, in itself, has significant repercussions, as much for India as for the world.

6. This recognition may not have been as strongly endorsed as it is today if India's political achievements were not matched by its economic success. An audience in Singapore needs no convincing of the merits of our reforms, initiated 15 years ago. But even more skeptical quarters have now come to accept that the unleashing of energies in India and growth of our aspirations has the most profound consequences for the global economy. The changes in India itself are visible for all to see. A sustained 9% growth rate is manifesting itself in growing incomes and rising demand. Poverty levels in the last decade alone have declined significantly in both urban and rural areas. Contrary to many expectations, Indian business has proven its competitiveness as our economy integrates with the world.
7. Against this backdrop, how does India see the current global landscape from its own vantage point and what is its perspective regarding its own role in Asia and the world?
  - In the current international landscape, there is only one country which has a truly global agenda and also a global reach, which is the United States. However, there is also a cluster of major powers with strong regional profiles but increasingly global impact. These include the E.U., Russia, China, Japan, India, Brazil and South Africa. While U.S. pre-eminence is unlikely to be reversed in the foreseeable future, the relative importance of the other major powers is likely to increase. We are already in a world of what I would call "asymmetric multipolarity" with the asymmetry progressively diminishing over a period of time. India has an instinctive preference for multipolarity and multipolarity globally implies a multipolar Asia as well and this is a trend which is positive from India's standpoint as an emerging power.
  - There is unlikely to be confrontation among the major powers, even though there may be areas of competition and even

tension among them. It is our perception that the growing globalisation of the world economy, and the consequent increase in interdependence and interconnectedness among the major powers, makes it unlikely that competition and tensions will be allowed to go beyond a point, since the consequences would be negative for both sides. On the other hand, there will be issues on which there could well be coalitions of powers whose interests may be convergent on specific issues. Examples of this are the six-party talks on Korea and the P-5 + 1 initiative with respect of Iran's nuclear issue. In this loosely structured concert of powers, India finds greater space for the pursuit of its foreign policy objectives.

- The international agenda today is dominated, as never before, by a number of significant cross-cutting issues that are not amenable to national or regional solutions. They require global responses and this itself would limit the scope for competitive behaviour among major states. These cross-cutting issues include terrorism, drug-trafficking, international crime, global pandemics, environment to name a few. The participation of large developing countries like India and China would be imperative in seeking solutions to such issues, even as multilateral institutions and multilateral approaches become essential tools in confronting these challenges. India will be increasingly engaged in playing a leading role both in the creation of such global institutions and in the fashioning of global approaches.
- While the current global landscape is characterized by the emergence of a number of major powers, there is unmistakably a shift in the center of gravity of global economy towards Asia and with that the relative weight of Asia in global affairs. The most obvious manifestation of this is of course the emergence of both India and China as two dynamic, continental sized economies, but also the continued expansion and maturation of ASEAN economies, and the resumption of growth in Japan. How Asia will manage this historic transformation will be critical to the prospects for peace and prosperity both in our region and the world. There is little doubt that India's energies will be focused to a considerable extent, in managing this transformation and

participating in the creation of new political, security and economic architectures in our region.

- Recent trends indicate that development will, in the future, be increasingly knowledge-driven and technology-driven. Countries that demonstrate strengths in innovation, in knowledge creation and applications and have the demographic profile to sustain growth over a period of time, will emerge in the front ranks of the world in the next 30 to 50 years. India has demonstrated strengths in this regard. It has a large and growing corps of skilled and technical qualified manpower. IT is an example. At the same time, it has a young population which will ensure sustained growth over the next several decades.
  - As technology and communications continue to shrink the global neighbourhood and interaction among countries and peoples grow in quantum leaps, the ability to handle and reconcile diversities of ethnicity, religion, culture and language, is what will distinguish successful societies. There will be a natural tendency for plural democracies to seek proximity and confront the intolerance and hostility generated in societies unable to adapt to rapidly shifting winds of change. India is an example of a successful, plural democracy, which has by and large, been able to accommodate immense diversity within a liberal political order. It is, therefore, well-positioned to adapt to a more interconnected world.
8. In articulating an appropriate foreign policy for the next couple of decades, it is the parameters detailed above which would be the most relevant. There will be certain significant elements of continuity. The objective of India's foreign policy has long been to expand its strategic space and strengthen the autonomy of its decision-making. As a large and populous country, and heir to a rich and ancient civilization, India has always had a sense of its place in the world. The experience of colonial domination only strengthened the zealotry with which its people safeguarded their newly won independence. Non-aligned foreign policy was an expression of this ethos and remains so today. What has changed is the context in which this objective is sought to be pursued.
9. In terms of the parameters I have spelt out, the contours of India's current

foreign policy begin to emerge with a certain clarity. Divested of the bipolarity of the Cold War and the rigidities of East-West confrontation, international relations today offers India the opportunity to simultaneously pursue closer engagement with the all the major powers; strengthening of relations with one does not inevitably lead to diminishing returns on some other front. It is possible today to think of flexible and shifting coalitions of major powers to deal with a varied set of challenges. For example, India is part of an India-Brazil-South Africa arrangement called IBSA. It is a member of a Russia-China-India trilateral and an observer at the Shanghai Cooperation Organization, even as it is comfortable pursuing a closer consultative relationship in the quadrilateral format with the US, Japan and Australia. India works together with the EU on issues of energy and environment, but it is also willing to cooperate with the U.S., China, Japan, Australia and South Korea under the Asia-Pacific Clean Development Partnership. India's foreign policy is becoming expansive, with an unprecedented degree of regional and global engagement. The rapidity with which the country is becoming enmeshed in a variety of regional and global networks is truly astonishing. This trend towards more intense engagement with a globalised world is likely to continue in the coming years.

10. Operating at all these levels naturally require an integrated vision. A pre-requisite for a multi-polar world, for example, will have to be a multi-polar Asia. Independence of thought and action will remain a dominant feature of India's diplomacy into the future. Even when we were much weaker, India was chary of being used by other powers. There is no cause for that to change. Our approach remains to translate the achievements of one relationship into gains in another. The record of the last few years would bear this out.
11. The transformation in India's ties with the United States in recent years should be seen in this context. The US is India's largest trade, technology and investment partner, a home to a successful Indian community and a large student body. Its value to India lies particularly in its ability to shape global sentiment on a wide range of issues. Our civilian nuclear energy understanding is an appropriate example. Other countries have leveraged their relationship with the US to accelerate their growth and there is no reason why India should not do so. Stronger Indo-US ties not only bring benefits to the two partners but contribute to regional and

global stability. They have also strengthened our hand in building many other relationships across the world.

12. Our relationship with China has also expanded noticeably during this very period. While our bilateral trade has grown exponentially, the real story is the rapid broad-basing of our interaction. Today, the two countries have established a commendable record of exchanges in the political, security, economic and cultural spheres. It is not always appreciated how much India and China have in common. The world should expect to see us work together on the many areas where our interests converge. I would stress that the rise of China is a positive development in so far as India is concerned. It encourages by example the growth of Indian aspirations. Structurally, it compels the international system to change at the very time when India too wishes to alter the status quo to its advantage. Both Indian and Chinese leaders have emphasized that there is enough room in Asia and the world for both India and China to grow and that there is no fundamental conflict of interest between the two.
13. Prime Minister Abe's recent visit to India has highlighted the change in India-Japan relations. This has been a long time in coming. It is apparent that Japan now sees value in going beyond those regions of Asia with which it had historical familiarity. The scale of the economic partnership under contemplation is impressive. We also share a vital interest in ensuring security of maritime trade.
14. We have longstanding ties with Russia and nations of the European Union which too have expanded along the lines of our other major relationships. Russia remains a key security partner, one with whom we also share strong political interests. The engagement with Europe, of course, is dominated much more by economic cooperation and the presence of a large Indian community.
15. While our global engagement is expanding, it is also true that this expansion is increasingly weighted in the direction of Asia, particularly South-East Asia and the Far East. All major indices e.g. growth of trade, investment, transport and communications, point to India's economic resurgence becoming an integral component of the Asian growth story. India has now accepted that its economic destiny is now firmly linked to its fuller integration in the global economy. However, global integration will come increasingly through greater connectivity and enmeshing with the dynamic economies of South

East Asia and East Asia. This is precisely what is happening. There has been a steady evolution in India's Look East Policy - from a sectoral to a full dialogue partner with ASEAN and the imminent prospect of an India-ASEAN Free Trade Agreement. The East Asia Summit is an even broader canvas on which such integration could be pursued.

16. India also believes that it cannot make a true success of its economic integration with Asia, unless it is able to realize such integration within South Asia itself. A fractured South Asia would inevitably inhibit the larger process of integration with the dynamic economies of South East Asia and East Asia. Therefore, a major preoccupation of India's foreign policy is the pursuit of a peaceful neighbourhood in South Asia based on shared prosperity.
17. As with India's domestic prospects, the outlook for the region too has improved as a result of economic transformation. India's emergence as a motor of economic growth has opened up opportunities for all our neighbours. Already, its impact is making itself felt on their economies. Those among them who leveraged these possibilities to advance their interests have been well rewarded. Sri Lanka, for example, has emerged as a major logistical hub for peninsular India. It is also benefiting both as an important investment and tourism destination for a more prosperous India. In the north, Bhutan has significantly raised its per capita income as a result of energy exports to India. In the case of Myanmar, infrastructure projects have opened up new avenues of cooperation which benefit both countries. Even with our other neighbours, the expansion of our bilateral trade - including those routed through third countries - has been noteworthy. Above all, business communities across South Asia are increasingly aware that this is a win-win situation and not a zero sum game. The challenge that we face is to overcome entrenched suspicions and to raise cooperation to a higher level. India will clearly have to take the lead in providing incentives to overcome the old mindsets and our approach at the SAARC Summit in New Delhi in April 2007 was reassuring on that score.
18. Our relations with Pakistan deserve a special mention as they have been the most intractable of our diplomatic problems. Many of you perhaps would be surprised to learn how normal our relationship has become since 2004 despite our continuing differences on major issues. Sentiments of civil society have been very much a driving force in this

normalization process. Governments have responded by creating a more helpful enabling environment. Support by Pakistan for terrorism directed against India has long been a particular obstacle to improved ties. The commitment made in January 2004 to desist must be honoured if we are to progress. There, however, seems to be a growing awareness in both countries in recent years that our futures are closely inter-linked and that the present impasse helps neither country. On the Indian side, our Prime Minister has underlined our complete flexibility, short of contemplating territorial changes. There has been a serious search for a solution underway for some time now. Since a middle ground does not exist, political ingenuity has to create one. A lowering of tensions is obviously the basic pre-requisite to do so, followed by as broad-based engagement as possible. We now have to see how purposefully the two countries can move down a road that has never been taken. A dilution in external interests that have perpetuated the differences in South Asia would also be greatly helpful in that context.

19. Some thoughts about our nuclear policy would also be appropriate. Over the last six decades, an India that was a vocal exponent of disarmament was compelled by circumstances to emerge as a nuclear weapon state. The challenge that we will now face is to fashion diplomacy more appropriate to our present strategic posture, while simultaneously pursuing disarmament goals and participating in international nuclear commerce and technology initiatives.
20. A few remarks about our relations with Singapore. An India that envisages in the opportunities that are offered by the changing global scenario the realisation of its aspirations naturally will pursue vigorously cooperation with other economically resurgent societies. As you would have gathered, our world view contemplates both concentric circles of interest and a multi-polar global architecture. Singapore is located in one of the inner circles, and is clearly a priority relationship for India. It is among our top five trade and investment partners. Our privileged relationship is reflected in the Comprehensive Economic Cooperation Agreement (CECA), a framework agreed upon in June 2005. Its results are no mere statistics. Singapore is the favoured location for Indian businesses seeking a global footprint and more than 2600 of them have set up offices there. Most of our large banks have their presence as well and the air connectivity between our two countries is particularly strong. At the Indian end, Singaporean companies have moved beyond financial investment to assume project execution responsibilities. We have strong political and security convergences and are establishing

effective institutional linkages to advance them. Above all, as multi-ethnic and plural societies, we have a natural bonding that can only gain further significance as India globalises.

21. What kind of India the world would see in the next six decades? It would be an India largely focused in raising the quality of life of its people. This will be the basis on which our external engagements would be judged. India's response to the forces of globalization will also be watched closely. We have the cultural strengths and the self-assurance to meet the world on our terms. What augurs well is that India, as a cross-roads culture, has never seen the world in adversarial terms. If the past is a guide at all, the world could learn much from South East Asia's long tradition of interaction with India. That tradition has been very much one of an exchange of ideas, people and commerce. Therefore, one can safely predict that interests of this region would be well served by a more prosperous, confident and active India.

I thank you for your attention.

#### **042. Address by External Affairs Minister at the All India Haj Conference-II.**

**Hyderabad, September 8, 2007.**

Shri Rajasekhara Reddy, Chief Minister of Andhra Pradesh, Shri. E. Ahamed, Minister of State for External Affairs, Shri M.O.H. Farook, Ambassador of India to the Kingdom of Saudi Arabia, Chairman and Members of Haj Committee of India, Chairmen and Members of the State Haj Committees, Distinguished Guests and Religious Scholars, Members of the Media and Friends,

I am very glad to be amidst you this morning to inaugurate the 2nd All India Annual Haj Conference for Haj 2007. I commend the Haj Committee of India in taking the initiative to organise this 2nd All India Haj Conference in the same calendar year and in the modern metropolis of Hyderabad. I am especially grateful to the State of Andhra Pradesh and to its Chief Minister, Shri Rajashekhara Reddy for their gracious hospitality and support.

The Haj Conference provides a good opportunity for useful exchange of

views on Haj matters, which the Government of India takes into account while formulating the policies regarding Haj. The Haj Committee of India, the Indian Missions in Saudi Arabia, the Airline companies and all other individuals and agencies are in the midst of their preparations for the organization of the next Haj pilgrimage. As such this Haj Conference would, provide us with an occasion to review the progress made till now as well as to formulate further plans to make Haj 2007 a grand success and spiritually rewarding for the Indian pilgrims.

It is a matter of great pride for us that one of the largest contingent of Haj pilgrims in the world goes from our country. Last year about 1,57,000 Indian pilgrims performed the Haj. This year the same number would go for pilgrimage and I would like to express my sincere gratitude to the Government of the Kingdom of Saudi Arabia for maintaining India's quota for Haj 2007 at the same level as last year. Shri E. Ahamed, MOS for External Affairs, visited Saudi Arabia to meet the Saudi Minister for Haj and to conclude the formal agreements for Haj 2007.

At the last conference in May this year I had conveyed that the Government had constituted two Committees i.e. an Expert Group on Haj to recommend ways and means to make further improvements in our Haj management and another Committee to study measures to look into the reforms of the existing system of management of Haj pilgrimage and prepare an appropriate and viable model for Haj Management. The first has already submitted its report, which the Government plans to implement in the near future. This would take further the efforts put in by the External Affairs Ministry under the guidance of my colleague Shri E. Ahamed for bringing about qualitative improvements in Haj management.

The Indian Haj Mission in Jeddah, which has recently been conferred with the ISO 9001 certification is fully geared up for the forthcoming Haj. The Haj Committee of India and our Haj Mission in Saudi Arabia are both working hard to fulfill the mandate given to them of serving the Hajjis and taking care of their needs and requirements their journey to the Kingdom and during their stay there. The role and assistance of the State Haj Committees in this process is a vital one. As such I would once again like to take the opportunity to urge all those States who have so far not constituted their State Haj Committees in accordance with the provisions of the Haj Committee Act 2002 to do so expeditiously.

It is a matter of great satisfaction that this year the Haj Committee of India and the Indian Haj Mission are endeavoring to acquire as many accommodation units as possible in the traditional boundaries of Makkah

to facilitate the visits of the Indian pilgrims to the Holy Haram. I am informed that more than 85% of pilgrim accommodation in Makkah has already been hired while the process of hiring of accommodation in Madinah has been completed. Efforts are also being made to accommodate the pilgrims within the traditional boundaries of Mina and to provide the pilgrims with better amenities and facilities.

The Government of India is committed to providing all necessary infrastructure for the efficient management of Haj. It would continue to depute in sufficient numbers administrative, para-medical and medical personnel to look after and assist the Indian pilgrims during their stay in Saudi Arabia. The Government has sanctioned 8 additional ambulances for the Haj Mission in Jeddah, which would substantially add to the medical facilities, which are provided to the pilgrims. Sufficient medicines and other critical medical equipment would also be made available to our doctors for the benefit of Indian pilgrims. We are providing our Haj Mission in Jeddah with trained personnel as required including IT professionals. The States send Khadim-ul-Hujjajs every year to assist the pilgrims. This year, very few States have forwarded their list of nominees despite the last date having passed. We are extending it till the end of this month in the hope that all States would send their nominations by then.

I was happy to learn that the Haj Committee of India plans for the computerization of Haj arrangements by linking all the State Haj Committees through a wide area network has made considerable progress. Pilgrim data is already computerized by the Consulate in Jeddah and can be accessed through the Consulate's website. We are very happy that this year, in all States bar one, Qurrah where required has been held through computers using the software provided by the Haj Committee of India. This has made the process more transparent. We hope that next year, all Qurrahs will be held all over India on the same day in a uniform manner.

I would urge the Haj Committee of India, the State Haj Committees, our Missions in Saudi Arabia and all concerned with Haj affairs to give high priority to the training and orientation of prospective Haj pilgrims so that our pilgrims are able to perform their holy rituals in a proper and safe manner. The pilgrims have been informed of the various steps that they have to take including the requirement for vaccination, which is for their safety. This year, the Government of Saudi Arabia has suggested appropriate inoculating vaccinations and other measures against influenza, meningitis, polio, etc. I would request the concerned authorities to assist the Haj

Committee in providing the necessary certificates in this regard, and thus help in visas procurement.

The Ministry of Civil Aviation in association with Air India and Saudi Arabian Airlines is in the advanced state of preparations for airlifting of pilgrims for the forthcoming Haj. 10 embarkation points will be handled by Air India and 6 by Saudia. A new embarkation point this year is Varanasi. Pilgrims will also have to ensure that their baggage is of the standard type and restricted to the maximum permissible weight.

The Government is also making all efforts to ensure that private tour operators who take pilgrims to Haj provide proper services and facilities for the pilgrims. It is a matter of satisfaction that over the years their services have improved and they have been contributing in a significant manner in providing necessary services to the Indian pilgrims. The Government ensures that these pilgrims also benefit from the arrangements for medical and general assistance put in place by the Haj Mission in Jeddah. The allocation of quota to PTOs has already been made and their details will be distributed to all State Haj Committees and concerned authorities. We would like to enlist the cooperation of all concerned to ensure that non-authorized PTOs do not dupe intending pilgrims.

I am sure that this Conference would provide a very strong platform for serious discussion and healthy debate to achieve the common objective of making the best possible arrangements for Indian Hajjis in an objective and transparent manner. As improvement in Haj Management is a continuous process, I, on behalf of Government of India, would like to assure you that we would very carefully consider all suggestions that would emerge from the deliberations of this Conference and try to implement them wherever feasible in the overall interest of our pilgrims.

I extend my best wishes for a very successful All India Haj Conference.

**043. External Affairs Minister Pranab Mukherjee's visit to New York as leader of the Indian Delegation to the 62nd session of the UN General Assembly.**

**New York, September 23 - October 2, 2007.**

**September 23, 2007**

H.E Mr. Pranab Mukherjee, Minister of External Affairs of India, arrived in New York on the morning of September 23, to lead the Indian delegation at the 62nd UN General Assembly.

The Minister participated in a High-Level meeting convened by the Secretary-General of the United Nations, jointly co-chaired by the UNSG and H.E President Hamid Karzai of Afghanistan. In his statement, the Minister reaffirmed India's commitment to the reconstruction and long-term development of Afghanistan, noting that India had pledged over US\$ 750 million in assistance, with over US \$ 300 million already disbursed. India's assistance covers virtually all regions of Afghanistan, and includes areas ranging from infrastructure projects to small development projects, and capacity-building assistance. The Minister also emphasized the central importance of addressing the security situation in Afghanistan, emphasizing the need for both a robust international political solution and a stronger internal military response. Lastly, the Minister underscored the centrality of the regional aspect in reconstruction and donor-led development processes. The meeting concluded with the adoption of a communiqué, which is available on the website of the United Nations.

In the afternoon, the External Affairs Minister met H.E Mr. Yang Jiechi, Foreign Minister of the Peoples' Republic of China. The Ministers discussed the further expansion of the strategic cooperative partnership between the two countries, and agreed on the need to expand bilateral cooperation, including in multilateral fora such as the United Nations. Both sides noted the rapid expansion of bilateral trade, and expressed satisfaction that the target for bilateral trade of US \$ 40 billion would be achieved soon. They also noted that high-level interaction between the two countries continued to increase, in accordance with the Ten Point initiative agreed upon by both sides during the visit of President Hu Jintao to India in 2006.

Later in the evening, the Minister called upon H.E Mr. Mahinda Rajapakse, President of Sri Lanka. The meeting was in continuation of the practice of

regular and close consultations between the two countries, on issues of common concern. As befitting the historic and close ties between the two nations, the talks were held in a warm and cordial atmosphere. The two sides discussed bilateral relations, as well as regional and international issues of mutual interest.

Finally, the Minister participated as Chief Guest at the inaugural event of "India@60", organized by the Tourism Ministry of the Government of India. This event was a celebration of the sixtieth anniversary of India's independence, at which India's diversity and cultural traditions were highlighted.

## **On the bilateral meetings of External affairs Minister Mr. Pranab Mukherjee in New York.**

### **September 24, 2007**

On Monday, September 24, the External Affairs Minister had bilateral meetings with several of his counterparts, including HE Dr Rangin Spanta, Foreign Minister of Afghanistan; HE Mr. Mourad Medelci, Foreign Minister of Algeria; HE Mr George Yeo, Foreign Minister of Singapore; H.E Mr. Felipe Perez Roque, Foreign Minister of Cuba; H.E Mr. Jan Kubis, Foreign Minister of Slovakia; HH Sheikh Abdullah bin Zayed Al-Nahyan of the United Arab Emirates; HE Mr. Dmitrij Rupel, Foreign Minister of Slovenia and HE Mr. Maxime Bernier, Foreign Minister of Canada.

Apart from these bilateral meetings, EAM met the Foreign Ministers of Russia, China and Brazil, as part of the (BRICs) initiative involving ministerial meetings of Brazil, Russia, India and China. During this meeting, the Ministers agreed that the four countries would gradually intensify cooperation in this format, beginning with closer consultations at the Ambassadorial-level, and moving on to the political level. Consultations would focus upon issues of mutual interest in the international system, in particular, issues relating to trade, development and the international financial system.

EAM and the Foreign Minister of Afghanistan reviewed the excellent bilateral relationship, and the similarity of their views on the situation in Afghanistan. EAM underlined India's firm commitment to assisting in Afghanistan's reconstruction, focusing on infrastructure and capacity-building programmes, aimed at "Afghan-ization" of developments in Afghanistan. The leaders also

agreed on the centrality of the security issue, noting that it posed a significant challenge to the efforts of the international community thus far.

During the meeting between EAM and the Foreign Minister of Algeria, the two sides agreed on the need to expand bilateral cooperation, focusing in particular on the economic relationship. As representatives of nations that had suffered greatly from terrorism, there was a close similarity of views between the Ministers on threat posed to the two countries by this menace. In his meeting with the Foreign Minister of Singapore, EAM and his counterpart reviewed the strong bilateral ties between the two countries in the political, economic, trade, cultural, defence and scientific fields. The two Ministers expressed satisfaction at the close similarity of views in several areas of common interest.

In his meeting with the Foreign Minister of Cuba, EAM sought and received a briefing on the health of President Fidel Castro. The two Ministers noted that the excellent bilateral relationship had developed over the years with contacts at the highest levels, and recalled in this regard the fact that Prime Minister Manmohan Singh had called upon President Castro in September 2006, on the margins of the Summit meeting of the Non-Aligned Movement in Havana. The two leaders also reviewed developments in the NAM, in context of Cuba's stewardship of the Movement. Following this meeting, EAM met the Foreign Minister of Slovakia. The two leaders agreed on the need build upon the commonalities in the bilateral relationship, predating Slovakia's current political configuration, the determination of the new Government of Slovakia to build relations with the Asian states, such as India, and the strategic partnership between India and the European Union, of which Slovakia is a member.

In the afternoon, in his meeting with the Foreign Minister of the United Arab Emirates, EAM underscored the need for the historic relationship of close people to people and cultural ties needed to expand rapidly, in particular, in the economic dimension. EAM pointed out that in India's rapidly-growing economy, there was considerable scope for investments from the UAE, in particular, in the expansion of India's infrastructure. Following this meeting, the Foreign Minister of Slovenia welcomed India's decision to open an Embassy in Ljubljana. He observed that the bilateral relationship had great potential for further development, in particular, in the Slovenian Presidency of the European Union in the first half of 2008. In his last meeting of the day, EAM discussed the situation in Afghanistan and the problem of climate change with the Foreign Minister of Canada.

## **On the bilateral meetings of External affairs Minister Mr. Pranab Mukherjee in New York.**

**September 25, 2007**

On Tuesday, September 25, the External Affairs Minister had bilateral meetings with the Foreign Minister of Albania and the Foreign Minister of Nepal. Apart from these bilateral meetings, the Minister participated in a meeting of the Non-Aligned Movement's Ministerial Committee on Palestine. He also met the Foreign Ministers of the Central American Integration System (SICA), and the Foreign Ministers of the Five Countries invited to the Summit meeting of the G-8 at the Heilegendamm Summit, namely, Brazil, China, India, Mexico and South Africa (G-5).

At the meeting with Foreign Minister Lulzim Basha of Albania, EAM welcomed the announcement that Albania would soon open its Embassy in New Delhi. The two Ministers agreed to develop the bilateral relationship, including in the trade and economic sectors. Towards this end, the Ministers decided to work towards early finalization of framework agreements to facilitate bilateral trade, economic cooperation and investment.

Following this, EAM met H.E Mrs. Sahana Pradhan, Foreign Minister of Nepal. The two leaders reviewed the excellent bilateral relationship, including bilateral economic and trade relations. They discussed current developments in the peace process in Nepal, and the state of preparations for the forthcoming Constituent Assembly elections. EAM reiterated his invitation for the Foreign Minister to visit India at her convenience.

The NAM Ministerial Committee on Palestine, which is composed of the representatives of former Chairs of NAM, met to review the situation in the Occupied Palestinian Territories. The group heard a briefing by the Palestinian leadership, following which EAM made an intervention in which he underlined the need to move forward on concrete projects and pragmatic action, aimed at providing results and solutions. While welcoming the resumption of the Palestinian-Israeli dialogue, he urged that this be sustained by a time-bound agenda. EAM reiterated that violence and counter-violence should be condemned, while noting that there could be no justification existed for the targeting of civilians and civilian infrastructure.

In the meeting with SICA, the Ministers underlined their interest in expanding cooperation between India and the nations of the group. EAM noted that a relaxation of the visa regime in the region, as applicable to Indians, would

lead to an increased volume of trade and investment flows between India and the region. Separately, Costa Rica, El Salvador and Nicaragua indicated their intention to open Embassies in New Delhi next year. EAM offered to host the next Ministerial meeting of India with SICA in New Delhi next year, and the offer was accepted.

The meeting of Foreign Ministers of the G-5 took place in fulfillment of the mandate given by their Heads of State/Government for them to meet on the margins of the 62nd UN General Assembly session. The Ministers discussed the Heilegendamm process, and explored ways of expanding consultation and cooperation amongst themselves and between the G-5 and the G-8 in areas of mutual interest.

### **On the bilateral meetings of External affairs Minister Pranab Mukherjee in New York.**

#### **September 26, 2007**

On Wednesday, September 26, the External Affairs Minister met the Foreign Minister of Brazil, HE Mr. Celso Amorim; the Deputy Prime Minister and Foreign Minister of Israel, H.E Ms. Tzipi Livni; the High Representative of the European Union for the Common Security and Foreign Policy, H.E Mr. Javier Solana; Secretary General of the North Atlantic Treaty Organization, Mr. Jaap de Hoop Scheffer, and the Secretary of State of the United States of America, H.E Dr Condoleezza Rice Separately, EAM participated in a Ministerial Meeting of the India, Brazil, South Africa (IBSA) initiative. He also Chaired an informal Ministerial meeting of the South Asian Association for Regional Cooperation (SAARC).

In the IBSA meeting, EAM and his counterparts, Foreign Minister Celso Amorim of Brazil and Foreign Minister Dr. Nkosazana Dlamini-Zuma of South Africa exchanged views on topics of mutual interest relating to the IBSA Dialogue Forum and the IBSA Fund for Alleviation of Poverty and Hunger. The Ministers also underlined their determination to strengthen political aspects of IBSA's work, including by focusing on reform of the United Nations, in particular the UN Security Council, calling for an immediate, elements-based, result-oriented intergovernmental negotiation to commence for expansion of the UN Security Council. The meeting also discussed preparations for the second IBSA Summit in South Africa in October 2007.

At the SAARC Meeting, the participants heard a report of the work of SAARC since the last Summit in New Delhi in April 2007 from the Secretary-General of SAARC. Members the eight-nation group discussed the need to expand cooperation in the SAARC framework, taking into account the concrete projects set by previous Summits and reviewing progress achieved thus far. Following the informal meeting, EAM hosted an iftar reception for participating SAARC delegations.

Earlier in the day, EAM had a series of bilateral meetings. The meeting with the Foreign Minister of Brazil was held in a warm atmosphere. Bilateral cooperation was reviewed, as well as the prospects for expanded cooperation, including in the defence sector, in alternative sources of energy, in economic and trade relations, in cultural exchanges, and also through further coordination in multilateral fora, in context of the similarity of positions and concerns of the two countries. At the meeting with the Deputy Prime Minister and Foreign Minister of Israel, the two leaders reviewed the cordial bilateral relationship, reviewing existing cooperation, and examining areas for further cooperation, such as high-technology. The leaders also had a cordial and frank discussion regarding the situation in the Middle East region.

During the meeting with the Secretary-General of NATO, there was a discussion on the international security situation, with particular reference to the situation in Afghanistan. The two leaders emphasized the importance of continued international cooperation in the reconstruction of Afghanistan. During EAM's meeting with the EU High Representative, Javier Solana, the two leaders reviewed preparations for the forthcoming annual India-EU Summit, in the overall context of further expansion of the rapidly-developing relationship, with particular emphasis on trade and economic aspects of India-EU relations. In the afternoon, at the meeting between EAM and the US Secretary of State, the two leaders reviewed bilateral relations across the gamut of items of cooperation. They also considered the international situation, and exchanged views on issues of concern.

Later in the evening, EAM left for Washington DC to lead the Indian delegation to the Major Economies Meeting on Energy Security and Climate Change, being convened by the Department of State of the United States of America.

## **On the bilateral meetings of External affairs Minister Mr. Pranab Mukherjee in New York**

**September 27, 2007**

The External Affairs Minister returned to New York from Washington DC on the evening of Thursday, September 27. In Washington, he led the Indian delegation at the Major Economies Meeting on Energy Security and Climate Change, convened by H.E Mr George W. Bush, President of the United States.

Shortly after his return to New York, EAM called upon H. E Mr. Mahmoud Abbas, President of the Palestine Authority. The meeting took place in a warm and cordial atmosphere, with the two leaders recalling India's historic and consistent support for the Palestinian people's struggle for a homeland of their own, and for the Palestinian people to attain their rightful place in the comity of nations. President Mahmoud Abbas briefed EAM about the situation in the region, and gave him an update on the current state of the Middle East peace process. EAM reiterated India's conviction that since force cannot resolve what is essentially a political dispute, a mutually-acceptable political solution must be found to resolve this dispute.

## **On the bilateral meetings of External affairs Minister Mr. Pranab Mukherjee in New York.**

**September 28, 2007.**

On Friday, September 28, the External Affairs Minister participated in a Ministerial meeting of the Asian Cooperation Dialogue. Thereafter, he attended a Ministerial meeting of the Coordination Bureau of the Non-Aligned Movement. EAM separately held bilateral meetings with H.E Mr. Mohammed Benaissa, Foreign Minister of Morocco; H.E. Mr. Ahmed Aboul Gheith, Foreign Minister of Egypt; H. E Mr. Bernard Kouchner, Foreign Minister of France and H.E Mr. Miguel Angel de Moratinos, Foreign Minister of Spain. EAM also called upon H.E Mr. Navinchandra Ramgoolam, Prime Minister of Mauritius.

The Foreign Minister of the Republic of Korea convened a Ministerial meeting of the 28-member Asian Cooperation Dialogue (ACD). The Ministers discussed the regional situation in the Asian continent, and reviewed ongoing cooperative endeavours within the group. The Ministers

discussed substantive ideas to begin a cultural dialogue within the ACD. The group noted the offer of the Government of Kazakhstan to host the next Ministerial meeting of the ACD in Astana in October 2008.

The meeting of the Coordination Bureau of the Non-Aligned Movement focused on an interactive discussion on "Concrete Measures to Strengthen the Capacity for Action of NAM". Members reviewed progress since the Havana Summit in September 2006. In his intervention, EAM underlined India's abiding commitment to the Movement, and the enduring relevance of the NAM in the current international context. He also pointed out that the strength of the Movement has historically been its inclusiveness, which enabled it to take into account the diverse interests of the 118-member group.

The meeting between EAM and his Moroccan counterpart was conducted in a warm and cordial atmosphere. The two leaders appreciated the fact that regular high-level bilateral interactions, and the growing bilateral economic relationship, were important indicators of a rapidly-developing relationship. In his meeting with the Foreign Minister of Egypt, EAM and his counterpart agreed to increase the frequency of high-level interaction. Both leaders noted the rapid development of economic relations and bilateral trade, but agreed that the existing potential was yet to be realized. The two Ministers agreed to consider expanding cooperation into new areas, such as the development of renewable sources of energy. They also exchanged views on the situation in West Asia. In his meeting with the Foreign Minister of Spain, EAM and his counterpart expressed interest in developing bilateral cooperation further, in particular, in the context of the threat posed to both India and Spain from international terrorism.

During EAM's call on the Prime Minister of Mauritius, the two sides reviewed the close bilateral relationship between the two countries. EAM thanked the Prime Minister of Mauritius for his strong support for India's candidature for a permanent seat in a reformed and expanded UN Security Council, in his statement to the UN General Assembly earlier today. The leaders agreed on the need to task their officials to further intensify the extensive bilateral economic relationship.

During his meeting with the Foreign Minister of France, EAM extended his congratulations to France upon the confirmation of Mr. Dominique Strauss-Kahn as Executive Director of the International Monetary Fund. The two leaders reviewed bilateral cooperation between the two countries, including in the defence, energy, science and technology and political spheres, and

expressed the intention to work together to increase bilateral cooperation. The two Ministers also reviewed the international situation, discussing issues of mutual interest.

## **On the bilateral meetings of External affairs Minister Mr. Pranab Mukherjee in New York.**

### **October 1, 2007.**

On Monday, October 1, 2007, the External Affairs Minister delivered his statement at the General Debate of the 62nd UN General Assembly. He also addressed the Council on Foreign Relations, and participated in a public meeting organized by the Indian National Overseas Congress.

The Minister also held bilateral meetings with H.E. U Nyan Win, Foreign Minister of Myanmar, H.E Mr. Kenneth Baugh, Foreign Minister of Jamaica and H.E Mr. Ednan Karabaev, Foreign Minister of Kyrgyzstan. EAM also met H.E Mr. Ban Ki-moon, Secretary-General of the United Nations, and H.E Dr Srgjan Kerim, President of the 62nd UN General Assembly.

During his bilateral meeting with the Foreign Minister of Myanmar, the External Affairs Minister expressed concern at the current situation in Myanmar, noting that as a close and friendly neighbour, India hoped to see peace, prosperity and stability in Myanmar. The Minister also expressed the hope that the process of national reconciliation and political reform, initiated by the Government of Myanmar, would be taken forward expeditiously. Further, he suggested that the Government could consider undertaking an inquiry into recent incidents and the use of force.

In his meeting with the Foreign Minister of Jamaica, the two Ministers discussed the traditionally warm and cordial bilateral relationship. The Ministers agreed on the need to expand cooperation in particular, in developing human resources. In this context, focus areas identified included information technology and the medical sector. During the meeting between EAM and his counterpart from Kyrgyzstan, the two sides reviewed the progress in bilateral cooperation projects, including an India-Kyrgyz Information Technology centre, and other projects in the medical and food processing sectors.

During the meeting between EAM and the UN Secretary-General, the latter underlined India's important position in the international system,

and stressed the importance of India's continued support for the UN. EAM affirmed India's support for the UNSG's efforts to make the UN more efficient and effective. EAM and the UNSG also discussed the situation in Myanmar, apart from reviewing the status of the UN missions in Nepal and Afghanistan. EAM congratulated the UNSG for successfully organizing a number of high-level meetings on the margins of the current UNGA session, including the High-Level meetings on Climate Change and on Afghanistan.

In his meeting with the President of the UN General Assembly, EAM and the PGA discussed current issues on the Agenda of the 62nd UN General Assembly, including climate change and the reform of the United Nations. EAM also thanked the PGA for accepting India's invitation for him to preside over an informal session of the UN General Assembly, being organized to commemorate the first International Day of Non-Violence on October 2, 2007.

\* \* \* \*

### **On the International Day of Non-Violence and the meetings of the External Affairs Minister in New York.**

**October 2, 2007.**

#### **I: International Day of Non-Violence:**

H.E. Mrs. Sonia Gandhi, Chairperson of the United Progressive Alliance of India, addressed an informal plenary session of the United Nations General Assembly today, thus launching the commemoration of the first International Day of Non-Violence, which falls on the birth anniversary of Mahatma Gandhi. H.E. Dr. Srgjan Kerim, President of the 62nd UN General Assembly, H.E. Mr. Ban Ki-moon, UN Secretary-General, and H.E. Dr. N Dlamini Zuma, Minister of Foreign Affairs of South Africa also addressed the meeting.

Thereafter, H.E. Mr. Pranab Mukherjee, External Affairs Minister, chaired a Round Table meeting that focussed upon the contemporary relevance of the Gandhian method of non-violence in the current international context. H.E Mr. Anand Sharma, Minister of State for External Affairs, was also present on this occasion. The participants included UN Deputy-Secretary-General H.E Mrs. Asha Rose Migiro, and several other Heads of Delegations to the UN General Assembly. The panellists included eminent intellectuals, thinkers and Gandhians, such as Dr. Ahmed Kathrada, Prof. Amartya Sen,

Dr. Ela Gandhi, Dr. Gene Sharp, the Rev. Jesse L. Jackson Sr., Prof. Johan Galtung, Prof. John Nash and Dr. Lia Diskin. The discussions were moderated by Mr. Dileep Padgaonkar. Subsequently, H.E. Mrs. Sonia Gandhi joined the Panelists and other dignitaries at lunch following the Round Table.

In the evening, H.E Mrs. Sonia Gandhi inaugurated a photographic exhibition entitled "Gandhi and Global Non-violent Awakening" at the UN premises. Separately, a documentary film entitled "Mahatma- The Great Soul" was screened at the Dag Hammarskjöld Auditorium at the UN Building. A Special Cancellation was also issued by the UN Postal Administration to mark the International Day of Non-violence. This cancellation will be used by the UN through the month of October 2007.

## **II: UN General Assembly:**

On the margins of the General Assembly and the commemorative events to mark the first International Day of Non-Violence, the External Affairs Minister met H.E Mr. Manouchehr Mottaki, Foreign Minister of the Islamic Republic of Iran, and H.E Dame Billie Miller, Foreign Minister of Barbados.

During EAM's meeting with the Foreign Minister of Iran, the two leaders reviewed the historical and traditional bilateral relationship, and reviewed areas of bilateral cooperation. EAM and the Foreign Minister also reviewed the situation in Afghanistan. The two Ministers agreed that the bilateral Joint Commission should meet soon.

Later, at the meeting between EAM and the Foreign Minister of Barbados, the two reviewed the bilateral relationship, and agreed to find ways of increasing existing bilateral cooperation, in particular, technical cooperation in areas such as Information Technology.

The Minister's last engagement in New York included an interview with Charlie Rose of PBS, after which he participated in the inauguration of the photographic exhibition, "Gandhi and Global non-violent awakening", by H.E Mrs. Sonia Gandhi at the United Nations.

(Following these engagements, EAM left New York for the United Kingdom.)

**044. Statement by Finance Minister P. Chidambaram as Special Envoy of the Prime Minister during the High-Level event on Climate Change convened by the UN Secretary-General: "The Future in Our Hands: Addressing the Leadership Challenge of Climate Change" at the Thematic Plenary on "The challenge of adaptation - from vulnerability to resilience".**

**New York, September 24, 2007.**

Honourable Co-Chairs,

May I begin by expressing our appreciation for the initiative of the Secretary-General in convening this High-Level Event. I am confident that this event will assist in moving forward the process in the United Nations Framework Convention on Climate Change [UNFCCC]

Like many developing countries, India is an energy deficient country. In 2006-07, we produced 662 billion units of electricity from all sources for a population of over a billion people. Energy is the sine qua non of development. We are obliged to explore every option available to us to produce or procure energy. However, we are profoundly concerned about environmental degradation and climate change.

Our per capita consumption of energy is 530 kgoe of primary energy compared to a world average of 1770 kgoe. Our per capita emission of CO<sub>2</sub> is among the lowest in the world: it is approximately 1 tonne per annum as against a world average of 4 tonnes per annum. Currently, developing countries bear an inordinate share of the burden of Climate Change, though this is due to the high-level of emissions of developed countries. Developing countries are, therefore, obliged to significantly augment their capacity to cope with and adapt to climate change.

We acknowledge the principle of common but differentiated responsibilities. We uphold the view that adaptation is the key for developing countries and that it needs to be adequately resourced without diverting funds meant for development. In any case, development is the best form of adaptation.

Adaptation has been integral to India's development process. We are challenged constantly by climate variability. We spend every year over 2

percent of our GDP in development measures with strong adaptation content like cyclone warning and protection, coastal protection, flood control, drought relief, and food security.

In 2001, we passed the Energy Conservation Act. We have notified an Energy Efficiency Code for new commercial buildings.

A new Electricity Act was passed in 2003. The Act mandates the procurement of electricity from renewables and has given a major fillip to the wind energy sector.

In 2006, the Government of India adopted a National Environment Policy. This year, we set up a special committee to look into the impact of climate change. The committee will study the impact of anthropogenic climate change on India and identify the measures that we may have to take in the future. In addition, we have constituted a Council on Climate Change chaired by the Prime Minister to coordinate national action plans.

We have taken a number of measures that are inherently supportive of sustainability and clean development. We have insisted on the use of CNG for public transport; we have introduced the metro rail in many cities; and we have commenced a major bio-diesel program including mandatory blending of ethanol in petrol.

We have also launched the Green India project that will be the world's largest afforestation project covering six million hectares of degraded forest land.

We have managed the demand side through targeted interventions. As a result, we have raised energy efficiency in all the major energy intensive sectors - steel, aluminium, fertilizer, paper and cement. We propose to make available Compact Fluorescent Lamps at the price of normal incandescent bulbs.

Honourable Co-Chairs,

The earth's atmosphere is a common resource for all of humankind. The problem lies not in accessing this resource but in its excessive usage. India is committed to sustainable development, and that means sustainable patterns of production and consumption.

India is also fully sensitive to the concerns of small island developing states that arise out of climate change and will join efforts to assist the small states.

The Prime Minister of India has made the offer that India's per-capita GHG emissions would at no stage exceed the per capita GHG emissions of developed countries. This is the starting point to reach a just and fair agreement.

Adaptation can become a reality if we are able to put new and intelligent technologies to use. We urge the countries of the world - especially the developed countries - to seize the opportunity.

Thank you.

**045. Remarks by External Affairs Minister Pranab Mukherjee  
at the Meeting of Major Economies.**

**Washington (D. C), September 27, 2007.**

Your Excellencies, Distinguished Delegates,

Please allow me to begin by thanking President Bush for this timely initiative on Energy Security and Climate Change, two of the most daunting challenges confronting the world today.

We are happy to note that this is a meeting of major economies, which allows for exploration of opportunities for large scale cooperative action on Energy Security and Climate Change. In India's case, we have a very small individual carbon footprint with per-capita CO<sub>2</sub> emissions being just about a quarter of the world's average. However, our willingness to engage in finding practical, pragmatic solutions, and cooperating in advanced clean technologies for the benefit of entire humankind are second to none.

Ladies & Gentlemen,

Energy security is a matter of considerable concern to us, given the direct link between energy consumption and human development. The imperative of meeting our people's aspirations for a better life, demands that India grow rapidly at around 8% - 10% each year in the coming decades. India needs to substantially increase per-capita electricity consumption and cannot compromise on this. Rapid economic growth and concomitant energy production and electricity consumption will increase CO<sub>2</sub> emissions. However, we are determined that even as we pursue economic growth, our per-capita GHG emissions will not increase beyond those of the industrialized countries.

India's efforts include increased energy efficiency and conservation and the use of renewable and clean energy like nuclear. With about 7,000 MW of installed wind-power, we now have the fourth-highest wind generated electricity capacity in the world. Targeted demand side management programmes have brought energy efficiency in India in all the major energy intensive sectors - steel, aluminium, fertilizer, paper and cement - to global levels. We have also made other efforts. These include introducing CNG for public and private transport in metropolitan areas, metro rail networks, a major bio-diesel program and the blending of ethanol in petrol. One of the world's largest afforestation efforts in recent times called Green India, covering six million hectares of degraded forest land, is underway in India.

#### Distinguished Delegates

India faces extreme climate variability. We spend more than 2 percent of our GDP each year in development measures with strong adaptation content like cyclone warning and protection, flood and drought control and relief and food security measures. Further global warming is inevitable as a result of the accumulated concentration of GHG in the atmosphere caused by emissions from the industrialized countries. The key issue for India and other developing countries is developing the ability to cope with the adverse impacts of Climate Change and adapt to it. This requires technological and financial resources that can only come through development, which, without doubt, is the best form of adaptation. The time is not ripe for us to take on quantitative targets of emissions limitation. These would be counter-productive and have a negative effect on our development process. Developed countries need to continue to take the lead in accordance with the principle of common but differentiated responsibilities.

In this context, we are pleased by this meeting's emphasis on technology. Any long term solution to climate change requires the development and diffusion of technologies for adaptation. We would urge research & development in clean technologies that could be advanced through programmes of collaborative R&D between institutions in developed and developing countries. The sharing of IPRs is crucial. A more fair balance between rewards to the innovator, and the global imperative of sustainable development, is essential, if large-scale deployment of advanced, clean technologies is to occur. Technology control regimes need to be dispensed with for advanced clean technologies. Standards and priorities should reflect the developmental context to which they apply.

Ladies & Gentlemen,

We appreciate the lead taken by the USA in hosting this meeting, which is bound to throw up a rich variety of diverse ideas. We are confident that this meeting will greatly facilitate negotiations at the United Nations Framework Convention on Climate Change.

Thank You

**046. Statement by Deputy Permanent Representative at UN Ajai Malhotra at the 31st Annual Meeting of Ministers for Foreign Affairs of the Group of 77.**

**New York, September 27, 2007.**

Mr. Chairman,

At the outset I would like to congratulate Pakistan for the able leadership provided to the Group of 77 since the beginning of 2007 and for promoting the Group's interests at UN fora.

I would also like to warmly greet Antigua and Barbuda on its election as the Chairman of the Group of 77 for the year 2008. We wish Antigua and Barbuda a very productive tenure as our Chair and reiterate India's whole-hearted support to it in pursuit of our common goals and objectives.

Mr. Chairman,

At the Millennium Summit seven years ago, we set ourselves the target of achieving the Millennium Development Goals by 2015. We are at the half-way mark today. Yet, despite best efforts and notable successes, many developing countries are unlikely to achieve the targets set. Full implementation of MDG 8 - the global partnership for development - is essential in order to assist developing countries in their efforts to achieve the MDGs. To do so, the commitments made by developed countries regarding official development assistance, trade, technology transfer and enhanced market access must be fulfilled. We note with concern that, unfortunately, the trend is in the opposite direction.

Not only has there been a drop in ODA during 2006, but a substantial part of

ODA is being channeled towards debt relief, with no additional or new resources being made available. Given that the process of debt relief has been largely completed for most donors, the prognosis remains grim for a future increase in aid so as to reach the targeted 0.7% of GNI. Moreover, there is an upward trend in overall resource transfer from developing to developed countries. Real and effective technology transfer needs to take place to developing countries, and it is time that the IPR regime looks at balancing the rewards to the innovator with the benefit to humankind. In this regard, we fully support the newly strengthened Economic and Social Council promoting awareness and giving policy guidelines in the area of development cooperation, and following-up on major UN Summits and Conferences.

In this context, the implementation of the outcomes of the Monterrey Conference, on creating an international economic environment conducive to development and ensuring that predictable and sufficient resources are made available to developing countries to pursue their development policies, remain a central objective. Unfortunately, progress remains limited. Recent turbulence in the financial markets has demonstrated yet again the potential threat to the 'real' economy and, consequently, to development policies, posed by esoteric and speculative financial products, and the need for more effective surveillance of such transactions.

At the same time, a comprehensive review of the international economic and financial architecture, so as to ensure a greater voice and increased participation by developing countries in decision-making and norm setting processes, continues to elude us. There is a need to intensify our efforts in order to achieve tangible progress in this area. We appreciate the offer of the Government of Qatar to host the Monterrey Review Conference in 2008, and we hope that the Conference will undertake a detailed review of progress made and enable us to chart the way ahead.

Mr. Chairman,

The Doha round of trade negotiations must ensure the primacy of the development dimension. Subsistence farming in developing countries cannot be compared with the enormously subsidized farming that takes place in developed countries. It is unfair to link progress on this issue with NAMA. It is important for developing countries to maintain flexibilities and preserve policy space particularly in the context of NAMA, in order to avoid the danger of deindustrialisation for some developing countries. The overarching principle of special and differential treatment remains a categorical imperative. We hope that our developed country partners will show the necessary flexibility so that progress in the negotiations is achieved.

Recent meetings at the UN General Assembly and other fora have highlighted the urgent need to address the issue of global warming and climate change, on the basis of common but differentiated responsibilities and respective capabilities. We look forward to the UNFCCC meeting in Bali later this year and hope that developed countries will commit to, and implement, sharper emission reduction targets for the post-2012 period under the Kyoto protocol. We also underline the need for additional financial resources, technology transfer, and capacity enhancement in developing countries, in order to assist them in to address climate change and related concerns. Sustainable development must be promoted in a holistic manner through its three pillars of economic development, social development, and environmental protection. On our part, we are determined that even as we pursue economic growth, our per-capita GHG emissions will not increase beyond those of industrialised world. At the same time, we are sensitive to the genuine concerns of small island developing countries arising out of global warming and climate change and will join efforts to assist them.

Mr. Chairman,

The need for unity and solidarity among developing countries remains crucial. The singular success of this Group has been in its ability to project our common interests with one voice and the continued cohesiveness of the Group remains key to ensuring that the interests of developing countries are adequately protected and promoted. It is satisfying to note that even in areas where some of our members have somewhat varying concerns, the Group has been able to coalesce around common elements.

Our diverse membership in turn brings a wide range of concerns to the fore. However, we must be cognizant of the need to specifically address the concerns of the Least Developed Countries, the Landlocked Developing Countries, the Small Island Developing States, the African countries and others who are vulnerable and need our support.

Mr. Chairman,

The Group of 77 has a special role to play in promoting the common interests of developing countries and in fostering South-South cooperation. India is already active in sharing its developmental experiences with numerous partner countries, as also its expertise in certain areas of capacity building and technology. India intends to further expand and intensify such cooperation with our developing country partners in the years ahead.

Thank you, Mr. Chairman.

**047. Address by Smt. Sonia Gandhi Chairperson of the UPA to Indian Overseas Congress and other Indian Organisations in New York.**

**New York, October 1, 2007.**

Foreign Minister P K Mukherjee

Minister Vayalar Ravi

Dr Karan Singh

Minister of State Anand Sharma

Ambassador Sen

Dr Malhotra

Shri George Abraham

Friends,

I am very happy to be back with the Indian National Overseas Congress after six years. The warmth of your reception is still fresh in my memory. Today too, you have made me feel completely at home with your gracious welcome.

I came here last time as Leader of the Opposition. This time, I stand before you as the Chairperson of the United Progressive Alliance.

In 2004, the people of our country gave us the mandate.

It was a mandate to restore the secular foundations of governance, to revitalise the wellsprings of harmony and tolerance in our diverse society.

It was a mandate to make the process of economic reforms more inclusive, and economic growth more equitable.

Significant steps to fulfil that mandate have been taken.

Our government, as you well know, is a coalition government. Being in coalition at the Centre is a new experience for the Congress but we have adapted well. We have not compromised on our basic values and principles. The National Common Minimum Programme which is the agenda for the coalition and its partners, is largely derived from the Congress Party's own manifesto. Sometimes a great deal is made in the public domain of the

opinions expressed by our friends who support our coalition. This should not alarm you. We believe it is important to listen to all points of view. This only strengthens the democratic process and helps to arrive at a consensus.

I come here at a time of extraordinary interest in our country, in its progress and its achievements.

The manner in which in the course of sixty years we have nurtured and deepened parliamentary democracy, managed the multitude of our diversities, accelerated economic growth, the manner in which we are empowering the disadvantaged, all this is a matter of National Pride. This has been possible chiefly because of the vision, direction and tremendous sacrifices of our Founder Fathers, the leaders of the Congress Party.

Tomorrow, I speak at the UN on the occasion of the declaration by the General Assembly of Mahatma Gandhi *Jayanti* as International Non-violence Day. This is a collective homage of the world community to one of the greatest men of all time for which we are grateful.

Since I was here last, the tragedy of 9/11 took place in this city itself. Our hearts went out to all Americans. We all saw with admiration how magnificently the people of New York had rebuilt their lives after that terrible trauma.

India has been confronting the scourge of terrorism for a very long time. Indeed, Gandhiji himself fell to the bullet of a fanatic. Two of our own leaders have fallen victim to terrorism.

We have had a number of terrorist attacks in the last few years in different parts of our country. What is remarkable is the resilience of our people and how these attacks have not succeeded in damaging the bonds of social harmony in our society.

Terrorism in the name of religion is a negation of all that every religion stands for - peace, compassion and understanding. We must combat terrorism. At the same time, we must ensure that no community feels under siege or sees itself a target of automatic suspicion. Our party's guiding philosophy has always been '*Sarva Dharma Sambhava*' or equal respect to all religion; similarly it has been to fight fundamentalism and communalism of any and every shade.

India's economic growth is one of the highest in the world. This is creating new prosperity and opening vast new employment opportunities. But there

are still many regions of our country that are lagging behind. In keeping with our Party's priorities, while fully supporting business enterprise investments, we are making special efforts to improve the quality of our human capital. In the last three years we have significantly increased investments in areas like education, nutrition and health. Agriculture is being revitalized. A far-reaching rural employment guarantee programme has been launched, covering all the districts of the country. A new legislation for social security for workers in the unorganised sector (that accounts for over 90% of our work force) has been introduced.

In the last few years we have also been able to build new partnerships with Indians living overseas. The huge remittances being made by all of you back home is a major source of strength for our economy. Remittances apart, many more Indians are coming back to start new ventures and businesses and to work in universities, research institutions and companies. There was a time when people used to complain of a "brain drain". But Rajivji's belief that Indians living and working abroad were actually a "brain bank" has been proved correct. It is gratifying that a large number of Indians are supporting worthwhile social causes through NGOs in areas like education and rural development. However, I would like to add a word of caution here. Not all NGOs are noble in their intentions or transparent in their activities. If they are engaged in activities that damage our secular heritage we must be wary of them.

Our government in May 2004 set up a separate Ministry of Overseas Indian Affairs. The grant of Overseas Citizenship of India to all Persons of Indian Origin where local laws permit dual citizenship (in some form or the other) has also been announced. A number of internship and scholarship programmes for young men and women have been started. The Ministry is launching a new scheme to provide assistance to women deserted by their Overseas Indian spouses, which I am told, has emerged as a serious problem.

The Indian community in the USA is huge success story of its own. No other community has excelled itself in so many fields in so short a time. You have shown your capabilities in many areas of endeavour, using your education and skills, and the boundless energy and capacity for hard work. Many of you had to struggle much harder than others. You deserve our praise and admiration. Your achievements bring great credit to India and we applaud you. Even more, we see you as a bridge between our two democracies.

We see you as our voice to this continent. I am sure you will continue to

propagate the message of Indian National Congress with clarity and conviction. The world must know of our deep commitment to secular democracy and pluralism. They must hear of our vision and values. As we continue our challenging and onerous tasks of governance at home we look to you to spread our message. We are partners in this great endeavour of building a new and prosperous India. I know we can count on you to give your best and keep our flag flying high.

I wish the Indian National Overseas Congress all success. I compliment Dr Malhotra and his colleagues for organising this meeting – they have worked very hard. I extend in advance my greetings to you all for the auspicious festivities of *Eid, Dussehra and Dipawali*.

Jai Hind.

**048. Statement by External Affairs Minsiter Pranab Mukherjee  
at the General Debate of the 62nd UN General Assembly.**

**New York, October 1, 2007.**

**Your Excellency, Mr. President, Excellencies, Ladies and Gentlemen,**

Kindly accept my congratulations on your election to the Presidency of the 62nd session of the UN General Assembly. My delegation assures you of its full co-operation as we address issues identified in the Annual Report of the Secretary-General and responsibly and creatively move forward with pending reforms to this Organization.

Mr. President, At the outset I would like to express India's deep gratitude to all Member States for the unanimous adoption recently by the UN General Assembly of the resolution to annually observe the International Day of Non-Violence on October 2, the birth anniversary of Mahatma Gandhi. I also look forward to participation by Member States in the informal UNGA Plenary and other functions being organized tomorrow at the United Nations to mark the first International Day of Non-Violence.

Mr. President, The topic for this year's debate - Responding to Climate Change - is both timely and relevant. India's views on it have recently been set forth at the high-level event on Climate Change here last week. Combined with the exchange of views in the General Debate, it will no

doubt provide a useful backdrop to the meeting of the UN Framework Convention on Climate Change to be held later this year in Bali, Indonesia. The impact of climate change and environmental degradation falls disproportionately upon developing countries. Developing countries, are the most vulnerable to it, and also lack the means to tackle it.

Measures to address climate change must be based on mitigation and adaptation strategies with fair burden sharing and measures to realize sustainable patterns of consumption and production. The process of burden sharing must also take into account where the primary responsibility for the present state of GHG concentration in the atmosphere rests and not foreclose rapid and sustained economic development for the developing world, which, in any case, is an imperative for adaptation.

Technology is the other key area that needs to be addressed. It is important that critical clean technologies are made available and affordable for developing countries. The IPR regime must balance rewards for innovators with the common good of humankind. Concerted international action to address climate change in accordance with the principle of common but differentiated responsibilities and respective capabilities, as also national circumstances and social and economic conditions, is the need of the hour. India, for whom energy security is a national imperative, has a very small individual carbon footprint with per capita CO<sub>2</sub> emissions just about a quarter of the world's average. Even then, we are determined that even as we pursue economic growth, our per capita GHG emissions will not increase beyond those of the industrial countries.

Mr. President, Poverty and underdevelopment are amongst the central challenges of our times. The overarching requirement is for sustained economic growth to eradicate poverty in developing countries. However, economic growth must also be measured against the template of social inclusion. Growth alone is not enough if it does not produce benefits that are sufficiently dispersed, not only in terms of increased income and employment but also for improved health, nutrition, and education for all.

I affirm India's resolve to achieve the internationally agreed development goals, including the Millennium Development Goals. The Government of India accords the highest priority to inclusive growth, including the political, legal, educational and economic empowerment of women, effective and affordable public health and enhanced access to educational opportunities, especially for all those who are disadvantaged.

It is apparent that progress in the achievement of the internationally agreed development goals has been tardy. The international community, through the UN system, must more effectively support the efforts of developing countries to achieve the development goals. A comprehensive reform of the international financial architecture is a key ingredient in this process. The United Nations must play an important role in overseeing the reform of the international financial architecture. This should include measures to ensure a greater voice for and participation by developing countries in the Bretton Woods Institutions. The process of reform must be carried to its logical conclusion if the credibility of these institutions is to be enhanced.

We must also address as a priority the regrettable inversion of global resource flows. Today, instead of the urgently needed inflow of resources to developing countries to buttress their national economic development plans, we are confronted with a net outflow from them. Official Development Assistance showed a marked fall during 2006, and remains well below the target of 0.7% of GNP. It is primarily being used to finance debt relief. That this is happening after so many years of liberalization and globalization highlights our collective failure. Perhaps we should be considering mechanisms such as an international debt commission to redress the problem of developing country debt. The LDCs, who are particularly hard hit by rising energy costs, find themselves in an even more difficult situation. Enhanced and predictable resource flow to developing countries remains a key objective of the global partnership for development. India will continue to do what she can to help with capacity building in other developing countries, and to assist them through ODA within the limits of our capacity. By the end of the year, LDC imports into India will face a zero tariff regime.

Early and substantive progress at the Doha round of trade negotiations, based on the primacy of the development dimension, is another imperative. We must return to the negotiating table with a redoubled sense of urgency, while recognizing that adherence to the existing mandate remains critical. Nor can the interests of subsistence farmers be ignored or equated with those of other sectors. An illogical linkage between agriculture and NAMA will only complicate the developmental impact of the round. The overarching principle of special and differential treatment for developing countries remains a categorical imperative.

Mr. President, As part of India's commitment to the achievement of human rights for all, and as a member of the Human Rights Council, we remain actively involved in developing the institutional framework of this body,

including the Universal Periodic Review Mechanism, based on effective international cooperation as a central principle in the Council's method of work. India will work towards developing an international normative framework for promotion and protection of human rights. India is honored to be one of the first signatories of the International Convention for the Protection of all Persons from Enforced Disappearance. Earlier today, I also had the honour of depositing India's instrument of ratification of the UN Convention on the Rights of Persons with Disabilities.

As the largest democracy in the world, India has developed a system of local self-government with democratically-elected institutions of representative government at all levels, i.e., the village, the district, the state and at the national level. The effort to make participatory democracy more meaningful to every Indian citizen underpins what is perhaps one of the greatest social experiments in the world today, namely, the transfer of decision-making power to nearly one million elected women local government representatives. As a result, women are not merely the beneficiaries of change in India, but are its instruments.

As the world's largest democracy, it was also natural for India to support the establishment of the UN Democracy Fund. We had made an initial contribution of \$10 million to this Fund and remain actively and constructively involved in realizing the objectives for which it has been set up. As a small token of our commitment to this laudable initiative, I have the privilege of announcing a further pledge of \$10 million to the UN Democracy Fund.

Mr. President, The international system cannot be reordered meaningfully without comprehensively reforming the United Nations. If the Organization is to remain the cornerstone of the international architecture in this century, it cannot remain mired in the realities of the 1940s. Despite substantive implementation of the UN reform agenda that emerged from the Outcome Document of the World Summit in 2005, such reform will inevitably remain incomplete without comprehensive reform and expansion of the Security Council, and revitalization of the General Assembly. Elements and ideas on the reform of the Security Council have been discussed for well over a decade, through numerous reports and interminable consultations. It is now time for inter-governmental negotiations to commence in order to make the Security Council more democratic, representative and responsive. We, with partners from Africa, Latin America and Asia, tabled a resolution on September 11, 2007, spelling out the principles on which reform ought to be based if it has to be meaningful. These principles are: expansion in both

permanent and non-permanent categories of membership; greater representation for developing countries, including representation for developed countries that is reflective of contemporary world realities; and comprehensive improvement in the working methods of the Security Council, including ensuring greater access to island and small states. We welcome recent statements from this podium by President Bush of the USA and other world leaders on the need for UNSC reform in both permanent and non-permanent categories. It is high time that we collectively brought these ideas to implementation.

Mr. President, Reform of the United Nations would also be incomplete without revitalization of the General Assembly. The central goal of such revitalization must be the restoration and enhancement of the role and authority of the General Assembly, as originally envisaged in the Charter.

Given the significance of developmental activities for the developing world, India sees a corresponding need for the reform of UN's operational activities for development. Since these activities are aimed at supporting the work of Member States, it follows that Members must determine their direction and shape through an intergovernmental process. The litmus test for any reform proposal is whether it improves the support extended by the UN to the efforts of programme countries. India would, therefore, judge reform proposals by their impact on the ground, the resultant improvement in the effectiveness of the system, and by the impact on transaction costs for the UN development system.

Mr. President, Steps to achieve the complete elimination of nuclear weapons have also only made limited headway. Despite some progress, the world remains far from achieving the objective of total elimination of nuclear weapons. India's long-standing commitment to universal, non-discriminatory and comprehensive nuclear disarmament is embodied in the vision of late Prime Minister Rajiv Gandhi for a "nuclear-free and non-violent world". This vision was put forward nearly two decades ago.

It remains undiminished today. Indeed, it is all the more relevant today, given the fact that peaceful uses of nuclear energy can address the inexorably growing demand for new and non-polluting sources of energy to fuel economic development. We will be bringing proposals to member states and this organisation to see how we can refocus on general and complete disarmament, particularly nuclear disarmament. It is disarmament that is our agreed goal, and that subsumes arms control and non-proliferation.

It is well known that India has an impeccable record in preventing the proliferation of sensitive technologies. This is in keeping with our commitment to being a responsible nuclear power. India is ready to work with the international community to develop a new international consensus on non-proliferation. The international community needs to intensify the effort to address the very real threat posed by the link between proliferation of WMDs and related materials and technologies to non-state actors. The risk posed by the intersection between proliferation and terrorism is real and serious. The central objective must be to ensure that our solidarity in words is translated into action.

Mr. President, The adoption of the United Nations Global Counter-Terrorism Strategy last September was a noteworthy development, signaling the will of the international community to combat this menace in a holistic and coordinated manner. Welcome as the strategy is, there is much more that needs to be done to combat the menace that international terrorism has become. India is convinced that without the early adoption of the Comprehensive Convention against International Terrorism, the global struggle against terrorism remains incomplete and likely to succeed only partially. We must ensure that there is zero tolerance for all forms of terrorism.

Mr. President, In conclusion, I would express the hope that our deliberations in the year ahead will lead us to enlightened action. With maturity and resolve we will successfully overcome the many challenges before us.

Thank you Mr. President.

**049. Interview of External Affairs Minister Pranab Mukherjee by Charlie Rose and aired on PBS.**

**New York, October 2, 2007.**

**CHARLIE ROSE, HOST:** Welcome to the broadcast. India recently celebrated the 60th anniversary of its independence. New York hosted a series of events last week called "India at 60" to mark the occasion. Tonight, we consider India from two perspectives. We begin with the foreign minister, Pranab Mukherjee.

**Pranab Mukherjee, Foreign Minister, India:** I don't think that there is anything to containing Tehran, because we do not believe in containing anybody. We believe that there's enough space to grow together to accommodate each other's legitimate aspirations. But if the aspirations become illegitimate, I can't tell.

**Charlie Rose:** And we conclude with Nandan Nilekani, chairman of Infosys and one of India's top business leaders.

**Nandan Nilekani, Chairman, INFOSYS:** Well, I think ...

**Charlie Rose:** Political tensions.

**Nandan Nilekani:** No, you hit the nail on the head. I mean, if you don't create a broad base of support for reforms and free markets and governments start losing, then they lose their appetite for reforms, and then they're quite liable to take decisions that are politically expedient, but they're not with the right set of reforms, and then the whole thing could start slowing down. I think that's the fundamental worry that everybody has.

**Charlie Rose:** India for the hour, coming up.

**Charlie Rose:** Pranab Mukherjee is here. He is the foreign minister of India. He was previously defense minister in the current government. He is leading India's diplomacy at a critical time. The country is widely recognized a growing power on the world stage. Recent years have also seen a deepening relationship between India and the United States.

In March 2005, U.S. Secretary of State Condoleezza Rice announced that it was U.S. policy to help India become a world power.

The foreign minister is here for meetings at the United Nations. He also met with Secretary Rice last week. I'm pleased to have him here at this table for the very first time. Thank you for coming.

**Pranab Mukherjee:** Thank you.

**Charlie Rose:** You have had -- and I just want you to reflect on this first -- a remarkable live in government. You've been finance minister.

**Pranab Mukherjee:** I have been.

**Charlie Rose:** Defense minister.

**Pranab Mukherjee:** Yes.

**Charlie Rose:** Now, foreign minister, or external affairs minister.

**Pranab Mukherjee:** And I was also (inaudible) trade minister ...

**Charlie Rose:** Yes.

**Pranab Mukherjee:** And I was also the Chairman of the Planning Commission which is the national planning body. And, of course, I held that charge simultaneously with trade ministry and foreign ministry.

**Charlie Rose:** You are a living embodiment of Indian history. Tell me what are the critical moments that you have seen in your country's history.

**Pranab Mukherjee:** Several critical moments, not one. For instance, immediately when we came to office in the '70s, we had confrontation with Pakistan, as a result of which a new nation was born, Bangladesh. Immediately after that, we had to confront with the first oil crisis. Substantially, our import cost on energy increased. Thereafter, we had very acute food shortage and very high rate of inflation because of severe drought.

Then, because of certain internal disturbance, we had to declare emergency. And for the first time, Indian National Congress was defeated in the general election of 1977, including Mrs. Indira Gandhi, myself, and a whole...

**Charlie Rose:** Yes.

**Pranab Mukherjee** ... host of others. Then we came back in 1980. We had problems. Mrs. Gandhi was assassinated at the hands of the terrorists. He was - she was succeeded by Mr. Rajiv Gandhi. We had massive majority in (inaudible) elections, parliament elections, and subsequently provincial parliament's election, but unfortunately again we lost after five years. And then Mr. Rajiv Gandhi was assassinated. That means in a short period of seven years, less than 10 years, we lost two permanent leaders of our party.

**Charlie Rose:** Mother and son.

**Pranab Mukherjee:** Mother and son, and both became the victims of terrorists. Thereafter, we had again (inaudible) congress government. And we made a remarkable change. We came out of our old economic policies and we introduced revitalized economic policy. The present prime minister was the finance minister at that point of time.

**Charlie Rose:** 1991.

**Pranab Mukherjee:** 1991. And it unleashed the latent energies of the entrepreneurs and private sectors. And thereafter, we entered into a steady growth rate of GDP over the period of more than 15 years. And last two decades, we have registered the GDP growth of 6 percent. Prior to that, our growth rate was steady around 3.5 percent. And now Indian economy is robust.

**Charlie Rose:** What role does India want to play in the world today, with its economic power, with its growing prominence? With its nuclear capability? With its place in the geography of the world?

**Pranab Mukherjee:** I would like to suggest that these are all incidental, but the basic things are certain values. This morning, the United Nations declared as International Nonviolence Day, being the birthday of Mahatma Gandhi. Yesterday, I've heard (ph) this because India's importance and prominence is because of certain values. And these values, we're inculcating from the days of our freedom struggle, what we believe.

First, this is the largest functional democracy.

**Charlie Rose:** In the world.

**Pranab Mukherjee:** 700 million electors are participating in (inaudible) 143 elected members having an average of 1.2 million voters per constituency. Secondly, we believe in inclusive groups. And when you talk of democracy, democracy is not merely a form or structure of government. We mean democracy, we offer (ph) decision-making, internally and it is equally externally.

Then we want growth. But growth is not merely in statistical terms. Inclusive growth, both domestically and in our relations with external countries. Then, basically, which is the inherent strength of India, its pluralism. Cultural pluralism, ethnic pluralism, linguistic pluralism -- and these diversity -- and the religious pluralism -- you name any religion, you'll find it in India.

**Charlie Rose:** And the second largest Muslim ...

**Pranab Mukherjee:** And second largest Muslim population, 147 million.

**Charlie Rose:** A right to be proud. Do you think you'll gain a seat on the U.N. Security Council?

**Pranab Mukherjee:** We do believe that India should get a seat in the Security Council, because first we believe -- not only we, we believe certain other countries should also have its place in the Security Council, because in 1945 when these institutions were created, since then world has undergone major changes. And they have spoken of the India change itself. Similarly, all over the world, changes have taken place. Therefore, in the functioning of the United Nations, in its structure and in its contents, it should reflect the contemporary realities. That's why the reforms of the United Nations is necessary, and, of course, India considers it qualifies all the ingredients necessary to be a permanent member of Security Council.

**Charlie Rose:** I'm sure you made that point well.

The most important thing, according to Nick Burns, who was on this program last night, the State Department official who has had the closest relationship with India, worked very hard on the nuclear agreement, was there right before we went there last year.

He said this is perhaps the single most important initiative that India and the United States have agreed to in the 60 years of the relationship. There's some quarters of America where they don't approve of that agreement, as you know. Some are represented in the Senate. It is because they see it as rewarding someone who was not part of the treaty.

**Pranab Mukherjee:** NPT.

**Charlie Rose:** Why is it -- the NPT, Non-Proliferation Treaty. Why is it so important to you and your development as a nation?

**Pranab Mukherjee:** You know, as I mentioned to you earlier, that we require economic growth, of course, we require growth for -- with justice. Growth with equity and inclusive growth, (inaudible) of all. But nonetheless, growth is important. We cannot share poverty. We can share prosperity.

If we want to have growth, then we require energy. And it is one of the cleanest (ph) energy. Now people are talking of climate change.

Environmental concerns is there, and it is rightly so. We have to leave this world for the living for the next generations.

But if we want clean energy, therefore we must have access to civilian nuclear program. That's why it is important. And not merely it is important from economic point of view. We also require access to superior technology. After all, technology is the power. Technology, with its proper application, can lead to the prosperity. And its mindless application can bring disaster. But we would like to apply it with a purpose, and the purpose is for the benefit not only of the Indians, but for the people of the whole world.

**Charlie Rose:** One non-proliferation expert in the United States said, "The deal is a complete capitulation to existing U.S. laws that helps India reprocess fuel from a reactor to produce plutonium, which could be used in bombs, and it dilutes strict conditions that Congress has placed on (inaudible) India test a nuclear weapon again."

**Pranab Mukherjee:** Look, so far the U.S. laws are concerned, we are fully aware of U.S. laws. But here, I would like to make one point quite clear: When we did not agree to sign Non-Proliferation Treaty, it is not that we disagreed with the ultimate objective of nonproliferation. It is in 1988, '89, leader and prime minister, Mr. Rajiv Gandhi, give his vision of the disarmament and disarmament of the nuclear weapons, in the special sessions of the United Nations for disarmament. And he agreed at that point of time, we did not have second explosions in 1998. We had two explosions, 1974 first; after a quarter of a century in 1998, the second one.

But in between, in 1989, Mr. Rajiv Gandhi, in his vision of nuclear disarmament, clearly pointed out that we can manufacture a weapon, but we have kept our options open. We did not use our options. We did not graduate ourselves from the threshold level, because we want that there should be universally verifiable, nondiscriminatory non-proliferation arrangement, all over the world, and every country, including the nuclear weapon states, should have equal rights, should have equal obligations, and there should be a total stoppage of both horizontal and vertical proliferation.

Unfortunately, and then repeating the word, unfortunately, international community did not listen to us. Therefore, because of our geopolitical situation, everyone is aware of it. I'm not going to repeat it. We had to go for the second nuclear explosions in 1998. But there, too, immediately after that, irrespective of sanctions or not, we voluntarily declared our nuclear

doctrine. And three essential ingredients of that are, A, there will be no first use. B ...

**Charlie Rose:** No -- no first use?

**Pranab Mukherjee:** No first use. B, it will not be used against non-nuclear -- non-nuclear weapon states. C, we declared ourselves voluntary moratorium on further test. D, we wanted to have minimum credible deterrent for self-defense, not for aggression.

**Charlie Rose:** What is the danger in the world that we live in now of proliferation?

**Charlie Rose:** What is the relationship -- what happens if the U.S. Congress doesn't pass it?

**Pranab Mukherjee:** Of course, it will not go through.

**Charlie Rose:** Of course not. But what does it mean -- what does it mean to India, what does it mean to the U.S.- Indian relations?

**Pranab Mukherjee:** No, I do not think so. I'm afraid that I do not pin hope only on the -- this particular arrangement, because this arrangement we started talking off from 1995, June, during the visit of prime minister, Dr Monmahan Singh.

But our relationship -- you talked of 60 years relationship. That means from the very beginning, we have good relationship with USA. Sometimes there have been -- in every relationship, there maybe things that maybe don't work, but nonetheless, we have good relations from the day one.

The United States of America is the single largest country to us, (inaudible) our export-import, and apart (ph) from the oil. The single largest industrial and technical collaboration we had with one country, that is the United States of America. Therefore, this is not the only matter on which our entire relationship depends. Of course, it is an important milestone, but I do not feel that if this will collapse, or if this will fails to (inaudible) our relationship, we'll go back to the negative situation. It's not like that.

**Charlie Rose:** Iran. Characterize your relationship with Iran.

**Pranab Mukherjee:** You know, in our foreign policy, not now but from day one, we believed that our foreign policy is best on certain principles. Therefore, our relationship with one country does not depend on our relationship with other countries. It is independent of that.

And the basic principle, 1949 when communist China came, India was one of first countries to reorganize it, only one China. And even when we had differences in the early 1960s with China, if somebody goes through the record of this, even (inaudible), even in the 1960s we are good. They're not Taiwan. But People's Republic of China is the real representative of China, and they should have a permanent seat in the Security Council, because it was a question of the principle.

Therefore, our relationship with Iran is best on several issues (ph). It's one of important suppliers of energy to us. About 4 million expatriates, Indians, are living around that region. Not Iran alone, around that region.

**Charlie Rose:** Is your relationship with Iran a problem for the United States?

**Pranab Mukherjee:** I do not consider so. Because we have made it quite clear both to Iran and the United States that our relationship does not depend on the relationship or closeness with USA, or it will be effected because of relationship with Iran. These are totally independent stands.

**Charlie Rose:** Do you believe Iran wants a nuclear weapon?

**Pranab Mukherjee:** I'm discussing this with them. Therefore, what we feel that even this morning I had a discussion with the Iranian foreign minister, and we do believe that as we have every right to pursue a civilian nuclear program for peaceful purposes, similarly, Iran has that right. At the same time, as a signatory to NPT, it has its obligations....

**Charlie Rose:** NPT, right.

**Pranab Mukherjee:** It has its obligations to the international community, because Iran signed NPT voluntarily. India did not sign. That's the difference.

**Charlie Rose:** I understand the difference. You did not sign the NPT, the Non-Proliferation Treaty, and then you did -- and Iran did.

**Pranab Mukherjee:** Therefore, I suggested that you should satisfy IAEA, and the queries which they are having.

**Charlie Rose:** And if they don't satisfy...

**Pranab Mukherjee:** You should respond to their questions, and it is in the interest of you, it is in the interest of all of us. We did not want another conflagration in our neighborhood. Therefore, it would be better to resolve

the problems through negotiations, however strenuous it may be. And I'm repeating, however strenuous it may be, we should pursue that.

**Charlie Rose:** The pipeline that was to go through South Asia and connect with Iranian fields, will it take place?

**Pranab Mukherjee:** Look, this we are discussing with them for quite some time.

**Charlie Rose:** With Iran.

**Pranab Mukherjee:** With Iran and Pakistan. And also, it's commercial (inaudible). We are interested in having gas, but gas must be at an affordable cost, an economic cost. Therefore, we are currently engaged about the transfer fee which Pakistan is demanding from us for the transfer of gas through the territory of Pakistan. And unless that issue is resolved, we cannot participate in the talks. Currently, we are engaged in bilateral negotiation with Pakistan to sort out this issue.

**Charlie Rose:** Do you worry about the stability of the Pakistan government?

**Pranab Mukherjee:** For the individuals concerned, I cannot give any guarantee that a certain individual A or B will continue. But what we want, what my desire, I can tell you, my desire with respect to Pakistan, is that there be stability and prosperity in Pakistan. It's helpful to me for my own stability, for my own development for my own prosperity.

And insofar as the current problems are concerned, I hope in the whole subcontinent which was part of larger India before 60 years, it has its own way of self-correcting the crisis that it is (ph) to face. And Pakistan is no exception.

Therefore, if Pakistan finds its own way of correcting the present problem, I will not be surprised. It may be possible, because at one point of time, it appeared that the judiciary is in total confrontation position with -- but it is not so. Therefore, in relationships between different organs (ph), between different countries, sometimes it may appear that it's going to be insurmountable, but in course of time, it gets it corrected.

**Charlie Rose:** Everybody I have ever talked to in India, everybody, from the prime minister, the national security adviser, to business people, to other members of the government, including the finance minister, say to me that they see the relationship with China for the near term growing,

comfortable and OK. Some of them worry about where it might be 25 years from now, 50 years from now. Do you?

**Pranab Mukherjee:** No, because I have seen -- excuse me, as a student of history, I have seen that no relation is permanent nor any relation is temporary. Every relation is partly temporary, partly permanent. Could anybody imagine in the 50's or even up to mid-60s that the close relationship between China or USA will develop as it developed in the mid'60s onwards?

**Charlie Rose:** Or even India and China when they had a border war.

**Pranab Mukherjee:** Exactly. Exactly. Therefore, what we're trying to do - - we had excellent discussions and relations between our leaderships and -- Indian leadership and Chinese leadership. In the recent years, we had two important visits, visit of the Chinese prime minister and Chinese president, and in the last week of this month, president and chairperson (inaudible) has been.

I'm also going to visit China for the trilateral foreign ministers consulting mechanism which we have -- India, China and Russia. We have another not trilateral, but quadrilateral -- India, China, Brazil, Russia.

Therefore, these groups have groups (ph) (inaudible) international relations are developing. So our relationship, and thereto I must give credit to the young prime minister, Mr. Rajiv Gandhi. You know, after 1962, there was a cold spell in our relationship between India and China. But in 1988, after his visit to China, that relationship was -- started improving substantially. And thereafter, in 1993, 1995, 1996, we made major changes in our relationships. And during the visit of the President Hu Jintao, we have agreed and both sides agreed and shared the same views, that there's enough space for both India and China to grow together, and it's not necessarily that one will grow at the expense of the other.

**Charlie Rose:** Do you believe that America's interest and its strategic relationship with India has something to do with containing China?

**Pranab Mukherjee:** I don't think that there is anything to containing China, because we do not believe in containing anybody. We believe that there is enough space to grow together, to accommodate each other's legitimate aspirations, but if the aspirations become illegitimate, I can't tell you.

**Charlie Rose:** Let me finally talk about Burma. You have had in the beginning a different relationship than you had now. Tell me how you see it today and the clash that is taking place there.

**Pranab Mukherjee:** In fact, I also had a discussion with my counterpart, foreign minister of Myanmar. And I expressed our concern. And I told him...

**Charlie Rose:** Myanmar. I should have said Myanmar right at the beginning.

**Pranab Mukherjee:** And I told him that, look, you yourself have showed the international community that the process of political reconciliation and national reconciliation and political process will (ph) start and it will take its logical conclusion involving the people. Now the time has come to demonstrate before the international community that you were serious. Therefore, this process must be expedited. It must be inclusive. And under no circumstances, nobody is going to accept the killing and violence. Therefore, it is necessary, even I have suggested, that to satisfy the international community, it would be desirable if you some sort of inquiry to find out why this actions has taken place, and of course it must be credible (ph).

Now, if you permit me, I would like to as we are having very frank discussion and I'm glad, somebody that (inaudible) that India being the largest functioning democracy, how it is that it can have its -- as its close neighbor a system which is totally different from democracy.

**Charlie Rose:** A dictatorship, a military dictatorship.

**Pranab Mukherjee:** But what can I do? Can I change my neighbor? What can I do? If in the subcontinent -- and incidentally at one point of time, not only Bangladesh, Pakistan, they were part of India before 1947. Even Myanmar, which was then known as Burma, and Sri Lanka, which was then known as Ceylon, they were administered by the Britishers from Delhi itself. Therefore, there is some sort of administrative affinity.

And when we became independent, almost at the same time, all of us accepted the parliamentary form of democracy. But in the Myanmar, it collapsed. In Pakistan, it collapsed after 11 years, 1958. Bangladesh, of course, was created in 1971 as a result of a bloody struggle that is part of the history. Sri Lanka (inaudible) presidential form of government, but a democracy.

Now, India a democracy, parliamentary democracy, flourished, despite poverty, despite backwardness, despite illiteracy, despite slow growth rate.

Therefore, what do we have to do? We have to live with our neighbors. We cannot change our neighbors. We have to live with them. It's better to live

in peace. I cannot alter the government in my neighborhoods. It is for the people of the countries concerned to decide what type of government they would like to have.

**Charlie Rose:** I'm not sure the people decided.

**Pranab Mukherjee:** No, as soon as they decide, it will be for them. I do believe no power can prevent the desire of the people. It may be delayed, but at some point of time, it will assert itself.

**Charlie Rose:** Finally, I know you have to go back to India tonight, clearly poverty is a big issue. In your country, the distance between the haves and have-nots -- true in China, true in a large part of the world. So because of your experience, will the economic growth enable you to have the political will to bridge that gap? And will it have the same effect in China? And will it enable the word to come to -- somehow come to do something to alleviate the fact that too many people are too poor, too malnourished and too absent the basic essentials of a good life?

**Pranab Mukherjee:** Exactly, exactly. This is precisely the point. And again, I am referring to the teaching of Mahatma Gandhi. Just now in the morning, we celebrated the International Nonviolence Day.

And one of the basic teachings of Mahatma Gandhi is that Mother Earth has enough resources to meet the need of every individual, but it is inadequate to meet the greed of even a few. Therefore, keeping that objective in view, we do not believe merely in growth in terms of statistics. We believe growth with equity, growth with social justice. And growth must be inclusive.

And here, what the point -- at some point of time, people started believing -- I have not mentioned the name of the countries -- that if there be a quick decision-making process, economic growth may be faster. Therefore, instead of democracy, there should be some other type of system of government.

**Charlie Rose:** Forty percent?

**Pranab Mukherjee:** Forty percent. Are undernourished. Therefore, these are the targets, and the entire process, with the growth, with the new economic policies, which have unleashed the latent force of growth. Our basic objective is to ensure empowerment and entitlement. This, just two years back, we passed a legislation of providing legal rights to unemployed

youths to have the guaranteed employment. Not full yet, but at least 100 days in a year.

A couple of days back, our prime minister has declared that this program will be extended to all 600 districts. That means the entire rural area will be covered. The major task during the current plan period which we are giving, all these are directed towards this underprivileged sections of the society, because for them, state policy and state intervention is needed. Merely giving it to the market forces is not possible. Yes, market forces will generate employment, market forces will generate wealth. But for the distribution of the wealth, what is required is some sort of guided state interventions, which we are bringing (ph). And it will take some time, but we are confident that through this process, it will be possible for us to achieve it. Because the disparities which you are talking of, this is a serious challenge, and collectively we shall have to meet this challenge. That's why we want more energy. That's why we want access to technology, and technology for the betterment of the people.

**Charlie Rose:** Thank you very much for joining us this evening.

**050. Joint Press Briefing by Foreign Secretary Shivshankar Menon and Secretary (Environment & Forests) Smt. Meena Gupta on the Second Ministerial Meeting of the Asia-Pacific Partnership on Clean Development and Climate.**

**New Delhi, October 10, 2007.**

**Official Spokesperson (Shri Navtej Sarna):** Good evening everybody and welcome to this joint briefing by the Foreign Secretary and Secretary (Environment) on the forthcoming Second Ministerial Meeting of the Asia-Pacific Partnership on Clean Development and Climate. May I request Foreign Secretary first to say a few words and then lead on the briefing.

**Foreign Secretary:** Thank you very much. Good to see all of you here. Secretary (Environment) and I are here just to tell you about the Second Ministerial Meeting of the Asia-Pacific Partnership on Clean Development and Climate, which will be held on the 15th in New Delhi. We thought it is a measure of our seriousness and our interest in the subject that Secretary

(Environment) has come herself. What I thought we will do is I will just introduce it briefly and hand you over to Secretary (Environment) and then we will be happy to take questions about the meeting and about the subject of the meeting, about climate change as well.

As you know, the Asia-Pacific Partnership for Clean Development and Climate is a voluntary association of six countries. It is a normal legally binding association. The countries in alphabetical order are: Australia, China, India, Japan, Korea and the US. Together, these six countries represent about half the world's economy, population and energy use.

The purpose of the partnership is to advance clean development and climate objectives through voluntary cooperation among ourselves for accelerated development and deployment of cleaner, more efficient and cost-effective technologies. The partnership has already identified eight focal areas and established taskforces to concentrate on these areas which have then developed projects. This meeting of the Ministers is supposed to look through those projects and to identify and approve flagship projects in these sectors.

In the various taskforces that exist, five are in energy-intensive sectors - aluminium, buildings and appliances, cement, coal mining, and steel - three are in energy-supply sectors - cleaner fossil energy, renewable energy and distributed generation - one is on power generation and transmission. India heads the Taskforce on Coal and Steel.

The idea is that at this meeting the Ministers will have a chance to look at the various projects - over a hundred projects have been developed - identify them as flagships ones and approve them. A measure of the appeal and the success of what this voluntary association has managed to achieve so far is that there is interest in other countries in joining it. Canada, for instance, is interested. That is one of the decisions that this meeting is likely to take - to expand the membership. Maybe, I will stop here and hand you over to Secretary (Environment) who knows much more about this than I do. After that, maybe we can answer any questions that you may have.

**Secretary (Environment):** I would just like to add that this is the second Ministerial meeting. The first one was held in Sydney in January, 2006. We will also have, on the 14th, the Policy Implementation Committee meeting which will decide the construction projects and other details. We are holding this press conference to tell you about the APP meeting on the 15th. We hope you will find it of interest.

We would also like to tell you that FICCI and CII together are organizing an

industry event in the evening, which is a panel discussion on Technology and Finance for Clean Development. We expect that that discussion will be very lively. Thank you. I would be happy to answer any of your questions.

**Question:** If I recall correctly, focus on the problem of climate change was first visible at 2005 Gleneagles Summit. I would like to know if anything concrete has happened in the past years, vis-à-vis India particularly. Why is there so much focus on India and China while the impression is that the developed world is not doing enough?

**Secretary (Environment):** The general feeling among developed countries and others is that the emissions from India and China are high and, therefore, they should take on commitments. But the fact remains that under both the UN Framework Convention on Climate Change and Kyoto Protocol, mitigation commitments are supposed to be taken only by developed countries. Therefore, we do not agree with the question of China and India taking on mitigation commitments beyond 2012, that is, beyond Kyoto.

**Question:** Can you give us the details of the flagship projects? What exactly are you going to do?

**Secretary (Environment):** I will just tell you very briefly because the flagship projects will really be finalized at the big meeting. Each taskforce has about two or three flagship projects. For instance, the Aluminium Taskforce has management of PFC emissions and management of bauxite residue, that is, red mud. Building and Appliances Taskforce has harmonization of test procedures for compact fluorescent lamps, high performance buildings and development and so on. These flagship projects will be finalized on the 14th. I think on the 15th when we have a press briefing, these details can be given.

**Foreign Secretary:** There are over a hundred projects which are listed on the website actually. If you are interested in the details, we will give you the name of the website. Out of these, they will select the flagship projects. We have proposals but they have to approve them at the meeting.

**Question:** Will you have cooperative programmes on ...(Inaudible)...

**Foreign Secretary:** It is a voluntary partnership. Those who are interested in particular projects, who feel they have something to gain or to give, will participate in each project.

**Question:** Can you give us an idea as to how much fund Government of

India has allocated for dealing with them?

**Secretary (Environment):** On adaptation, we spend about two per cent of our GDP. Our basic thrust is on adaptation. In the last year of the Tenth Plan it was about ten per cent of the Government expenditure. But I do not know if there is any overall figure other than that.

**Question:** What about our view on non-adherence to Kyoto Protocol by the US and what are you going to do in this particular Conference about that?

**Foreign Secretary:** This is a voluntary association, as I said, and this includes the US. What we are doing now in several fora - including Gleneagles forum which she mentioned, including the Conference of Major Economies which happened in Washington two weeks ago, and the UN Secretary-General's High-Level Forum - is we are trying to work out how we move to a situation after Kyoto, what kind of regime will be in place. Ultimately, the negotiating forum for all this is the UN Framework Convention on Climate Change. It is at the Conference of the Parties in Bali in December that we will start the formal process of negotiation. But obviously, since there are so many different views and so many different interests around the world, it helps to be able to talk about these issues among ourselves. That is what we are in the process of doing now. We would rather look ahead to see that we can evolve a framework which is fair, equitable, does not stand in the way of development and which does in real terms help to achieve the goal of not just mitigating but adapting to climate change.

**Question:** If I can get you back to the earlier question when the percentage of GDP was mentioned, India's GDP, as you know, has overshot one trillion dollar mark. Two per cent of our GDP would be quite a lot. Can you elaborate how much would it be and over what period is it going to be spent?

**Foreign Secretary:** I think what we will do is we will give you a little booklet right now which contains information not just on our stand on climate change but what India has done. You look at that. There are different ways of calculating what you are asking for. When we say ten per cent of Government expenditure what we mean is many of the things we do. For instance, we are spending money on setting up cyclone shelters. That is a way of adapting to the effects of climate. There are other expenditures that we undertake many of which one way or the other are related to our efforts to adapt to climate change or to mitigate the effects of climate change, on our population, on our society, on our economy. I think you should look at

that. Rather than our getting into trying to answer it in one sentence or two, look at the details and then maybe we will have a discussion on that.

**Secretary (Environment):** This is the booklet we have, which will give all the details that you are asking for.

**Question:** Are you likely to adapt any policy statement after the Conference, any Joint Declaration?

**Secretary (Environment):** As was mentioned earlier, it is a voluntary association for promoting cleaner and more efficient technologies. So, the work is primarily on the technology side between various sectors where the taskforces have been set up.

**Question:** Is there a separate taskforce on nuclear energy?

**Foreign Secretary:** Unless you treat it as renewable.

**Question:** Is there anything on Mr. Saran's visit to Nepal?

**Foreign Secretary:** Nothing yet. He has just gone there today morning.

Thank you.

**051. Address of Prime Minister Dr. Manmohan Singh at the  
*Hindustan Times* Summit.**

**New Delhi, October 12, 2007.**

I am delighted to be back once again at this important gathering. As I have said before, these forums provide us opportunities to exchange views, to debate and shape the thinking of our people. Such public discourse is the life blood of a democracy. I compliment Shobhanaji for the interest she has taken to ensure that these summits are high quality events. You have, once again, an impressive gathering of speakers and participants.

I hope the views and ideas expressed here are carried across the length and breadth of our country. These proceedings should be translated into all Indian languages so that our people get to know the thinking of the eminent personalities gathered here. I dare say, though, that one finds that on many issues, the people of our country are often ahead of their political and intellectual leaders! The people of India have shown time and again a remarkable capacity to keep in step with change and often, be the agents of the change they want to see. It is we - politicians, policy makers and opinion makers - who some times find ourselves lagging behind public opinion.

This would be more so in a society of increasingly young people. India is going through a demographic revolution. We are a nation of young people, with a new generation entering the electorate at every election. Each generation has it's own dreams. Each generation "Imagines the India that can be". In a society of such rapid demographic and social change, new ideas and experiences capture the imagination of each passing generation. The India that we imagine that can be today, may well be obsolete by tomorrow.

It is, therefore, of utmost importance that we remain in touch with this changing reality and understand the India `that is', even as we seek to imagine the India that `can be'. For us, here in India, this is not just a reality check, but also a way of renewing the basis of our nationhood, and our Republic.

I say this because our Republic is itself the product of our collective imagination. It is often said that we are an ancient civilisation but a young nation. The "idea of India" draws inspiration both from our civilisational roots and from the social, political, intellectual and, above all, the emotional

basis of our national movement. These define our collective imagination. A nation based on such diverse sources of human imagination - rather than on mere ethnicity, religion or language - has limitless possibilities. No static ideology can freeze or strait-jacket the creativity, the enterprise and the imagination of our people.

That is why I am filled with optimism when I think of the future of India. This optimism is not based merely on hope. It is based on experience and past performance. Sixty years ago, when we won our independence, few imagined that in our lifetime, India would be where it is today. I spent the first ten years of my life in a village that had no drinking water supply, no proper sanitation, no electricity, no school, no hospital. I walked a great distance every day to school and had to do study at home under an oil lamp. We have come a long way from those modest beginnings. There is no doubt that there are still places like that village of mine. However, they have hope that they too will be transformed in the foreseeable future.

We are today at the threshold of a new era of social and economic development. The recent acceleration of economic growth, coupled with the advances in social and human development give us renewed hope of banishing poverty, ignorance and disease sooner than later. Over the last three years, we have brought back into sharper focus the issues of critical importance for the development of the vast majority of our people. We have moved public debate and discourse away from narrow, sectarian, divisive agendas to an agenda where policies and programmes that will usher in a new India are discussed, debated and given a final shape. When I read the media, it gives me a great sense of hope that our democracy has shown a remarkable ability to re-focus its energies on issues of vital import to our common people - be it rural development, be it education, be it health care, be it social security. It is this vibrancy that makes me believe that the India of tomorrow will be a great nation.

To move forward, however, in step with the expectations of our people, there is much more we have to do. There is a vast unfinished agenda of development and reform that awaits us. We cannot rest on our laurels or take our successes for granted. In the past five years, our economy has grown close to 9%. This is unprecedented. This can be sustained into the future. However, we cannot take this for granted.

We cannot assume that the country and the economy will move forward on their own, while we dissipate our energies in meaningless controversies. If all our time and energy is spent battling the ghosts of the past, how can we

hope to do the day's work efficiently? And I dare say, there is a lot of work to be done.

When the media thinks of reforms, their attention is often focused on the financial and industrial sectors. I do agree that in these sectors there is more we must do, though the fact is that a considerable distance has been covered in these areas. But there are other equally vital areas of our economy waiting to be reformed and taken forward. I draw your attention, in particular, to agriculture and rural development, infrastructure and power, education, health and public service delivery.

I am particularly concerned about rural development and education. These will remain our key focus areas for a long time. Our farming community, and all those who live in rural areas, must be equal partners and beneficiaries of the development process. We have to improve their standard of living, offer them social security and insurance against risk. We have to reduce the development gap between rural and urban areas, between the more and less developed regions of our country. These are going to be enduring goals.

Equally important is the empowerment of the Scheduled Castes, the Scheduled Tribes, Other Backward Classes, women and Minorities, through education. No modern country has less than 80% literacy. As I said in my Independence Day Address this year, India needs a new revolution in modern education. Every village must have a good school, a working hospital, drinking water supply, sanitation and electricity. Every child must have access to good and modern education and to health care. Every household must have the basic amenities of a modern society. Such are the imperatives of the India we all wish to imagine.

You will recall that at your Summit last year, where your theme was "India - The Next Superpower", I had cautioned you not to ignore the many hurdles we have yet to cross to become a developed economy. We are still a poor nation. To be a Great Nation, we need to improve the quality of life of our people, generate more employment, improve productivity, educate all our children and eradicate mass poverty.

Today, I wish to once again emphasise that point. It is easy to imagine a future of great potential for our country. We must, however, first build the foundations that can help us realize that potential. That does not require us to dream. It requires us to act. And to act now. We must continue to exert pressure on our system to make our industry more globally competitive.

We must improve the quality of our educational system. We must improve the public delivery system, especially in health care, sanitation, drinking water and public transport. India has a long road to travel to join the ranks of even the newly industrialized developing economies.

To realise the India of our dreams, we must show courage in taking actions that the people expect us to take in their long term and best interests. I am fully aware of the dictum that in politics, one must survive short term battles to attain long term objectives. However, we need to work with one eye on long term objectives while meeting day-to-day challenges.

I recall the kind of pressures we had to withstand in 1991 as we sought to reform and modernize our economy. India was in choppy waters with a serious economic crisis on hand. If we had dithered, if we had yielded to our critics, if we were not firm in our resolve, if we had been overwhelmed by self-doubt, we would have taken the country into a whirlpool of disaster. We were not afraid to think into the future and take actions that have served the country well. Many people worried that our policies would lead to the de-industrialisation of India. On the contrary, those reforms unveiled a new era of enterprise and creativity for India. Enveloped by crisis, besieged by political uncertainty, surrounded by anxiety, we imagined an India that can be!

Our dream has not yet been realized in full measure. But there is no doubt in my mind that we helped create an environment that has encouraged subsequent generations to dream more boldly, imagine more creatively, aspire more confidently. The India we imagined two decades ago, is now within our reach. The India we imagine today will also be in our grasp, if only we keep faith, dare to dream and stay the course.

We want India to regain its due place in the comity of nations, as an open economy and an open society. We want India to have normal relations with all countries, big and small. India will always seek good relations with all countries on terms of equality and mutual respect. We seek India's membership of all global councils where the voice of a billion people must and should be heard.

In the past three years, our bilateral relations have become more broad-based and wide-ranging with a large number of countries. As our share of global trade and capital rises, as our economy becomes more globally integrated, we will become even more engaged with the global economy. India's voice will be heard, India's views will be sought. We must prepare to

make use of the emerging opportunities and responsibilities.

Dealing with the world is a process of give and take. "The India that can be" will be one which has confidence in itself, confidence in its abilities, confidence in its capabilities, confidence in its possibilities. I have no doubt in my mind that the people of India have that confidence in themselves. A great nation, a proud people, an ancient civilization, a home of all the great religions of the world, cannot but be a self-confident nation. I have no doubt that the people of my country have this confidence to deal with the world as it exists. Sometimes, it is we, in positions of authority, who are the doubters.

In an age of competitive politics, politicians tend to become short-term maximisers. It is for this reason that democratic and plural societies need a social group capable of long-term thinking. Men and women of wisdom capable of strategic thinking, with the self-confidence to articulate them. People with a stake in the future, with no vested interest in the political battles of the day. People who don't think just for a section of society, for a region or a religion, for a vested interest or for short-term gains. We need people who can think for the nation. Think into the future. Think about the future and its various possibilities.

To nurture the roots of our democracy and constantly reinforce its foundations we must invest in our future. Thinking about the future is the first step towards investing in it. I hope your forum will continue to offer space and time to those who wish to think about India's future, with confidence, self-confidence!

Thank you.

**052. Inaugural address by External Affairs Minister Pranab Mukherjee at the 2nd Ministerial Meeting of the Asia-Pacific Partnership for Clean Development and Climate.**

**New Delhi, October 15, 2007.**

Shri Namoo Narain Meena, Minister of State for Environment & Forests,

Your Excellencies,

Distinguished Delegates,

It is with great pleasure that I welcome you to New Delhi for this 2nd Ministerial meeting of the Asia Pacific Partnership for Clean Development and Climate. Your presence demonstrates the importance of this Partnership in addressing the crucial issue of clean development and climate for all our countries.

I am also delighted to welcome Canada into our fold. Their request for membership underscores the credibility that this Partnership has attained.

Excellencies,

I am very happy to note that this Partnership has come a long way since the first meeting in Sydney in January 2006. The Partnership advances clean development and climate objectives, while recognizing the urgent and overriding priority of development. It seeks enhanced co-operation to meet both increased energy needs and associated challenges in accordance with national circumstances. Adaptation is the critical imperative for developing countries. For this we require technological and financial resources that can only come through accelerated economic and social development. Development is, in fact, the sine qua non for adaptation.

The world is seized today with the issue of Climate Change. There are many initiatives being taken to look at different and probably innovative ways to address this challenge. While all these efforts are laudable, there is near unanimity that the United Nations Framework Convention on Climate Change is the only framework for negotiations. This was also reaffirmed at the Major Economies Meeting called by President Bush in Washington recently. Our efforts here in this Partnership are consistent with the principles of the UNFCCC and complement the Kyoto Protocol.

Excellencies,

Improvement in human development requires increased energy consumption. To meet our national development goals, India needs to sustain an 8% to 10% economic growth rate for which we need to increase our per-capita energy consumption. Our per capita consumption of energy at present is only 530 kgoe of primary energy compared to a world average of 1770 kgoe and nearly half of our citizens do not have access to electricity. As we endeavor to increase our energy consumption to empower our people, we ensure, through our national policies that the means are sustainable and include use of market mechanisms and relevant technology along-with promotion of energy efficiency and conservation.

In 2001 we enacted the Energy Conservation Act and followed it up with the Electricity Act of 2003. This Act mandates the procurement of electricity from renewables by all distribution companies. This has provided a major fillip to the wind-energy sector in India. We now have about 7,000 MW of installed wind-power, the fourth-largest wind generating electricity capacity in the world.

We have also been making many other clean development efforts, including introduction of CNG for public and private transport in metropolitan areas, introduction of metro rail and introduction of a major bio-diesel program and blending of ethanol in petrol. We have managed the demand side through targeted interventions. As a result, we have raised energy efficiency in all the major energy intensive sectors - steel, aluminium, fertilizer, paper and cement. We propose to make available Compact Fluorescent Lamps at the price of normal incandescent bulbs. We have also just launched one of the world's largest afforestation efforts in recent times, called Green India, covering six million hectares of degraded forest land.

Excellencies,

Technology is recognized as a fundamental transformation agent in being able to ensure Clean Development and in tackling Climate Change. This is all the more so for developing countries, where there is a large reliance on fossil fuels. It is our hope that this Partnership will ensure that we collaborate to develop, deploy and disseminate appropriate and advanced clean technologies.

Here I would like to mention that we have observed that there is very little R&D effort on technologies that respond to the requirements and resource endowments of developing countries. This should be remedied. Our suggestion is for collaborative R&D between developing and developed country R&D institutions.

In this context, we also need to be mindful of creating a fairer balance between rewards for the innovators and the need to ensure the common good of humankind as far as the IPR regime is concerned. Standards and priorities should reflect the developmental context to which they apply.

Excellencies,

We, the six countries, now seven, in the Asia-Pacific Partnership have achieved a lot in a very short time and can be proud of our achievement. This has been the result of strong bilateral and partnership co-operation between member countries. A unique facet of the APP has been strong inter-Ministerial and inter-agency cooperation within and between Governments.

Our industries, including from the private sectors, and environment institutions, have also been most active in supporting the APP and have played a stellar role in fostering the Partnership. I am glad that the Federation of Indian Chambers of Commerce & Industry and the Confederation of Indian Industry are active in promoting the APP. They have come together to organize an industry event later today and I would like to thank them for the same.

I would also like to express specific appreciation for the eight Task Forces, especially the Chairs and the Co-Chairs, for their excellent and very comprehensive work. I am particularly happy that India was able to co-chair the Coal and Steel Task Forces. It is heartening to see that over 100 projects have been identified and that many of them are in the process of being implemented. Our meeting today would be endorsing the Flagship projects. These flagship projects would demonstrate the importance and magnitude of what we are trying to achieve and reflect the vision and objectives of the partnership.

And, before I end, I must express gratitude for the work of the Programme & Implementation Committee and the Administrative Support Group in guiding the APP and also for arranging today's meeting.

Excellencies,

Our ultimate aim is to ensure sustainable and clean development while

ensuring energy security and economic growth. I am sure that the APP will contribute to these goals which we all share.

Thank You.

**053. Address of Defence Minister A. K. Antony at the Field Marshal K. M. Cariappa Memorial Lecture.**

**New Delhi, October 24, 2007.**

I am extremely happy to be amidst you on the occasion of 12th Field Marshal K.M Cariappa Lecture. Such occasions provide an opportunity to focus attention on issues of crucial importance.

K.M. Cariappa was among the only two Indian military officers to hold the highest rank of Field Marshal. In a career spanning almost three decades, he held several high offices, displaying tremendous qualities of head and heart in marshalling the troops. Affectionately called "Chimma" and "Kipper", he was deeply attached to books, music and sports. A staunch nationalist, Cariappa was secular to the core. He once said, "I don't care a damn, if a man is Hindu, Muslim, Sikh, Parsi or Christian, as long as he plays the game to serve our country well. That is all that matters to me". Besides military matters, Field Marshal Cariappa also displayed a profound understanding and insight about the status of the nation.

He used to say, "In modern warfare, a large army is the first line of defence, the industry is the second".

Gen Rodrigues, has just now put across his views on "Resurgent India - the way ahead". In fact, all those present here today would agree that India has bright days ahead- in the not too distant future.

Indeed, our military might is also an important contribution to its rise as a regional and global power. India has one of the world's largest professional Armed Forces. Our Army is one of the finest fighting machines in the world and has proved to be effective in combating insurgency and low-key conflicts for over three decades. Our military training institutions like National Defence Academy and Indian Military Academy are among the best in the world. Indian Navy has the largest presence in Indian Ocean after the United States and fields an aircraft carrier, which allows it to extend its operations beyond its immediate areas of concern. Our Air Force has already

demonstrated that it can be counted among the world's best in a series of joint exercises.

We have thus, come a far way indeed, but a lot more still needs to be done. It must be our collective endeavour to ensure that our country firmly takes its place in the comity of nations.

India was once considered to be the repository of knowledge contained in Vedas and Upanishads. Nalanda was believed to be one of the best centres of learning. Nations that are knowledge societies will emerge as knowledge powers in the future. We must ensure that India remains in the forefront of knowledge revolution.

The international community is no doubt changing its perception of India. The name "India" is no longer associated merely with magic and snake charmers. India has taken rapid strides in the fields of economy and technology. We are committed to provide latest technology to our Armed Forces and to the extent possible - indigenously.

During the last few years, several global IT and science-based firms have located R&D labs in India. Their recruits are young graduates, straight out of Indian universities and elite technology institutes, or expats eager to come back, as they see India as the place to be in.

Our young population is technology-savvy, making our country one of the most important hi-tech hubs in the world. Bangalore is referred to as the world's second Silicon Valley. The same companies and their founders had played a major role in hi-tech and internet boom in United States in the 1990s.

On the economic front, conditions have never looked better before. In an interview to Future magazine, noted management guru, Peter Drucker had said, "India is becoming a powerhouse very fast. The medical school in New Delhi is now perhaps the best in the world. And the technical graduates of the Institute of Technology in Bangalore are as good as any in the world".

It has been a privilege to be with all of you and Gen S.F Rodrigues. I am sure such occasions definitely help our Armed Forces in taking stock of the situation and charting the future course of action.

**054. Remarks of Prime Minister at the Fortune Global Forum.****New Delhi, October 29, 2007.**

I am delighted to be here in your midst today and in the presence of such an august gathering. You represent the best and brightest in global enterprise and creativity. I welcome you to our country, which has itself embarked on a journey of enterprise and creativity. I hope you not only enjoy your stay here but also get a feel for the momentous changes that are now taking place across the length and breadth of this vast nation. India is a nation on the move. The elephant, which has long been commented upon as being slow and sleepy, is not just wide-awake but moving forward rapidly. So rapidly that it has become imperative for the global community to notice and acknowledge its emergence on the global stage as an economy that counts.

You are all distinguished and experienced CEOs of important global companies. I am sure you have done your homework on the quantitative dimensions of India's resurgence. Your presence here in such numbers is an indication of the dynamism that exists in our country and that is widely noticed now all over the world.

I would not like to go through the numbers. They are well known to you. But, it is undeniable that India is now on a new growth trajectory. A trajectory where sustained economic growth of 9-10% per annum - growth rates which were considered impossible even five years ago - seems possible for many years to come. This acceleration of economic growth over the past two decades has been driven by rising investment and savings rates and by rising domestic consumption. I believe this can be sustained in the foreseeable future for two important reasons.

First, we have witnessed an unleashing of Indian enterprise in this past decade. Big corporates have gone global. Small and medium enterprises have become more competitive. A new generation of local enterprise has burst forth onto the business stage. These "children of reform", who have benefited from our ongoing liberalization and reform programme, are our vanguard to a new India - an India that is prosperous, an India that is equitable and an India that is a just society. At the same time, our growth process is based on a widening and deepening of our own domestic market. As the Indian market grows, it is creating new opportunities for businesses across the world.

Let me say without hesitation that we are committed to the successful functioning of a rule based multilateral trading system. India remains committed to the successful conclusion of the Doha Round of Trade Negotiations at an early date. We do hope that the round keeps in mind the promised development dimension and that it also will address the concerns of millions of our subsistence farmers. Trade liberalization, we recognize, has contributed immensely to our economic growth and to the growth of the world economy as a whole. Lowering trade barriers both at home and abroad has helped us. Our enterprises have become more globally competitive. We shall persist on that path.

More importantly, new business activities have grown in response to global opportunities. The successes of our Information Technology, automobile and pharmaceutical sectors is a living testimony to the benefits that liberalization and globalization have brought us. Sometimes, we do worry that at a time when we are becoming more open, protectionist voices are being heard in developed countries. The lesson we must all draw from the experience of the past century is that no country can reverse the dynamics of social, economic and technological change. Rather we must learn to cope and adapt with change.

This is precisely why India chose to join the World Trade Organization. India is a founder member of GATT. You will recognize the fact that we have adhered to all our Uruguay Round commitments. In fact, our firms have benefited from these commitments. While we remain committed to these obligations, we must also explore ways in which developing countries can catch up in the race to modernization.

We have affirmed our commitment to the protection of intellectual property rights. But, the global economy, the global community cannot afford the complete privatization of research, of knowledge generation, especially in fields like medicine. We need to evolve mechanisms that protect intellectual property and at the same time, address the needs of the poor. With the increasing privatization of Research & Development in science and technology, modern societies require new approaches to the sharing of knowledge where such knowledge is of benefit to all humankind.

What the world needs today is a new concord between private enterprise and public welfare. How do we maintain the required incentive mechanisms that encourage private initiative and enterprise, while at the same time ensure that public welfare is also enhanced? This dilemma poses itself most obviously in the field of health care. The policies we require to

incentivise new R&D must be balanced against the need to ensure availability of medicines at affordable prices to the world's people.

There are similar trade-offs we need to reflect on when we consider the problem of climate change, global warming, ecological degradation and environment policies. The developing world will continue to see per capita consumption of CO<sub>2</sub> emissions rising in the foreseeable future. This will exert pressure on global resources. How do we balance the aspirations of the world's poor against our shared concern about the sustainability of the growth process?

Let me assure you that we in India are deeply and sincerely committed to the protection of our environment because we all share a single global environment. The Indian approach to climate change and global warming derives from the ancient Hindu saying - *vasudhaiva kutumbakam* - "the whole universe is one family".

As I had said at the G8 Summit some months ago in Germany, India accepts its global responsibilities. We are willing to accept the obligation that our per capita emissions of CO<sub>2</sub> will never exceed the per capita emissions of developed countries. If developed countries succeed in reducing their per capita emissions, this would exert pressure and will be a source of incentive for all of us as well.

Whether it is on trade policy or on climate change, or indeed on any other international obligation, India has always worked with the global community. Moreover, India has never reneged on its international commitments. India has been a reliable partner, a responsible global citizen. India respects the rule of law in international relations. India is, therefore, a predictable partner. This is what makes India an attractive destination for investors like you.

I know very well that investment in the final analysis is an act of faith. It is shaped by perceptions, by expectations and by all the uncertainties of life. I invite you to have faith in our country. I assure you that your faith will not be misplaced.

I do sincerely believe that the success of the Indian experiment in development - the experiment of a developing economy seeking its salvation within the framework of an open society and an open economy, committed to the protection of fundamental human rights and the rule of law, as a plural, secular democracy - has a global significance. Our success has a global significance. India's success and the success of this experiment can alter the course of history in the 21st century.

The record of the 20th century has been a mixed one as far as democracy is concerned. While people across the world have rejected fascism, authoritarianism and totalitarianism, the record of democratic societies in pulling people out of poverty has not been as convincing as we would have liked it. Let us show that this is indeed possible.

All those who invest in India, who invest in its future, who invest in India's prosperity, who invest in the capabilities of the Indian people will be investing in the future of democracy.

The beauty of Indian democracy is its vitality; its ability to periodically rejuvenate itself; its ability to reform itself. We will continue to do so. Our systems may be slow, but they are steady. We will continue to reform our systems and our institutions, so that our economy becomes more efficient and our society more equitable.

I must draw your attention to the fact that the road to such reform over the past two decades has been a one-way street. Different political parties of different ideological hues have been in office over the past two decades. Yet, no policy reform has ever been reversed. The Indian economy, and its globalisation, has moved in only one direction - towards greater and greater freedom for individual creativity, initiative and enterprise and towards increased integration with the world economy. This is a path which has come to stay.

That is why the India Story looks so good. This was what we dreamt of in 1991. I doubt whether Fortune would have considered hosting such an event in India even a decade ago. The fact that you are all here today is proof of your faith in the abilities of Indian people. Be it Foreign Direct Investment flows, investments in our stock markets, investments in our knowledge economy, the signals are all positive. We will work to keep these positive. I hope you will remain engaged and committed to India. I wish you all well.

**055. Interview of Prime Minister Dr. Manmohan Singh with the German Weekly *Der Spiegel* and reproduced by the New Delhi daily *Indian Express*.**

**New Delhi, October 30, 2007.**

(Manmohan Singh talks to Der Spiegel's South Asia Bureau Chief Padma Rao Sundarji about German Chancellor Angela Merkel's visit to India, nuclear cooperation with the US and Indo-German academic exchange.)

**SPIEGEL:** Dr Singh, German Chancellor Angela Merkel is in New Delhi this week. Her entourage, which includes some of Germany's top executives, scientists and politicians, fills two Airbus planes. The scale of the visit is a bit surprising considering that Germany and India have no historical links. Why are the two countries suddenly so important for each other?

**Singh:** It is no secret that trade and investment have been growing rapidly. And then there has always been close scientific and technological cooperation between our two countries. Most importantly, however, Germany and India are both democracies and believe in human rights. This makes the relations far easier and smoother than with many other countries. We also cooperate with Germany on global issues through the European Union and the G-8 as well as other international forums. We have also, through the G-4 framework, presented our joint candidature for permanent membership in the UN Security Council. Seldom do two leading countries enjoy such a harmonious relationship.

**SPIEGEL:** Nevertheless, there is great disharmony within your own country over the planned nuclear deal with the United States, which will allow international monitoring of India's civil nuclear power stations in exchange for technological know-how. Your own coalition partners, the Left Front, vehemently oppose the Indian-US nuclear deal. Is it all but dead?

**Singh:** I take your point, but I am still of the opinion that we will reach a consensus soon. The Indian-US nuclear deal will considerably improve and consolidate India's energy supply. And what is good for India is good for the world.

**SPIEGEL:** Many countries would beg to differ. India, a nuclear power, has consistently refused to sign the Nuclear Non-Proliferation Treaty. In a phone call to US President George W. Bush last year, Chancellor Merkel herself criticised the Indian-US nuclear deal.

**Singh:** Chancellor Merkel, who has herself campaigned intensively for renewable energy since the last G-8 summit, has no reason to worry. Yes, we do have an ambitious domestic nuclear power programme and want to raise the proportion of nuclear power in the overall energy mix. But it is also well established that we want to look at all available fuel options and forms of sustainable and environment-friendly energy. International cooperation can play an important role in that endeavor. Take the German-Indian Energy Forum, for example. German companies are already supplying equipment for the Indian power sector, and we are already working together on energy efficiency, clean coal technology and renewables. For the business delegation accompanying the chancellor to India, the trip will not be in vain.

**SPIEGEL:** But will the failure of the Indian-US nuclear deal reduce India's chances of a seat on the United Nations Security Council?

**Singh:** Where do you see the connection?

**SPIEGEL:** The United States could vehemently oppose India's efforts.

**Singh:** One should look at the advantages of expanding the Security Council: Germany and India could both play a very constructive role. Reform of the Security Council, we believe, is essential for enhancing both the legitimacy and effectiveness of the UN. The UN must reflect the contemporary realities of the 21st century.

**SPIEGEL:** But then India would have to take a more decisive stance on sensitive issues like Burma. At the moment, one has the impression that India has been evading the question. Or has New Delhi been tolerating Burma's military junta only because Burma, as an oil and gas supplier, is crucial to India's growing energy needs?

**Singh:** Like Germany and the EU, India too wants peace and stability in South Asia and we are working together to bring that about. But please remember that the ability to keep a sense of proportion is often far more effective than shrill condemnation and sanctions.

**SPIEGEL:** For several years, German universities have been trying to woo Indian students. But Indians still seem to prefer countries like the United States and Canada. What are the Germans doing wrong?

**Singh:** Germany could consider providing incentives such as scholarships and employment opportunities, and, most importantly, put in place a visa regime which makes it easier to enter the country. Germany is a leader in

higher education, particularly in the area of technology. We would welcome more Indian students benefiting from Germany's strengths, but we would also like to see more German scholars and academics in India.

**056. Inaugural Address of Prime Minister Dr. Manmohan Singh at the 4th International Conference on Federalism.**

**New Delhi, November 5, 2007.**

It is indeed a matter of great honour and happiness for us that the 4th International Conference on Federalism is being held in our country. As one of the newer members of the Forum of Federations, we deem it a privilege to host this Conference. I extend a very warm welcome to the Excellencies, the Heads of States and Governments, and all other distinguished delegates to this global assemblage of the practitioners of federalism.

The theme of the Conference, "Unity in Diversity" is apt and in many ways, reflects the essence of the Indian approach to federalism. India embarked on its journey as an independent Republic based on the ideas of unity in diversity. As an ancient civilisation with a heritage spanning all the great religions of the world, spanning innumerable ethnicities, languages and cultures, India is a land of immense diversity. At the same time, India also had an underlying sense of unity. It may not have been political unity at all times nor was it based on linguistic or religious unity. This was a unity at a subliminal level, a unity based on shared values, on the co-existence of diversity and on respect for alternate thoughts and ideas. The challenge for a young nation was to build on this underlying sense of unity and to design an institutional structure which would manage the contradictions that would keep emerging from time to time. The unity, forged by our freedom movement for a common purpose, had to provide space for the inherent diversity of this vast ancient land of ours.

The Constitution we created sought to reinforce the unity and integrity of our Republic while providing the necessary space for all the extant diversities. It has tried to allow the diverse components of our federation retain their unique identity while merging them into a larger personality because of the benefits that arise from this. Maintaining a fine and healthy balance between the aspirations of individual federating units and the

obligations of the federation itself has been an essay in mutual comprehension. It has been an essay in persuasion and, above all, an essay in nation building.

The peace treaties of Westphalia are said to have established the modern concept of sovereign statehood. Since then, nations have evolved along multiple paths while developing their organisational structures and institutions. We have had nation-states that are based on single language, single ethnicity, single religious affiliation and single socio-cultural identities. There have been other states that have been more diverse in one or more - and sometimes, even all - of these dimensions. The challenge for many nation-states has been - and it is particularly true of the larger ones - is to manage the multiplicity of identities of individuals with the requirements of a unified nation. Managing this duality has been one of the drivers of political evolution in the last century.

Federalism has been a governance issue across nations of all types, particularly in the extent of the need to have governance as close to people as possible and to enforce accountability. But, it is in the plural group of nations, with their inherent diversity, that federalism as a concept has had to show ingenuity and innovation in managing contradictions. In fact, large plural democracies have been successful only by having federalism sculpted into their institutional architecture. Today, we see multiple models of federal architectures across the world, each trying in its own way, to allow for diversity to coexist in a larger unified framework; for individual sub-national identities to work in harmony with a larger national identity. In many ways, one can say that the concept of federation has enabled large nation-states to survive and flourish in today's world.

In the modern world, systems of governance acquire legitimacy and popular acceptance only because they fulfil the felt needs and aspirations of the people. Federalism too has come to stay because it serves a purpose. It has successfully mediated between the opposing pulls and pressures of individual identities and the needs of a larger national identity.

However, federalism as a concept cannot be static. The incredibly wide variations we see in the federal architectures across the world demonstrate that there is no unique solution to the problem of striking a balance between national and sub-national needs and aspirations. Further, the boundaries between different layers of identities will keep shifting owing to a wide variety of pulls and pressures and the challenges of social and economic change.

Economic development has been one of the biggest unifying drivers of the past few decades. The need for economies of scale and scope have necessitated the creation of large unified markets such as the European Union. The forces driving economic unification have driven unification on other planes as well. This is in some ways inevitable as unification of economic activity impinges on almost all other spheres of human activity and hence, the need for gradual harmonisation, if not unification. In fact, when I see the world getting increasingly globalised, I wonder whether the day is not far away when the concept of absolute sovereignty may itself come into question. As rule based international regimes permeate various forms of human endeavour, we may see states giving up sovereign rights for the larger benefit of humankind. This is in many ways, necessary when managing issues such as climate change.

On the other hand, the logic of political evolution and the quest for transparency and accountability have encouraged some nations to empower lower levels of government by adopting a federal look. We have seen cases where nation-states have been unsuccessful in managing the aspirations of sub-national aspirations with unhappy consequences for the nation as a whole.

Technological developments too have their bearing on the evolution of federalism. Recent developments in Information Technology have enabled even smaller communities to maintain their distinct identities and communicate with each other. They have enabled more vigorous participation in governance, bringing greater accountability to processes of governance. They have also enabled smaller governance structures to exist at reasonable costs.

The challenge of our founding fathers in India was to design a federal architecture which was flexible enough to manage contradictions, which could build on the common strengths and which would evolve with the new passage of time. We have a structure in which some issues are best dealt with at a larger "national" level and such issues become the responsibility of the Central or Federal Government. Defence, foreign policy and macro-economic management are clearly best dealt at the national level. Other policy issues like health care, education and law and order, are best dealt with at more decentralised levels of governance.

However, from time to time, questions do arise about the boundaries between national or sub-national levels and relative responsibilities of the two layers of Government. Dynamic polities must be prepared to constantly examine the status quo and adjust to evolving realities. India has been

able to do this through Constitutional amendments. The ease and flexibilities in our amendment process has enabled changes to be more easily accommodated. These changes reflect the evolution of our polity.

We have had to address the issue of fiscal federalism as well and our experience has been constructive. The responsibilities for public expenditure and their financing by taxation and other instruments are shared between the Centre and the States. These are built in devices by way of devolution of Central taxes and grants-in-aid in favour of States to bring about a measure of harmonization and equalization in patterns of spending in States. Finance Commissions, wisely envisaged in the Constitution and appointed every five years, have played a constructive role in harmonizing the revenue structures of the Centre and the States and in resolving disputes with respect to distribution of revenues between them. They have strengthened in the process, the foundations of fiscal federalism in our country.

We continue to have some difficulties in eliminating fiscal barriers to inter-State movement of goods and in the utilization of natural resources. These pose a major challenge for the management of our federal polity.

A major challenge for large federations is that of inter-regional disparities. Reducing such disparities is essential for the success of a federal structure. This has been an important challenge in India. Both the Planning Commission and the Finance Commission, through a system of transfer of resources from the Centre to the States, have played a constructive role in reducing inter-regional disparities and promoting balanced, social and economic development across the country. Even then, inter-regional disparities in the level of development do persist and constitute a major challenge for the management of our federal polity.

Large countries of continental dimensions must also have policies for an equitable and efficient management of natural resources. What would be a subject for international or bilateral negotiation, in the case of smaller nations, becomes an inter-State and a Centre-State issue in large federal systems. This is more so with respect to the management of natural resources like water, minerals and energy.

River water sharing has posed a challenge to the management of federalism. It is perhaps no exaggeration to say that we have found it easier to manage bilateral agreements with neighbours on river water sharing than settling domestic disputes between various States. Similar issues arise in the management of our mineral and hydrocarbon resources. Sustained economic

development increases the inter-dependence among the units of a federation. Balanced and equitable management of this growing inter-dependence is yet another major challenge facing federal polities in the modern world.

An extremely important function in a federation is the mediation of disputes between different levels and identities. In some cases, this becomes a case of using agreed principles for determining solutions. The judicial processes can be used for this purpose. In other cases, when there are no agreed principles, or when these are insufficient for the task at hand, we need other processes of dispute resolution. There may be questions of equity, there may be questions of efficiency and questions of identity that are involved and needs to be mediated upon. Finally, this may be a political process as the issue of identities is not just a matter of law. We need, therefore, at times, creative thinking and redesign of institutions to allow the federal concept to adjust to emerging and changing realities.

Before I conclude, I would like to turn to raise some questions for this conference to reflect on. In a modern state, does a single party state have any advantages in managing centre-state relations smoothly as opposed to a multi-party system? It is a question which I pose for your concern. Or is a multi-party model, with national parties dominating the political scene, superior where one can hope that all of these parties will take a national view on policy issues and help to reinforce the unity of the federation. In theory, management of Centre-States relations should be smooth in this sort of model. But, the Indian experience suggests that even in this sort of world the management of Centre-State relations can give rise to serious tensions.

Then there is the case of a multi-party model where political parties with varying national reach and many with a very limited sub-national reach, form a coalition at a national level. Is such a model capable of providing and reflecting the unity of purpose that nation-states have to often demonstrate? Or is it an essential outcome of federalism which successfully projects local aspirations at a national level? This political dimension of the Centre-State relations is yet another challenge facing a federal polities. Sometimes the resolution of problems acquires an excessively political hue, and narrow political considerations, based on regional or sectional loyalties and ideologies, can distort the national vision and sense of wider collective purposes. We may have a lot to learn from the experience of other countries in this regard.

I am sure that such issues are not unique to our country. In a world of multi-ethnic, multi-cultural plural societies, federal political systems face new

political challenges of all the times. Tensions between centralisation in certain spheres of governance and decentralisation in others is the essence of federalism. Managing this is the challenge of successful federalism.

I hope your Conference will deliberate on these important issues. We can learn a great deal from the experience of other countries as we seek to take our country forward. Thus great importance is attached to your deliberations and I conclude by wishing you success in your endeavours.

**057. Keynote Address by External Affairs Minister Pranab Mukherjee during the 4th International Conference on Federalism.**

**New Delhi, November 5, 2007.**

**Shri Somnath Chatterjee, Hon'ble Speaker Lok Sabha, Hon'ble Home Minister, Excellencies, Distinguished Guests, Ladies & Gentlemen.**

I am happy to address this august gathering on a topic that underlines the Indian polity and our governance structures. It is also heartening to note that this conference is the first such being held in Asia and hosted by India, one of the largest "Federating Union". We live in an age of unprecedented plenty, grave poverty, and dizzying technological progress. It is not surprising that the contemporary international community is confronted with complex challenges that require ingenious, innovative responses. Never before in history has the world witnessed such sharp divisions. Issues of identity, autonomy and equity impinge on all international interactions and the situation is fraught with grave hazards. Dangerous degradation of environment, human rights issues, rise of sectarianism and growing unrest among ethnic minorities all over the globe have thrown up unprecedented challenges to world polity. Proliferation of international terrorism is just one manifestation of the malady. Potentially destructive and violent strife is palpable just below the surface. In this context, it would be unwise to postpone considering urgent appropriate strategies to accommodate diverse, often conflicting interests- not only national but also religious, ethnic and cultural. This lends a new urgency to the concept and practice of federalism which has the inherent capacity to deal with diversity.

We in India can take justifiable pride that it was millennia before the

emergence of the nation-state system when the significance of federation was realized. Federal republics flourished on the north-western and eastern peripheries of the ancient Indian sub-continent. *Sangha* or federation in ancient India was synonymous with unity and strength. It would not be an exaggeration to state that in a society so remarkably plural, the federal imperative was obvious. Diversities and differences were not only tolerated but were joyously celebrated. All this is recollected here not to lay any special proprietary claims but only to indicate that India is a natural ally and a substantial constituency for federalism.

Historical factors have played an important role in the adoption of a federal Constitution with strong unitary features in India. The classical concept in federalism is that before a federation is formed, there are separate identifiable units. Once they joined the federation, they surrender some power, and gain some. Indian federation grew from its ancient past where centralized monarchical and dynastic ruler ship was the adopted statecraft from Chandragupta to Asoka, or the Mughals, who had unitary administration over vast parts of India. For the sake of administrative convenience, they divided certain parts into administrative units. Akbar's empire stretched from Kashmir to Pragjyotishpur in Assam, and from Kabul to the Deccan in the south divided into 16 "subas". When local chieftains raised their heads, they were delegated some local powers in keeping with the politico-administrative expediencies.

A new political paradigm was laid with the advent of British who, captured power through the East India Company acting on the certificate of "Dewani" obtained from the Mughal Emperor. Later, Lord Wellesley used the policy of annexing Princely states followed by the theory of "Doctrine of Lapse" by Lord Dalhousie, whereby a princely state, in absence of a direct heir to the ruler, got annexed and merged to the British territory under the Crown. There was some territorial contiguity and stability in the ninety years that followed 1857 and up to the Independence from the British rule in 1947. The administration was governed by the British Governor General through provincial Governors. These provinces had no uniformity and neither were they carved out of any coherent or logical policy dictates. Bengal, Bihar, and Orissa were one administrative unit for some time; Oudh used to be the larger united provinces, while a large number of territories were captured from rulers in different parts of the country and merged with the British territory.

Some major changes in the governance structure of the country took place after the revolt of 1857. Almost 60% of British India territory was directly

administered by the British Governor General, Governors of provinces or in some cases Chief Commissioners. The hereditary princely rulers numbering more than 700 ruled the other 40 percent of this territory.

### **Excellencies, Distinguished Guests,**

In India, the traditional concept of federalism did not take roots as successive governments starting from the Mughal Emperors to the East India Company ruled in the unitary format. The Montague-Chelmsford reforms of 1918 envisaged a federal solution to the problem of political freedom for British India, as a distant prospect, observing that the conditions for a federation, did not then exist, because the provinces in India were not self-governing States which could surrender certain powers to the federal government. This remained equally true in 1929 when the Simon Commission did not recommend a federal solution, though was envisaged as a distant goal. However, in keeping with the exigencies and imperatives, the governance was carried out under the Government of India Act, 1919. Definite concept for federal structure was laid only with passing of the Government of India Act, 1935.

What then made the British Parliament in 1935 to provide a federal Constitution for India, disregarding the views expressed in two reports? To my mind, the British tried to look for pragmatic adjustments by establishing political institutions which would work, as the demand for self rule and freedom struggle had become almost irresistible, and each political advance brought the full transfer of power nearer to the Indians. The political struggle produced a sense of national cohesion and, for the leaders of freedom struggle, federal solution offered the best chance of an early realization of their goal.

The "**Objectives Resolution**" which was moved in the Constituent Assembly on 13th December, 1946 by Jawaharlal Nehru favored loose federation with the residuary powers of legislation given to the Provinces. This possibility faded with the partition of British India into India & Pakistan, and it was seen as no longer necessary to provide a loose federal Constitution. The India Independence Act, 1947 abrogated all treaties between the Crown and the Indian Rulers making them fend for themselves. With the liquidation and merger of Princely States in the provinces, federal solution emerged as the natural choice.

The outcome of the Constituent Assembly deliberations brought out the underlying philosophy of federalism in the Indian Constitution while adopting a Parliamentary system of federal government and enunciating its basic

features. **The Indian polity was to be federal in structure, unitary in bias.** India would be a Union of States. This would not be the classical federation like that of the United States Constitution which says "association of States" and many other countries that adopted a federal system of governance. The Indian Constitution makers chose to use the word "**Union**" instead of federation. It may be mentioned that, in order to be called "federal", not using the word itself does not mean that the principles are foregone. In fact, we have gone even beyond by delegating powers to the units of local self governments that were not strictly laid down under the Constitution. The actual structure laid down for two-tier system of government with the Union and the States, and it was left to the States to legislate on the local self government structures.

### **Excellencies, Distinguished Guests,**

The test for federalism laid down by experts such as Prof. Wheare in his work "Federal Government" has been generally applied to our Constitution. Another eminent exponent of the subject Prof. Sawyer, who propounded that it is necessary to inquire whether a federal situation existed in a country before it adopted a federal constitution, said, the sub-continent of India is an area which by reason of size, population, regional (including linguistic) differences and communication problems presented an obvious federal situation.

Among the basic features laid down for Indian federalism, is the mechanism through which the independent judiciary will arbitrate on the matters between the Union and the States and that is how the Original jurisdiction was bestowed on the Supreme Court. On the Legislative side, in the classical federal mechanism, it is the Second Chamber of Federal Parliament which is to represent the States. That is how in the case of United States, two representatives are fixed for each State in the Senate. India also opted for a Bi-cameral Legislature. The allocation of seats in the Upper Legislative House is filled by representatives of States and the Union Territories elected by the elected members of the Assemblies of the respective States in accordance with the system of proportional representation of population. The present number of seats was fixed in 1956 on the basis of the recommendations made by the States' Reorganization Commission.

The responsibility of governance between the Federal Government and its constituent units, the States, is enshrined in the Constitution by dividing the subjects into three Lists. **The Union** List gives exclusive right to the national Parliament to legislate on 97 subjects; the **State List** gives right to

State Legislatures to legislate on 66 subjects and the **Concurrent List** gives rights to both the Union and State Legislatures to make laws on 47 subjects. The district and local bodies do not make laws; they make policies and take executive decisions and act. Some States, due to their peculiar situation, have been given wider and additional powers for legislation. Executive powers are distributed between the Union and the States, including the power to levy duties, raise revenues by taxes operating on mutually exclusive spheres, adhering to the principle of federalism.

The unique unitary features of the Indian Constitution entrusts the Union Government with institutions such as the Election Commission, the Union Public Services Commission, the Comptroller and Auditor General of India.

Every five years, a Finance Commission is appointed to make recommendations on the sharing of taxes that are levied by the Union government, including Grants-in-aid under the Constitutional provisions. This is in addition to the debt relief and calamity relief given to the States in times of need by the Union. First such Finance Commission was constituted in 1951, currently the 12th Commission's recommendations are being acted upon and the 13th will shortly be constituted.

It is this basic characteristic of the Union of India, which has enabled peaceful structural changes and reshaping of the states many a time. The core value of the unity and integrity of the nation in the constitutional scheme has facilitated this exercise. However, in the last sixty years, there were some challenges thrown as to what constitutes the basic features of our federalism. By the 42nd amendment to the Indian Constitution, the Union acquired certain State powers such as the deployment of Central para-military forces. The State subjects like Forests & Education that hitherto were in the State List, were placed in the Concurrent List. Use of certain provisions with respect to the dissolution of State Governments and Centre-State relations assumed importance. It was realized over a period of time that this power in the union is meant to be exercised sparingly, and were substantially addressed by the 44th amendment to the Constitution.

The Government has also set up several independent mechanisms to review the working of the arrangements between the Union and States and to make recommendations for ensuring good governance and the welfare of the people while strengthening the unity and integrity of the country. Among these are the **Planning Commission**, the **National Development Council**, the **National Integration Council**, the **Inter-State Council** and others. The Planning Commission allocates financial resources to the States for

their plans of development. The government constituted a Commission under a retired Chief Justice in early 1980's to take a comprehensive review of Centre-State relations. Many of its recommendations were accepted and acted upon. The Government has now set up another Commission on Centre-State Relations to take a fresh look at the rights and responsibilities of the Union and State Governments and make recommendations for addressing new challenges that have emerged in our polity and economy in the last two decades.

We have made substantial progress in the direction of empowering the people through local self-governance, commonly called Panchayats in the rural areas, and municipal bodies in urban areas. These are periodically elected bodies that are nearest to the people and form the grassroots level governance. In the structure of multi-party political system, when no single political party can claim dominance and when the central and provincial governments represent rival coalitions, the daily pulls and pressures can only be managed by genuinely federal institutions.

### **Excellencies, Distinguished Guests,**

The structure of the world had begun to alter dramatically by the 19th century. Empires had given way to new, independent nation States' and the artificial order imposed by colonial powers was dismantled by the rising tide of assertive nationalism. Ironically, the unity forged during the anti imperial freedom struggle was in most cases lost as soon as independence was attained and the new born nation-states found themselves struggling to preserve their integrity and autonomy. The colonial masters had redrawn political maps and diplomatic adjustments among imperial rivals that arbitrarily violated the pre-existing organic relationships among the people of Asia and Africa. The Indian case is illustrative of this. Communities that had harmoniously coexisted for generations suddenly found themselves confronted by divisive forces. Demands of the people from its own government increased with growing political consciousness and awareness. Diversity, at times, tended to become divisive and discordant. Contending claims to scarce resources aggravated political conflicts and began to put strain on political institutions. However, these could be adequately addressed through the institutions of the federal government.

At the global level, geopolitics dominated thinking during this phase, and the democratic essence was dispensed with leading to the start of the Cold War which distorted the natural evolution of the federal idea. Strategic considerations of containing the adversary, an ideological rival, fuelled the formation of military alliances.

We need to refer to another significant development during the last quarter of the twentieth century and that is the strong imperative for regional integration. The emergence of the European Union as a supra-national political association- a unique federal institution- provided a powerful impetus to similar aspirations elsewhere. Bodies like ASEAN and SAARC have demonstrated that an innovative social contract, essentially federal in character, can be extremely useful in managing diversities.

What is clear as we enter the new millennium is that there can be no genuine democracy without adequate space for diverse minorities. They have to be assured unequivocally that their identities are not imperiled. Regions that have borne the brunt of imbalanced economic development too must begin to perceive themselves as stakeholders. Devolution of power to the grassroots has to be hastened. Without this sense of participation in governance there can be no credible empowerment. Only when people hitherto marginalized identify themselves as agents of change can their grievances become less volatile. The people of India can take just pride in electing the largest number of representatives, 2.5 million persons, at different federating structures, right from the central level down to the grassroots.

### **Excellencies, Distinguished Guests,**

In recent years, there has been much talk of a clash of civilizations, cultural fault-lines and multiple identities. It is not possible to reflect on these topics in detail here but it is necessary to recognize them since it is federal institutions, structures and processes that hold the most promise in helping us to learn to live with multiple identities, negotiating invisible fault-lines and coping with differences constructively.

It is not only in the comparatively younger nations that the significance of federalism is being realized, many developed countries too have learnt valuable political lessons from their own or others' experiences.

### **Excellencies, Distinguished Guests,**

It is a privilege for India to host the 4th International Conference on Federalism in the 60th year of our Independence. I understand that about one thousand practitioners of federalism from more than 50 countries, including a large number from developing countries, are participating in this Conference. India is deeply committed to realizing the federal ideal and is extremely happy to join hands with the Forum of Federations in sharing experiences and promoting learning. Indeed it is for this reason that we partnered with Forum of Federations, a partnership which we expect to deepen in the years ahead.

In India, our own commitment to federalism is for the long term as we are convinced that it provides the best hope for robust expression of divergent viewpoints and finding peaceful and enduring solutions to our problems. We have absolutely no doubt that federalism holds the key to a better future. Federalism at home and in the international system alone will allow us to blend interdependence with autonomy, preserve our distinct cultural identities and help us fight emerging challenges. I have great expectations from this conference and look forward keenly to its recommendations.

Thank You.

**058. Address of Prime Minister Dr. Manmohan Singh at the  
2nd Asian Ministerial Conference on Disaster Risk  
Reduction.**

**New Delhi, November 7, 2007.**

I am delighted to have this opportunity to be here at this very important conference, which is deliberating on a subject of immense relevance to the entire Asian region. I also hope that this conference will be yet another milestone in strengthening collaborative, cooperative relations among the nations of Asia.

Disasters know no political boundaries and we are all equally vulnerable to them. I firmly believe that this is one area where nations can - and indeed must - cooperate to find collective, cooperative solutions to the challenges that face them. After all, it is in difficult times that we need the best of relations. As a wise old saying goes - a friend in need, is a friend indeed.

It is, therefore, heartening to note that in recent years, countries of Asia have come together to help one another during times of natural disasters. We have had joint efforts to provide rescue and relief to those in distress - in the aftermath of the tsunami of 2004, after the recent earthquakes in our regions, including in Jammu & Kashmir. This conference is taking place at a time when we can all feel hopeful that we have the sagacity to cooperate during times of natural disasters.

The Asian Ministerial Conference is a natural platform to discuss disaster risk reduction. What is done - or not done - in one country, can have repercussions in another. This conference, therefore, can be a common

platform for us to learn to work together in the best interests of all our peoples.

Earthquakes, cyclones, floods and tsunami have contributed to disasters across Asia in the recent past. In handling all these disasters, what is important is to have coherent national strategies and national capabilities to handle these disasters. This would be in the realm of both disaster prevention and disaster management. I believe that it is incumbent on each one of us to develop the necessary national capabilities. There can be no substitute for effective national efforts.

At the same time, each of the past episodes has shown us that a national response alone is not adequate. While we have the necessary wherewithal in Asia to respond to disasters, we need more bilateral and regional cooperation to make effective use of our capabilities.

Greater cooperation in relief and rehabilitation, cooperation in disaster preparedness and in setting up and maintaining early warning systems is a useful and a very good way of demonstrating good neighbourliness. The regional effort in creating a Tsunami Early Warning System is a good example of regional cooperation. I hope we The focus of this conference need not be limited to natural disasters alone. Modern societies must also prepare to come together to deal with manmade disasters - be they industrial disasters or disasters caused by terrorists' attacks. The threat of terrorism looms large in many parts of our region and could trigger disasters across borders. We must also learn to deal with new kinds of health disasters such as HIV, Avian Flu which have emerged as new challenges all over the world. They have enormous social and economic consequences. Here again, we need improved methodologies for risk reduction, insurance as well as for mitigation.

And of course, the biggest disaster that we may yet prevent from happening is the catastrophic effect of global warming and climate change. Whereas we have only nature to blame for natural disasters, we cannot say the same for manmade disasters. Actions of one nation can affect many other nations. I hope our region shows the same wisdom and cooperative spirit in dealing with manmade disasters as it has shown in dealing with natural disasters.

Our country has adThere is yet another popular saying that has relevance to risk reduction, namely - a stitch in time, saves nine! Disaster risk reduction, in particular, should be based on pro-active pre-emptive action. Typically, small investments in improving the safety of houses can go a long way in

reducing the risk of damage to life and property arising from earthquakes. Studies carried out by our engineers show that we could have saved valuable lives and property if we had appropriate housing technologies in earthquake-prone areas. We are developing such technologies that are affordable and also are appropriate to the situation we face on the ground. Information sharing in such technologies will be a useful way of addressing the challenge of risk reduction and promote regional cooperation in this important area.

A second type of intervention relates to insurance against risk. The penetration of insurance in many of the countries of Asia is still very limited. I, therefore, urge all those who manage our financial systems to be even more pro-active in insuring the risk-prone regions. Insurance against natural disasters is still very limited. Here again, we need an approach that can spread the costs and ensure the financial sustainability of risk insurance mechanism.

Countries of our region should learn to work together on a wide variety of fronts. The people of Asia have interacted with each other for centuries and they must do so on this vital subject. I hope opportunities provided by this Conference will help forge a new unity among the peoples of Asia. I wish your conference all success in addressing the challenges that we face. I hope you will come forward with new approaches, enlightened approaches for addressing the enduring problems of our people with regard to the management of disasters, their prevention and their management if they are unavoidable. With these words, I have great pleasure in inaugurating this Conference with a forward-looking approach to disaster management and mitigation. We have constituted a National Disaster Management Authority and State Level Disaster Management Authorities. The National Authority has come forward with a new approach to disaster management. The paradigm shift that they have advocated is based on moving away from a relief-centric, post event approach to a holistic, integrated and preventive approach. The focus will be on disaster prevention, preparedness and mitigation.

Improved coordination between various agencies of the Government is a first step in the new approach. Greater awareness among civil society with regard to prevention, mitigation and preparedness, is the next important step. Lack of information, panic and uncoordinated responses can have a negative impact. Community-based approaches can, therefore, help deal with panic, rumour-mongering and provide immediate relief. In risk reduction, such an approach can have positive externalities.

**059. Address by Vice President M. Hamid Ansari at the Foundation Day of the Institute for Defence Studies and Analyses.**

**New Delhi, November 10, 2007.**

Hon'ble Shri Pranab Mukherjee

Hon'ble Shri A.K. Antony

Shri K. Subrahmanyam

Chiefs of Staff

Members of the Executive Council of the IDSA

Dr. N. Sisodia

Distinguished guests

Many friends in the audience

Ladies and Gentlemen

I feel privileged to be here with you today to celebrate the Foundation Day of the Institute for Defence Studies and Analyses. I also celebrate as an insider. Over the years the IDSA has carved out for itself a place in the fraternity of the regional and international community dedicating itself to matters strategic. These engagements have in some measure helped shape perceptions, and add a much needed Indian dimension to them.

'I think, therefore I am', said the philosopher Rene Descartes. By this logic, thinking should be a normal and universal human trait. Experience however reveals a propensity to avoid structured thinking and leave it either to superiors in the social or organizational hierarchy or to a small group charged to do so. Both amount to an abdication of civic responsibility since, as Pericles said a long time back, ordinary citizens are fair judges of public matters and discussion therefore is not a stumbling block but 'an indispensable preliminary to any wise action'.

At the other end of the spectrum governments, busy with the concerns of the moment, sometimes do not have the time and the energy to devote themselves in sufficient measure to matters in the domain of the possible, the probable and even the improbable. It is here that speculative but

structured thinking demonstrates its relevance and helps bridge the gap between the worlds of ideas and action.

The sociologist Anthony Giddens, who was in New Delhi recently, described the present day world as “puzzling, strange, elliptical” in which ‘we are far from being fully in control of the forces we have unleashed’. This is further complicated, as Philip Bobbit put it in a seminal work published a few years back, by ‘the shift in the basis of legitimacy from that of the nation-state to that of the market-state’ which questions much of what went with the doctrine of sovereignty. To think about the world of today in terms of security and foreign policy, therefore, requires cognition of what is decidedly new. Some of these are evident and can be mentioned:

- Revolution in Information Technology and the emergence of user-friendly technologies at the retail level leading to immense empowerment at the individual level.
- Globalisation, with its market integration and instantaneous media of communication, has created extensive interdependencies down to the village level.
- The end of the Cold War and the emergence of a more complex international order that lends itself much less to prototyping. Affiliations, alliances and identities are no longer exclusive - overlapping multiplicity is no longer merely an option, it has become a necessity
- The concept of ‘power’ and ‘influence’ has undergone tremendous changes. Today, strong nation-states are much less feared than weaker ones. Non-state actors have been technologically empowered to unleash enormous destruction among states and societies. Soft power projections are as important as hard power instrumentalities.
- The political, economic and cultural DNA of nations acts as the limit of the potential that exists for development and flowering of peoples. The actualisation of this potential depends as always on the political and social environment of the day and the leadership available to harness the energies of the people.
- Fundamental human rights have obtained the widest observance and recognition in human history. They impose implicit and explicit codes of behaviour for nation states irrespective of national constitutions and domestic legislation.

- With the predominantly young profile of our population - over 550 million Indians are below the age of 25 years - patience with state interventions and facilitation for socio-economic development is wearing thin. People want income growth, enhanced standards of life and actualisation of their potential at the earliest. The margin for delay and non-performance in this area is minimal. This is the *leitmotif* of this generation.

This then is one set of factors that impact on the security and foreign policies of countries, including our own. Needless to say, the traditional imperatives also remain in place. How then do we harmonise the two, respond to security imperatives and energise the policy impulse? This, to my mind, is the challenge of the day that requires to be addressed by the strategic community.

Ladies and gentlemen

Any exercise in structured thinking is premised on conceptual clarity. Our terms of reference today pertain both to security policy and to foreign policy. In the first place, the two are not synonymous since national security has domestic dimensions as relevant as external ones. The concept of security itself has acquired depth and a new meaning; it now encapsulates non-traditional security and is focused on comprehensive human security.

Foreign policy, on its part, is not conducted in a vacuum on the basis of a wish list; it must perforce result from the manner in which a country persuades the external world to respond to its national vision (inclusive of its security requirements) and the supportive structure it brings to bear in terms of national capabilities.

I venture to suggest that India of tomorrow would attempt to locate itself in terms of such a basket of imperatives and perspectives. In doing so, it would still go back to the basic objectives enunciated by Jawaharlal Nehru in his Address on 7th September 1946, six days after the Interim National Government was formed. Its essence bears reiteration:

- 'We propose, as far as possible, to keep away from the power politics of groups';
- 'We believe that peace and freedom are indivisible and the denial of freedom anywhere must endanger freedom elsewhere and lead to conflict and war';
- 'We are particularly interested in the emancipation of colonial and

dependent countries and peoples, and in the recognition in theory and practice of equal opportunities for all races’;

- ‘We seek no dominion over others and we claim no privileged position over other peoples. But we do claim equal and honourable treatment for our people wherever they may go, and we cannot accept any discrimination against them’;
- ‘India is on the move and the old order passes. We go forward to success and to freedom and well-being of the hundreds of millions of Indians.’

An observer of the Indian scene may well ask the question: do these considerations remain operative? The answer would be in the affirmative, as is evident from authoritative pronouncements made from time to time by public personalities and government leaders and most recently in the conclave organised by the *Hindustan Times*.

The focus thus remains on success, on freedom and on the well-being of our people and on a cooperative, non-hegemonic, world order. By implication, challenges to these in a changing situation become challenges to our security.

If there is one challenge that I wish to highlight today as being of critical importance and yet under-appreciated for its likely impact, it is the predominantly state-centric discourse of our national security policies. The protection of a state from external aggression and internal threats is increasingly seen as one component of a more comprehensive approach to security – that of human security. There is a need to look at security of individuals and peoples in this more holistic sense – where protection of individuals from all forms of violence, from hunger and disease, from natural and man-made disasters, from socio-economic and political inequity is the goal.

Undertaking this quantum definitional leap is critical if the discourse on national security and on foreign policy challenges is to evolve and progress. We also need to remind ourselves constantly that the primary purpose of conducting foreign policy, and of the effort to ‘promote international peace and security’ and ‘maintain just and honourable relations between nations’, is to do so in the interest of the People of India.

The complexity of the Indian reality, particularly in its economic, sociological and human dimensions, is the umbilical cord linking domestic and foreign

policy; it conditions all aspects of the security perspective. The sources of strength, and weaknesses, of this reality need to be borne in mind by scholars devoting themselves to national security studies.

Ladies and Gentlemen

We live in an era where the only certainty is uncertainty. How do we convey our vision of our security and foreign policy to the world and our people? How do we synthesize the ambiguities and uncertainties into coherent policies and build support in our diverse polity and society? The only answer would be to place individuals and peoples at the centre of the discourse and debate. All around us are societies where the priorities were reversed, with dire consequences.

A word of caution may not be out of place. It is a folly to view the world in terms of black and white. The future of world peace and of the international community remains in balance because ambitions of control continue to surface to achieve, in Headley Bull's terms, dominance, hegemony or primacy. An alternative model, based on common ideals and common values, is yet to emerge. There is, however, hope that eventually sanity will prevail. Almost two decades after India proposed it in 1988, there is now talk in the United States itself of a phased reduction and elimination of nuclear weapons. Would some researcher in IDSA be tempted to explore the options from an Indian perspective?

Ladies and Gentlemen

The only approach to our security and foreign policy challenges is one of incremental success. This is a painstaking task that requires patience and clarity of purpose. I have no doubt that IDSA would continue to play an important role in this task by generating new knowledge and ideas, by paying greater attention to societal impulses, and by shaping Indian responses to challenges that may confront us in the years to come.

I wish the Institute all success in its work.

Thank you.

**060. Speech of External Affairs Minister Pranab Mukherjee on the Foundation Day Celebrations of the Institute of Defence Studies and Analysis.**

**New Delhi, November 10, 2007.**

Hon'ble Vice President Shri Hamid Ansari, my esteemed colleague and Defence Minister Shri A.K. Antony, Chiefs of Staff, Senior officers from the Armed Forces and officials of the Government, Excellencies, members of the media, Shri K. Subrahmanyam, Director IDSA and Members of the extended IDSA family,

I am glad to be with you to celebrate this 42nd Foundation Day of IDSA. This Institute was set up at a difficult time in India's history. Despite the peaceful and non-violent orientation of our foreign policy, we found ourselves in wars against our neighbours. We realised then that the country's defence could not be neglected and to protect effectively our hard won freedom, we had to have a strong defence. We also realised that for a strong defence we needed strategic planning, sound analysis and intellectual inputs to develop appropriate policies. IDSA was founded as a part of the effort to generate such intellectual inputs.

Over the past four decades and more, IDSA has contributed to the cause of national security in diverse ways. It created public awareness on critical issues concerning security. Its alumni are now a part of universities, media, international organisations, government and other think tanks both in India and abroad and are making significant contributions to the discourse of national and international security. On many occasions in the past, IDSA has set the agenda for debates on important security and foreign policy issues. It is fair to say that IDSA laid the foundation of strategic thinking in this country and in terms of the range and depth of its academic resources, it continues to be the nation's premier think tank on strategic issues.

I recall that on its 40th Anniversary, the Prime Minister had urged that IDSA should strive to become a centre of excellence. It is heartening to note that the Institute's scholars and staff have adopted a vision to develop IDSA, over the next few years, into a world-class think tank. To accommodate its increased research output, its flagship journal Strategic Analysis has been transformed from a Quarterly to a Bi-monthly and the journal is now published by a renowned international publisher with a global reach. To further focus specifically on core issues of defence, a new journal called "The Journal of Defence Studies" is being launched today. The Institute

has a vigorous programme of scholarly conferences, workshops and seminars. Research in certain new areas like defence economics has been initiated. I warmly congratulate IDSA for these initiatives. There is, however, much work to be done in the future to achieve the level of excellence the Institute aspires for; and to serve the growing needs of India, which is destined to become a major player in global affairs.

I am also extremely happy to note that an annual award has been instituted in honour of Shri K. Subrahmanyam, who is rightly regarded as the doyen of strategic thinkers in India; and the first award is being conferred today. It is only appropriate that this is happening on the IDSA's Foundation Day as Shri Subrahmanyam had helped to found this Institute and nurtured it with care in its formative years. I have no doubt that this award will inspire younger scholars to strive for the benchmarks of excellence set by Shri Subrahmanyam.

Our Chief Guest today, will speak on "Emerging Challenges for India's Foreign and Security Policies" and we are keenly looking forward to his Address. I would, however, like to share just a few thoughts with you, ladies and gentlemen, on the need to take a holistic view of the foreign and security policy challenges facing the country.

Our national goal is the rapid development of the country, within a democratic polity. We aspire for a nation in which economic growth is inclusive and the polity accommodates the legitimate aspirations of different sections of society. To achieve the objective of rapid and inclusive growth, and eliminate poverty, we need to maintain high rates of growth, averaging 9-10 per cent for the next few decades.

If we have to succeed in the international arena and secure our vital national interests, it would be essential for us not only to have a strong defence, but also a robust economy. In fact, the two are closely inter-linked. We have begun to enjoy a much greater measure of international respect due to our vibrant democracy, a dynamic economy and a strong defence capability.

If India's democratic fabric is to be preserved and a high growth rate is to be achieved, we will need to meet a few pre-conditions. The first is to ensure truly inclusive growth, so that all sections of our society enjoy the fruits of development and internal dissatisfaction is not created. The second is to preserve our secular ethos so as to avoid divisions in our society, which make it weak and vulnerable. The third is to focus on education, including higher education. If we want to make knowledge as the principal driver of India's growth, then higher education with an intense focus on research,

technology and innovation must receive high priority. The fourth precondition is infrastructure, not only in terms of roads, airports and the like, but also planned urban renewal and development. In years to come, large numbers will migrate to cities in search of better economic opportunities and failure to plan and provide for mass migration to cities will lead to tensions and instability. Fifth is the provision of Energy to meet our rapidly growing needs. Unfortunately, we are heavily dependent on the import of hydro-carbons and this dependence is likely to continue. Without energy, sustained economic growth is impossible. To meet our growing energy requirements, a multi-pronged strategy needs to be pursued. This will include development of alternative sources, fuels and nuclear energy. The sixth precondition, is to ensure that we protect our environment and prepare for climate change. All our efforts to develop will come to naught, if we do not address the problem of the rapidly degrading environment. Finally these measures must be accompanied by a proactive and vigorous foreign policy, seeking to develop strategic partnerships with all the major powers in the world and friendly and mutually-beneficial relations with our neighbours.

These vital needs of the nation should set the agenda for IDSA's future work. As I have pointed out earlier, we need to take a holistic and comprehensive view of our security, as the success of our foreign policy initiatives depends to a large measure on our ability to deal with the range of challenges, I have identified.

And yet, we cannot afford to neglect the current threats like terrorism, proliferation of Weapons of Mass Destruction and conventional conflict. However, peaceful the orientation of our foreign and defence policies, these threats are real and we cannot afford to lower our guard. As Plato had wisely observed many centuries ago: "only the dead have seen the end of war". While traditional challenges remain, they are likely to become more complex with some of the emerging trends.

I have shared this perspective with you to urge you to take an integrated and multi-dimensional view of security. This will make your research findings richer and more policy-relevant. The world is becoming increasingly complex. IDSA's research should factor in this complexity of present day realities.

I am happy to make an announcement that in the memory of Late Shri Y B Chavan who was President of IDSA for long time when he was Defence Minister, IDSA will be organising Y B Chavan lecture in his memory.

Let me conclude by felicitating you on your 42nd Foundation Day once

again and wishing you success in all your endeavours. I wish you rapid progress and hope that you will realise your vision to become a 'world-class' Institute in the near future.

Thank you.

**061. Address of Defence Minister A. K. Antony at the Foundation Day Celebrations of the Institute of Defence Studies and Analysis.**

**New Delhi, November 10, 2007.**

I am happy to be present amidst you at the 42nd Foundation Day of the Institute. At the very outset, I wish to congratulate the Institute for successfully completing over four decades of service to the nation. IDSA was set up to provide inputs on security-related and strategic issues of national and international importance. Till now, it has performed its task admirably.

Today, India has firmly established itself on the centre-stage of international politics. In such a scenario, the responsibility on you will no doubt increase manifold. Technology is changing at an unbelievable speed. As a result, the transmission of information takes place at light speed. The challenge therefore, to keep pace with these technological changes is more pronounced than ever before. The choice before us is clear - to either let the events shape us, or enhance our ability to shape the events. Our collective endeavour must be to shape the events - to the maximum possible extent.

With our growing stature, the need of the hour is to develop stronger defence capabilities to safeguard our interests. As a prominent regional player, we will be called upon to play an increasingly significant role in ensuring peace and stability in our immediate as well as extended neighbourhood and in the Asian region. We have to ensure that our security apparatus is well-equipped to deal with various challenges effectively.

Our security forces face several challenges. Though traditional threats do exist, there are little chances of a conventional war breaking out. However, there may be scattered incidents of localized skirmishes, border incursions, civil strife, maritime or other potential threats.

Besides traditional threats, there are the unconventional threats. Terrorism with its global networks, financing and support from various quarters is one such challenge. Increasingly, terrorism is being outsourced to local criminals and miscreants to hide the real source of its origin. Insurgents supported by external forces, propagating extremist ideologies result in irregular, but long-drawn out warfare.

The changes in technology have given rise to 'disruptive threats' - of what is known as cyber warfare. A few nations are believed to be providing training to a large numbers of 'hackers' to attack highly intricate and networked systems. The aim of these cyber attacks is to disrupt functioning of government agencies, gain illegal access to sensitive information and break into banking systems.

Disruption could also be caused by extreme weather conditions and demographic changes. Climate change could also lead to disasters of unimaginable proportions - as was the case during the Tsunami that struck in 2004. At present, the security agencies are not fully structured to deal with such disruptive challenges effectively. Such crisis situations demand quick and effective responses. The need of the hour is to devise integrated strategies for better assessments, contingency planning and making long-term forecasts.

In the days and years to come, we need to be better prepared to deal with the challenge posed by Weapons of Mass Destruction. These weapons could be nuclear, radiological, biological and even chemical. The access of terrorists to such technologies and materials could make the situation worse.

The changing dynamics of the security situation call for eternal vigil and a continuous review and reform of the country's security apparatus. The need of the hour is to undertake specialized research into evolving geo-political developments, Inter-State relations and monitor and analyse the latest developments in our neighbourhood.

At the same time, we must not lose sight of the long-term global trends, security challenges and continue to modernise defence technologies, re-evaluate policies and organisational structures needed to counter various challenges effectively.

However, increasing costs of new technologies and equipment require that we meet our requirements indigenously and to gradually eliminate our

reliance on foreign assistance. Increased transparency and fairness in all defence-related expenditures would prove to be cost-effective in the long run. It must be our firm resolve and commitment to enforce the principle of 'Zero Tolerance' to corruption in meeting our defence requirements.

IDSA has played an important role in enhancing security awareness and strategic thinking over the years. However, a lot more still needs to be done. You must keep track of the latest changes in research methodologies and constantly update your knowledge of security related issues - both national and international. It must be our collective endeavour to ensure that India remains at the forefront of the 'Knowledge Revolution' that will shape nations and societies in the future.

You must take good care of the available physical infrastructure and make optimum use of available human resource for the tasks ahead.

I once again congratulate all of you for the Foundation Day. I hope that you will continue to strive to make more meaningful contribution to security-related issues and take your organization to greater heights.

**062. Speech of External Affairs Minister Pranab Mukherjee at the High-Level Conference on "Asian Economic Integration: Towards an Asian Economic Community".**

**New Delhi, November 12, 2007.**

Dr. Arjun Sengupta,

Distinguished Delegates,

Ladies and Gentlemen:

It is a pleasure for me to be associated with this high-level conference. I am particularly delighted and impressed by the galaxy of distinguished participants who are present here. I believe this event is an important example of the kind of intellectual cooperation between Asian institutions and experts that is the need of the hour for promoting broader Asian regional cooperation. Our minds have to meet before our economies can and this gathering of Asian scholars is exactly what is needed to kick-start our efforts for realizing the Asian dream! I commend RIS for taking this initiative to

launch a long-term programme of networking with Asian think-tanks with the aim of providing a roadmap to Asian leaders and policy makers. It is also a very timely event as it comes on the eve of the third East Asia Summit scheduled for next week in Singapore.

When we talk of Asian economic integration and its potential, we often hear how the 21st century is destined to be the Asian century. A peep into Asian history will show that this is not as revolutionary a state of affairs as is sometimes presumed. The Asian continent was the centre of gravity of the world economy for much of the previous millennium. Various studies show that, in 1000 AD, Asia (excluding Japan) accounted for more than two-thirds of world GDP based on the strengths of the Chinese and Indian civilizations. Indeed, China and India were world leaders in terms of technological and economic development during most of the period from 500AD to 1500AD. Both countries constituted significant political systems and sophisticated economies, bolstered by well-developed industries, overseas trade and important advances in science and mathematics that led to some of the most important inventions of the time. Because of rising incomes in Western Europe, Asia's share by 1820 AD had come down but was still a substantial 56 per cent. It was only during the period 1820 to 1950, due to reasons that are well known to all of you, that Asian incomes stagnated and brought Asia's share in world GDP down to only about 20 per cent.

This situation underwent a change over the second half of the last century as Asia sought to retrieve lost ground. Indeed, the economic progress achieved by Asia in the fifty years since the end of the Second World War has been the fastest in human history. The Japanese example of rapid growth in the 1960s and 1970s was followed in rapid succession by the success stories of the Asian Tigers and 7% annual growth became a routine affair in East Asia. China has achieved an average growth rate of about 9% per year since 1980. In recent years, riding on the back of important measures of economic reform and liberalization, the Indian economy has achieved an average annual growth rate of 6% over the 1980s and 1990s and is currently growing at about 9% annually.

These developments constitute the backdrop of the vision that sees the center of gravity of the world economy shifting to Asia in the 21st century. You are all no doubt well-acquainted with the Goldman Sachs report, according to which, by the middle of this century, 3 of the world's top 4 economies will be in Asia, namely China, India and Japan. By the year 2010, 60% of the world's population in the 20-35 age-group is likely to be

Asian, contributing a vast pool of producers of goods and services and driving global demand. This will inevitably make Asia the fulcrum of economic activity in the 21st century.

Friends, if we look at individual economic performance, practically all Asian countries can point to a proud record. If at all there are lacunae in our record of economic performance, they are perhaps in the area of regional economic integration. Asian history suggests that there was vibrant trade, economic and cultural exchange between Asian countries in pre-colonial times. There is no reason why this experience cannot be replicated. The recent past has witnessed a series of attempts in precisely this direction. This is manifested in the setting up of Free Trade Areas like the ASEAN Free Trade Area (AFTA) and the SAARC Free Trade Area (SAFTA). In addition, China, Japan, India and South Korea are working with ASEAN on comprehensive economic cooperation pacts, covering free trade agreements to be implemented in the coming decade. There is a growing realization that we need an overarching framework for these important initiatives that help the countries of the region exploit the synergies between them for mutual advantage. Hence, proposals for a pan-Asian economic grouping such as that of an Asian Economic Community have begun to be discussed.

In India, we have always attached great importance to the concept of Asian unity and identity. The first Prime Minister of India, Pandit Jawaharlal Nehru, was perhaps ahead of his times when he saw the possibilities that Asian unity could offer. Many of the factors that drive Asian cooperation and interdependence today, such as globalization and trade liberalization, had not emerged in his lifetime. Nevertheless, he was clearly driven by a common vision of Asia when he spearheaded two important Asian movements of his time - the Asian Relations Conference in Delhi in 1947 and the Bandung Conference in 1955. It is significant that this conference marks the Sixtieth Anniversary of the Asian Relations Conference!

The dynamics of globalization and the growing economic potential of Asia justify the resurrection of that vision of Pan-Asian regionalism. Driven by this vision, India has been striving to strengthen relations with its Asian partners who are gathered under the umbrella of the East Asian Summit. We believe that such cooperation is economically logical and will help make this century the century of Asia. It was in this context, and with this vision of an Asian century that our Government unveiled the "Look East" policy in 1991, which is now a vital part of India's foreign policy.

The Look East policy has a strong economic rationale. With the two way trade of India with EAS countries crossing \$80 billion, East Asia as a region is today India's largest trade partner, ahead of EU and also ahead of the US. This region has also emerged as an important region for two way investment flows and other economic exchanges. Recent years have also seen India pursue a number of policy initiatives, bilaterally as well as multilaterally, with the countries of the region. This has taken place through our engagement with ASEAN, ARF, BIMSTEC, Mekong Ganga Cooperation, and now through the mechanism of the East Asia Summit.

These policy initiatives vis-à-vis East Asia are the logical consequence of our new economic policies, which emphasize openness and integration. An open and fast growing India has much to offer to Asia, helping knit the continent together in a manner never seen before. It is with this conviction that India espouses a vision of an Asian Economic Community that could drive Asia's emergence as the epicenter of the global economy. It is relevant here to recall the words of Prime Minister Dr. Manmohan Singh at the Third India - Asean Business Summit in October, 2004. He said, and I quote:

"Such a community would release enormous creative energies of our people. One cannot but be captivated by the vision of an integrated market, spanning the distance from the Himalayas to the Pacific Ocean, linked by efficient road, rail, air and shipping services. This community of nations would constitute an "arc of advantage" across which there would be large scale movement of people, capital, ideas and creativity. Such a community would be roughly the size of the European Union in terms of income, and bigger than NAFTA in terms of trade. It would account for half the world's population and it would hold foreign exchange reserves exceeding those of the EU and NAFTA put together". Unquote.

Friends, there is no doubt that it will take a great deal of time, energy and perseverance to translate this vision into reality. But we should at least start thinking about the idea and develop the roadmap for its realization. An important development in the direction of building a cooperative architecture in Asia is the East Asia Summit to be held in Singapore next month, with the participation of ASEAN, Japan, China, South Korea, India, Australia and New Zealand. This Summit could provide an important platform for initiating the process of creation of an East Asian Community. Such a Community could be an important step in the direction of creation of an "arc of advantage

and prosperity" that would act as an anchor of stability and development for Asia and beyond as articulated by Prime Minister Manmohan Singh and then Japanese Prime Minister Koizumi in the Joint Statement signed on April 29, 2005 during Prime Minister Koizumi's visit to India.

Studies by RIS and other institutions show that economic integration within the East Asian Community has the potential to generate billions of dollars of new output and thus serve as an engine of growth for the continent and the world economy. Monetary and financial cooperation in Asia, designed to mobilize the huge foreign exchange reserves of Asian countries for development of regional infrastructure, could have the potential of creating hundreds of billions of dollars of additional output while helping to overcome the infrastructural constraints for Asian development.

Asia, therefore, today stands at the cusp of exciting times, which hold a bright promise for our future collective endeavours. We share the responsibility to shape our collaboration to liberate the creative energies of the entire region. It is incumbent on us to put in place a political and economic architecture which is conducive to Asia's emergence as a pre-eminent region of stability and prosperity. Sixty years ago, delivering the inaugural address of the Asian Relations Conference in New Delhi, Pandit Nehru said, and I quote: "Strong winds are blowing all over Asia. Let us not be afraid of them, but rather welcome them; for, only with their help can we build the new Asia of our dreams. Let us have faith in these great new forces and the dream which is taking shape. Let us, above all, have faith in the human spirit which Asia has symbolized for these long ages past." Unquote.

Ladies and Gentlemen: India constantly seeks closer and wider engagement with her Asian neighbours and is willing to work with them to realize the aspirations and dreams that Pandit Nehru spoke of. Let us therefore work together to make the 21st century truly the Asian century.

I thank you for your attention and wish you success in your endeavors.

Thank you.

**063. Speech of External Affairs Minister Pranab Mukherjee delivered at New Delhi Haj Terminal for the Inaugural Haj Flight: November 12, 2007 for Haj Pilgrims.**

**New Delhi, November 12, 2007.**

Smt. Sheila Dixit, Honourable Chief Minister of Delhi.

H.E. Mr. Saleh Mohd. Al-Ghamdi, Ambassador of the Kingdom of Saudi Arabia to India Shri Iqbal Ahmed Saradgi, Hon'ble Member of Parliament and Chairman, Haj Committee of India and Members of the Haj Committee of India, Shri Raj Kumar Chauhan, Hon'ble Minister of Revenue and Development, Government of Delhi.

Hon'ble Members of Parliament,

Chairmen and Members of the Delhi State Haj Committee,

Distinguished Religious Scholars,

Members of the Media, Ladies & Gentlemen,

*Assalaam-o-Alaikum,*

On behalf of the Government of India and on my own behalf, I convey my best wishes to all the pilgrims who are embarking upon the pious journey for performing the Haj. The Government is happy to have facilitated the accomplishment of your cherished dream of performing Haj and for you to be able to pay respects at the Holy Mosque at Madinah. Haj is a precious gift from the Almighty Allah and all of you are fortunate that you have been chosen as his guest and permitted you to visit His House.

2. Government of India attaches the greatest importance to the fulfillment of the religious obligations of Indian Muslims and pays close attention to the arrangements made in India and Saudi Arabia to facilitate the Haj pilgrimage. Ministry of External Affairs, in collaboration with the Ministry of Civil Aviation, our Missions in Saudi Arabia, H.E. the Ambassador of Saudi Arabia, other agencies of the Government of India, the Haj Committee of India and the State Haj Committees have been working to take all necessary measures to provide and improve facilities and services for the pilgrims in Jeddah, Makkah Mukarramah, Madina Munawwarah and the Mina/Arafat areas.
3. With this aim my colleague, Shri E. Ahamed, Minister of State for

External Affairs, senior officials from the Ministry of External Affairs and the Ministry of Civil Aviation and Air India along with Chairman and Members of Haj Committee of India, have visited Saudi Arabia from time to time this year and have held extensive discussions with Saudi Arabian authorities and Saudi Arabian Airlines about various issues concerning our pilgrims. Shri E. Ahamed visited Saudi Arabia in May this year to sign the Haj 2007 Agreement. Accommodation of pilgrims in Saudi Arabia and their air transportation to and from India constitute two of the core Haj arrangements which are planned well in advance of the Haj. In order to provide maximum convenience and comfort to the pilgrims, it has been decided that, as in the previous years, only such buildings, which are suitable, are being hired for the stay of Indian pilgrims for Haj 2007.

4. During Haj 2007, India would be sending one of the largest contingents of Haj pilgrims 157,000. Of those going through the arrangements of Haj Committee of India about 59,000 pilgrims are being transported through Saudi Arabian Airlines; Air India would be carrying the remaining 51,000 pilgrims. Like last year, arrangement have been made for some of the Indian pilgrims to travel directly to Madinah Munawwarah and return directly from there. I am happy to note that Varanasi has been added as a new embarkation point from this year, in addition to the existing fifteen embarkation points for the Haj pilgrimage.
5. A significant aspect of the arrangements for Indian pilgrims for Haj 2007 is the enhanced use of Information Technology through computerization of pilgrim location and movement including all those who are going through private tour operators. Relatives sitting in India can now find out, through the website of the Indian Consulate General in Jeddah, the whereabouts of their relatives performing Haj and can communicate with them during their stay in Saudi Arabia. We are happy that this year, in all States except one, Qurrah, where required, was held through computers using the software provided by the Haj Committee of India.
6. The coverage of Cash Loss and Baggage Loss cases under the Accident Compensation Scheme, which was introduced during Haj 2004, continues. Haj Committee has also continued with the system of issuance of foreign exchange amount in Saudi Riyals in cash to the pilgrims at all the embarkation points in India itself. This system

has worked very well and helped the pilgrims to reduce the waiting time on arrival at Jeddah.

7. Keeping in view the problems faced by the pilgrims going through the Private Tour Operators, the Government started the registration of Private Tour Operators from Haj 2003. This has resulted in substantial decrease in the complaints received from the pilgrims. We continue to streamline the activities of the Private Tour Operators further for the overall welfare of pilgrims. As in the past year, the Private Tour Operators have been advised to provide coverage under the Accident Compensation Scheme to pilgrims being taken by them.
8. Indian Embassy in Riyadh and Consulate General of India, Jeddah have been entrusted with the responsibility of the arrangements made for the Indian pilgrims in the Kingdom of Saudi Arabia. In case of any difficulty during stay in the Kingdom of Saudi Arabia, the pilgrims are requested to approach the officials of the Indian Embassy/Indian Consulate who shall be available in Jeddah, Makkah Mukarramah, Madina Munawwarah and also at centers established at Mina/Arafat during Haj period. The Government of India is also deputing about 506 administrative and medical staff who along with the officers and staff of the Consulate General of India, Jeddah would try to ensure the provision of all requisite facilities to the Indian pilgrims. The Government is also facilitating the deputation of about 200 Khadim-ul-Hujjajs being sent by State Governments.
9. Improvement in Haj management is a continuous process. The Government and the Haj Committee of India constantly strive to make the Haj as comfortable as possible despite the magnitude of the logistics of movement, accommodation and air transport. On its part, the Government of the Kingdom of Saudi Arabia also makes every possible effort to improve the Haj arrangements. During Haj there is a congregation of more than thirty lakh pilgrims coming from all over the world. Despite such a large number of pilgrims, the Government of the Kingdom of Saudi Arabia has time and again exhibited that they are keen and capable of handling this job and provide their best facilities and services to the pilgrims. We are grateful for their support. During this spiritual and religious journey of Haj, I would urge you to kindly demonstrate exemplary patience, particularly while stoning at Jamarat, to be careful about your own security and that of your companions in the huge congregation.

From the time you leave for Haj pilgrimage till the time you return to your home, you are on the path leading to Allah. Your patience and forbearance would definitely prove rewarding. I would also request you kindly to pray for the welfare, peace and prosperity of our country.

10. Once again, on behalf of the Government of India and on my personal behalf, I offer my heartiest greetings to all of you and I extend my best wishes for a very successful Haj. May Almighty Allah reward you with a perfectly accomplished Haj.(Ameen).

Thank you,

Jai Hind.

**064. Speech of External Affairs Minister Pranab Mukherjee at the Inauguration of the New Campus of the Foreign Service Institute.**

**New Delhi, November 14, 2007.**

**"The World Today - An Indian Perspective"**

Foreign Secretary, Shri Shivshankar Menon

Dean Foreign Service Institute, Shri Surendra Kumar

Trainee Officers of the Foreign Service Institute,

Excellencies, Distinguished Guests,

Ladies and gentlemen.

The formal inauguration of these impressive new quarters of the Foreign Service Institute would have been a significant duty for me to perform on any day of the calendar. That it should coincide with the 118th birth anniversary of Pandit Jawahar Lal Nehru marks it as a particularly auspicious beginning. As independent India's first Prime Minister and Minister for External Affairs, Pandit ji not only played a critical role in shaping modern India's foreign policy, but also took a personal interest in the selection and training of Foreign Service officers. With him as the guiding spirit of this

institution, I am confident that the Foreign Service Institute is well-equipped to discharge its functions of training the coming generations of India's diplomats and imparting them the knowledge and skills they need to serve the nation in today's world.

The world that the alumni of this Institute are training to serve in is characterized by relentless change. The effects of this change are felt more keenly than ever before because the world today is also connected like never before. Interdependence is the defining characteristic of international relations today. The notion of power, critical to understanding international relations at any time in history, has also evolved significantly and the relatively new construct of "soft power" now attracts significant attention in foreign offices across the world.

The Indian mind is comfortable with change and connectedness. The enabling environment created since the mid-80s, and especially since 1991, has allowed India's entrepreneurs and professionals to leverage change and create wealth and employment on an unprecedented scale. In the same vein, the challenge before the Indian Foreign Service in today's interdependent world is to leverage India's unique soft power to sustain the right external environment and enable India to pursue her national goals successfully. I am confident that with the efforts of this Institute and with the backing of other significant actors in foreign policy, such as Parliament, media and academia, this is eminently possible.

The world today is unfortunately not only about expanding economic and technological horizons. There are dangers and pitfalls such as poverty, environmental degradation, constriction of political freedom and choice, growth of extremism and intolerance, international terrorism, proliferation of weapons of mass destruction and the risk of their falling into the hands of irresponsible actors, pandemics, energy security and climate change. Quite often, the manner of addressing some of these challenges poses a challenge in itself. For a large, diverse, developing democracy located in a region going through many painful transitions, these are not academic concerns, but real, daily issues. We have to respond to them energetically, creatively and in partnership with other actors on the international stage.

From our perspective, the primary challenge for the world today has to be the elimination of poverty and a radical improvement in the living standards of people in the developing world. Much of the industry in the developing world needs significant technology upgrades to become globally competitive. Agriculture faces challenges of productivity, technology, managing scarce

water resources and establishing marketing standards. Infrastructure needs a drastic overhaul. Access to predictable, affordable and environmentally sound energy resources, in particular, has emerged as a major bottleneck and must rank foremost in our priorities. A priority task of Indian diplomacy has to be the facilitation of the developmental process, promotion of trade and investment flows, securing predictable and affordable energy supplies and ensuring the widest possible access to technologies. While the primary development effort has to be national, we need to leverage international partnerships to the best possible effect.

The second challenge is institutional. While people are sovereign in choosing how to govern themselves, the Indian experience is that democracy is essential to the management of the diverse aspirations of a plural society. It is also undoubtedly one of the best tools to manage social change without upheaval and violence. As the world becomes more connected and interdependent, the diversity that we see at the level of individual nations will necessarily get more and more reflected at the global level. The management of this global diversity under conditions of interdependence would require the application of democratic principles to global governance as well.

India is not looking for new poles, but rather a pluralistic world order that is reflective of the diversity of the world today and accommodating of new players who can contribute solutions to tomorrow's problems. In this context, the composition of the UN Security Council too needs to come to terms with present reality and reflect future potential. This premier institution of global governance needs to be democratized and India needs to find its rightful place in an expanded Council.

Another priority has to be a significant diminution, if not outright elimination, of the threat of war and conflict. Peace and security are indispensable in confronting challenges that the international community will face in the coming years. In India, we are acutely aware of the ferment in our neighbourhood and the need to ensure a peaceful periphery for our and the region's development. Here again, international priorities blend with our national priorities.

Tighter inter-linkages and shared stakes do diminish the prospects of traditional conflict, but old sources of conflict are now being joined by new threats related to proliferation, terrorism as well as natural disasters and pandemics like HIV/AIDS or Avian Flu. Proliferation of weapons of mass destruction and the possibility of their falling into the hands of terrorists

must rank among the most critical challenges facing the world today. The issue cannot be addressed merely by focusing on supply-side technology controls. The so-called A Q Khan network made a mockery of these controls. A new approach is required, which also prioritizes disarmament. India has always pursued the objective of global disarmament, based on the principles of universality, non-discrimination and effective compliance.

Given its record of restraint and responsible behaviour, India's participation as a full partner in a new global consensus on non-proliferation would strengthen global efforts in this arena. Conscious of our responsibilities, we have adopted a comprehensive export control system, harmonized with international best practices, and reiterated our traditional commitment to nuclear disarmament through a Working Paper submitted to the United Nations General Assembly. We believe that a good beginning would be to formalize a no-first use agreement internationally as a step towards delegitimizing nuclear weapons. This approach was adopted in 1925 in the Geneva Protocol on chemical and biological weapons and ultimately led to their elimination.

Finally, from my perspective, an essential priority for the world today has to be a new consciousness, not just among the political elites, but also among the peoples of the world, that their choices and their actions affect all others on this planet. This consciousness is what would break down the barriers to greater global cooperation and lead to the structures and processes that are needed to address international challenges such as climate change and energy security. And this is where the voice of India's diplomats can best be heard. However, this is a subtle task. A narrow consciousness can hardly be the best communicator of a global consciousness. Therefore, I would call upon our future diplomats to reflect the best of Indian civilization when interacting with the world.

In the timeless words of India's 'best' diplomat, Krishna, a diplomat's speech "should not disturb the mind of the listener; it should be precise with correct use of language; and again, if possible, it should be of utility to the listener."

With the hope that some of what I have said has been of some utility to those gathered here today, let me conclude by congratulating the officers and alumni of the FSI on gaining these new premises. May the FSI's new portals welcome and train a new generation of diplomats destined to take India to loftier heights.

Thank you.

**065. Extract from the speech of Prime Minister Dr. Manmohan Singh at the All India Congress Committee Session.**

**New Delhi, November 17, 2007.**

We are meeting here at the AICC Session today after a gap of almost two years. We last met in January 2006 in Hyderabad where we had discussed the working of the party and the Government. We had also taken many important decisions. In the intervening twenty two months, there have been many events, many elections. The Government has taken important steps on many fronts. There have been controversies on some issues as well. This is an opportune moment for all of us to reflect on the prevailing situation in the country, in the party and in the Government and think about the action we need to take in the future.

\* \* \* \*

I would like to remind you of the conditions that prevailed across the length and breadth of the nation a few years ago. Do think about the conditions prior to 2004. Communal tensions were at their peak throughout the country and attempts were being made to divide people on the basis of religion, caste, language and religion. There is no need to remind you of what happened in Gujarat in 2002. As far as the law and order situation is concerned, terrorism was spreading across the country. The hands of terrorists could reach anywhere – be it Raghunath Mandir in Jammu, be it Akshardham Temple in Gujarat or be it our Parliament itself. Farmers were groaning under a burden of debt and in some states, there were waves of suicides going on. The economic condition of the country was not better either. Agriculture, rural areas, education, health care and backward regions were all neglected by the Government. As for foreign policy, our relations with our neighbours were going through ups and downs. On one hand, there were attempts to promote peace at Agra and Lahore and on the other, there was war in Kargil. All this was branded as 'India Shining'. Shining for whom? Shining for which region? Shining for which class of people?

\* \* \* \*

On the external front, our Government has been successful in maintaining harmonious and friendly relations with all our neighbouring countries, with major powers of the world and with the countries of the Middle-East, Africa and Asia. We are in the process of finalizing a historic agreement with the United States which will enhance our prospects of increasing the production

of nuclear power. There are doubts and misgivings in many minds about this agreement. If we see the pace at which our economy is growing, it becomes apparent that we will have to expand our power generation capacity on a massive scale. It is also apparent that it will be impossible to fulfill our needs solely through thermal and hydro electric power. We need to locate new sources of energy if we want to maintain our growth rate and we want to eliminate poverty. One possible source is nuclear power. This route has, so far, been closed. The Civil Nuclear Agreement is an effort to open closed doors so that we can obtain nuclear fuel and technology from other countries, such as USA, Russia and France, and remove the shortage of electricity in the country. You need to understand this reality and explain it to our people.

We have had a historic and long-standing relationship with the countries of the Middle-East and the Persian Gulf. Over fifty lakh citizens are working there for their livelihood. We have always sought peace in this region – be it Iraq, be it Iran or be it any other country. The bulk of our petroleum and energy requirements come from this region and our energy security is critically dependent on the conditions there. It has been — and will be — our effort to reduce tensions there and promote peace and harmony. We have also improved our relations with China, Pakistan, Russia, European Union, ASEAN, Japan and other countries. With Pakistan, it has been our consistent effort to improve our relations, to promote freer movement of people and to expand trade and economic relations. I have always believed that the destinies of our two nations are linked. Both nations should realize that terrorism and religious fundamentalism are common challenges to both the countries and are dangerous to peace and prosperity in the region. Therefore, it is essential that we co-operate to promote peace. It has been our effort to ensure that we have an environment of peace and harmony all around us so that the development options available to us can expand.

Brothers and Sisters,

All that I have said so far does not imply that there is nothing else to do. We have only created a new architecture of development, started new programmes and vastly expanded government expenditure. We need to now ensure that all these programmes run efficiently for the next five to ten years, that implementation is effective and that funds given to States are utilized in a proper manner. We have to ensure that the benefits of the expansion in health and education programmes reach every citizen of the country. The programmes begun for the welfare of women, scheduled

castes, scheduled tribes and minorities should reach every nook and corner of the nation. The Government needs to work hard in this direction. It is the solemn duty of every one associated with the Government – Ministers, peoples' representatives and employees – to work hard till the desired results are not achieved. State Governments should work hard to counter naxalism, terrorism and communal forces and promote an environment conducive to development. Congress party workers should take the lead in all these matters. We should ensure that poverty alleviation and improving the conditions in our rural areas remain at the forefront of all our efforts.

**066. Extract from the Resolution adopted by the All India Congress Committee relating to foreign policy issues.**

**New Delhi, November 17, 2007.**

1. The AICC congratulates the President of the Indian National Congress, Smt. Sonia Gandhi for her sustained efforts and endeavours that have resulted in the UN General Assembly declaring October 2nd as the International Day of Non-violence. While there is worldwide appreciation for the enhanced relevance of Gandhiji, there are ideologies and individuals in our own country who heap abuse on him, on his memory and his achievements as a unique political leader and bold social reformer. The AICC meets at a time when Gandhian ideas and ideals are under severe assault. The AICC calls on Congressmen and women across the country to remain vigilant and thwart these nefarious designs with all their might. The AICC recalls here that the 75th anniversary of the historic Poona Pact, which fell just two months back, and that paved the way for the social emancipation and political empowerment of *dalits* (and *adivasis*) in our Constitution, was made possible by an agreement between Mahatma Gandhi and Dr. Babasaheb Ambedkar. The AICC also recalls here that while piloting the Constitution in the Constituent Assembly on November 25, 1949, it was Dr. Ambedkar who had said that the Constitution would not have been possible without the Congress and its visionary leaders. The legacy of the Father of the Nation is under siege in his own home state and it is the bounden duty of every Congressman and woman to see to it that Gujarat of Gandhiji is rescued from the clutches of those who have been brought up in the ideological

shadow of Nathuram Godse. The AICC calls upon the Congress-led UPA government to revitalize all Gandhian institutions and make them vibrant institutions of social change once again.

\* \* \* \*

26. The AICC lauds the Congress-led UPA government for taking a number of important initiatives to enhance India's standing in the world community. Our Prime Minister has given India's foreign policy a new boost, both by his personal standing and his vision. The AICC welcomes the Prime Minister back from his successful visit to Russia earlier this week, which has given our bilateral relationship a new direction. This time-tested strategic partnership is of vital significance and extends to various aspects of human activity ranging from high science to culture, from defence to energy, from space to nuclear energy, reflecting the quality and depth of India-Russia ties.
27. Recently, the Congress President has returned from a very successful visit to China where she was accorded the rare honour of being the first foreign leader to meet with the top Chinese leadership after the Congress of the Chinese Communist Party. Her speech at Tsinghua University was widely acclaimed in China and the AICC congratulates her for this. Together, India and China have an opportunity with the other major powers, to contribute to an improvement in the world situation. The relationship between the two countries has deepened ever since Rajiv Gandhi's epoch-making visit in December 1988.
28. The AICC congratulates the Congress-led UPA government for setting up a full-fledged Ministry of Overseas Indian Affairs. It welcomes the initiatives being taken by this Ministry for the welfare of Indian workers in West Asia. The AICC applauds the outstanding achievements of Indian scientists, doctors, engineers and other professionals in countries like the USA, UK and Germany. At the same time, the AICC salutes the hard work and toil of lakhs of Indian workers in West Asia who have earned a name for themselves by their diligence and who are a major source of remittances to their families in India which helps in the growth of our economy. The AICC places on record its appreciation of the Prime Minister's personal efforts to build a new economic and strategic relationship with countries of West Asia. Expanding ties with countries like Saudi Arabia and the UAE is particularly significant.

29. The AICC recalls that right from the days of Jawaharlal Nehru, the Congress has remained unwavering in its support to the Palestinian cause. The Congress has always supported the establishment of a sovereign, independent viable state of Palestine, within well-defined and recognized borders, living side-by-side at peace with the state of Israel through a negotiated solution to the conflict there. The AICC calls upon the Congress-led UPA government to expand its aid and emergency relief programme to the Palestinian authorities.
30. The AICC appreciates that India's Look East policy is leading to closer political and economic relations with countries of Southeast Asia with whom India has had intimate cultural links in centuries gone by. The AICC wants to impress upon the Congress-led UPA government that India's Look East Policy will be truly meaningful when it begins to have a demonstrable impact on the states of our Northeast.
31. The AICC recognises that many of our neighbours are passing through difficult internal transitions. The situation in Pakistan is a matter of grave concern since anarchy, terrorism and extremism have an immediate effect on us. The AICC believes in a stable, peaceful and democratic Pakistan. The AICC hopes that the situation in Pakistan will return to normal soon and the India-Pakistan dialogue process can be resumed with full vigour sooner than later. The AICC hopes that the people of Nepal will have an opportunity to choose their own future and the nature of the institutions that will govern them through early elections to the constituent assembly. Bangladesh too is attempting a difficult process back to democratic normalcy. The AICC would like Bangladesh to continue on the path of democracy and secularism. The AICC notes with concern that peace and an internal constitutional settlement acceptable to all communities within the framework of a united Sri Lanka has still not been achieved. The Congress-led UPA government's efforts towards this end should continue. The LTTE, categorized internationally as a terrorist outfit, deliberately assassinated our beloved leader in a brutal manner. The sentiments of all Congressmen and women especially are bound to get hurt if the LTTE is eulogised in any manner. AICC notes with satisfaction that relations with Bhutan have been consolidated and improved and are reflected in the new India-Bhutan Friendship Treaty signed in February 2007. The AICC welcomes the dialogue process in Myanmar and hopes that normalcy will return to Myanmar soon.

32. India today has strategic partnerships and relations with 12 countries and the EU. India has strategic dialogues with Brazil, China, the European Union, France, Germany, Iran, Indonesia, Saudi Arabia, Japan, Russia, South Africa, UK , USA and Vietnam. These are consistent with India's pursuit of non-alignment as a means of expanding India's strategic autonomy and freedom of choice. For instance, India's defence ties with countries in the region and beyond have continuously increased over the years as our armed forces and our defence production gain recognition as among the best in the world. India conducts joint exercises, training and other activities with a number of countries including Russia, China, the USA, Japan and the countries of South East Asia.
33. The AICC calls upon the Congress-led UPA government to take all steps to deepen economic and political engagement with African countries. The Prime Minister has visited South Africa and Nigeria and is soon to visit Uganda. This is a continent with which the Congress Party has always had a special relationship.
34. International cooperation on our terms within an overall framework of self-reliance has always been the founding principle of our nuclear programme that is a precious legacy of Jawaharlal Nehru. In this context, the AICC welcomes the nuclear cooperation agreement with the USA. It is convinced that it will end India's isolation in the international nuclear community and will enable it to access technology more easily so as to significantly increase the contribution of nuclear energy to our electricity supply over the next two decades. The AICC has no doubt that the nuclear agreement protects India's fundamental strategic interests in every way.
35. Even as our credible minimum nuclear deterrent is maintained purely from the point of view of securing the country's defences, the AICC recalls that the commitment of the Congress to comprehensive, universal nuclear disarmament has been both profound and steadfast. We have never compromised in this belief even as strategic compulsions have forced us into nuclear weaponisation. In this connection, the AICC also calls upon the Congress-led UPA government to actively build upon the Rajiv Gandhi Action Plan for a Nuclear Weapon-Free and Nonviolent World Order that was submitted to the UN General Assembly in June, 1988.

36. The AICC has always believed in a foreign policy that upholds and promotes the interests of India. It condemns the efforts of some political parties to give a communal colour to our foreign policy. The AICC would like to remind the people of the country that it was the letter of June 2003 of the Congress President to the then-Prime Minister Shri Atal Bihari Vajpayee that stalled the dispatch of Indian troops to Iraq when the BJP-led NDA government had all but decided to do so. No country has suffered as much from terrorism as India has over the past two decades and a half and no country has a great stake in the elimination of terrorism as India has.
37. The AICC wants to put on record that from August 15, 1947 it was the Congress leadership that put in place a foreign policy of peace, non-alignment and autonomous choice, based wholly on national self-interest, expanding India's strategic autonomy and capability. This has been the guiding principle for the Congress-led UPA government. In an international situation marked by simultaneous competition and cooperation among the major powers, and of unprecedented interdependence created by globalization, representing both a threat and an opportunity for developing countries, the government led by the Congress Party has steadily improved India's relations with all important countries and has reinforced our country's distinctive position in world affairs, a position that goes back to the days of Gandhiji and Jawaharlal Nehru. The Congress Party needs no lessons from anyone in pursuing India's independent foreign policy.

**067. Press Conference of Prime Minister on board the special flight enroute to Singapore.**

**November 20, 2007.**

**Q-1. On Free Trade Agreement**

Well, there are some problems in giving final shape to the Free Trade Agreement with the ASEAN countries. These essentially involve the extent of concessions we can give on some sensitive products. We hope to can sort these out.

**Q-2. On Myanmar**

**Ans** - Myanmar is our neighbour, what goes on there has an important bearing on our own country as a number of insurgent groups take advantage of the instability in Myanmar to indulge in unlawful activities in our North East. Therefore we have a strong interest in a stable, prosperous and peaceful Myanmar. We have supported the role of the United Nations in bringing about a national reconciliation between the Government of Myanmar and Ms. Suu Ki. And I sincerely hope that that dialogue which is progressing will yield a satisfactory outcome.

**Q-3. “Look East Policy” and FDI in North East**

Well, this is an ongoing process. We need more foreign direct investment, not only in the North East but also in other parts of the country, wherever there are opportunities of attracting foreign direct investment on terms and conditions which suit us. We will make India an attractive proposition for foreign direct investment.

**Q-4. On the delay in concluding the Nuclear Agreement**

There has been some delay – I can't deny it. But I still hope that the process of bringing about a viable national consensus will yield results. So I have not given up hope that we can reach a final satisfactory outcome.

**Q-5. On meetings with Presidents of Malaysia and Indonesia at ASEAN summit**

We will discuss all bilateral issues. I can't tell you right now what we will discuss. All relevant bilateral issues are raised in these meetings. I have an opportunity to meet our colleagues from ASEAN once a year. I find that

it is a fruitful way of interacting with our neighbours. Bilateral trade and trade with ASEAN is of prime importance to us. I will discuss these issues.

\* \* \* \*

**Q-8. On FTA.**

I mentioned already , with regard to some sensitive agricultural products we have some demands that are being made that can adversely affect our subsistence farmers and certain crops. We are trying to persuade our ASEAN friends. I am hopeful that the process will reach a satisfactory outcome.

\* \* \* \*

**Q-10. ASEAN + 3 to ASEAN + 6 ?**

**Ans** – We would like ASEAN plus 6 that is the East Asia summit .... Well we have had two successful summits in the past and this is the third summit. We would like the process to gather momentum.

\* \* \* \*

**Q-12. Are you hopeful that the nuclear safeguards agreement will be brought to the UPA coordination committee this year.**

**Ans** - Well I hope as soon as possible. The negotiations are going to begin with the International Atomic Energy Agency. I hope they can be brought to a successful conclusion. We will bring them back to the Left –UPA coordination committee.

**Q-13. No finalization of deal with Russia on nuclear reactors?**

**Ans** – Well let me say that what is stated in some newspapers is not the truth. We have entered into an MOU with Russia on Koodankulam for additional reactors. But it has been made known to us that that agreement can be operationalised only if we have any India specific safeguards agreement with the international atomic energy agency. And also if the Nuclear Suppliers Group gives India the exception form their respective guidelines. So therefore since there has been some hitch in finalizing the India safeguards agreement with the IAEA and we are yet to go the NSG so it was felt that it will be premature to sign an agreement which we cannot operationalize. We have been discussing with Russia and it is agreed that these four reactors will be installed as soon as we have an India specific

safeguards agreement and as soon as the NSG says okay. ***Intervening question*** – so the 123 agreement and the Russian deal are linked. Well it has always been understood as such by us as well as the Russians.

**Q-14. On Pakistan**

Well I don't like to comment on the internal affairs of Pakistan. I have said on more than one occasion that the destinies of our two countries are interlinked. A prosperous, stable, peaceful and democratic Pakistan is in our interest. I sincerely hope the difficulties through which Pakistan is passing are resolved and they find pragmatic, practical and effective means of solving their problems.

**Q-15. Russian N Deal**

Ans - Well, I discussed this matter with President Putin now and in the last two years. Russia has been very very supportive of India. They are supportive of India in dealing with the IAEA and also we have the assurances of their support when the matter goes before the NSG.

**Q-16. On China's support at NSG.**

Ans –Well, I think the Chinese have not said that they would not support us.

\* \* \* \*

**Q-18. On road link with South East Asia**

**Ans** - It is not a unilateral process, We need their help, for example the road will have to pass through Myanmar. We need the consent of the government, we need more stable conditions. I sincerely hope that we can work together with all relevant authorities to expedite the work.

\* \* \* \*

**068. Remarks by Prime Minister at the Asian Civilisations Museum Exhibition “On the Nalanda Trail: Buddhism in India, China and Southeast Asia”.**

**Singapore, November 21, 2007.**

Excellencies, Ladies & Gentlemen,

I am very pleased to join my distinguished colleague and good friend, the Prime Minister of Singapore, in welcoming you to this extraordinary exhibition on Nalanda.

I extend a special welcome to the leaders of the European Union present here. We seek your support in making the initiative on Nalanda a success.

The Nalanda University was a part of the intellectual life of Asia for over seven centuries. It was one of the first great Universities in recorded history, and one of the world's first residential universities. The university was an architectural masterpiece, attracting students from China, Japan, Korea, Persia and Turkey.

Through the exchange of scholars and the spread of ideas, the University made an invaluable contribution to international understanding.

Earlier today, we have discussed our collective efforts to revive the Nalanda University as a centre of cross-cultural understanding and learning. There is much we can learn from each other.

We recognize the contribution of the Mentor Group, whose recommendations provide a roadmap to recreating a unique international institution and preserving a common cultural heritage.

Nalanda will focus on becoming a centre for excellence for research and teaching with an emphasis on postgraduate studies. It will have departments for philosophy and Buddhist studies, regional history, business and management studies, international relations and peace studies and study of languages. It will be established as an international university through an international treaty.

This Exhibition has recreated the spiritual and physical splendour of Nalanda. It comprises 116 of the most precious art objects from four prestigious Museums in India, which have been specially sent to Singapore. The artifacts include rare paintings and bronze and stone sculptures. There are great

masterpieces like the Nalanda Copper Plate, depicting the royal patronage to the Nalanda University, and the Sacred Relics of the Buddha himself.

The Exhibition covers all the eight important events of Buddha's life, which relate to the eight important Buddhist pilgrimage sites in India. By doing so, it brings to life Buddha's message of compassion, tolerance and contentment. It is a poignant reminder of the rich cultural heritage of our region.

The Exhibition truly brings a very memorable day to a most appropriate conclusion.

The Third East Asia Summit has emerged as an important forum for dialogue on issues of common interest and concern. The EAS process is an ideal vehicle for promoting peace, stability and economic prosperity in East Asia. The promotion of greater people-to-people contacts and cultural understanding is one of its important objectives. This Exhibition will go a long way in achieving this goal.

I would like to convey our sincere gratitude to the Government of Singapore for seeking to recapture the spirit of Nalanda, and the Asian Civilisations Museum for making it a reality.

Thank you.

**069. Inaugural address by Vice President M. Hamid Ansari at the Third International Congress of the Asian Political and International Studies Association at Academic Research Centre, University of Delhi.**

**Delhi, November 23, 2007.**

Vice Chancellor,

Professor Neera Chandhoke,

Distinguished participants in the Third Congress of the Asian Political and International Studies Association,

Ladies and gentlemen,

I confess I did not understand until quite recently the import of the adage 'accept in haste, repent at leisure'. The point was driven home to me when, some weeks after having accepted Professor Chandhoke's invitation, I started thinking about the implications of the commitment and was gripped with trepidation at the prospect of standing before an audience of distinguished political scientists to expose the inadequacy of my thought process on so weighty a subject.

Having unburdened my conscience, let me thank the organisers of the 3rd Congress of APISA for conferring on me the privilege of inaugurating your conference. I am happy to do so, confident in the knowledge that your deliberations would clarify and amplify concepts and further understanding on a subject of crucial relevance to social well being.

I notice that since its inception, your Association has structured its work on the specific theme of Asia in New Millennium. This makes sense since yours is an ASIAN association and rightly retains the focus on Asia, more so because the misfortunes of Asian history for a few centuries not only subjected it to colonial and neo-colonial domination but also ensured intellectual subordination by making the world Euro-centric. Terms like the Near East, Middle East and Far East entered the political vocabulary and Orientalism became an intellectual industry.

The focus on Asia has helped APISA explore specific areas of the Asian experience. The 1st Congress dwelt on development, democracy and security. The 2nd Congress focused on aspects of governance. The theme of this 3rd Congress is Asian concepts of justice.

I am, I confess, enthused by the theme and intrigued by it. The concept of justice is integral to social well being; for this reason, it must be reiterated on every possible opportunity. It is also in the category of universal values, rather than location-specific. Talk of an Asian concept may, therefore, convey an impression that there is something specific by way of a value addition or value subtraction. This, presumably, is not intended.

The primacy of Asia in terms of religious or ethical traditions is a matter of recorded history. Virtually all the world religions - Hinduism, Judaism, Zoroastrianism, Confucianism, Buddhism, Christianity, Shinto, Jainism, Islam and Sikhism - emanated in Asian lands. Each has an ethical system and thus an approach to the concept of justice. Even if we take Toynbee's categorisation of twenty one societies for his comparative study of civilisations, we find a majority of them emerging from Asia.

Let us take a closer look into the subject matter. The human being is a social animal. Living in society necessitates social arrangements that determine the division of responsibilities and ascribe rights and duties. Such an allocation is made on a basis that is broadly acceptable; this is considered the principle of social justice. In ancient Greece, Plato set out to enquire into the nature of justice and injustice and found justice to be the bond that holds society together. Aristotle amplified it in a statement of universal validity: "justice is the bond of men in states, and the administration of justice, which is the determination of what is just, is the principle of order in political society". Devoting a whole section of Nicomachean Ethics to it, he defined just behaviour as "a mean between doing injustice and suffering it".

The critical question for Aristotle, and for every society in history, was the determination of what is considered just – its median and its extremities. Plato concluded that justice is a public and private virtue, "best for the soul" irrespective of the rewards that may accrue "both in life and after death".

The quest for the nature of justice, however, was much older. The Indic world considered justice as synonymous with righteousness. In Mahabharata the sage Vamadeva stresses the need to act righteously: "There is nothing superior to righteousness. Those kings that are observant of righteousness succeed...That king who disregards righteousness and desires to act with brute force, soon falls away from righteousness and loses both Righteousness and Profit". In practical statecraft, Kautilya, in the second century A.D., could prescribe dispensation of justice as the duty of the King, adding that this was to be undertaken on the basis of Dharma, Evidence, Custom, and Royal Edicts. In this framework, ethical

value is attached to Dharma which is based on truth; its observance, said Kautilya, leads to eternal bliss and its transgression to chaos.

Instances of considering justice as a religio-ethical notion, elsewhere in Asia and in different epochs, can be multiplied. The Muslim approach, for instance, was no different. The Qur'anic injunction "judge with justice" led to the conclusion that injustice is transgression. It is the counterweight to arrogance. Justice, said a medieval jurist, is the maintenance of the mean or of the just middle. It introduces, in Aziz Al-Azmeh's words, the notion of normative equity "not of equality or equivalence but of optimal proportionality among the unequal and uneven components of a composite".

## II

Inherited tradition is one thing, albeit relevant and important. In the context of the contemporary world, however, it confronts three questions:

- To what extent has it been transmitted to modern societies in Asia and translated into state practice in a secular paradigm?
- How far does it conform to the global norms that have emerged in our times?
- To what extent have the new global norms been imbibed in Asian societies?

On a theoretical plane, and given the differences over the ultimate nature of good and bad in politics, a rational and practical basis for what is just needed to be worked out. The position was stated by the philosopher John Rawls:

"The unity of society and the allegiance of its citizens to their common institutions rests not on their espousing one rational conception of the good, but on an agreement as to what is just for free and equal moral persons with different and opposing conceptions of the good".

Dwelling on the role of justice in social cooperation, Rawls argued that "justice is the first virtue of social institutions" that take "the liberties of equal citizenship as settled"; as a result, "the rights secured by justice are not subject to political bargaining or to the calculus of social interests".

The modern concept of justice received international recognition in the Universal Declaration of Human Rights of 1948. It proclaimed "a common standard of achievement for all peoples and all nations", asserted equality before the law and equal protection of the law. These were amplified in the

International Covenant on Civil and Political Rights and other international documents.

Any analysis of contemporary Asia, devoid of its modern history, would be partial and inadequate. The year 1498 marked the coming of the Portuguese. An Asian awareness of that seminal event was slow in coming. The new comer, however, realised it comprehensively and formalised it by an addition to the titles of the King of Portugal: “Lords of the Conquest, Navigation and Commerce, of India, Ethiopia, Arabia and Persia”. Other conquerors followed and had different patterns of influence. All had a profound impact on the inner structures of Asian societies and upset the equilibrium of pre-modern institutions. Assessing the longer term impact of European imperialism, the historian K.M. Panikkar concluded that “the first and perhaps the most abiding influence is in the sphere of law. In all Asian countries the legal systems have been fundamentally changed and reorganised”. This process involved a re-look at the principles of governance and a re-arrangement of institutional arrangements to give shape to them.

The most visible evidence of this was in India. In a book published in 1951 Sir Earnest Barker reproduced on its first page the Preamble of the Constitution of India and explained his reasons for doing so. “I am proud”, he wrote, “that the people of India begin their independent life by subscribing to the principles of a political tradition which we in the West call Western, but which is now more than Western”.

The ambit of the Preamble is comprehensive and interlinked. It is reflective of the sovereign will of a people to acquire for themselves the virtues in totality of justice, liberty, equality and fraternity. The operative line, for our argument today, is the commitment to secure to all its citizens Justice, social, economic and political. This expression has been the subject of commentary and judicial interpretations. One knowledgeable commentator expressed it succinctly:

“The expression ‘social and economic justice’ involves the concept of ‘distributive justice’ which connotes the removal of economic inequalities and rectifying the injustice resulting from dealings and transactions between unequals in society...the ideal of economic justice is to make equality of status meaningful and life worth living removing inequality of opportunity and of status – social, economic and political”.

He argues that the doctrine of equality embodied in Arts. 14 to 18 of Part III

(Fundamental Rights) is to be understood in the light of social justice assured by the relevant Articles of Part IV of the Constitution. On this basis, therefore, social justice is a fundamental right.

It can be said, with some justice, that six decades of independent India have been a journey to actualise the concept of social justice visualised in the Constitution. In the process, content has been added and the concept amplified. The debate is premised on contemporary, secular, norms of inclusive justice and does not seek sustenance from traditional concepts rooted in religion or tradition. While much has been done, the task as yet remains unfinished.

### III

So much for the 'Plural Conception of Justice' and 'Social Justice'. But what about the issue of Transnational Justice – the third theme of this Congress. Because of associations rooted in history and culture, reinforced by the shared experience of colonial domination, the thought of an Asian dimension to the nationalist awareness of emerging India was not a strange one. An expression of it was the Asian Relations Conference of March-April 1947. A sense of Asian-ness emerged in India and, possibly, in other Asian lands. In 1997, the golden jubilee of that historic gathering was celebrated by convening another conference. At the end of it the delegates felt that "unless there is political and social understanding, economic cooperation is difficult to achieve and, for the attainment of the objectives of freedom, equality and justice a new international system characterised by an absence of want, fear and all forms of intolerance and based on peace, justice, equality and respect for freedom of all is essential".

The association of expressions 'freedom', 'equality' and 'justice' with the quest for a new international system is indicative both of a lacunae and of a desire to fill it in terms of the international system. Does this suggest an acceptance of universal norms in these matters? If so, has the theoretical framework for it been put into place? How far have individual Asian societies moved on the road to implementation of these norms. There are many in this audience who are in a position to answer these questions in generic and specific terms.

There is one other aspect of the matter. In Asia, there is a justifiable frustration about selective application of the existing modes of transnational justice. The provisions for robust international intervention in conflict situations in Asia are unevenly applied. In today's age of globalisation,

domestic conceptions of justice as applied in democracies of the West must find application in the larger international arena. There can be no apartheid in the application of justice.

The matter goes beyond the realm of political theory. For several centuries, the history of the world was also the history of the suppression and domination of Asian lands. The termination of that process, in the middle of the 20th century, was the first step in the correction of that historical distortion; much more, however, needs to be done to prepare Asian lands to take their rightful place in the comity of nations and contribute in full measure to the development of a world that eschews the doctrines of dominance and, instead, tries to live by principles of cooperation. Economics is one aspect of the matter: Asia's share of global trade climbed from 16 percent in 1980 to 27 percent in 2003 and economists predict that Asia would provide the growth engine to world trade. They also opine that this would necessitate greater importance being given to corporate governance.

However, can good governance be selective and confined to sectors of human activity? Also, can governance be good without conceptual clarity about what is good? Is it possible, over a longer term, to govern the business sector on norms of fair play and mutual advantage while denying it to all segments of society that contribute to economic activity?

Whichever we look at it, selective good and selective justice is a recipe for trouble. A conceptual framework for justice, therefore, has practical implications and can only be viable if it is inclusive – at the societal, national and international levels. Asian societies, drawing upon their extensive heritage, undoubtedly would come to this conclusion and conceptualise it appropriately.

I wish the Congress success in its endeavours.

**070. Inaugural Address by External Affairs Minister Pranab Mukherjee at the valedictory function of the International Conference of Forum of Scientists from South and South-East Asia.**

**New Delhi, November 29, 2007.**

His Excellency Dr. A.R. Kidwai, Governor of Haryana,

Mr. Koichiro Matsuura, Director General of UNESCO,

Excellencies, Distinguished Guests, Ladies and Gentlemen,

I am delighted to be here today to address this distinguished gathering of scientists, technologists, educationists and policy makers of South and South-East Asia. Please allow me to begin by thanking Dr. A.R. Kidwai for this timely initiative on capacity building in science and technology.

I am happy to see that this Conference is being attended by distinguished participants from India and our Asian neighbours. I am sure this would have provided you all with an excellent opportunity to share regional concerns, experiences and future plans for the integrated development of the South East Asian region in the field of science and technology.

More than half a century ago, Pandit Jawaharlal Nehru saw India as being the pivot around which issues relating to the economic development in South East Asia would have to be considered. India's "**Look East policy**", which we are pursuing vigorously in the Ministry of External Affairs, is not merely an external economic policy but is also a strategic shift in India's vision of the world and its place in the evolving global economy. It is a concerted effort to reach out to our civilisational neighbours in the region who, by emerging as regional economic power houses, have placed before us a model worthy of emulation. Therefore this Conference, which has brought together the scientists, technologists, educationists and policy makers of this region, is of great interest to me.

Excellencies, Distinguished Guests,

India has a long and glorious tradition of scientific thought and technological innovation. **Aryabhatta's** contribution to the field of astronomy and *Heliocentric theory of gravitation* in the 5th Century, **Varahamihira's** expansion of the theory of gravity followed by **Brahmagupta's** contribution to the concept of *ēzeroī* and *decimal system*, which were later perfected

by Arab mathematicians, gave the world its current system of enumeration which we call the Arab numerals and which were originally the Indian numerals. It is reported that way back in 1660-70, India exported *iWootzís steeli* made in **Deccan** to Western Europe for making the famed *Damascus swords*.

In the modern India, we are proud of the achievements of our IT industry, space research organizations and our national laboratories. Indian Industry has shown great enterprise in reaching new heights in bio-technology and medicine. We have a fast growing and resilient manufacturing sector which is competing with the best in the world.

Excellencies, Distinguished Guests,

Science and technology are no longer specialized enterprises confined to laboratories and factories. They have become intertwined with each other and with human society. I have followed with interest the long standing debate between the “**curiosity driven basic research**” and the “**targeted research**” specifically designed to produce a desired product. [*Here I am referring to an article by Jerome Kerle, 1985 Nobel Laureate in Chemistry.*] While there is no denying the fact that fundamental research provides the fertile ground for a rich technology harvest, it is equally true that the policy makers have to think of directing research and development to priority areas, national competitiveness and strategic goals. We do recognize the uncertainties in the process that starts with basic research and may or may not lead to economically successful technologies. In science and technology it is not possible to talk of time frames but history has shown that focused basic research leads to development of products and services, sometimes unintended ones, which benefit the masses. While the “**curiosity driven basic research**” must keep on receiving our support, I would like to urge upon our scientists and technologists to innovate and develop technologies that will improve the quality of life of our people. As we move ahead on a growth trajectory of 9% GDP growth per year, it is essential for us to ensure that the fruits of this growth reach our billion plus population.

Excellencies, Distinguished Guests,

On-going processes of globalization of world economy and integration of markets have led to organized effort on the part of scientists, technologists and other members of the knowledge society to mobilize their efforts to accelerate the pace of development. We must integrate scientific development and sustainable growth and foster scientific temper among the people. Our economic and social programmes must move in tandem with R&D activities in science to provide our people with the wherewithal to fulfill their aspirations for

a richer life and help us achieve the millennium development goals.

The progress of any nation today depends greatly on the quality of its human resources. Our huge reservoir of highly skilled and well trained scientific and technical manpower is now spread all over the world. To extend the reach of higher education, India has and is in the process of establishing more educational and training facilities, at a level commensurate with the best international standards. We seek to further promote this by inculcation of scientific temperament through school curricula and development of new age skills.

Excellencies, Distinguished Guests,

We live today in an increasingly interdependent world. International cooperation in science and technology offers exciting opportunities in this globalised world. We need coordinated international efforts to address common technological issues. It is imperative for nations to join hands to establish large-scale scientific projects, both to share costs and to benefit from their combined pool of expertise.

Over the years, India has developed much expertise in science and technology. We are very happy to share this expertise with other developing countries for mutual benefit. We are increasing our linkages with the developing world through cooperation and networking and through forging new collaborative programmes and research links.

The important themes to be addressed by the scientific community in our region are **sustainable development, adaptation to climate changes, bridging the digital divide, cost effective uses of renewable energy, water conservation, environmental preservation and judicious use of non-renewable sources of energy**. Science foundations and non-profit organizations involved in these efforts can be of great help in realizing the capacity building initiatives.

Excellencies, Distinguished Guests,

The 21st Century is going to be a **'Knowledge Century'**. For this we must support the co-evolution of science and technology with the society and develop our scientific resource base and capabilities. This Conference, I am sure, will act as a catalyst to take this process forward.

I look forward to receiving the recommendations of this Conference.

Thank you

## **071. Inaugural Address by External Affairs Minister Pranab Mukherjee at the Sustainability Summit: Asia 2007.**

**New Delhi, December 11, 2007.**

Mr. Y. C. Deveshwar, Chairman of the Sustainability Summit,

Dr. Ashok Khosla, Co-Chairman of the Sustainability Summit,

His Excellency, John McCarthy, High Commissioner, Australia Distinguished Guests,

Ladies and Gentlemen,

It gives me great pleasure to be here today to inaugurate the 2nd Sustainability Summit with its focus on **'Partnerships for Action'**.

The theme of the Summit is testimony to the commitment of the participants gathered here and the organizers to harness the energies of key stakeholders to make growth inclusive and sustainable. This also reflects the growing recognition that the social and environmental challenges facing us in the 21st century are so complex and so multi-dimensional that they can only be solved if government, NGOs and industry work together effectively. Increasingly our combined efforts and resources have to channelised to not only preserve but refresh our eco-system.

Sustainable development is now an accepted term in our lexicon. However, it has meant different things to different people. There are many who think sustainable development is synonymous with environmental protection. This is of course only a third of the truth. Equally important are the pillars of economic and social development.

Ladies and Gentlemen,

The concept of sustainable development was first mooted in the 1980s and then embedded into our collective consciousness at the Rio Summit of 1992. While its origins are in the concept of environment protection, sustainable development encompasses within itself a much wider gamut of issues. The World Summit 2005, highlighted the interdependent and mutually reinforcing pillars of sustainable development which are economic development, social development, and environmental protection. In that sense the concept of sustainable development pervades almost all aspects of our life including the future.

India's approach to the challenge of the protection of our environment was shaped by the perceptive observations of **Prime Minister Indira Gandhi**, who told the United Nations Conference on the Human Environment in 1972 that "**poverty was the worst polluter**". In saying so, Indiraji launched a global debate on the relationship between poverty alleviation, economic growth, and environmental conservation. In the years since then, an organized structure of multilateral agreements and institutions for realizing the goal of sustainable development has been developed.

Ladies and Gentlemen,

The World Summit on Sustainable Development held at Johannesburg in 2002 had clearly reaffirmed that addressing poverty was central to the efforts of developing countries in achieving sustainable development. India is a developing country and our overriding priorities are poverty eradication and rapid and inclusive economic development. For us, the concept of sustainable development must include the needs of our people for health, nutrition, education and housing so as to provide to all a life of dignity in a clean, safe and healthy environment. The "**development**" dimension of the concept of "**sustainable development**" is, therefore, **critical**. In fact, we should be clear that without development there can be no sustainable environmental protection.

The Government of India adopted the **National Environmental Policy in 2006**. It aims at creating an enabling domestic environment for sustainable development. This policy recognizes that human beings are at the centre of sustainable development and emphasizes that the right to development must equitably meet the developmental and environmental needs of present and future generations. Its dominant theme is that while we must conserve environmental resources to secure livelihoods, the most effective way of doing this is **to ensure that people benefit more from conservation than from resource degradation**.

Ladies and Gentlemen,

To sustain our projected GDP growth rate of 9%, we require more energy. Over 50% of our population, more than 500 million people, does not have access to electricity. The per-capita energy consumption is less than a third of the global average. For developing countries like us, a rapid increase in energy use per capita is imperative to realize our national development goals and the internationally agreed Millennium Development Goals.

India is not a significant contributor to Green House Gases (GHG) emissions

nor will it be so in the foreseeable future. Currently, India's per capita GHG emissions are around a quarter of the global average. In aggregate terms, India with 17% of the World population has only 4% of global GHG emissions. Our energy intensity levels are also on par with most developed countries and have improved considerably over time. More-so, while economic growth over the last five years has been around 9%, commercial energy consumption has only grown by under 4%. **We are also determined that, even as we pursue economic growth, our per capita GHG missions will not increase beyond those of industrialized countries.**

Ladies & Gentlemen,

We are facing today an unprecedented challenge in ensuring the energy security of our nation. Oil prices have touched USD 100 a barrel and indications are that it will further increase.

Our efforts at both energy security and sustainable development mean that we require the necessary policy space to address our energy needs in line with our resource endowments and national priorities. Demand side management, through targeted programmes, has brought to global levels, energy efficiency in India in a number of major energy intensive sectors – steel, aluminium, fertilizer, paper and cement. An Energy Efficiency Code for Buildings has been released for new commercial buildings and energy audit is being actively promoted.

We must have the option and the ability to tap all significant energy sources – whether conventional or advanced fossil fuels based, or renewables. With about 7,000 MW of installed wind-power, we now have the fourth highest wind capacity in the world. We are intensifying our efforts to enhance the use of solar energy and bio-fuels. We are also working to increase significantly the share of civil nuclear power in our energy mix. You all are well aware of the strong efforts being made by our government in this regard.

Even as we pursue our goal of harnessing nuclear and other forms of energy, we should not forget that much of India still relies on traditional biomass for their energy needs. There is an urgent need today to have greater R&D focusing on resource endowments of developing countries and transfer of advanced clean technologies to developing countries in a cost effective manner. Many existing critical technologies have also been out of reach of developing countries because of prohibitive cost, due largely to the existing IPRs regime, and technology denial regimes. These issues need to be addressed urgently.

Our international interlocutors tell us that under the existing IPRs regime, the private sector has legal rights over such technologies and so governments cannot do anything about it. We need, however, to bear in mind that all IPRs regimes are the realization of tradeoffs between providing incentives to the innovator, and imperatives of wider human society. We need to address the IPRs regime to ensure that technologies, which are necessary for pursuing the global goal of sustainable development, are available to developing countries. Collaborative R&D between industrialized and developing countries with sharing of the resulting IPRs, between institutions can help us achieve this.

Ladies & Gentlemen,

Even as we stand here discussing sustainable development, there is a major conference going on in Bali, Indonesia, on climate change. We are extremely concerned about climate change as all indications point to the fact that developing countries would bear a disproportionately severe impact of its adverse effects even though responsibility lies with those countries which have been polluting since industrialization. We have made it clear that in accordance with the principle of common but differentiated responsibility we expect the developed countries to commit themselves to significant binding emissions reductions. We have also made it clear that the need of the hour for developing countries is adapting to the inevitability of climate change. For that we need to have the necessary financial and technological wherewithal. And as we have always maintained, development would give us the necessary capability for adaptation.

Recognising the common threat of climate change to our region, only a few days ago on 7th December, in the 29th meeting of the SAARC Council of Ministers, we adopted the SAARC Declaration on Climate Change. SAARC believes that the way forward must include:

- Adequate resources to tackle climate change without detracting from development funds.
- Effective access to and funding assistance for the transfer of environment-friendly technologies and for adaptation.
- Binding GHG emission reduction commitments by developed countries with effective timeframes.
- Equitable burden-sharing.

Ladies and Gentlemen,

Sustainable development requires sustainable patterns of production and consumption. We need to understand that for our efforts at environmental protection to really succeed, we must address the issue of unsustainable patterns of production and consumption, including lifestyles. In-fact, the core issue has to be to influence personal activities and choices to a more sustainable pattern, and the willingness of individuals and Governments to exercise preferences to a more sustainable consumption pattern especially in the developed countries.

The Indian development canvas is garangutan. We are acutely aware that the achievement of objectives will require tremendous efforts for resource mobilization, investment in infrastructure, improved allocative efficiency of resources, investment in social sectors and people's participation. These challenges call for an enabling framework for sustainable development to be in place which is provided by our system of democratic governance, with an active civil society and media. This also includes devolution of power to states and local bodies and ensuring people's participation in decision making. This structure makes for a compact between the state and the people constituting the most enduring partnership for sustainable development.

Ladies and Gentlemen,

I have great pleasure in inaugurating the 2nd Sustainability Summit. I wish the deliberations all success. I am sure the outcome of your discussion will be of great interest to policy makers.

Thank you.

**072. Address of Minister of Science & Technology and Earth Sciences Kapil Sibal at the 13<sup>th</sup> Conference of Parties of the United Nations Framework Convention on Climate Change.**

**Bali (Indonesia), December 12, 2007.**

**Mr. President**

**Excellencies**

**Distinguished Delegates**

**Ladies & Gentlemen,**

Please allow me to begin by expressing our deep appreciation for you Mr. President and to the Government of Indonesia for hosting this meeting, the excellent arrangements and your warm hospitality. We are also delighted to be in Bali with its strong civilizational links with India.

**Mr. President,**

Let me also congratulate you on having successfully steered this Conference towards the operationalization of the Adaptation Fund. Forestry issues have also moved forward under your leadership and we hope that the draft decision will be adopted.

**Mr. President,**

We know that the impact of climate change on India will be very serious. The frequency of extreme weather events leading to natural disasters may increase. We may face multiple risks resulting from rise in sea-levels, problems with water availability, recession of Himalayan glaciers, food security and public health. To coordinate national action on climate change at the highest level, we have set up a Council on Climate Change chaired by the Prime Minister himself.

**Mr. President,**

The disproportionate impact of climate change will fall on the developing world given our vulnerabilities, inadequate means and limited capacities to adapt to its effects.

Developing countries must equip themselves to develop capacities to

become climate resilient. For this, we require technology solutions and financial resources at an accelerated rate to cope with and adapt to the inevitability of increased global warming in the coming decades.

Estimates of adaptation costs for developing countries run into several tens of billions of US Dollars on an annual basis. I hope that there is clear recognition by all concerned that these have to be met through “new and additional” monies and not by re-appropriation of funds meant for development.

Resource mobilization of this magnitude requires that we tap all possible sources, including the carbon market and make full use of the potential from all the Kyoto flexibility mechanisms.

**Mr. President,**

300 million people live in India on less than US\$ 1 a day. We need to improve their quality of life and we need to do that urgently. To stagger and slow down the pace of improving human development for those living with such limited pecuniary means is unacceptable; and energy is the *sine qua non* to development.

600 million people in India do not have access to electricity. We have no choice but to rapidly expand energy use to realize our national development goals and the Millennium Development Goals.

Our per capita emission of CO<sub>2</sub> is amongst the lowest in the world at around 1 ton per annum as against a world average of 4 tons. Nevertheless we have been taking measures that inherently promote sustainable development.

This includes a National Environment Policy, an Energy Conservation Act and a new Electricity Act that mandates the procurement of electricity from renewables. We now have the fourth largest wind power capacity in the world.

We also understand the importance of carbon sinks and, in addition to protecting our existing forest cover from deforestation through a national law, we are launching the world’s largest afforestation project covering six million hectares of degraded forest land at a cost of over US\$ 1.5 billion.

Our Bureau of Energy Efficiency is continuously engaged in adopting and implementing policies and measures on energy efficiency and energy conservation. An energy efficiency code for new buildings has been issued.

Standards and labeling are being introduced in a major way along with energy audits. Targeted interventions have raised energy efficiency in all the major energy intensive sectors – steel, aluminum, fertilizer, paper and cement – to world levels. We are also working on making available Compact Fluorescent Lamps at affordable prices to all.

**Mr. President,**

Technology is a key enabler in our efforts to tackle climate change. It is imperative that international efforts significantly enhance availability of cost effective advanced clean technologies to developing countries many of which rely on fossil fuels as a major source of energy.

The IPR regime must balance rewards for innovators with the common good of humankind. Standards and norms must reflect the development levels of where they are being deployed.

It is, therefore, good that at Bali we have brought technology transfer on the agenda for implementation. Mere discussion is not enough. We need to reach decisions. Absence of decisions only reinforces the perception that there is lack of will on the part of the developed countries to fulfill their commitments. We need to reach consensus on technology transfer and capacity-building – two issues that are really central to the global response to climate change.

On our part, we would be happy to share with our friends in the developing world, the S&T expertise and capacities that India has built over the years.

Mr. President,

At the G8 Summit in Heiligendamm, our Prime Minister offered that India's per-capita GHG emissions would at no stage exceed the per capita GHG emissions of developed countries even as we pursue our economic development.

The Earth's atmosphere is a common resource. Yet more than three-fourths of the present stock of CO<sub>2</sub> has been emitted by developed countries, which account for less than 20% of the world's population. According to the recent UNDP Human Development Report, historical emissions account for 1100 tons of CO<sub>2</sub> per-capita for some developed countries as compared to 23 tons for India. It is absolutely imperative that this excessive usage ends and we move to a paradigm of equal per-capita entitlements.

Developed countries have committed to take the lead in reducing GHG emissions. Yet, the figures tell a very different story. Since 2000 emissions

of all Annex I Parties have increased in aggregate by 2.6%. And, if EIT countries are excluded, the rise since 1990 has been 11%.

Moreover, with a single exception, no Annex I Party has given any indication of the range by which they would reduce their emissions in the second commitment period under the Kyoto Protocol. This must change.

We are concerned at the attempts to create a new framework, which may result in the dilution of specific and time bound commitments on emission reductions by developed countries. This should not be allowed to happen. Any such dilution would have disastrous and irreversible consequences for future generations. We must not fail their trust.

**Mr. President,**

Bali needs to send out strong messages. Without doubt the most important one should be that the negotiations under the Kyoto Protocol for quantified, time bound and substantial GHG reductions by developed countries post 2012 will be completed by 2009.

This is also the only way to deliver on the Fourth Assessment Report of the IPCC. We acknowledge the selfless contribution made by the global scientific community for its preparation, for which it has been fittingly recognized with the Nobel Peace Prize.

Bali must also focus on urgent action for enhanced implementation of the Convention. Adaptation and technology cooperation, forestry issues including afforestation, sustainable lifestyle patterns, sustainable consumption levels and financial arrangements are key: only then will we fully address the issues of global warming.

As a responsible member of the global community, in accordance with the principle of common but differentiated responsibilities, we would do all that we can for pragmatic, practical solutions, which are for the benefit of all.

**Mr. President,**

Let me conclude by saying that our efforts in the UNFCCC and Kyoto Protocol must move in a decisive manner for enhancing their implementation. That should be the singular message from Bali. Then alone will the journey to Poland and Denmark be truly fruitful.

Thank you.

**073. Briefing Points by Official Spokesperson on the meeting of the Consultative Committee of Parliament on External Affairs.**

**New Delhi, December 12, 2007.**

- The External Affairs Minister, Shri Pranab Mukherjee, chaired the meeting of the Consultative Committee on External Affairs held today. Continuing the discussion on the subjects of “Progress under SAARC” and “India’s partnership with African countries” from the previous meeting of July 18, 2007, the Committee also covered the issue of India’s bilateral relations with the West Asian countries.
- As part of his opening statement, External Affairs Minister briefed the Members on India’s close interaction with West Asian countries. He emphasized that India’s engagements with these countries in the political, economic, cultural and other fields has grown considerably and West Asia has emerged as an important region whose stability and security has a direct relevance for India.
- On the Palestine issue, EAM stated that India supports a negotiated solution resulting in a sovereign, independent, viable and united State of Palestine within secure and recognized borders living side by side at peace with Israel as endorsed in the Roadmap and UNSC Resolutions 1397 & 1515. India has supported the Quartet Roadmap of 2003 and the Arab Peace Initiative, resumption of dialogue on Israel-Lebanon and Israel-Syria Tracks and believes that these have to be addressed in efforts to establish comprehensive and durable peace in the region.
- India’s support to the Palestinian cause has not wavered. India recognized the PLO as a representative of the Palestinian people in 1975 and was one of the first countries to recognize the State of Palestine in 1988.
- EAM also touched upon the significant humanitarian contribution that India has made to the Palestinian people who are coping with multiple challenges. Together with the Palestine National Authority, India is working on several development projects, including a cardiac hospital in Gaza, a school in Abu Dis and an IT Centre at the Al Quds University. India has also rushed life-saving drugs for Palestinian civilians affected by the conflict. In consultation with the Lebanese

government, India is working to assist the Palestinian refugees at the Nahr al -Bared Camp in North Lebanon.

- EAM informed the Members that India was invited to attend the Middle East Peace Conference in Annapolis held on 27th November. In its statement at the Conference, India applauded the Joint Understanding reached by the President of Palestine Mr. Mahmoud Abbas and Prime Minister of Israel Mr. Ehud Olmert to launch vigorous, ongoing and continuing bilateral negotiations over the coming weeks and months to arrive at a negotiated solution of the core issues that will lead to the establishment of an independent, democratic and viable Palestinian State, living side by side in mutual peace and prosperity with the State of Israel.
- EAM in his statement also briefed the Members on India's bilateral relations with other countries in the region like Israel, Egypt and Jordan.
- EAM also informed the Members that Shri E. Ahamed, Minister of State for External Affairs would attend the International Donors Conference for Palestine being held in Paris on December 17.

**074. Inaugural Address by Foreign Secretary Shivshankar Menon on Foreign Policy Dialogue with International Institute for Strategic Studies, London.**

**New Delhi, December 13, 2007.**

Dr. Patrick Cronin,

Ladies and Gentlemen,

I am delighted to inaugurate this foreign policy dialogue with the International Institute of Strategic Studies London, which was initiated earlier this year. The IISS has played a significant role in shaping international discourse on strategic issues and I am happy to note that it is now concentrating on Asia. In April IISS will organize a major conference on India. Such occasions offer a useful opportunity for experts and scholars to exchange and analyze views on the series of strategic issues that confront us.

Today's one-day dialogue will engage on three subjects: the strategic shape of the world, international terrorism and energy security. All three are crucial to whether or not we in India achieve the basic goals we have set our foreign policy: of enabling the transformation of India. In fact, today more than ever, the outside world will affect India's future. Measured by any criterion, the proportion of GDP linked to foreign trade, the role of foreign investment and technology and India's need for energy, markets and raw materials, we are more connected to the rest of the world than ever before. The strategic shape of the world and the issues that you will consider are therefore central to our concerns.

### **The strategic shape of the world**

It is sometimes said that what you see depends on where you stand. Looking at the world from India, it often seems that we are witness to the collapse of the Westphalian state system and a redistribution in the global balance of power leading to the rise of major new powers and forces. Our shorthand for this phenomenon is the rather inadequate word globalization. Equally, the twin processes of globalization and economic inter-dependence have resulted in a situation where Cold War concepts like containment have very little relevance. The interdependence brought about by globalization puts limits beyond which tensions among the major powers cannot escalate. What seems likely, and is in fact happening, is that major powers come together to form coalitions to deal with issues where they have a convergence of interests, despite differences in broader approach. In other words, what we see is the emergence of a global order marked by the preponderance of several major powers, with minimal likelihood of direct conflict amongst these powers. The result is a de-hyphenation of relationships with each other, of each major power engaging with all the others, in a situation that might perhaps be described as "general un-alignment".

We see the evolving situation as one in which there is an opportunity for India. As a developing country, the consistent objective of our foreign policy has been and remains poverty eradication and rapid and inclusive economic development. If we are to eradicate mass poverty by 2020, we need to keep growing our economy at 8-10% each year. This requires a peaceful and supportive global environment in general and a peaceful periphery in particular. We have therefore attempted since independence to expand India's strategic space, thus strengthening our strategic autonomy. In practice this has meant the increasing autonomy of decision-making of India on issues that are of importance to us, what our first Prime Minister

Nehru used to call our “enlightened self-interest”.

Today the international situation has made possible the rapid development of our relationships with each of the major powers, and this is apparent in developments over the last few years. Equally important have been two other necessary conditions for this rapid development which have given India space to work in: India’s rapid economic and social transformation. As a result of twenty five years of 6% growth, our reforms since 1991, India is today in a position to engage with the world in an unprecedented manner. Our engagement with the global economy is growing rapidly, with trade in goods and services now exceeding US\$ 330 billion. Our needs from the world have changed, as has our capability. India can do and consider things that we could not do or consider twenty years ago. This is reflected in how India perceives its own future, its ties with its neighbourhood and its approach to the larger international order. The second necessary condition which has obtained to a greater or lesser extent is our attempt to build a peaceful periphery within which India’s transformation can take place.

Paradoxically, some of the same forces of globalization – the evolution of technology, the mobility of capital and so on – which have led to the decline or collapse of the Westphalian state order are also the source of our greatest dangers. Our major threats today are from non-state actors, from trans-boundary effects of the collapse of the state system, or, at least, of its inadequacy.

(Parenthetically, the doctrine of absolute sovereignty created by the strong European states and rulers in earlier centuries is now the last defence of the weak against the strong.)

Looking ahead, the real factors of risk that threaten systemic stability come from larger, global issues like terrorism, energy security and environmental and climate change. With globalization and the spread of technology the threats have also globalised and now span across borders. These are issues that will impact directly on India’s ability to grow and expand our strategic autonomy. It is also obvious that no single country can deal with these issues alone. They require global solutions. Hence the importance of what you will discuss about the strategic shape of the world.

### **International Terrorism**

Among these global threats, international terrorism remains a major threat to peace and stability. We in India have directly suffered the consequences

of the linkages and relationships among terrorist organizations, support structures and funding mechanisms, centered upon our immediate neighborhood, and transcending national borders. Any compromise with such forces, howsoever pragmatic or opportune it might appear momentarily, only encourages the forces responsible for terrorism. Large areas abutting India to the west have seen the collapse of state structures and the absence of governance or the writ of the state, with the emergence of multiple centres of power. The results, in the form of terrorism, extremism and radicalism are felt by us in India.

### **Energy Security**

As for energy security, this is one issue which combines an ethical challenge to all societies with an opportunity to provide for the energy so necessary for development. For India, clean, convenient and affordable energy is a critical necessity if we are to improve the lives of our people. Today, India's per-capita energy consumption is less than a third of the global average. (Our per capita consumption is only 500 kgoe compared to a global average of nearly 1800 kgoe). For India a rapid increase in energy use per capita is imperative to realize our national development goals.

Global warming and climate change require all societies to work together. While the major responsibility for the accumulation of green house gasses in the atmosphere lies with the developed countries, its adverse affects are felt most severely by developing countries like India. When we speak of 'shared responsibility', it must include the international community's shared responsibility to ensure the right to development of the developing countries. Development is the best form of adaptation to climate change.

At the SAARC Council of Ministers last week in Delhi a Declaration was adopted which noted that the way forward must include:

- Adequate resources to tackle climate change without detracting from development funds.
- Effective access to and funding assistance for the transfer of environment-friendly technologies and for adaptation.
- Binding GHG emission reduction commitments by developed countries with effective timeframes.
- Equitable burden-sharing.

Equally, the transfer and access to clean technologies by developing countries, as global public goods on the lines of what was done for retrovirals to fight AIDS, is essential to effectively limit future GHG emissions. The IPR regime should include collaborative R&D and the sharing of the resulting IPRs.

India will work constructively with the global community to find solutions which do not constrain development. We are determined not to allow our per capita emissions of GHG's to exceed those of developed countries.

For all these reasons, the subjects you are about to consider are central to our concerns in India. I look forward to the results of your deliberations and wish you a very successful dialogue.

**INDIA'S FOREIGN RELATIONS - 2007**

**SECTION - II**

**CIVIL NUCLEAR ENERGY  
COOPERATION WITH THE  
UNITED STATES**

# Blank

**075. Press summary of remarks by Special Envoy of the Prime Minister Shyam Saran at the India Habitat Centre on "India - U. S. Understanding on Civil Nuclear Energy Cooperation".**

**New Delhi, January 10, 2007.**

The Special Envoy to the Prime Minister, Shri Shyam Saran had an interaction programme at the India Habitat Centre on January 10, 2007 where he spoke on "India-US understanding on civil nuclear cooperation - The Way Ahead.

"The Special Envoy dealt with a number of issues that have been raised concerning the recent passage of the Hyde Act by the US Congress, enabling the two countries to engage in civil nuclear energy cooperation.

He pointed out that the next steps involved:

- i) The negotiation and conclusion of a bilateral Indo-US cooperation agreement on civil nuclear energy cooperation, popularly known as the "123 Agreement";
- ii) An amendment in the guidelines of the Nuclear Suppliers' Group (NSG) permitting NSG members to engage in civil nuclear energy cooperation with India despite India not being a party to the Non-Proliferation Treaty (NPT) and not having full scope safeguards on all its nuclear facilities; and
- iii) Negotiation of an India specific safeguard agreement with the International Atomic Energy Agency (IAEA) covering India's declared civil nuclear energy facilities.

The Special Envoy pointed out that the significance of the Hyde Act lies in the fact that it gives permanent waiver to the US Administration from the application of the following key provisions in the US Atomic Energy Act 1954, in pursuing civil nuclear cooperation with India:

- i) The requirement that the partner country should not have exploded a nuclear explosive device;
- ii) the requirement of that country having all its nuclear facilities under safeguards i.e. full scope safeguards; and
- iii) The requirement that the country does not have an active nuclear

weapons programme involving development and production of nuclear weapons.

He pointed out that these waivers clearly recognize that India has a strategic programme and that its current nuclear weapons programme would not be under any limitations. These waivers, therefore, acknowledge all the most important attributes of a Nuclear Weapon State.

The Special Envoy explained why the Indo-US nuclear deal and the subsequent adjustments in the NSG guidelines would help India meet its growing energy requirements and would also lead to the dismantling of a series of technology denial regimes to which India was subject to over the past three decades.

In the Question and Answer session which followed, the Special Envoy was asked whether India would still go ahead with the deal if there were requirements which would undermine India's national interest. The Special Envoy pointed out that obviously if something undermined India's national interest, India would not go ahead with such an agreement. However, in the past several months that India and US have been negotiating on a very complex and difficult subject, they have been able to overcome the difficulties that they have confronted. They have displayed a constructive spirit and a spirit of problem solving. Given this spirit the Special Envoy stated that there was no reason why the remaining issues could not be overcome and the initiative brought to a successful conclusion. He said that he remained optimistic on this score. On what specific issues which remained to be tackled, he said that India would need to have the entitlement to reprocess U.S. origin spent fuel so that we do not once again face a Tarapur type situation, when we have accumulated large stocks of spent fuel. He pointed out that U.S. had given such entitlement to Switzerland, Japan and Eurotom and India would seek similar treatment.

The issue of the consequence of India carrying out a nuclear test in the future was also raised. The Special Envoy pointed out that the waiver given by the US Congress related-retrospectively to tests that have been carried out by India in the past but did not cover such tests prospectively. It had been clear right from the beginning that such a waiver would not be forthcoming from either the US or the NSG countries, several of whose members have both signed and ratified the Comprehensive Test Ban Treaty.

In this context, he also pointed out that India had committed itself to a unilateral moratorium on nuclear testing but was not prepared to convert

this into a legal undertaking. If at any future point of time India decided to carry out another test because of compelling national interests, then it would not be violating any legal undertaking but we would have to be aware of the fact that there could be consequences in terms of cessation of cooperation and possibly other sanctions.

In reply to another question relating to fuel supply assurances, the Special Envoy pointed out that the US Administration had confirmed that nothing in the legislation would prevent United States of America from fulfilling its commitment that it made to India in the July 18 Joint Statement and the March 2 Separation Plan, including fuel supply assurances.

He said that we should accept this assurance.

## **076. Interview of Chairman of the Atomic Energy Commission Dr. Anil Kakodkar to the fortnightly *Frontline*.**

**Trombay (Maharashtra), March 2, 2007.**

### ***What will be the future thrust of BARC activities?***

BARC is a technology powerhouse. The future thrust will essentially be, of course, in the utilisation of thorium as fuel, which has been the thrust all along. Next comes the generation of nuclear energy at high temperature so that we can produce hydrogen in addition to electricity because hydrogen is likely to be another important carrier of energy in future. Then another thrust will be on ways of using technologies for storage, transportation and utilisation of hydrogen. We are also talking about the role of particle accelerators.

### ***Do you mean accelerator-driven systems?***

A lot of technologies have to be developed because particle accelerators can be used for energy production, for example, through accelerator-driven systems. This is as far as area of energy is concerned.

There are other areas. The spent fuel that comes out of the reactor contains a lot of radioactive products such as cesium. It is an important material for radiation processing. It is better than cobalt.

### ***Can cesium be used for irradiation of spices, potatoes and onions to increase their shelf-life and prevent sprouting?***

We can have a whole set of new technologies for radiation processing using cesium. Other thrust areas will be a host of technologies, including MEMs [micro-electro-mechanical systems], high-precision engineering and even futuristic micro-maching.

***When will you start the construction of the Advanced Heavy Water Reactor (AHWR) that will use thorium as fuel, which will signify the beginning of the third stage of India's nuclear power programme? When you were BARC Director, you had written an article in the BARC newsletter in 1999 that India should accelerate the utilisation of thorium, which we have in plenty.***

Correct.

***In 2003, you said the DAE will start the construction of the AHWR in 2004. It is 2007 now.***

I know.

***Construction of the AHWR has not begun. You said it would begin in 2004.***

The peer review was completed sometime ago. It was being looked at by the Atomic Energy Regulatory Board for pre-licensing review. I believe that has just been completed. They are now preparing the project document. So we want to start the construction this year. That will be our attempt.

***Has Tarapur been selected as the site for the AHWR?***

We have not decided on the site yet.

***How was the criticality of the third nuclear reactor at Kaiga, Karnataka on February 26?***

Kaiga-3 criticality went off very well.

***It is said there has been a delay in starting the construction of the 700 MWe PHWRs because the natural uranium supply from the country will not match the demand. (The indigenous PHWRs use natural uranium as fuel and heavy water as both coolant and moderator).***

Yes. We have to make some more progress on the mining and milling capacity of natural uranium in the country. We have this new mine coming up now.

***Where is this new mine?***

The uranium mine at Bandurung [near Jaduguda in Jharkhand State] is

ready. The erection of a mill at Turamdih [also near Jaduguda for processing the natural uranium] is almost complete.

We have the environmental clearance for the Tumalapalle mine in Andhra Pradesh. We also have the environmental clearance for exploratory mining at Gogi in Karnataka.

***Is the mine at Bandurung producing uranium ore?***

They have reached the ore body. As soon as the mill at Turamdih starts working, they will start producing the ore at Bandurung. The mill is mechanically complete. They must be commissioning it now.

***You have not been able to bring around the Meghalaya government to start the process of uranium mining in the State.***

In Meghalaya, some progress is there. It will take time. In the meantime, we are working on the preliminary activities on [starting the construction of] 700 MWe reactors [at Rawatbhatta in Rajasthan and Kakrapar in Gujarat].

***You said in September 2006 that India would not allow its unilateral, voluntary moratorium on nuclear tests into a bilateral legality with the United States. The U.S. officials have told their Indian counterparts during their negotiations on the "123 agreement" that it is not merely a nuclear test by India but any event in India that "jeopardises supreme U.S. national interests" will lead to the termination of the Indo-U.S. nuclear cooperation.***

The question is our position remains the same. The Prime Minister has very clearly stated our concerns in Parliament. Now, we are, of course, approaching the whole matter in a positive spirit. So what we would like to see is explicit provisions that safeguard our interests in the light of the concerns that were expressed in Parliament by our Prime Minister. That will be the basis on which we will approach the negotiations.

***If the U.S. insists that India should not conduct any more nuclear tests and that it will terminate the Indo-U.S. nuclear cooperation if we do the tests...***

We don't want to convert this [unilateral, voluntary moratorium on nuclear tests] into a bilateral legality. We cannot do that. The moratorium on nuclear testing is unilateral, voluntary. So that is the position. Nothing more than that.

The U.S. says that it would supply only one extra "core" of fuel for the reactors instead of the lifetime fuel supplies which had been agreed upon earlier by India and the U.S.

The March 2006 Separation Plan document has a clear provision for building stockpiles of fuel to meet the lifetime requirements of reactors placed under the International Atomic Energy Agency's safeguards. That is what I am saying. We need everything to be built into the 123 agreement in a very explicit manner so that our interests are protected.

***At what stage is our negotiations with the U.S. on the 123 agreement?***

The 123 draft has just been given to them.

**077. Question in the Lok Sabha: "Nuclear Suppliers' Group".**

**New Delhi, May 16, 2007.**

**Will the Minister of External Affairs be pleased to state:**

- (a) whether the Government has made any efforts to garner support of the Nuclear Suppliers' Group (NSG) on Nuclear Treaty;
- (b) if so, the details thereof; and
- (c) the outcome thereof?

**The Minister of External Affairs (Shri Pranab Mukherjee):**

- (a) to (c) A statement is placed on the Table of the House.

**STATEMENT**

- (a) & (b) Yes Sir. The Joint Statement of July 18, 2005 commits the United States to work with its friends and allies to adjust international regimes to enable full civil nuclear energy cooperation and trade with India. Government have also taken steps to seek the support of Nuclear Suppliers Group (NSG) countries. This has been done through briefings in NSG member country capitals and in New Delhi as well as through dialogue with the NSG. The issue of an India-specific exemption to the NSG Guidelines has also been taken up at political levels during visits abroad as well as incoming visits.
- (c) As a result of these efforts, several important NSG countries such as UK, France and Russia have expressed understanding for our position.

**078. Reaction of Official Spokesperson to a question about the meeting between Indian and US officials in London to discuss the nuclear deal.**

**New Delhi, May 23, 2007**

**Question:** There was a meeting of Indian and US officials in London<sup>1</sup> on the nuclear issue. Anything on that?

**Official Spokesperson:** Yes, we have held a round of technical discussions with the United States on the bilateral Agreement for Cooperation in Civil Nuclear Energy in London on 21st and 22nd May. Let me add that during the discussions we have clarified certain concepts and exchanged ideas making further progress towards a mutually agreed text. Some further work is required to bridge the remaining gaps. Both sides have agreed that discussions will continue.

**Question:** Do you have any dates for the next round of discussions?

**Official Spokesperson:** I do not have any dates but we have said that discussions will continue.

**Question:** Who led the delegation?

**Official Spokesperson:** I do not have details with me on the composition of delegation but it was at the technical and expert level.

---

1. The meeting took place soon after U.S. Under Secretary of State Nicholas Burns postponed his visit to India amid reports of both sides being unable to concur on several clauses in the deal such as reprocessing rights, perpetuity of fuel supplies and continuance of the civil nuclear cooperation in case India conducted an atomic test. In a statement, the U.S. Embassy spokesperson said that Mr. Burns was optimistic about an accord while a top Indian official maintained that there was "commitment" at the top levels in both countries about the deal. The Press Trust of India from Washington said the U.S., however, reported 90 per cent progress towards finalisation of an agreement to operationalise the civil nuclear deal with India but said both countries needed to make "compromises" to sort out remaining differences. Mr. Burns meanwhile said he would be travelling to India in the next week or two for talks and that a "major effort" was expected in the near future to firm up the agreement.

## **079. Briefing by Foreign Secretary Shivshankar Menon on the visit of US Under Secretary of State Nicholas Burns for discussion on the India-US nuclear cooperation.**

**New Delhi, June 2, 2007.**

**Foreign Secretary (Shri Shivshankar Menon):** I thought I would brief you on Under Secretary Burns' visit while it is still fresh in our minds. We have had Under Secretary Burns here for the last three days. We have had three intense, productive, constructive days of discussions with him. Apart from the talks with Special Envoy Shyam Saran and me on the 123 Agreement, he also called on our leaders. Earlier this evening, he had a courtesy call on Prime Minister. Yesterday evening, he called on the External Affairs Minister, Shri Pranab Mukherjee. He has also met I think a wide range of leaders across the political spectrum.

We used the opportunity not only to do the 123 Agreement, but also to talk about regional issues, about global issues that interest us, and about the broader India-US relationship which, as you know, has been transformed over the last few years. Maybe, I will just run you through those discussions and then I would be happy to answer any questions that you might have.

On the 123 Agreement which took up most of the time, we have had, as I said, constructive and productive discussion<sup>1</sup>. There were several issues which were still open when we started this discussion. We have managed to remove some from the table. We still have a few issues left where there

---

1. At the end of the first day's talks media speculated that the US had nothing fresh to offer to meet Indian concerns. The contentious issues were stated to be: the U.S. refusal to allow India the right to reprocess spent fuel produced by American-manufactured reactors, and the U.S. insistence on including a "right of return" over any nuclear equipment or material such as the strategic nuclear fuel reserve sold to India, in the event of an Indian nuclear test. At the end of the talks the media describing the talks as "hardnosed negotiations" said the two had 'hit an impasse with no real progress registered on the major issues separating them'. The analysts felt that though some minor questions were cleared, "stalemate" was reached on issues like the right to reprocess spent fuel produced by any imported reactor. While the official Indian sources quoted by the media declined to characterise the situation as a "deadlock" it was said more time was needed to sort out the issues. "But if there are no reprocessing consent rights, then we simply can't proceed," said an official source, referring to the process - integral to India's indigenous civil nuclear programme - of converting the spent fuel produced by a nuclear reactor into fresh fuel for use in a fast breeder reactor. A separate statement issued by the U.S. embassy on 2nd June night said that India and the U.S. had made "some progress" on the 123 but "more work remains to be done to complete arrangements that will permit a civil nuclear agreement to be finalised." The media constructing the story

is some distance for us to travel. Our goal in this exercise is to produce a bilateral cooperation agreement for civil nuclear energy which reflects fully the July 18, 2005 Joint Statement and the March 2, 2006 Joint Statement between Prime Minister and President Bush, and the statement the Prime Minister has made in Parliament.

---

on the differences between the two on the question of reprocessing rights based on official sources provided a broad account of it.

It said the Indian officials insisted that their mandate was to secure the explicit recognition of India's right to reprocess spent fuel in the '123 agreement'. Under the U.S. Atomic Energy Act, any country, which buys and uses U.S. nuclear equipment or fuel requires American consent prior to reprocessing the spent fuel which is produced. But rather than obtaining this consent later in a subsequent agreement - as the American side insisted - India wanted the agreement to recognize it and also to specify the precise parameters under which actual reprocessing would take place. "There should not be any ambiguity in this matter," *The Hindu* quoted a senior Indian official. So far, all that the U.S. side was prepared to offer was "forward looking language" based on a formula similar to its 123 agreement with China. That agreement, concluded in 1985, provided for a presumption of approval in the event that China wished to "alter U.S. origin material" and an expedited process of consultations to agree on a mutually acceptable arrangement. In addition, the U.S. said it was willing to enter into a subsequent negotiation with India a few years down the line as and when the country was ready to reprocess the spent fuel that accumulates from U.S. reactors. Indian officials said that while the lack of explicit consent rights might be acceptable to China - whose 123 agreement began with the premise that the country had "no intention" of reprocessing U.S.-origin or U.S.-obligated fuel - India needed its rights to be recognised up front. "Reprocessing is integral to our entire three-stage programme," said an official. "Without reprocessing, there is nothing". Though officials acknowledge that any actual reprocessing was still years away, India's insistence on explicit consent rights was based on a close study of the tortuous process Japan and Euratom had to go through before they were able to begin the reprocessing of spent U.S. fuel despite the fact that they were American allies, with a long history of close defence cooperation. And yet the process dragged on for a long time and finally came with all kind of intrusive inspections. In contrast, not only India did not enjoy that kind of comfort level with the United States, but also had the history of Tarapur behind it. There, huge pools of spent fuel produced by an American-built reactor had accumulated over the years with Washington neither agreeing to take it back nor granting India the right to reprocess. "That is why we are insisting on a clear, rights-based approach." Guaranteeing adequate fuel - including a strategic reserve - for India's reactors was a key provision in the March 2, 2006 separation plan agreed by the U.S. and India. However, the Hyde Act contained a provision limiting the provision of fuel supplies for India and directing the administration to lobby against fuel supplies for India in the event that the U.S. ended its own nuclear cooperation with India. And then there was also the right of return, which, if incorporated into the 123 in the manner the U.S. wanted, would lead to India being forced to surrender its imported fuel reserves if it ever were to conduct a nuclear weapons test. According to further reports the status of India's strategic fuel reserve also emerged as a major stumbling block. "I think as a result of our talks, we have a better understanding of their concerns and they of ours," said an official. He added that India this time was "more explicit than it has ever been so far" that the ownership of any nuclear fuel it imports under the Indo-U.S. agreement is a red line which cannot be crossed under any circumstances. It is significant that on June 2

We are still in the process of discussing the various issues. So, I do not want to go into the specific issues. In fact, I would not. We have an agreement among ourselves that we will not negotiate through the media, we will negotiate with each other. But I can tell you that as a result of the last three days' discussions, we have come much closer in our understanding of the issues that still divide us and we have managed to remove most of the issues from the table. It is our hope that when we do this agreement, which we both want to do rapidly, we will thereby make a major contribution to our own energy security to producing the energy that India needs for her own development, in a clean and environment-friendly manner.

---

Prime Minister Manmohan Singh used the "courtesy call" Nicolas Burns made on him to convey to the United States "in the clearest manner possible" that the nuclear deal would not be acceptable to either Parliament or people if it did not insulate India's nuclear facilities from supply disruptions and grant the right to reprocess spent fuel. Giving an account of the "brisk and businesslike" meeting, which was scheduled only after it became clear that negotiations on the bilateral nuclear cooperation agreement were going nowhere, media quoted senior Indian officials to say that the Prime Minister's message was intended to convey the fact that the Government had no intention of backing off on these and other red lines drawn by him in Parliament in August 2006. Together with the "extremely intensive" technical discussions stretching over three days, Indian officials said the Prime Minister's brief meeting with Burns "hopefully" drove home the point that India's insistence on reprocessing and fuel assurances was not a "negotiating tactic" but a reflection of domestic political realities. "No Prime Minister of India can stand up and tell Parliament that he is going ahead with this deal even though we haven't got reprocessing rights and there is no security of fuel supplies," *Hindu* quoted a senior official to say. "This is frankly not saleable politically." Asked for his assessment of how Mr. Burns reacted to the Indian message, an official said the feeling on the U.S. side has been that "We are doing such a big deal for India, why the hell are you not taking it? Why are you making such a big deal about reprocessing and strategic reserves?" "But now, for the first time, there seems to have been an appreciation from the Americans that there is a political issue which has to be resolved, and that we are not bluffing," said the official. He added: "I can't say the issue will be resolved, but if as a result of this last meeting we are now on the same wavelength, there is a better chance." For India, said the officials, "full civil nuclear energy cooperation" includes four separate spheres: reactors, fuel, reprocessing rights and fuel cycle equipment and technology. "It is very important to get this principle incorporated into the 123 agreement," said an official. "The fact that the [Bush] administration did not take the trouble to inform the U.S. Congress that reprocessing is a part of the deal is not our problem. We have been saying from June 3, that the U.S. side appeared to be facing "legal constraints" in completing the nuclear deal, say officials, is a reflection of India's view that the necessary adjustments to domestic law President Bush promised in July 2005 have not been fully carried out. In previous week's talks, say officials, a few relatively minor issues were resolved but all the big obstacles - reprocessing, security of fuel supplies, fall-back safeguards, and access to nuclear fuel cycle equipment - remained. On Article 14 of the draft 123 agreement - which deals with the circumstances under which there would be cessation of cooperation as well as the consequences that would follow - "there is still a lot of work that has to be done." For the moment, however, officials said efforts were focussed on ensuring that any consequences that follow an Indian

While in New Delhi, as I said, Under Secretary Burns called on the Prime Minister earlier today. This was a courtesy call. They reviewed the relationship as a whole, expressed satisfaction at the developments in the relationship, and looked forward to its further development. He called on the External Affairs Minister yesterday where the External Affairs Minister extended an invitation to Secretary of State Rice to visit India. It is possible that she will be coming within the next few months to India. We are working on that. They also covered regional and other issues and the broader relationship between our two countries. He called on the National Security Advisor also yesterday evening where again they covered both the 123 Agreement and the broader relationship.

---

nuclear test should not compromise the country's ability to ride out any cut-off in fuel supplies that may follow. Giving an account of one of the minor issues which was resolved, Indian officials said the status of "byproduct material" - defined in U.S. statute as "all materials (except fissionable material) yielded in the processes of producing fissionable material" - has now been settled. Byproduct material, which has a variety of industrial, commercial and medical applications, is not subject to safeguards by the International Atomic Energy Agency. "But the U.S. side started by demanding Indian byproduct material had to be safeguarded!" said an official. After a lengthy tussle, the U.S. backed off. Last week in Delhi, a compromise was reached wherein India said it would "share information" on any such material produced from U.S.-supplied equipment. While declining to provide specific details on the different proposals covering reprocessing and security of fuel supplies, senior officials in their briefings to the *Hindu* said the Indian side essentially sought to impress upon their American interlocutors the "legacy issue" of Tarapur. This is the U.S.-built reactor whose spent fuel has been accumulating for decades with Washington withholding permission to reprocess and refusing to take back what is essentially a toxic hazard. "There is also a practical issue," said an official. If India's ambitious plans on the nuclear front fructify and 20 additional 1000 MWe reactors are built, the accumulation of spent fuel would be enormous. "At that point, if we find we are not able to reprocess, this would be a massive problem." "In the Indian mind, Tarapur is negatively famous for two things," said an official. "For the fact that fuel supplies for the reactor were cut-off, and for our inability to reprocess. Hence, we need to show that through this negotiation we will no longer be exposed to these problems again. So we have to have strategic reserves to tide us over the problem of any disruption of supplies, and we have to have reprocessing." In practical political terms, said the official to the *Hindu*, the Prime Minister has to be able to "honestly get up and say 'Yes' if asked whether this negative legacy has been overcome, that there is reprocessing, that he has ensured there will be no supply disruptions for our reactors." At the same time, the *Hindu's* story said the officials hasten to add, that there were other big issues which were still unresolved in the 123 process. On fallback safeguards, which were mandated by the Hyde Act passed last December, the U.S. side was insisting that India agree to secondary bilateral safeguards. Indeed, one U.S. proposal was for so-called "joint safeguards" to be conducted by the IAEA and U.S. officials, something the Indian side has categorically rejected. As for access to reprocessing, enrichment and heavy water equipment and technology, the U.S. said its proposed cooperation with India would not cover this. While the Indian side did not realistically expect controls to be eased on the Nuclear Suppliers Group "trigger list" items - i.e. actual reprocessing or enrichment plants - it must be able to buy "dual use" list items for use in civilian reprocessing and enrichment facilities.

All told, I think this has been a positive and useful visit. It has taken us some of the way forward towards the Agreement that we want, towards our goal or the 123 Agreement which actually reflects in legal terms the understandings that our leaders have arrived at previously.

Am I satisfied with the visit? Yes, I think we have achieved what we could, what we set out to do in this particular round. We have agreed that we will continue these discussions until we bring the discussions to a successful conclusion.

I would be happy to answer any questions that you might have.

**Question:** You said that you do not want to negotiate through media. But could you at least tell us the areas where you have reached agreement?

**Foreign Secretary:** Rather than doing that what I would like to do is to just say that we have made considerable progress towards this goal of an agreement which reflects July 18, 2005 and March 2, 2006 Joint Statements and what Prime Minister said in Parliament. But there are still issues where there is a gap. Maybe now, thanks to these discussions, we both understand each other's positions much better. We know what is possible. We even, in some cases, see a way forward towards resolving. But we need to sit and think about it. We will do a little thinking, they will do their thinking. This is normal. I think this is part of the negotiating process. So, I do not want to get into which issue is at which stage of resolution.

**Question:** I have pretty much the same question....

**Foreign Secretary:** I will give you the same answer.

**Question:** If you could at least tell us in 'yes' or 'no'. We know that the right to reprocess spent fuel has been at the heart of the differences we have had with them. Is that still an issue?

**Foreign Secretary:** That is one of the issues we discussed.

**Question:** You said that Mr. Burns met the Prime Minister. Was there any message from President Bush to the Prime Minister? Is any meeting between President and the Indian Prime Minister scheduled?

**Foreign Secretary:** I think they both will be in the Heiligendamm together on the 8th of June for the Summit. Now I think they are in the process of trying to schedule the meeting. But certainly they will have an opportunity to talk while they are there together.

**Question:** Did he get any letter or any message from President Bush?

**Foreign Secretary:** No, he did not.

**Question:** Have you set any dates or deadlines for finalizing the agreement?

**Foreign Secretary:** We are optimistic that we will have an agreement. But, as you know, I have never tried to set dates for this, or to set deadlines because I do not think that is the right way to negotiate something that is so complicated where the issues are really interlinked. Therefore, to start saying that we have done one issue and not done the other, actually does not reflect the situation properly. Many of these issues are interlinked. It is a complicated agreement. It is the first time I think we are trying to have such an agreement, both of us. Both, I think, have the will to bring it to a successful conclusion. But I do not think that setting dates or deadlines is really the way to go about.

**Question:** You said that both sides are trying to give a legal expression to the two Joint Statements. Are the United States and India on same page as far as the whole set of commitments which ...(inaudible)... It is an acknowledged fact that ...( inaudible)... is an integral part of the July ...( inaudible)...

**Foreign Secretary:** I think that is exactly what we are establishing with this agreement. When we have the agreement we will say, "they are on the same page entirely." I think we are closer and closer to being entirely on the same page. That is what this negotiation process is about. But the problem here is I think that, as I said, these are interlinked issues. So, it is not possible to say, 'Yes, on this issue we are on the same page, on this issue we are not', because they all affect each other.

**Question:** Is it difficult to reach the (123) agreement within the legal framework if there is no agreement at the political level?

**Foreign Secretary:** This is a chicken-and-egg situation. We have a political understanding already. I think it is a question of reducing that to a legal framework. I think that is what we are doing.

**Question:** You said there was a gap in understanding in some of the issues. Do you want to tell us what that is?

**Foreign Secretary:** No.

**Question:** Is there any thought that we could be running out of time? Is there a possible timeframe (that) you are looking at to wrap up the discussions? When could the next round of talks be held?

**Foreign Secretary:** We both like to do it very quickly, the quicker the better, quite frankly. But, as I said, we are not setting deadlines for ourselves. I do not think we are saying that we will do it by this date or that date. What we have agreed today is that we will meet again, we will discuss this again. We both need a little time to think over what we have done over the last few days. Then we will re-engage whenever it suits both of us.

**Question:** How many rounds of talks have been completed between the two countries so far?

**Foreign Secretary:** Formal rounds - four. But this is a subject that we have been discussing in various conversations whenever we met at various levels. Yes, four is the formal number of rounds that we have had. But I do not think it reflects the reality of the nature of the engagement.

**Question:** Have any dates been finalized for Prime Minister's visit to the US?

**Foreign Secretary:** I think we have not set dates for the Prime Minister's visit yet. What we are now looking at is a visit in the next few months by the Secretary of State. We still have to agree dates. But I think when the External Affairs Minister extended the invitation yesterday we were looking at dates sometime towards the end of July and beginning of August.

**Question:** *You don't just now want to tell the issues on which there is disagreement. Can you tell us the issues on which there is agreement?*

**Foreign Secretary:** *If tell that, then you will know the other too.*

**Question:** *What is the distance between agreement and disagreement?*

**Foreign Secretary:** *There is agreement on a lot of issues. The disagreement has narrowed down; it is much less than before. Each time we talk, we try to increase the area of agreement; and a lot has increased.*

**Question:** *What is the percentage of agreement and disagreement?*

**Foreign Secretary:** *We cannot calculate in percentage.*

**Question:** *According to you how far is Delhi?*

**Foreign Secretary:** *I am very much in Delhi. I was saying that in this neither I want to go into percentages nor I want to estimate the distance. When it is done, you will be informed that it is done. But the talks will continue.*

**Question:** Mr. Menon, since we want to know something more than you want to tell us, Mr. Burns is not here and you are not addressing the Joint Press Conference, shall we understand something more out of that? What does it mean?

**Foreign Secretary:** It only means that Mr. Burns has to catch a flight and he has gone to the airport. That is what it means.

**Question:** One of the issues you have to resolve is the sequencing arrangement like when we deliver on the IAEA safeguards and other things etc. Is this technical delegation level talks the forum where the problems would be addressed or they will be addressed at some other level?

**Foreign Secretary:** I think what we are trying to do is to do all these processes simultaneously. Obviously we need a bilateral civil cooperation agreement before we have something that needs to be safeguarded. But we have begun our contacts with the IAEA to discuss an India-specific safeguards agreement and those discussions have gone well, positively. Once we have a bilateral civil cooperation agreement with the US, we would then I think be in a position to actually move further forward on the IAEA safeguards agreement and go to the NSG for the necessary exemption. I think ultimately our goal is to have it all done, and the quicker we can get all three done, the better.

**Question:** Has any date been agreed for the next round of talks?

**Foreign Secretary:** No, we have not agreed a date.

**Question:** Sir, by any chance was the letter written by the Senators raised in the discussions?

**Foreign Secretary:** No.

**Question:** *The talks that will take place now will be at your level or any other level? If America agrees with the problems that India has with the Hyde Act, and accommodates India, it will have to go to the American Congress; and if India agrees with the United States; then it has to answer its Parliament. What is the way out?*

**Foreign Secretary:** Let me be precise. The US Administration has assured us that nothing in the Hyde Act prevents them from implementing their obligations under July 18, 2005 and March 2, 2006 Joint Statements. Our task is to reduce those understandings into a legal agreement. So far we are well on the way to doing so. As I said, we are close to actually doing so.

When we finish that task, we will be able to confirm to you whether or not anything in the Hyde Act prevents the US Administration from fulfilling its obligations as we understand them under those two Joint Statements. I think that is the position today. Our job is to reflect those understandings in the agreement. So far we have been assured nothing prevents that. So far we are moving forward steadily.

**Question:** *What are the issues for which America will be answerable to its Congress and the issues for which India is answerable to its Parliament?*

**Foreign Secretary:** *When you see the agreement every thing will become clear. Thank you very much.*

*(Text in italics is the translation from Hindi Text)*

**080. Extract from the Media interaction of Prime Minister Dr. Manmohan Singh on board the special flight from Berlin to New Delhi after attending the Out Reach Conference of the G-8 in Berlin.**

**June 9, 2007.**

President Bush was not well yesterday. But he came briefly for the meeting and then he took me aside and we had a good conversation on our cooperation in the civil nuclear energy and related issues. There has been a whole lot of speculation in the press about difficulties. There are some difficulties but I think both of us expressed our determination to overcome them. President Bush was quite appreciative of our concerns. Beyond that, I wouldn't like to say more than that. He has a very positive feeling towards India and he feels a certain sense of ownership of the nuclear deal and therefore I was quite satisfied with my meeting. Mr. Narayanan had a meeting with his counterpart, the National Security Advisor.

Extract from the Question - Answer session:

**On the India- US Nuclear deal :**

1. Let me say that I cannot assert that I got the final answer yesterday. I can only talk about atmospherics. Atmospherics at the yesterday's meetings were quite positive but it will take some more time. Some

tough negotiations will be required before we see light at the end of the tunnel.

2. There are several ideas which are around . I think this is an ongoing process. I think there is nothing new. All we are interested in is the substance of the 123 agreement should conform to what I had told people of India, what I told Parliament. I think various permutations and combinations are discussed from time to time. There is no finality to these till we see light at the end of the tunnel.
3. He [Bush] took copious notes of what I said to him. With him was his deputy, Hadley, the National Security Advisor. Mr. Narayanan had also detailed talks with Mr. Hadley.
4. We did not discuss a time frame. It was too brief a meeting for me. The President was not too well yesterday. In spite of that he did us the honour of pulling me aside and discussing this issue.
5. Well, it will be immature on my part to indicate any deadline. Why September? Why not earlier?

#### **On Opposition parties criticism of the nuclear deal.**

8. It doesn't bother me. I have always said, we should judge politicians not by what they say when they are in opposition but what they do when they are in seat of power. I am quite sure any patriotic Indian, if she or he had reins of running this country, they would have welcomed the deal. What we are attempting would end India's nuclear isolation, preserve the integrity of our strategic programme, and at the same time, open new pathways for India to cooperate in international civil nuclear energy. Energy is our critical bottleneck. Environment friendly energies are now talk of the town. Nuclear energy happens to be one such clean energy. If we get access to International cooperation, international technology, I think that will only enhance our development objectives.

**081. Extract from the T.V Interview of External Affairs Minister Pranab Mukherjee with Karan Thapar on India – US nuclear deal.**

**New Delhi, June 10, 2007.**

*[India's External Affairs Minister Pranab Mukherjee explains the current position of nuclear talks between India and US in an exclusive interview to Karan Thapar on Devil's Advocate. Excerpts:-]*

**Karan Thapar:** After the Burns-Menon's meeting, where does the Indo-US nuclear deal stands—that's one of the issues that I shall explore today with External Affairs Minister Pranab Mukherjee.

Mr. Mukherjee you have already said that the Indo-US nuclear deal hasn't hit a roadblock. But are you disappointed with the outcome of the Menon-Burns talks?

**Pranab Mukherjee:** This is a negotiation which is going on for quite some time. There are certain issues, which are yet to be dissolved. So there is no question of disappointment. We are engaged in negotiations.

**Karan Thapar:** Let's look at some of the issues which as you say still need to be resolved and start with the question of reprocessing. Nothing in US law and nothing in the hierarchy prohibits America granting India reprocessing rights. So what explanation have they given you for their reluctance to give us these rights?

**Pranab Mukherjee:** Look it's not possible for us to explain in details what is their stand. We can only explain what is our expectation and to what extent we can go. Reprocessing is absolutely necessary for us because we do not want to have a situation like the repetition of Tarapur.

**Karan Thapar:** Quite right and have they explained why they are reluctant?

**Pranab Mukherjee:** They say that they have some problems. We said that you do not transfer your problems to us. What has been agreed in the joint statement of July 2005 and subsequently in March 2006 and what's in our commitment to Parliament - they are already aware of it - therefore within these two parameters, this 123 Agreement has to be signed.

**Karan Thapar:** When Mr Burn was here last week, did you point out to him that at his press conference in Hyderabad House in March 2, 2006, George

Bush as good as committed himself to giving India reprocessing rights. He said and I quite, "I don't see how you can advocate nuclear power without advocating technological development of reprocessing.

**Pranab Mukherjee:** That's why I am saying that it is for them to decide and to argue and carry on conviction to their people if they have any difficulty. What we required we made it quite clear to them.

**Karan Thapar:** America has granted reprocessing rights to three countries. It has given it in the past—to Switzerland, Japan and to Euratom. Would India be satisfied with reprocessing rights on the same terms and conditions?

**Pranab Mukherjee:** First of all we will be satisfied only, we will have to examine it in the context of our commitment to the Indian Parliament in the joint statement of July 2005 and the separation plan of 2006.

**Karan Thapar:** People say that there are two steps that India could consider taking, Which these three countries, which I have just named, have already taken, which would encourage America. They say that were you to identify the reprocessing plant where the reprocessing would happen, and were you to be more amenable and acceptable to fallback safeguards, this would encourage America. Are you prepared to take these steps?

**Pranab Mukherjee:** Look, there are certain issues, which we shall have to keep in mind. For instance, India is a non-signatory to NPT. The other countries which you have referred to all of them are signatories to NPT. Therefore this arrangement will have to be India-specific.

**Karan Thapar:** So, just because these three countries have taken certain steps, India cant necessarily follow the same way.

**Pranab Mukherjee:** India can follow what has been stated, as I mentioned in those two statements, and what is our commitment to the Indian Parliament.

**Karan Thapar:** Another way in fact the reprocessing rights could be granted to India is when America were to adopt what it did with China. In the case of 123 Agreement with China, America has committed itself to expeditiously and favourable considering any Chinese request for reprocessing within a limited time frame of just six months and if no decision is possible in that six months period then China automatically gets an interim right to reprocess. Would that be acceptable?

**Pranab Mukherjee:** I'm sorry Karan but you are making comparison between the incomparables. China is already a declared nuclear weapon state. I have already stated that it will have to be India-specific in the context as India is a non-signatory to NPT.

**Karan Thapar:** If none of the earlier examples or precedence are applicable to us as you pointed out, doesn't that make you the granting of reprocessing even more difficult?

**Pranab Mukherjee:** I don't think it will be more difficult. We will be able to find some way out. Though the negotiations have protracted, but in a complicated negotiation like this sometimes it happens. Both countries are trying their best. I don't doubt their sincerity. Similarly we would also like to have it. Because the process began from July 2005 when Prime Minister visited.

**Karan Thapar:** Do you think that if both countries try their best, the outcome will be satisfactory to India, or is there a danger that the best may not be good enough.

**Pranab Mukherjee:** No that's your value judgment. I'm not entering into any value judgment at this juncture. Let me first reach the breach and then I will think what to do next.

**Karan Thapar:** Very interesting. You are not wanting to express confidence. But you are leaving open the possibility that on reprocessing you might not get what would be satisfactory for India.

**Pranab Mukherjee:** No, I am saying that what will satisfy me—those parameters are in the knowledge of public domain. If it meets my requirements in the context of those documents, I will be satisfied.

**Karan Thapar:** A second sticking point according to the press is the issue of what America calls 'right to return'. On that question of right to return, is India looking for an exemption from that law or is India looking for a way to cushioning the impact of the law so that it doesn't have a deleterious, hurtful or harmful impact on India's position. Which is that you are looking for?

**Pranab Mukherjee:** No. We would not like to have any impact on our indigenous nuclear programme. And also we would not like to affect our strategic programme to maintain the reserves for our strategic programme.

**Karan Thapar:** Very specifically on this question of right to return, I imagine your prime interest is to ensure that any strategic reserves of fuel which

you build up are not covered by the right to return. But can America exempt India's strategic reserves without making a mockery of its own law of right of return?

**Pranab Mukherjee:** What would be India specific? Otherwise where does the question come about India-specific? It is known to everybody that India is not a signatory to NPT. India has its strategic programmes.

**Karan Thapar:** And therefore you are saying that anything that is India specific must take into consideration the fact that we have certain demands that are different to other countries and they must be met and catered.

**Pranab Mukherjee:** Exactly, because we would like to continue our existing position in respect of the other things.

**Karan Thapar:** How confident are you that at the end of this whole series of negotiations, you will have a satisfactory 123 which India can accept and sign?

**Pranab Mukherjee:** Unless it meets our requirement, it will be difficult for us to accept any proposition.

**Karan Thapar:** Are you optimistic or pessimistic about it?

**Pranab Mukherjee:** I am hopeful. The way you want to interpret...I'm hopeful that everything will fall in line.

**Karan Thapar:** But hopeful is not a very positive word. It's a very neutral word.

**Pranab Mukherjee:** I do not know whether it is a positive word. I'm not a great linguist. So let's leave it to the linguists.

**Karan Thapar:** If for some reason, after two years of negotiating, the Indo-US nuclear deal falls through, how much of a setback will it be to Indo-US relations?

**Pranab Mukherjee:** No, I do not think it will have any adverse impact on Indo-US relationship because the relationship is growing. These developments have taken place from the July 2005. It is an important landmark in our bilateral relationships no doubt but we do hope as I mentioned that we will be able to reach the successful conclusion of the present series of negotiations. Therefore I am not looking at that at all.

**Karan Thapar:** But you are also saying that if you don't reach to a hopeful or a satisfactory conclusion it won't have a major impact on the relationship.

**Pranab Mukherjee:** It should not have.

**Karan Thapar:** 'It should not have'. 'Should not' means also hopefully it won't have.

**Pranab Mukherjee:** Again you are just trying to twist the words. What is the fun in it?

\* \* \* \*

**Pranab Mukherjee:** Thank You.

**082 Press Release issued by the Prime Minister's Office on the Prime Minister's telephonic talk with US President George W. Bush.**

**New Delhi, July 11, 2007.**

Prime Minister Dr. Manmohan Singh had a telephone conversation with United States President George Bush earlier this evening. The two leaders expressed satisfaction at the strong India-US bilateral relationship and spoke about the forthcoming discussions between the National Security Advisers of both countries, scheduled for next week. They were of the view that these discussions will reinforce our strong bilateral relations. The Prime Minister and the US President also said they both looked forward to continuing their own discussions at their next meeting<sup>1</sup>.

---

1. The telephonic talk led to media speculation on the urgency of the negotiations being clinched in the next round of talks. The inclusion of Anil Kakodkar, Secretary Department of Atomic Energy along with the Foreign Secretary Shivshankar Menon and the fact that level of delegations was upgraded to that of National Security Advisors of the two countries, was considered as adding urgency to the negotiations. Media speculated that the visit of Ambassador Ronen Sen to New Delhi the previous week for consultations, was another piece of evidence of the need to clinch the Agreement.

The *Indian Express* said on July 11 "though the right atmospheric conditions are in place for the talks, the key hurdle in the 123 talks of US extending India the right to reprocess spent fuel still remains unresolved. While this is an absolute must for India, given that the PM made this commitment in Parliament, American bureaucracy continues to grapple with the reality that a blanket "programmatic consent" has not yet been given even to Russia and China. Barring EU and Japan, US only gives "case-by-case consent" for reprocessing to other nuclear powers. But Indian hopes rested on a political decision from White House. The second issue holding back the agreement was US reluctance to assure that 'it will not demand return of US-origin fuel in case the agreement were to terminate if India tested a nuclear device in future.' New Delhi argued that this was against Washington's March 2 commitment for permanent guarantee of fuel supplies.

**083A. Joint Press Statement issued on the conclusion of meetings on the US-India Civil Nuclear Cooperation Initiative.**

**Washington (D. C), July 21, 2007.**

Under Secretary of State for Political Affairs R. Nicholas Burns and Foreign Secretary Shivshankar Menon held four days of meetings in Washington July 17-20, 2007, on the US-India Civil Nuclear Cooperation Initiative, including talks on bilateral agreement for peaceful nuclear cooperation, also known as the 123 agreement.

2. In addition, National Security Advisor M.K.Narayanan and Foreign Secretary Menon met with Vice President Cheney, Secretary Rice, Secretary Gates, and with the U.S. National Security Advisor Stephen P.Hadley.
3. The discussions were constructive and positive, and both Under Secretary Burns and Foreign Secretary Menon are pleased with the substantial progress made on the outstanding issues in the 123 agreement. We will now refer the issue to our governments for final review.
4. Both the United States and India look forward to the completion of these remaining steps and to the conclusion of this historic Initiative<sup>1</sup>.

---

1. In New Delhi a joint meeting of the Cabinet Committee on Political Affairs (CCPA) and the Cabinet Committee on Security (CCS) on July 25 approved the text of the '123' civilian nuclear cooperation agreement. National Security Adviser M.K. Narayanan and Foreign Secretary Shivshankar Menon, who conducted the Washington talks, briefed the Cabinet members on the "deal." Prime Minister Manmohan Singh presided over the meeting. Besides the four CCS members (Shivraj Patil, Pranab Mukherjee, A.K. Antony and P. Chidambaram), the CCPA comprises HRD Minister Arjun Singh, Agriculture Minister Sharad Pawar, Transport Minister T.R. Baalu and Railway Minister Lalu Prasad. (The text would be presented to the Atomic Energy Commission for approval at its meeting on July 27. Once it gives its sanction, the two countries are likely to release the text simultaneously.) The Prime Minister took the earliest opportunity to meet the top Left leaders on July 25 night itself to allay their concerns on the matter. Pranab Mukherjee told the media that "all concerns of India have been reflected and adequately addressed" in the agreement. (Mr. Mukherjee said Dr. Singh had invited the former Prime Minister, Atal Bihari Vajpayee, the Leaders of the Opposition in the Lok Sabha and the Rajya Sabha, L.K. Advani and Jaswant Singh, for discussions this week. Leaders of other political parties would also be briefed on the agreement, he said.)

**083B. Initialed Text of the Agreement for Cooperation between The Government of India and The Government of the United States of America concerning peaceful uses of nuclear energy.**

**The Government of India and the Government of the United States of America**, hereinafter referred to as the Parties,

**RECOGNIZING** the significance of civilian nuclear energy for meeting growing global energy demands in a cleaner and more efficient manner;

**DESIRING** to cooperate extensively in the full development and use of nuclear energy for peaceful purposes as a means of achieving energy security, on a stable, reliable and predictable basis;

**WISHING** to develop such cooperation on the basis of mutual respect for sovereignty, non-interference in each other's internal affairs, equality, mutual benefit, reciprocity and with due respect for each other's nuclear programmes;

**DESIRING** to establish the necessary legal framework and basis for cooperation concerning peaceful uses of nuclear energy;

**AFFIRMING** that cooperation under this Agreement is between two States possessing advanced nuclear technology, both Parties having the same benefits and advantages, both committed to preventing WMD proliferation;

**NOTING** the understandings expressed in the India - U.S. Joint Statement of July 18, 2005 to enable full civil nuclear energy cooperation with India covering aspects of the associated nuclear fuel cycle;

**AFFIRMING** their support for the objectives of the International Atomic Energy Agency (IAEA) and its safeguards system, as applicable to India and the United States of America, and its importance in ensuring that international cooperation in development and use of nuclear energy for peaceful purposes is carried out under arrangements that will not contribute to the proliferation of nuclear weapons or other nuclear explosive devices;

**NOTING** their respective commitments to safety and security of peaceful uses of nuclear energy, to adequate physical protection of nuclear material and effective national export controls;

**MINDFUL** that peaceful nuclear activities must be undertaken with a view to protecting the environment;

**MINDFUL** of their shared commitment to preventing the proliferation of weapons of mass destruction; and

**DESIROUS** of strengthening the strategic partnership between them;

**Have** agreed on the following:

#### **ARTICLE 1 - DEFINITIONS**

For the purposes of this Agreement:

- (A) "By-product material" means any radioactive material (except special fissionable material) yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special fissionable material. By-product material shall not be subject to safeguards or any other form of verification under this Agreement, unless it has been decided otherwise by prior mutual agreement in writing between the two Parties.
- (B) "Component" means a component part of equipment, or other item so designated by agreement of the Parties.
- (C) "Conversion" means any of the normal operations in the nuclear fuel cycle, preceding fuel fabrication and excluding enrichment, by which uranium is transformed from one chemical form to another - for example, from uranium hexafluoride (UF<sub>6</sub>) to uranium dioxide (UO<sub>2</sub>) or from uranium oxide to metal.
- (D) "Decommissioning" means the actions taken at the end of a facility's useful life to retire the facility from service in the manner that provides adequate protection for the health and safety of the decommissioning workers and the general public, and for the environment. These actions can range from closing down the facility and a minimal removal of nuclear material coupled with continuing maintenance and surveillance, to a complete removal of residual radioactivity in excess of levels acceptable for unrestricted use of the facility and its site.
- (E) "Dual-Use Item" means a nuclear related item which has a technical use in both nuclear and non-nuclear applications.
- (F) "Equipment" means any equipment in nuclear operation including reactor, reactor pressure vessel, reactor fuel charging and discharging equipment, reactor control rods, reactor pressure tubes,

reactor primary coolant pumps, zirconium tubing, equipment for fuel fabrication and any other item so designated by the Parties.

- (G) “High enriched uranium” means uranium enriched to twenty percent or greater in the isotope 235.
- (H) “Information” means any information that is not in the public domain and is transferred in any form pursuant to this Agreement and so designated and documented in hard copy or digital form by mutual agreement by the Parties that it shall be subject to this Agreement, but will cease to be information whenever the Party transferring the information or any third party legitimately releases it into the public domain.
- (I) “Low enriched uranium” means uranium enriched to less than twenty percent in the isotope 235.
- (J) “Major critical component” means any part or group of parts essential to the operation of a sensitive nuclear facility or heavy water production facility.
- (K) “Non-nuclear material” means heavy water, or any other material suitable for use in a reactor to slow down high velocity neutrons and increase the likelihood of further fission, as may be jointly designated by the appropriate authorities of the Parties.
- (L) “Nuclear material” means (1) source material and (2) special fissionable material. “Source material” means uranium containing the mixture of isotopes occurring in nature; uranium depleted in the isotope 235; thorium; any of the foregoing in the form of metal, alloy, chemical compound, or concentrate; any other material containing one or more of the foregoing in such concentration as the Board of Governors of the IAEA shall from time to time determine; and such other materials as the Board of Governors of the IAEA may determine or as may be agreed by the appropriate authorities of both Parties. “Special fissionable material” means plutonium, uranium-233, uranium enriched in the isotope 233 or 235, any substance containing one or more of the foregoing, and such other substances as the Board of Governors of the IAEA may determine or as may be agreed by the appropriate authorities of both Parties. “Special fissionable material” does not include “source material”. Any determination by the Board of Governors of the IAEA under Article XX of that Agency’s Statute or otherwise that amends the list of materials considered to

be "source material" or "special fissionable material" shall only have effect under this Agreement when both Parties to this Agreement have informed each other in writing that they accept such amendment.

- (M) "Peaceful purposes" include the use of information, nuclear material, equipment or components in such fields as research, power generation, medicine, agriculture and industry, but do not include use in, research on, or development of any nuclear explosive device or any other military purpose. Provision of power for a military base drawn from any power network, production of radioisotopes to be used for medical purposes in military environment for diagnostics, therapy and sterility assurance, and other similar purposes as may be mutually agreed by the Parties shall not be regarded as military purpose.
- (N) "Person" means any individual or any entity subject to the territorial jurisdiction of either Party but does not include the Parties.
- (O) "Reactor" means any apparatus, other than a nuclear weapon or other nuclear explosive device, in which a self-sustaining fission chain reaction is maintained by utilizing uranium, plutonium, or thorium or any combination thereof.
- (P) "Sensitive nuclear facility" means any facility designed or used primarily for uranium enrichment, reprocessing of nuclear fuel, or fabrication of nuclear fuel containing plutonium.
- (Q) "Sensitive nuclear technology" means any information that is not in the public domain and that is important to the design, construction, fabrication, operation, or maintenance of any sensitive nuclear facility, or other such information that may be so designated by agreement of the Parties.

## **ARTICLE 2 - SCOPE OF COOPERATION**

1. The Parties shall cooperate in the use of nuclear energy for peaceful purposes in accordance with the provisions of this Agreement. Each Party shall implement this Agreement in accordance with its respective applicable treaties, national laws, regulations, and license requirements concerning the use of nuclear energy for peaceful purposes.
2. The purpose of the Agreement being to enable full civil nuclear energy

cooperation between the Parties, the Parties may pursue cooperation in all relevant areas to include, but not limited to, the following:

- a. Advanced nuclear energy research and development in such areas as may be agreed between the Parties;
  - b. Nuclear safety matters of mutual interest and competence, as set out in Article 3;
  - c. Facilitation of exchange of scientists for visits, meetings, symposia and collaborative research;
  - d. Full civil nuclear cooperation activities covering nuclear reactors and aspects of the associated nuclear fuel cycle including technology transfer on an industrial or commercial scale between the Parties or authorized persons;
  - e. Development of a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors;
  - f. Advanced research and development in nuclear sciences including but not limited to biological research, medicine, agriculture and industry, environment and climate change;
  - g. Supply between the Parties, whether for use by or for the benefit of the Parties or third countries, of nuclear material;
  - h. Alteration in form or content of nuclear material as provided for in Article 6;
  - i. Supply between the Parties of equipment, whether for use by or for the benefit of the Parties or third countries;
  - j. Controlled thermonuclear fusion including in multilateral projects; and
  - k. Other areas of mutual interest as may be agreed by the Parties.
3. Transfer of nuclear material, non-nuclear material, equipment, components and information under this Agreement may be undertaken directly between the Parties or through authorized persons. Such transfers shall be subject to this Agreement and to such additional terms and conditions as may be agreed by the Parties. Nuclear material, non-nuclear material, equipment, components and

information transferred from the territory of one Party to the territory of the other Party, whether directly or through a third country, will be regarded as having been transferred pursuant to this Agreement only upon confirmation, by the appropriate authority of the recipient Party to the appropriate authority of the supplier Party that such items both will be subject to the Agreement and have been received by the recipient Party.

4. The Parties affirm that the purpose of this Agreement is to provide for peaceful nuclear cooperation and not to affect the unsafeguarded nuclear activities of either Party. Accordingly, nothing in this Agreement shall be interpreted as affecting the rights of the Parties to use for their own purposes nuclear material, non-nuclear material, equipment, components, information or technology produced, acquired or developed by them independent of any nuclear material, non-nuclear material, equipment, components, information or technology transferred to them pursuant to, this Agreement. This Agreement shall be implemented in a manner so as not to hinder or otherwise interfere with any other activities involving the use of nuclear material, non-nuclear material, equipment, components, information or technology and military nuclear facilities produced, acquired or developed by them independent of this Agreement for their own purposes.

### **ARTICLE 3 - TRANSFER OF INFORMATION**

1. Information concerning the use of nuclear energy for peaceful purposes may be transferred between the Parties. Transfers of information may be accomplished through reports, data banks and computer programs and any other means mutually agreed to by the Parties. Fields that may be covered include, but shall not be limited to, the following:
  - a. Research, development, design, construction, operation, maintenance and use of reactors, reactor experiments, and decommissioning;
  - b. The use of nuclear material in physical, chemical, radiological and biological research, medicine, agriculture and industry;
  - c. Fuel cycle activities to meet future world-wide civil nuclear energy needs, including multilateral approaches to which they are parties for ensuring nuclear fuel supply and appropriate

- techniques for management of nuclear wastes;
- d. Advanced research and development in nuclear science and technology;
  - e. Health, safety, and environmental considerations related to the foregoing;
  - f. Assessments of the role nuclear power may play in national energy plans;
  - g. Codes, regulations and standards for the nuclear industry;
  - h. Research on controlled thermonuclear fusion including bilateral activities and contributions toward multilateral projects such as the International Thermonuclear Experimental Reactor (ITER); and
  - i. Any other field mutually agreed to by the Parties.
2. Cooperation pursuant to this Article may include, but is not limited to, training, exchange of personnel, meetings, exchange of samples, materials and instruments for experimental purposes and a balanced participation in joint studies and projects.
  3. This Agreement does not require the transfer of any information regarding matters outside the scope of this Agreement, or information that the Parties are not permitted under their respective treaties, national laws, or regulations to transfer.
  4. Restricted Data, as defined by each Party, shall not be transferred under this Agreement.

#### **ARTICLE 4 - NUCLEAR TRADE**

1. The Parties shall facilitate nuclear trade between themselves in the mutual interests of their respective industry, utilities and consumers and also, where appropriate, trade between third countries and either Party of items obligated to the other Party. The Parties recognize that reliability of supplies is essential to ensure smooth and uninterrupted operation of nuclear facilities and that industry in both the Parties needs continuing reassurance that deliveries can be made on time in order to plan for the efficient operation of nuclear installations.
2. Authorizations, including export and import licenses as well as

authorizations or consents to third parties, relating to trade, industrial operations or nuclear material movement should be consistent with the sound and efficient administration of this Agreement and should not be used to restrict trade. It is further agreed that if the relevant authority of the concerned Party considers that an application cannot be processed within a two month period it shall immediately, upon request, provide reasoned information to the submitting Party. In the event of a refusal to authorize an application or a delay exceeding four months from the date of the first application the Party of the submitting persons or undertakings may call for urgent consultations under Article 13 of this Agreement, which shall take place at the earliest opportunity and in any case not later than 30 days after such a request.

#### **ARTICLE 5 - TRANSFER OF NUCLEAR MATERIAL, NON-NUCLEAR MATERIAL, EQUIPMENT, COMPONENTS AND RELATED TECHNOLOGY**

1. Nuclear material, non-nuclear material, equipment and components may be transferred for applications consistent with this Agreement. Any special fissionable material transferred under this Agreement shall be low enriched uranium, except as provided in paragraph 5.
2. Sensitive nuclear technology, heavy water production technology, sensitive nuclear facilities, heavy water production facilities and major critical components of such facilities may be transferred under this Agreement pursuant to an amendment to this Agreement. Transfers of dual-use items that could be used in enrichment, reprocessing or heavy water production facilities will be subject to the Parties' respective applicable laws, regulations and license policies.
3. Natural or low enriched uranium may be transferred for use as fuel in reactor experiments and in reactors, for conversion or fabrication, or for such other purposes as may be agreed to by the Parties.
4. The quantity of nuclear material transferred under this Agreement shall be consistent with any of the following purposes: use in reactor experiments or the loading of reactors, the efficient and continuous conduct of such reactor experiments or operation of reactors for their lifetime, use as samples, standards, detectors, and targets, and the accomplishment of other purposes as may be agreed by the Parties.
5. Small quantities of special fissionable material may be transferred

for use as samples, standards, detectors, and targets, and for such other purposes as the Parties may agree.

6. (a) The United States has conveyed its commitment to the reliable supply of fuel to India. Consistent with the July 18, 2005, Joint Statement, the United States has also reaffirmed its assurance to create the necessary conditions for India to have assured and full access to fuel for its reactors. As part of its implementation of the July 18, 2005, Joint Statement the United States is committed to seeking agreement from the U.S. Congress to amend its domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international fuel market, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations.

(b) To further guard against any disruption of fuel supplies, the United States is prepared to take the following additional steps:

- i) The United States is willing to incorporate assurances regarding fuel supply in the bilateral U.S.-India agreement on peaceful uses of nuclear energy under Section 123 of the U.S. Atomic Energy Act, which would be submitted to the U.S. Congress.
  - ii) The United States will join India in seeking to negotiate with the IAEA an India-specific fuel supply agreement.
  - iii) The United States will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors.
  - iv) If despite these arrangements, a disruption of fuel supplies to India occurs, the United States and India would jointly convene a group of friendly supplier countries to include countries such as Russia, France and the United Kingdom to pursue such measures as would restore fuel supply to India.
- (c) In light of the above understandings with the United States, an India-specific safeguards agreement will be negotiated between India and the IAEA providing for safeguards to guard against withdrawal of safeguarded nuclear material from civilian use at any time as well as providing for corrective

measures that India may take to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies. Taking this into account, India will place its civilian nuclear facilities under India-specific safeguards in perpetuity and negotiate an appropriate safeguards agreement to this end with the IAEA.

#### **ARTICLE 6 - NUCLEAR FUEL CYCLE ACTIVITIES**

In keeping with their commitment to full civil nuclear cooperation, both Parties, as they do with other states with advanced nuclear technology, may carry out the following nuclear fuel cycle activities:

- i) Within the territorial jurisdiction of either Party, enrichment up to twenty percent in the isotope 235 of uranium transferred pursuant to this Agreement, as well as of uranium used in or produced through the use of equipment so transferred, may be carried out.
- ii) Irradiation within the territorial jurisdiction of either Party of Plutonium, uranium-233, high enriched uranium and irradiated nuclear material transferred pursuant to this Agreement or used in or produced through the use of non-nuclear material, nuclear material or equipment so transferred may be carried out.
- iii) With a view to implementing full civil nuclear cooperation as envisioned in the Joint Statement of the Parties of July 18, 2005, the Parties grant each other consent to reprocess or otherwise alter in form or content nuclear material transferred pursuant to this Agreement and nuclear material and by-product material used in or produced through the use of nuclear material, non-nuclear material, or equipment so transferred. To bring these rights into effect, India will establish a new national reprocessing facility dedicated to reprocessing safeguarded nuclear material under IAEA safeguards and the Parties will agree on arrangements and procedures under which such reprocessing or other alteration in form or content will take place in this new facility. Consultations on arrangements and procedures will begin within six months of a request by either Party and will be concluded within one year. The Parties agree on the application of IAEA safeguards to all facilities concerned with the above activities. These arrangements and procedures shall include provisions with respect to physical protection standards set out in Article 8, storage standards set out in Article 7, and environmental

protections set forth in Article 11 of this Agreement, and such other provisions as may be agreed by the Parties. Any special fissionable material that may be separated may only be utilized in national facilities under IAEA safeguards.

- iv) Post-irradiation examination involving chemical dissolution or separation of irradiated nuclear material transferred pursuant to this Agreement or irradiated nuclear material used in or produced through the use of non-nuclear material, nuclear material or equipment so transferred may be carried out.

#### **ARTICLE 7 - STORAGE AND RETRANSFERS**

1. Plutonium and uranium 233 (except as either may be contained in irradiated fuel elements), and high enriched uranium, transferred pursuant to this Agreement or used in or produced through the use of material or equipment so transferred, may be stored in facilities that are at all times subject, as a minimum, to the levels of physical protection that are set out in IAEA document INFCIRC 225/REV 4 as it may be revised and accepted by the Parties. Each Party shall record such facilities on a list, made available to the other Party. A Party's list shall be held confidential if that Party so requests. Either Party may make changes to its list by notifying the other Party in writing and receiving a written acknowledgement. Such acknowledgement shall be given no later than thirty days after the receipt of the notification and shall be limited to a statement that the notification has been received. If there are grounds to believe that the provisions of this sub-Article are not being fully complied with, immediate consultations may be called for. Following upon such consultations, each Party shall ensure by means of such consultations that necessary remedial measures are taken immediately. Such measures shall be sufficient to restore the levels of physical protection referred to above at the facility in question. However, if the Party on whose territory the nuclear material in question is stored determines that such measures are not feasible, it will shift the nuclear material to another appropriate, listed facility it identifies.
2. Nuclear material, non-nuclear material, equipment, components, and information transferred pursuant to this Agreement and any special fissionable material produced through the use of nuclear material, non-nuclear material or equipment so transferred shall not be transferred or re-transferred to unauthorized persons or, unless the

Parties agree, beyond the recipient Party's territorial jurisdiction.

#### **ARTICLE 8 - PHYSICAL PROTECTION**

1. Adequate physical protection shall be maintained with respect to nuclear material and equipment transferred pursuant to this Agreement and nuclear material used in or produced through the use of nuclear material, non-nuclear material or equipment so transferred.
2. To fulfill the requirement in paragraph 1, each Party shall apply measures in accordance with (i) levels of physical protection at least equivalent to the recommendations published in IAEA document INFCIRC/225/Rev.4 entitled "The Physical Protection of Nuclear Material and Nuclear Facilities," and in any subsequent revisions of that document agreed to by the Parties, and (ii) the provisions of the 1980 Convention on the Physical Protection of Nuclear Material and any amendments to the Convention that enter into force for both Parties.
3. The Parties will keep each other informed through diplomatic channels of those agencies or authorities having responsibility for ensuring that levels of physical protection for nuclear material in their territory or under their jurisdiction or control are adequately met and having responsibility for coordinating response and recovery operations in the event of unauthorized use or handling of material subject to this Article. The Parties will also keep each other informed through diplomatic channels of the designated points of contact within their national authorities to cooperate on matters of out-of-country transportation and other matters of mutual concern.
4. The provisions of this Article shall *be* implemented in such a manner as to avoid undue interference in the Parties' peaceful nuclear activities and so as to be consistent with prudent management practices required for the safe and economic conduct of their peaceful nuclear programs.

#### **ARTICLE 9 - PEACEFUL USE**

Nuclear material, equipment and components transferred pursuant to this Agreement and nuclear material and by-product material used in or produced through the use of any nuclear material, equipment, and components so transferred shall not be used by the recipient Party for any

nuclear explosive device, for research on or development of any nuclear explosive device or for any military purpose.

#### **ARTICLE 10 - IAEA SAFEGUARDS**

1. Safeguards will be maintained with respect to all nuclear materials and equipment transferred pursuant to this Agreement, and with respect to all special fissionable material used in or produced through the use of such nuclear materials and equipment, so long as the material or equipment remains under the jurisdiction or control of the cooperating Party.
2. Taking into account Article 5.6 of this Agreement, India agrees that nuclear material and equipment transferred to India by the United States of America pursuant to this Agreement and any nuclear material used in or produced through the use of nuclear material, non-nuclear material, equipment or components so transferred shall be subject to safeguards in perpetuity in accordance with the India-specific Safeguards Agreement between India and the IAEA [*identifying data*] and an Additional Protocol, when in force.
3. Nuclear material and equipment transferred to the United States of America pursuant to this Agreement and any nuclear material used in or produced through the use of any nuclear material, non-nuclear material, equipment, or components so transferred shall be subject to the Agreement between the United States of America and the IAEA for the application of safeguards in the United States of America, done at Vienna November 18, 1977, which entered into force on December 9, 1980, and an Additional Protocol, when in force.
4. If the IAEA decides that the application of IAEA safeguards is no longer possible, the supplier and recipient should consult and agree on appropriate verification measures.
5. Each Party shall take such measures as are necessary to maintain and facilitate the application of IAEA safeguards in its respective territory provided for under this Article.
6. Each Party shall establish and maintain a system of accounting for and control of nuclear material transferred pursuant to this Agreement and nuclear material used in or produced through the use of any material, equipment, or components so transferred. The procedures applicable to India shall be those set forth in the India-specific

Safeguards Agreement referred to in Paragraph 2 of this Article.

7. Upon the request of either Party, the other Party shall report or permit the IAEA to report to the requesting Party on the status of all inventories of material subject to this Agreement.
8. The provisions of this Article shall be implemented in such a manner as to avoid hampering, delay, or undue interference in the Parties' peaceful nuclear activities and so as to be consistent with prudent management practices required for the safe and economic conduct of their peaceful nuclear programs.

#### **ARTICLE 11 - ENVIRONMENTAL PROTECTION**

The Parties shall cooperate in following the best practices for minimizing the impact on the environment from any radioactive, chemical or thermal contamination arising from peaceful nuclear activities under this Agreement and in related matters of health and safety.

#### **ARTICLE 12 - IMPLEMENTATION OF THE AGREEMENT**

1. This Agreement shall be implemented in a manner designed:
  - a) to avoid hampering or delaying the nuclear activities in the territory of either Party;
  - b) to avoid interference in such activities;
  - c) to be consistent with prudent management practices required for the safe conduct of such activities; and
  - d) to take full account of the long term requirements of the nuclear energy programs of the Parties.
2. The provisions of this Agreement shall not be used to:
  - a) secure unfair commercial or industrial advantages or to restrict trade to the disadvantage of persons and undertakings of either Party or hamper their commercial or industrial interests, whether international or domestic;
  - b) interfere with the nuclear policy or programs for the promotion of the peaceful uses of nuclear energy including research and development; or

- c) impede the free movement of nuclear material, non nuclear material and equipment supplied under this Agreement within the territory of the Parties.
3. When execution of an agreement or contract pursuant to this Agreement between Indian and United States organizations requires exchanges of experts, the Parties shall facilitate entry of the experts to their territories and their stay therein consistent with national laws, regulations and practices. When other cooperation pursuant to this Agreement requires visits of experts, the Parties shall facilitate entry of the experts to their territory and their stay therein consistent with national laws, regulations and practices.

### **ARTICLE 13-CONSULTATIONS**

1. The Parties undertake to consult at the request of either Party regarding the implementation of this Agreement and the development of further cooperation in the field of peaceful uses of nuclear energy on a stable, reliable and predictable basis. The Parties recognize that such consultations are between two States with advanced nuclear technology, which have agreed to assume the same responsibilities and practices and acquire the same benefits and advantages as other leading countries with advanced nuclear technology.
2. Each Party shall endeavor to avoid taking any action that adversely affects cooperation envisaged under Article 2 of this Agreement. If either Party at any time following the entry into force of this Agreement does not comply with the provisions of this Agreement, the Parties shall promptly hold consultations with a view to resolving the matter in a way that protects the legitimate interests of both Parties, it being understood that rights of either Party under Article 16.2 remain unaffected.
3. Consultations under this Article may be carried out by a Joint Committee specifically established for this purpose. A Joint Technical Working Group reporting to the Joint Committee will be set up to ensure the fulfillment of the requirements of the Administrative Arrangements referred to in Article 17.

### **ARTICLE 14 - TERMINATION AND CESSATION OF COOPERATION**

1. Either Party shall have the right to terminate this Agreement prior to

its expiration on one year's written notice to the other Party. A Party giving notice of termination shall provide the reasons for seeking such termination. The Agreement shall terminate one year from the date of the written notice, unless 'the notice has been withdrawn by the providing Party in writing prior to the date of termination.

2. Before this Agreement is terminated pursuant to paragraph 1 of this Article, the Parties shall consider the relevant circumstances and promptly hold consultations, as provided in Article 13, to address the reasons cited by the Party seeking termination. The Party seeking termination has the right to cease further cooperation under this Agreement if it determines that a mutually acceptable resolution of outstanding issues has not been possible or cannot be achieved through consultations. The Parties agree to consider carefully the circumstances that may lead to termination or cessation of cooperation. They further agree to take into account whether the circumstances that may lead to termination or cessation resulted from a Party's serious concern about a changed security environment or as a response to similar actions by other States which could impact national security.
3. If a Party seeking termination cites a violation of this Agreement as the reason for notice for seeking termination, the Parties shall consider whether the action was caused inadvertently or otherwise and whether the violation could be considered as material. No violation may be considered as being material unless corresponding to the definition of material violation or breach in the Vienna Convention on the Law of Treaties. If a Party seeking termination cites a violation of an IAEA safeguards agreement as the reason for notice for seeking termination, a crucial factor will be whether the IAEA Board of Governors has made a finding of non-compliance.
4. Following the cessation of cooperation under this Agreement, either Party shall have the right to require the return by the other Party of any nuclear material, equipment, non-nuclear material or components transferred under this Agreement and any special fissionable material produced through their use. A notice by a Party that is invoking the right of return shall be delivered to the other Party on or before the date of termination of this Agreement. The notice shall contain a statement of the items subject to this Agreement as to which the Party is requesting return. Except as provided in provisions of Article

16.3, all other legal obligations pertaining to this Agreement shall cease to apply with respect to the nuclear items remaining on the territory of the Party concerned upon termination of this Agreement.

5. The two Parties recognize that exercising the right of return would have profound implications for their relations. If either Party seeks to exercise its right pursuant to paragraph 4 of this Article, it shall, prior to the removal from the territory or from the control of the other Party of any nuclear items mentioned in paragraph 4, undertake consultations with the other Party. Such consultations shall give special consideration to the importance of uninterrupted operation of nuclear reactors of the Party concerned with respect to the availability of nuclear energy for peaceful purposes as a means of achieving energy security. Both Parties shall take into account the potential negative consequences of such termination on the on-going contracts and projects initiated under this Agreement of significance for the respective nuclear programmes of either Party.
6. If either Party exercises its right of return pursuant to paragraph 4 of this Article, it shall, prior to the removal from the territory or from the control of the other Party, compensate promptly that Party for the fair market value thereof and for the costs incurred as a consequence of such removal. If the return of nuclear items is required, the Parties shall agree on methods and arrangements for the return of the items, the relevant quantity of the items to be returned, and the amount of compensation that would have to be paid by the Party exercising the right to the other Party.
7. Prior to return of nuclear items, the Parties shall satisfy themselves that full safety, radiological and physical protection measures have been ensured in accordance with their existing national regulations and that the transfers pose no unreasonable risk to either Party, countries through which the nuclear items may transit and to the global environment and are in accordance with existing international regulations.
8. The Party seeking the return of nuclear items shall ensure that the timing, methods and arrangements for return of nuclear items are in accordance with paragraphs 5, 6 and 7. Accordingly, the consultations between the Parties shall address mutual commitments as contained in Article 5.6. It is not the purpose of the provisions of this Article

regarding cessation of cooperation and right of return to derogate from the rights of the Parties under Article 5.6.

9. The arrangements and procedures concluded pursuant to Article 6(iii) shall be subject to suspension by either Party in exceptional circumstances, as defined by the Parties, after consultations have been held between the Parties aimed at reaching mutually acceptable resolution of outstanding issues, while taking into account the effects of such suspension on other aspects of cooperation under this Agreement.

#### **ARTICLE 15 - SETTLEMENT OF DISPUTES**

Any dispute concerning the interpretation or implementation of the provisions of this Agreement shall be promptly negotiated by the Parties with a view to resolving that dispute.

#### **ARTICLE 16 - ENTRY INTO FORCE AND DURATION**

1. This Agreement shall enter into force on the date on which the Parties exchange diplomatic notes informing each other that they have completed all applicable requirements for its entry into force.
2. This Agreement shall remain in force for a period of 40 years. It shall continue in force thereafter for additional periods of 10 years each. Each Party may, by giving 6 months written notice to the other Party, terminate this Agreement at the end of the initial 40 year period or at the end of any subsequent 10 year period.
3. Notwithstanding the termination or expiration of this Agreement or withdrawal of a Party from this Agreement, Articles 5.6(c), 6, 7, 8, 9, 10 and 15 shall continue in effect so long as any nuclear material, non-nuclear material, by-product material, equipment or components subject to these articles remains in the territory of the Party concerned or under its jurisdiction or control anywhere, or until such time as the Parties agree that such nuclear material is no longer usable for any nuclear activity relevant from the point of view of safeguards.
4. This Agreement shall be implemented in good faith and in accordance with the principles of international law.
5. The Parties may consult, at the request of either Party, on possible amendments to this Agreement. This Agreement may be amended if the Parties so agree. Any amendment shall enter into force on the

date on which the Parties exchange diplomatic notes informing each other that their respective internal legal procedures necessary for the entry into force have been completed.

#### **ARTICLE 17 - ADMINISTRATIVE ARRANGEMENT**

1. The appropriate authorities of the Parties shall establish an Administrative Arrangement in order to provide for the effective implementation of the provisions of this Agreement.
2. The principles of fungibility and equivalence shall apply to nuclear material and non-nuclear material subject to this Agreement. Detailed provisions for applying these principles shall be set forth in the Administrative Arrangement.
3. The Administrative Arrangement established pursuant to this Article may be amended by agreement of the appropriate authorities of the Parties.

**IN WITNESS WHEREOF** the undersigned, being duly authorized, have signed this Agreement.

**DONE** at, this day of , 200 , in duplicate.

FOR THE GOVERNMENT  
OF INDIA:

FOR THE GOVERNMENT OF THE  
UNITED STATES OF AMERICA:

#### **AGREED MINUTE**

During the negotiation of the Agreement for Cooperation Between the Government of India and the Government of the United States of America Concerning Peaceful Uses of Nuclear Energy ("the Agreement") signed today, the following understandings, which shall be an integral part of the Agreement, were reached.

#### **Proportionality**

For the purposes of implementing the rights specified in Articles 6 and 7 of the Agreement with respect to special fissionable material and by-product material produced through the use of nuclear material and non-nuclear material, respectively, transferred pursuant to the Agreement and not used in or produced through the use of equipment transferred pursuant to the Agreement, such rights shall in practice be applied to that proportion of special fissionable material and by-product material produced that

represents the ratio of transferred nuclear material and non-nuclear material, respectively, used in the production of the special fissionable material and byproduct material to the total amount of nuclear material and non-nuclear material so used, and similarly for subsequent generations.

**By-product material**

The Parties agree that reporting and exchanges of information on by-product material subject to the Agreement will be limited to the following:

- (1) Both Parties would comply with the provisions as contained in the IAEA document GOV/1999/19/Rev.2, with regard to by-product material subject to the Agreement.
- (2) With regard to tritium subject to the Agreement, the Parties will exchange annually information pertaining to its disposition for peaceful purposes consistent with Article 9 of this Agreement.

**084. President Bush's statement on the conclusion of talks on nuclear energy cooperation.**

**Washington (D. C), July 27, 2007.**

I welcome the conclusion of negotiations on a bilateral agreement between the United States and India for peaceful nuclear cooperation. I commend those from both countries who have worked hard to make this deal happen, and I look forward to working with Congress to realize this important initiative. This marks another step in the continued progress that is deepening our Strategic Partnership with India, a vital world leader

◆ ◆ ◆ ◆ ◆

**085. Joint Statement issued at the end of talks between External Affairs Minister Pranab Mukherjee and U. S Secretary of State Dr. Condoleezza Rice regarding the India and United States Civil Nuclear Negotiations.**

**Washington, July 27, 2007.**

The United States and India have reached a historic milestone in their strategic partnership by completing negotiations on the bilateral agreement for peaceful nuclear cooperation, also known as the "123 agreement." This agreement will govern civil nuclear trade between our two countries and open the door for American and Indian firms to participate in each other's civil nuclear energy sector.

The conclusion of negotiations on this agreement marks a major step forward in fulfilling the promise of full civil nuclear cooperation as envisioned by President Bush and Prime Minister Manmohan Singh.

The successful completion of the text permits us to move forward on the U.S.-India Civil Nuclear Cooperation initiative, first announced by the two leaders on July 18, 2005, and reaffirmed on March 2, 2006. The next steps include India negotiating a safeguards agreement with the IAEA and support for nuclear trade with India from the forty-five member Nuclear Suppliers Group. Once these additional actions have been completed, President Bush will submit the text of the agreement to the U.S. Congress for final approval.

Civil nuclear cooperation between the United States and India will offer enormous strategic and economic benefits to both countries, including enhanced energy security, a more environmentally-friendly energy source, greater economic opportunities, and more robust nonproliferation efforts.

This achievement reinforces the growing bilateral relationship between two vibrant democracies. We are committed to the strategic partnership outlined by President Bush and Prime Minister Manmohan Singh, and look forward to working together to implement this historic initiative.

**086. Press Release issued by the Ministry of External Affairs giving Fact Sheet on the India - US Civil Nuclear Energy Co-operation: Conclusion of the '123' Agreement.**

**New Delhi, July 27, 2007.**

**Joint Statement of July 18, 2005**

India and the US announced that they would co-operate in civil nuclear energy in the Joint Statement of July 18, 2005 by PM and President Bush during the visit of PM to Washington.

**Understanding**

It was envisaged that the United States would adjust its laws and policies and work with friends and allies to adjust international regimes to enable full civil nuclear energy cooperation and trade with India. Reciprocally, India committed itself to identifying and separating civilian and military nuclear facilities in a phased manner, placing voluntarily its civilian nuclear facilities under IAEA safeguards, signing an Additional Protocol and continuing India's voluntary and unilateral moratorium on nuclear testing.

**Separation Plan and Passage of Enabling Legislation by the US**

To implement this, several important steps have been completed already: a Separation Plan was agreed to at the time of President Bush's visit to India in March 2006. This was followed by the passage of the enabling legislation in the US Congress, exempting the requirement, vide Section 123(a) (2) of the US Atomic Energy Act of full-scope safeguards as a condition for civil nuclear cooperation with India. The US Congress passed the legislation with bipartisan majority support. This cleared the way for the next important step - of concluding a bilateral agreement on peaceful uses of nuclear energy to implement the understandings of July 2005 and March 2006.

**Negotiations**

Five rounds of negotiations took place between June 2006 and July, 2007. The objective of the negotiations was to incorporate into a legal agreement the political understandings and commitments of July 2005 and March 2006 and the terms and basic principles listed out in the statement of Prime Minister in Parliament on August 17, 2006.

## Features of the Agreement

- \* The Agreement is "between two States possessing advanced nuclear technology, both parties having the same benefits and advantages".
- \* The purpose of the agreement is to enable full civil nuclear energy cooperation between India and the United States. The Agreement provides for full civil nuclear energy cooperation covering nuclear reactors and aspects of the associated nuclear fuel cycle including enrichment and reprocessing.
- \* The Agreement contains a full reflection of the March 2, 2006 supply assurances, and the provision for corrective measures. The Agreement provides for the development of a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors.
- \* The Agreement provides for nuclear trade, transfer of nuclear material, equipment, components, and related technologies and for cooperation in nuclear fuel cycle activities.
- \* The Agreement provides for the application of IAEA safeguards to transferred material and equipment.
- \* transfer nuclear material and its products. To bring this into effect, India will establish a national reprocessing facility to reprocess IAEA safeguarded nuclear material and the parties will agree on arrangements and procedures within one year.

## Significance

As finalized the Agreement meets the concerns of both sides and fulfils all the assurances made by Prime Minister to Parliament on August 17, 2006 including three basic principles - that the Agreement will specifically provide that India's strategic nuclear programme, three-stage Nuclear Programme and R&D activities will remain unhindered and unaffected.

The conclusion of the Agreement to the mutual satisfaction of both governments is symbolic of the transformed nature of the India-US bilateral relationship and an indication of a more intensified engagement in the wide ranging areas that have been identified for our bilateral co-operation including high technology, agriculture, science and technology, space, defence, and global issues of common concern related to the environment, climate change, disaster relief, HIV/AIDS and Avian influenza.

It would help to address the problem of energy deficit that has emerged as one of the primary constraints on accelerating India's growth rate. Presently, only 3% of India's energy needs are met from the nuclear sources. India plans to produce 20,000 MWe from the nuclear sector by 2020, an increase from the current 3,700 MWe.

Increased share of nuclear power in the Indian energy mix will diminish the reliance on fossil fuels and reduce emissions from India. We envisage technology solutions to check growth of emissions (e.g. our membership of the Asia Pacific Clean Development Partnership) and the nuclear industry offers value in that respect.

### **Next Steps**

India will now negotiate an India-specific safeguards agreement with the IAEA. The US will also work with friends and allies in the Nuclear Suppliers' Group (NSG) for an adjustment of their Guidelines to enable the NSG to enter into nuclear co-operation and trade with India as an equal partner<sup>1</sup>.

- 
1. On the 27th July itself the State Department in Washington too issued a Fact Sheet which reads thus: "The United States and India have reached a historic milestone in their strategic partnership by completing negotiations on the bilateral agreement for peaceful nuclear cooperation, also known as the 123 Agreement. This agreement will govern civil nuclear trade between our two countries and open the door for American and Indian firms to participate in each other's civil nuclear energy sector. The completed text of the proposed 123 Agreement is respectful of both the July 18, 2005, and March 2, 2006 Joint Statements issued by President Bush and Prime Minister Singh. In addition, it is consistent with applicable U.S. law.

This agreement, about which the Administration briefed Congress regularly, establishes the framework for full civil nuclear cooperation between the United States and India.

Key features of the agreement:

- Confirms the desire of both countries to engage in full civil nuclear cooperation, including research and development; nuclear safety; and commercial trade in nuclear reactors, technology, and fuel;
- Affirms the fuel supply assurances made to India by President Bush on March 2, 2006, including creating the necessary conditions to allow India access to the international fuel market, and by supporting the creation of an Indian strategic fuel reserve;
- Grants consent to India for certain nuclear fuel cycle activities. In particular, grants consent to reprocessing, with such right being brought into effect by India establishing a new national facility under International Atomic Energy Agency safeguards dedicated to reprocessing safeguarded nuclear material, and our two countries agreeing on arrangements and procedures under which reprocessing will take place;

- 
- Commits India to appropriate safeguards on all civil nuclear material and equipment subject to the agreement and to assuring that nuclear items subject to the agreement will be used only for peaceful purposes, including through a reaffirmation of India's commitments to safeguards in perpetuity;
  - Reinforces the commitment of both countries to global nonproliferation efforts;
  - Preserves the rights of both countries to terminate cooperation and request the return of transferred items under appropriate circumstances; and
  - Creates the legal basis for the United States to be a stable, reliable, and predictable supplier for India's civil nuclear energy market.  
The conclusion of negotiations on the 123 agreement opens the door for the completion of the remaining steps in the broader U.S.-India Civil Nuclear Cooperation Initiative.

These steps include:

- Conclusion of a safeguards agreement between India and the International Atomic Energy Agency applicable to India's separated civil nuclear sector and progress toward an Additional Protocol;
- Achievement of a consensus decision in the Nuclear Suppliers Group to make an India-specific exception to the full-scope safeguards requirement of the Group's export guidelines; and
- Approval of the 123 Agreement by the U.S. Congress.  
Civil nuclear cooperation between the United States and India will offer benefits to both of countries' citizens through enhanced energy security, a more environmentally-friendly energy source, greater economic opportunities, and more robust nonproliferation efforts.

**087. Joint Press Conference by National Security Advisor M. K. Narayanan, Chairman, Atomic Energy Commission Dr. Anil Kakodkar and Foreign Secretary Shivshankar Menon.**

**New Delhi, July 27, 2007.**

**Official Spokesperson:** Good evening everybody and welcome to this Joint Press Conference by National Security Advisor, Foreign Secretary and Chairman, Atomic Energy Commission. We will first have opening remarks by the National Security Advisor and thereafter remarks by the Foreign Secretary and then we will open the Press Conference to questions.

**National Security Advisor:** Ladies and gentlemen of the press: We are happy to inform you that the governments of India and the United States of America have finalized the text of the bilateral agreement for cooperation in peaceful uses of nuclear energy. India and the United States are today issuing a Joint Statement on the conclusion of negotiations on this agreement.

The finalization of the text of this Agreement after five rounds of discussion is a significant milestone in the implementation of Prime Minister Manmohan Singh and President Bush's vision to transform the relationship between India and the United States, which was expressed in the Joint Statements of 18th July 2005 and 2nd March 2006. The commitments expressed in the Joint Statements of 18th July 2005 and 2nd March 2006 have been fully reflected in the final text of the bilateral cooperation agreement.

The purpose of the Agreement is to enable full civil nuclear energy cooperation between India and the United States covering nuclear reactors and aspects of the associated nuclear fuel cycle. The Agreement is between two States possessing advanced nuclear technologies, both parties having the same benefits and advantages. We are confident that the Agreement fulfills the terms outlined by the Prime Minister to Parliament on the 17th of August 2006.

The significance of the Agreement, which has become a touchstone of the transformed bilateral relationship between India and the United States, is that when brought into effect, it will open the way to bilateral cooperation between India and the United States in the area of civil nuclear energy.

The Agreement is also significant in opening the possibility of India cooperating with other countries in the world in civil nuclear energy. We

look forward to this prospect. India regards international civil nuclear cooperation as potentially most important for energy security and for an environmentally sustainable pattern of development. India is ready to work with like-minded countries to fashion a new consensus on non-proliferation and realize the goal of a nuclear weapon-free world through universal nuclear disarmament.

In order to make cooperation in civil nuclear energy a reality, India will now negotiate an India-specific Safeguards Agreement with the IAEA. The India-US bilateral agreement also opens up the possibility of an unconditional exemption for India from the Nuclear Suppliers Group (NSG) Guidelines, as foreseen in the July 18, 2005 Joint Statement.

The text of the Agreement will be made available to the public soon, at a time to be agreed by the two governments.

**Foreign Secretary:** I will now read to you the Joint Statement by Shri Pranab Mukherjee, Minister for External Affairs; and Dr. Condoleezza Rice, US Secretary of State on India and United States Complete Civil Nuclear Negotiations, July 27, 2007.

"The United States and India have reached a historic milestone in their strategic partnership by completing negotiations on bilateral agreement for peaceful nuclear cooperation, also known as the '123 agreement.' This agreement will govern civil nuclear trade between our two countries and open the door for American and Indian firms to participate in each other's civil nuclear energy sector.

The conclusion of negotiations on this agreement marks a major step forward in fulfilling the promise of full civil nuclear cooperation as envisioned by President Bush and Prime Minister Manmohan Singh.

The successful completion of the text permits us to move forward on the U.S.-India Civil Nuclear Cooperation Initiative, first announced by the two leaders on July 18, 2005, and reaffirmed on March 2, 2006. The next steps include India negotiating a safeguards agreement with the IAEA and support for nuclear trade with India from the forty-five member Nuclear Suppliers Group. Once these additional actions have been completed, President Bush will submit the text of the agreement to the U.S. Congress for final approval.

Civil nuclear cooperation between the United States and India will offer enormous strategic and economic benefits to both countries, including enhanced energy security, a more environmentally-friendly energy source, greater economic opportunities, and more robust nonproliferation efforts.

This achievement reinforces the growing bilateral relationship between two vibrant democracies. We are committed to the strategic partnership outlined by President Bush and Prime Minister Manmohan Singh, and look forward to working together to implement this historic initiative.

**Question (Parul Malhotra, CNN-IBN):** This is a question for the National Security Advisor. Sir, you have been quoted as saying that the agreement is good but it is not the best that we could have got. What did you mean by that?

**National Security Advisor:** I said that the agreement is good but there is always something that you can always get better I can see that. I do not know from where you have got the quote unless it is this morning. We negotiated a text and I think the text is an excellent one. I did not want to be too presumptuous enough to say 'the best possible' because in a negotiation there is a certain amount of give and take on both sides. But what we have managed is that we have got all the commitments which our Prime Minister made to Parliament, they are fully safeguarded as far as this text is concerned.

**Question (Mathew Rosenberg, Associated Press):** How do you think is this agreement going to alter the balance of power in the region?

**Foreign Secretary:** This is an agreement for cooperation in civil nuclear energy. It is not about the balance of power in the region.

**Question (Manish Chand, IANS):** Talking of full civilian nuclear cooperation, would it also entail the transfer of technology related to reprocessing, heavy water reduction and enrichment? Also, some scientists have articulated apprehensions<sup>1</sup> that the reprocessing formula that has

---

1. That the scientists were by and large supportive of the agreement was borne out by the statement issued by them in Mumbai on July 22. Hailing the forward movement in the Indo-U.S. nuclear talks in Washington, they, however cautioned the government against any dilution of the original July 18, 2005 joint statement on full civil nuclear cooperation between the countries. With the U.S. and Indian negotiators reaching an understanding

---

on an agreement that would operationalise the deal by overcoming contentious issues like reprocessing and fuel supply, the scientists said this was a welcome step as it would end India's decades-old nuclear isolation. M.R. Srinivasan, member of the Atomic Energy Commission and former Chairman of the body, said: "This will end India's nuclear isolation which was always due to U.S. policy." The scientists were sure the move would enable New Delhi to openly negotiate with the world nuclear business community and boost power generation capacity by getting access to nuclear components. According to media reports top Nuclear Power Corporation officials, too hailed the breakthrough and said there was a recognition that India had to go through the "reprocessing mode" for energy production. Though fuel reprocessing was a little expensive, it gave 30 times more energy than conventional nuclear plants, they said. Mr. Srinivasan said the draft 123 Agreement had to be approved by both Governments and parallel steps also had to be taken by India to start negotiations with the International Atomic Energy Agency and the 45-member Nuclear Suppliers' Group. Once the agreement was approved, French and American nuclear businesses, which had been holding talks with the Nuclear Power Corporation, could go ahead with the selection of sites for power plants and other modalities, he said. "All these things will begin rolling once the 123 Agreement's draft, which has to be first reviewed by AEC, goes to the Prime Minister and gets final approval from the Union Cabinet," Mr. Srinivasan said. Mr. Prasad, considered the father of India's reprocessing technology, said the country always had the right to reprocess its spent fuel as the reprocessing plant was set up in 1965, much before the country's first civilian nuclear plant came up at Tarapur with U.S. assistance. On August 30, another group of former scientists at the Bhabha Atomic Research Centre said that the India-U.S. nuclear deal was in the interest of the country. and the agreement should not be hijacked by political parties. "With the country's ever-increasing energy needs and with a view to ending the 33-year-long nuclear isolation, the importance of the deal has to be understood by the people of India and should not be hijacked by the Opposition and the parties supporting the government," the scientists said in a statement. They were unhappy with the Left parties for questioning the integrity of Prime Minister Manmohan Singh over the civilian nuclear agreement. "India-U.S. Cooperation on the Civilian Nuclear Programme and the Agreement is now being called a 'deal' and our Prime Minister is being targeted as if he has made some underhand 'deal' with the U.S.," the statement said. "Some political parties, including ones supporting the government, are doubting the integrity of the Prime Minister and this is a matter of national shame," said the statement signed by A.K. Anand, former Director, Reactor Projects Group and Director Technical Coordination and International Relations Group, and others. "The Opposition is talking of the Hyde Act and saying that if India carries out a nuclear test in future, all nuclear cooperation will end. But we do not even know if at all and when, in the distant future, a test will be required by the nation," it said. The statement, which has been widely circulated among the nuclear scientists and industries, pointed out that the whole agreement is about the civilian nuclear cooperation and in no way would it hamper the weapons programme. "Our weapons programme will continue as it always has been, with our own reactors, reprocessing plants, enrichment plants and heavy water plants. We are not going to be giving the design and technology to any one; why, then are we pointing out that the U.S. will not give these technologies as part of the civilian agreement?" Dwelling on the past tests and India's strengths, they said, "We had been isolated because of sanctions since 1974. The DAE [Department of Atomic Energy] scientists, engineers and technologists took up the challenge and after more than 30 years' efforts have brought the nation to this stage of strength and pride which has made the western countries shake hands with us." The politicians should not think about scuttling the whole process of integration, they added. "But after all the recognition, why should we go back to isolation as we fear that future isolation may be more severe," they cautioned.

been worked, that is setting a safeguarded facility, will expose the three-stage programme to international surveillance? What do you make out of that? The first question can be answered by Dr. Kakodkar.

**Chairman, Atomic Energy Commission:** The objective of setting out this civil nuclear cooperation is to make sure that we benefit not only from the reactor and the fuel supplies that we get from outside, but also continue to benefit in terms of the enormous additional energy potential that would be there in the spent fuel. For that purpose this agreement gives advance consent rights for us to reprocess the spent fuel and reuse the material so recovered in national safeguarded facilities. So, as you can see, it allows us to derive the full benefit out of the cooperation. With regard to the domestic three-stage nuclear power programme, I think that is independent. That will be pursued in accordance with our own national programme and there is no interference of one into another.

**National Security Advisor:** I might just add, I presume that the question was whether the fast breeder programme would be interfered with. As the Chairman of the Atomic Energy Commission has just stated very explicitly, the fast breeder programme at the moment is not under any kind of international obligations.

**Question:** This is a question for either FS or NSA. Looking forward to the process of getting NSG exemption, what kind of assurances does India have so far and particularly what do you expect China's position to be on this?

**Foreign Secretary:** I think it is a little premature because we have not actually asked the question of individual countries. So far we have briefed them about what we were hoping to do but without a finalized 123 agreement. We had not actually gone to any of these countries and asked, "What will you do if we ask that question?" Now that we have a finalized text, I think we and the US will be briefing the members of the NSG and then I think we will be in a position to give you a response about individual countries, where they might stand, what they do, etc.

**Question (Rajeev Sharma, *The Tribune*):** My question is to NSA. I believe that in the text there is no reference to India conducting future tests<sup>1</sup>. If that

---

1. On August 3 the United States Under Secretary of State Nicholas Burns questioned in Washington by journalists whether India would have the right to explode a nuclear device, said New Delhi would have the "sovereign right," but he hoped that such a situation would not arise."It is hard to deal in hypotheticals because they are very far from the

were to happen whenever it happens, will there be a Presidential waiver? Is the Indian scientific community on board? The second question may probably be answered by Dr. Kakodkar.

**National Security Advisor:** This deal deals primarily with the civil nuclear cooperation. There is no reference here to detonation or to any test. So, what happens in the event of a test, we will come to that position later on. This one is with regard to civil nuclear cooperation. Both sides are agreed on what they need to do in terms of policy guidelines. If India decides that it has to test, I think Article 14 carries a whole multilayered thing on what we need to do. But as of now there is no particular reference to testing or non-testing as far as this.

**Chairman, Atomic Energy Commission:** The point is, this finalized draft of this agreement allows us to carry on with the domestic programme that includes both domestic three-stage programme, domestic R&D and of course the strategic programme. It allows us to also carry on the civil nuclear programme which is eligible for international cooperation. I think the rest is too speculative in the sense that would be decided at different points of time.

**Question (Seema Sirohi, *Outlook*):** Dr. Kakodkar, Sir, are you satisfied with the text of the 123 agreement?

**Chairman, Atomic Energy Commission:** Yes

**Question (Jyoti Malhotra, *The Telegraph*):** Dr. Kakodkar, you were quite

---

reality of the situations. The reality is that India is not in a situation where it is currently testing." But if there is a nuclear test, then American law says the U.S. President would have to decide whether or not to ask for fuel and technology back, Mr. Burns said. "We have preserved that legal right in our law. But it is a choice; it is not automatic," said Mr. Burns. Asked if the Right of Return was exercised what was that America could ask for, he said: "It is very hard to say without knowing the specifics of what happened, why it happened and how. But the legal right to do something has been protected." Mr. Burns explained that four specific fuel assurances that President George W. Bush made to Prime Minister Manmohan Singh on March 2, 2006 had been written verbatim in the Hyde Act. These were "assurances from our Government to the Government of India that we will, as its partner, help it to provide for a continuous supply of nuclear fuel to its power reactors," he said. One of the assurances is that the U.S. will help India create a multilateral reserve of fuel. "We suggest that India can work with the IAEA. This makes sense for any country that would want to have a continuous supply of fuel to power reactors." But this did not obviate the fact that both countries have laws that they lived up to. "One of our laws is the Atomic Energy Act and we have preserved the ability of any future President to fulfil his or her legal obligation under it," Mr. Burns added.

unhappy and you made it very clear in the public eye, in the media that you were very unhappy in the past by the way negotiations were going. So, specifically on the issues that you have discussed in the last week in Washington, - whether to do with reprocessing fuel, supply assurances, testing - are you satisfied with the deal that you have got with the Americans today?

**Chairman, Atomic Energy Commission:** The point is simple. Whatever I had said earlier was a part of the national position; whatever I am saying now is also a part of the national position; and whatever this agreement has achieved is also consistent with the national position. So, I have no reason to be unhappy.

**Question (Jyoti Malhotra, *The Telegraph*):** You have not answered the question about testing and reprocessing. Can you explain to us what India has got on these issues?

**Chairman, Atomic Energy Commission:** I explained that in detail earlier I thought. The benefit of the civil nuclear cooperation starting from the first reactor, which would come all the way into making use of the spent fuel arising out of such imported fuel and reactors through reprocessing into reuse in other safeguarded reactors. All that is provided for in this agreement. This is what exactly we are looking for as far as the full civilian nuclear cooperation. So, it is there. I was very unhappy when I thought it will not be there but it is there.

**Question (Sidharth Varadarajan, *The Hindu*):** I understand that the 123 agreement does not commit the United States to selling India technology and components for reprocessing, enrichment, heavy water. Is it our understanding that the United States will not block the Nuclear Suppliers Group from authorizing the export of such components as figured in the trigger list of the NSG? Secondly, my understanding of the manner in which the fuel supplies and the continuation operation of reactors have been immunized in the event of a test is that there is a mechanism for replacing any fuel supplies that the US may want return with fuel supplies from friendly countries. Would such a mechanism be possible if the NSG adopts as part of its rule change, the cessation of cooperation in the event of another Indian nuclear test because the first American draft of the NSG rule change last March has one of the conditions that this entire exemption for India is dependent on the six commitments India have made, one of which is continuing the moratorium.

**Foreign Secretary:** I think it is our expectation and we will work towards

an unconditional NSG exemption from the guidelines for India. As far as we are concerned, we think that fuel supply assurances that we have got, many of which were expressed in public in March 2, 2006 in the Joint Statement, stand and will be carried out in practice. That is our expectation. So, to the extent that you are asking what if the NSG does something or the other, frankly that is hypothetical. What we are looking at is an unconditional, clean NSG exemption. That is what we will work for. On the transfer of technology, maybe I should hand you over to the Chairman.

**Chairman, Atomic Energy Commission:** As I mentioned, any civil nuclear programme has the reactor activity and the fuel cycle activity. Now, this agreement would, as I said, allow us to derive full benefit out of the reactor and associated fuel cycle activities as a kind of uninterrupted chain. You also know that India has its own full capability in all areas. So, what is important is that we are able to derive full benefit out of whatever cooperation we get from outside and we do not have any issues left in terms of not knowing what will happen to spent fuel and things like that. So, it is fully provided for.

**National Security Advisor:** If I might just amplify what the Foreign Secretary was saying, I think this agreement contains a full reflection of the March 2, 2006 supply assurances. I think there has been no derogation of those rights. If companies are going to come up with something new, as the Foreign Secretary said, we will deal with it at that time. As of now, the text contains, as I said, the assurances that are contained with regard to fuel supplies in the March 2006 are repeated in full in this agreement.

**Question (Jo Johnson, *Financial Times*):** By allowing India to import fuel, does this agreement not free up indigenous nuclear fuel supplies for use in India's strategic weapons programme and thereby contribute to the nuclear arms race in South Asia and therefore affect the balance of power in the region?

**National Security Advisor:** I think it is time that certain countries overcame the belief that we are interested in proliferation. I would make use of this opportunity to drive home this point. If we need additionalities as far as our strategic stockpile is concerned, we know how to do it. We did not need to use this route for that purpose. I think it is important to understand that. We do not wish to enter into a debate on this issue. This agreement was intended primarily to drive the civil nuclear cooperation programme. I believe that the text that has been finalized opens that possibility. We are not using it

as an excuse to enhance our strategic capabilities. The earlier countries forget that, I think the better.

**Question (Rakesh Kapur, *Punjab Kesari*):** The question is for Mr. Narayanan. The whole deal has been done under the ambit of the Hyde Act which empowers the President of the US to snap the deal the day India conducts the nuclear explosion? Have we mortgaged our right to conduct nuclear explosion in Washington?

**National Security Advisor:** We have not mortgaged any right. If anything, we have enhanced our rights. I do not think I need to say anything further on the subject.

**Question:** The question is to the National Security Advisor. You have said that all concerns have been reflected in the deal. Now recently, very recently about 23 US Congressmen led by Democrat Edward Burke have written a letter to President Bush saying that if the 123 agreement has been intensely negotiated it seems to be bypassing the US law and the will of the Congress. In that case, the deal maybe heading to be in jeopardy. Do not you see this to be heading for yet another stumbling block?

**National Security Advisor:** We and the US Administration have arrived at an agreement. I think the negotiators on both sides understand the limits of the law, the limits of flexibility and how far we can go. In doing this, and to answer the first question that Parul made, the question is the best deal that we could get could have very well have other problems, but we have got a deal, a very good deal which we believe should meet the legal requirements of both countries. Now I cannot speak on behalf of individual Senators or Congressmen in this matter because we dealt with US Administration and I think they know the limits of where they can go.

**Question (Amit Baruah, *The Hindustan Times*):** My question is to Foreign Secretary Menon. External Affairs Minister Pranab Mukherjee goes for the ASEAN Regional Forum meeting in just a few days. Will he take this opportunity to engage a large number of Foreign Ministers including the Minister from China on the civil nuclear deal?

**Foreign Secretary:** Certainly. This will now be a topic in several of our conversations with those countries which are concerned with this issue. I am not sure as to which of the NSG members he is meeting at the ARF. I know he has a very detailed schedule and they are trying to set up a meeting between the Foreign Minister of China and EAM. Certainly this is one of the issues which we will raise. We will inform our friends of what has

occurred, what we just informed you about, and about how we plan to take this forward in the future.

**Question (Seema Mustafa, *Asian Age*):** I will go back to an issue that was raised earlier. The Hyde Act very clearly says that if India was to detonate a nuclear device, all nuclear cooperation will cease. Has any corrective measure been brought into the 123 agreement regarding this and also uninterrupted fuel supply?

**Foreign Secretary:** I think that question has been answered. This is an agreement between two Governments. It means the concerns of the two Governments and those Governments operate within their own laws. It is for them to understand whether this agreement meets their laws or not. It is not for us to interpret their laws, or for them to interpret ours. This agreement as a finalized text meets the concerns of both sides and serves the interests of both sides.

**Question (Rahul Bedi, *Jane's Defence Weekly*):** My question is to the National Security Advisor. We are all familiar with the American adage that there is no free lunch. My question, what are the Americans getting out of this? Is this predicated to a lot of arms contracts that are up for bidding because there have been a series of reports in newspapers that the Americans stand to gain a vast sum of money in contracts not only in the nuclear field but also in the weaponry.

**National Security Advisor:** I will say this and then I will ask Foreign Secretary to amplify what I have to say. Quite clearly in the course of our negotiations there was no reference to arms deals or any other extraneous considerations. I think the five days that we spent in Washington, we spent primarily on the text of what we need to. As the Foreign Secretary just mentioned, it took us a lot of time to reconcile the requirements on either side in keeping with their national legislations and national requirements. Quite clearly I would presume that the outcome would be a transformed relationship, the transformed relationship would then lead to areas of cooperation. But quite clearly we are not here to indicate that this will lead to A, B and C. I know what you are referring to. If the new contracts for the 126 aircraft is going to come. I suppose they would have been in the race irrespective of whether there was the 123 agreement or not. We have never kept countries captive to deals of this kind. This is an open transparent effort. As far as I am concerned, I have not seen any evidence of a deal that give us the 123 and we will give you something.

**Question (Rahul Bedi, *Jane's Defence Weekly*):** What are the Americans getting out of this deal?

**Foreign Secretary:** I think (you) should ask the Americans that. Let them speak for themselves. They are quite articulate. But the simple answer to your question is there are no conditionalities. This is an agreement for cooperation in civil nuclear energy. That is what it is. That is all there is. We did not negotiate anything else with it.

**Question (R. Ramachandran, *Frontline*):** I would like to know from Dr. Kakodkar as to what is the current status of implementation of safeguards on the safeguarded facilities with the IAEA. What is the status of negotiations on the additional protocol? Is there any move at the NSG contingent upon conclusion of the draft agreement?

**Chairman, Atomic Energy Commission:** We have had a number of discussions with IAEA on the India-specific Safeguards Agreement. With the finalization of the text we will carry that process forward and sort of try to negotiate this India-specific safeguards agreement further. The question of an additional protocol, we will take up later in sequence. First we have to get the safeguards agreement in place.

**Question:** Whether US tendency is contingent upon completion of the draft...Any move at the NSG?

**Chairman, Atomic Energy Commission:** We have to find out from the NSG.

**Question (Srinjoy Choudhary, *Times Now*):** Question for NSA. Sir, how convinced are the Left and the Opposition about the deal? You have met them already. How much in agreement are they with the Government's position?

**National Security Advisor:** Srinjoy, you always try to be smart. We have met the Left and we have met the members of the NDA. We have explained to them in great detail as to where we stood. They have indicated that they would like to see the text before they pass judgment. That is the point. But the impression we got from the discussion was that at least from what we discussed with them they were particularly satisfied. I think they were more than satisfied because I think we left most of the talking to Dr. Kakodkar. That carried credibility which I hope will be carried across board here also because I think if the nuclear community is on board, I think that should make everybody comfortable as to where we are.

**Question (Somini Sengupta, *New York Times*):** Can you characterize how good a deal is this for India; and if you did not get everything that you wanted what would that possibly be? This is for the NSA.

**National Security Advisor:** I think you should address this to Dr. Kakodkar. It was mentioned. I think Siddharth Varadarajan who reads not only between the lines but beyond the lines, also in these matters. Yes, we would have liked some of the technologies which are yet to come - they would require further discussions and what not. So, there are issues which we would have liked but we have settled for what we think is more than adequate from what we wanted. We were very hopeful that in course of time whatever you gain is a very small percentage would be available.

**Chairman, Atomic Energy Commission:** That should be adequate. I would describe this as a satisfactory thing from the point of view of carrying forward India's nuclear energy programme.

**Question (Sheela Bhatt, Rediff.Com):** Dr. Kakodkar, we do not know much about your Department. But we would like to know how jubilant are your scientists or what is the exact reaction of the scientists. Are they celebrating this as an award or not? Secondly, can you explain in layman's language how radical is this moment for you for the scientists of India. And I would like to know what you have not got what nuclear weapon states have got.

**Chairman, Atomic Energy Commission:** I think we are all karmayogis. So, we just carry the work on and this will allow us to remain consistent with that philosophy in an expanded manner.

**Question (Jyoti Malhotra, *The Telegraph*):** You have not answered that question, "What is it that you could have got?"

**Chairman, Atomic Energy Commission:** I think NSA responded to that right in the beginning. I can have a huge wish list, but that is not the point. The point is what was the objective with which we set out in July 18, 2005 and whether we are consistent with that. And the answer is yes.

**Question (Indrani Bagchi, *Times of India*):** Dr. Kakodkar, could you elaborate a little on the India-specific safeguards agreement that we will be negotiating? Around when do you expect the negotiations to be complete; and could you elaborate a little more on what you mean by India-specific safeguards? Would it be based on the template of current safeguards that we have or do you have a different template?

**Chairman, Atomic Energy Commission:** The very title 'India-specific' means that it has to be different and specific to the Indian conditions in the context of the international civil nuclear cooperation. I think we should wait for the details till the negotiations are complete with IAEA.

**Question (Indrani Bagchi, *Times of India*):** When?

**Chairman, Atomic Energy Commission:** As soon as possible.

**Question (Indrani Bagchi, *Times of India*):** Any timeframe?

**Chairman, Atomic Energy Commission:** I think it is unrealistic to put a timeframe to it. We should do it as soon as possible.

**Question (Pranab Dhal Samanta, *Indian Express*):** Dr. Kakodkar, in the March 2 Separation Plan it was agreed that India will put its civilian reactors under permanent safeguards in return for permanent fuel assurances. Are you convinced after the few assurances that are placed in the 123 agreement that you can go and negotiate a safeguards agreement with IAEA and put Indian reactors under permanent safeguards? Or is there more work to be done on the fuel assurances?

**Chairman, Atomic Energy Commission:** The fuel assurances that were built into the March 2 document and the fuel assurances built into this finalized draft agreement are entirely consistent.

**Question:** Mr. Menon, how soon can the commerce start once we have in place? The second question is for Dr. Kakodkar. Are you satisfied that India's security boat for energy and for weapons (is) secure for generations once we have this deal?

**National Security Advisor:** On Commerce, the NSA and Commerce have nothing in common. I will ask the Foreign Secretary to explain. As far as the second question whether we have adequate supplies of fissile material for our programmes, I think there is no reason for anybody to feel concerned over that irrespective of this agreement which does not touch on the strategic programme.

**Foreign Secretary:** Your question was, "When can commerce begin?" As soon as we complete the series of steps we have outlined here which bring this agreement into effect.

**Question:** You do not need to wait for...(inaudible)?

**Foreign Secretary:** I have just mentioned the whole series of steps that we have outlined in the Joint Statement and what the NSA said at the beginning.<sup>1</sup>

- 
1. U.S. Ambassador to India David Mulford as a footnote to the agreement in a telephonic interview to Indian newsmen from US responding to India's (proposed) strategic fuel reserves sourced from other countries clarified on July 30th that it would remain unaffected even if it was to conduct a nuclear test. "The testing issue is not mentioned in the agreement. There is [also] no regulation over India's strategic nuclear capability. India has accepted that U.S. laws on this matter [nuclear test] are not going to change but the right of return is a discretionary right by the U.S. President and it has been preserved," he said. "I hope this won't occur and India's commitment of a unilateral moratorium on further testing would hold out. But fuel from other countries would not be affected. India has come out with a very secure position," he added. Asked whether India could also access technologies for reprocessing and enrichment, Mr. Mulford said "it could be possible to seek changes," but maintained that it was not the "prime issue" in the negotiations. "The U.S. law is very clear on that but we will possibly remain open in that." Mr. Mulford also made the point that India and the U.S. must move quickly to wrap up other aspects to avoid the deal getting caught up by the U.S. Presidential elections. In particular, India must conclude safeguard negotiations with the International Atomic Energy Agency (IAEA) within a couple of months and the U.S. would attempt to place the 123 agreement before its Congress as soon as feasible. Mr. Mulford hoped that the "compromise and concessions" by both sides would set the basis for "deep" strategic relations. One of the most important concessions was granting India the right to reprocess the spent fuel. Asked who would be major beneficiary of the deal, he said India's 35 years of isolation from the civil nuclear mainstream would end if the process was completed and could serve as the basis for the development of one of the world's "major" civil nuclear industries with "heavy" participation by U.S. companies and other countries. On Iran, he did not think India was considering helping Iran in this sector but felt New Delhi's relationship with Tehran would be "carefully scrutinized and reviewed" by Congress when it votes on the changes in the 123 agreement. On obtaining a consensus in the Nuclear Suppliers' Group for changing its rules to accommodate India, he said the U.S. was committed to helping India. "Consultations show that the NSG members are generally favourable," he said confidently.

**088. Interview of National Security Advisor M. K. Narayanan with the Chennai based daily *The Hindu*.**

**New Delhi, July 28 & 30, 2007.**

[**Note:** Interview was conducted by Harish Khare and Siddharth Varadarajan and published in two parts –part I on July 28 and Part II on July 30]

**PART - I**

**Would it be fair to say that you are 100 per cent satisfied with the text of the 123 agreement?**

I am one of those who believes that if you are negotiating and you get everything you want, then obviously there is something wrong! But I think this is as good a text as one can possibly get. If this text gets implemented, I don't think there's anything for us to be worried about. You can always say you can get more, but you want both sides — after all they have to go back to Congress and get it passed in their up-down vote.

**As you went into the talks, what was the basic Indian approach?**

The PM had always taken the view that if you have a legal problem, we will not try to ask you to break the law but we should find the language that would meet the obligations of both sides. But as far as policy is concerned, we will push. This was roughly the strategy we followed, knowing full well that if we try to break the law, this would raise questions in Congress. Also, following [the G8 summit at] Heilingendamm, quite clearly the message had gone down that if the Indians are being reasonable, then we should also be reasonable.

Of course it helped that we decided we would stay there. We could have come away after a day and a half if we followed the standard pattern of meetings but we stayed a full five days! I had decided I would not leave till Friday night or Saturday morning. And finally, it was 4 p.m. on Friday evening when we tied it up. Second, the best idea we had was to take [Atomic Energy Commission chairman] Anil Kakodkar along with us so we could clear all doubts. This sent a tremendous message across to the other side that we mean business, that we've got the one person who understands what we need, and has the authority — in the sense of the nuclear community's endorsement — and this means the Prime Minister was willing to send everybody whom he could possibly think of. He had sent his Foreign Secretary, Dr. Kakodkar, and the NSA plus the team.

**How do you think the U.S. Congress will look at the text?**

I don't think Congress will object. If [the Democrats] do not wish the U.S. President to get a major foreign policy victory, they could probably do something. But I think the text is OK. Our point is that whatever we have on the table should primarily be something that meets our [concerns]; but if the other side is not able to get it through their system, then what is the point?

**And they understood this was our constraint too?**

We said we had reached the limit of our flexibility. But either side need not take the other's view into consideration unless both were willing to reach an agreement.

**Why was it necessary to split the Indian right to reprocess into two parts, with prior consent coming upfront but actual permission being granted only after an 18-month schedule of consultations?**

[Experts] will understand but most people were fed on the concept that advanced consent rights is the basic issue. So we wanted that upfront, literally. Two, we wanted to make a very clear demarcation that if your concerns are nonproliferation, we are offering you something, and we wanted to make it very clear that this is a dedicated national facility. Ever since I first floated the idea publicly, there have been efforts on the part of some to say 'Can it be part of an international program, part of GNEP?' So we wanted it clear. That is why these two sentences are put in a manner that nobody can quibble about what we meant ... And then we wanted some timelines so this wouldn't be dragged on and on. So we got those three...

**What happens if agreement on the modalities of reprocessing — like the infamous 'joint determination' for Tarapur reprocessing — does not come after a year of consultations? Is there a dispute resolution mechanism? Are there administrative arrangements? Will India be free to reprocess?**

Running right through the agreement is a system of consultations and discussions. We really did not need [the timeline] except for Banquo's Ghost of Tarapur hanging there. The question was, if you have an open-ended process, there will be no limit to this kind of thing. It becomes a chicken and egg situation — if the reactors come, the spent fuel starts piling up, and your reprocessing is still a matter of debate and discussion — so American industry must realise that to some extent, if they are thinking of expanding the opportunities they have, there must be an outlet for what is being

produced. We have tried to put into the document as much as is possible to state. Now, it depends on people who are there. You will get spoilers I am quite sure, definitely on their side, probably on our side, who will try to do this. But we've tried to put into the agreement something that rational, normal human beings will understand what it means. If you don't have agreement within a year, OK, it may be because some designs have not been properly [made], but if someone is quibbling that 'I don't like it to be facing west, it should face east,' I mean, that would be different. I don't think the whole thing will be decided in one year, it maybe extended if there is a rational way of looking at it — may be because the design you have drawn does not seem to be ok. But if you are just trying to prolong the process because you don't want to give us reprocessing, we have the opportunity to terminate it in the ultimate, that is, it is not as if, at the end of 12 months, we are going to put a guillotine and say nothing is happening so therefore... The whole purpose is to move forward.

#### **Terminate the consultation process or terminate the agreement?**

We don't know. We have no intention of terminating unless you see somebody is ... I don't think it's going to happen. It's really an insurance against what you rightly said is Tarapur. I think they have understood that we have not done anything with Tarapur. We did mention it is a ticking time bomb. Ok, Tarapur is a small quantity but if there are larger quantities, there is no question. If we are thinking of a huge expansion and you want to be part of that game, you need to do this. I think they've understood that and they have come forward. But you will always have some spoilers, for which we have put some kind of break so that people understand that if push comes to shove, and that's the ultimate, we have no ... For that is part of the agreement. The whole point of this is that we are not cheaters at all. Whatever we say or want to do will be in conformity with the terms of what has been put down. That is the sum and substance of the agreement.

#### **The 123 text says that in the event of the International Atomic Energy Agency determining that safeguards are not being applied, India and the U.S. must enter into consultations for the establishment of alternative verification mechanisms. Have we thought about the circumstances under which the IAEA could make such a determination?**

We were trying to bridge a concern that was being expressed, may be real, may be not. Running through this as a thread in the entire agreement is our willingness to stake our credibility in terms of our honesty of purpose. We

have said we are prepared to put our reactors under safeguards in perpetuity and the only safeguards we accept are the IAEA safeguards. We are going in for an India-specific safeguards regime. Now the Americans say, 'Suppose the IAEA doesn't do this or that?' We have already consulted the IAEA, they cannot even conceive of a situation, I mean short of a nuclear Armageddon when everything is broken down... But we are dealing with people who have concerns. After all, someone may ask us, why do you want a timeline on reprocessing. It's purely based on our apprehensions. Similarly, they have apprehensions on the other side. So what we have said is ok, we meet your apprehensions, that if the IAEA determines they cannot, then we will have joint — the two parties will mutually agree on new verification arrangements, which I think is a very rational way of looking at it. We have removed the whole question of fallback safeguards. Now you may say, the IAEA could be persuaded, coerced...

**What about budgetary reasons? The IAEA does have a budget crunch. Could lack of money be a reason for the IAEA to make such a determination on implementing Indian safeguards?**

That's true, but we have left it to IAEA determination. Whoever is the Director General will have to make the determination and get the [IAEA] Board to agree that we are unable to put the safeguards process. Now, if that is because of lack of funds, we may decide to add to the IAEA's funds. There are several innovative things one can think of.

**So in the worst-case scenario, we pay for our own safeguards rather than letting the U.S. come in?**

Exactly. We don't want someone else. If the IAEA is unable to do it because of lack of funds, we can always find some way to do it. What we do not want is x, y or z coming and prying.

**How has the U.S. 'right of return' on fuel supplies in case of a nuclear test by India been reconciled with their commitment to fuel supply assurances and the continuous operation of our reactors?**

When you see the full text, you will see. I think it's a major achievement. In a sense we have squared a very difficult circle. The principle is that you cannot derogate a commitment that has been made because it is linked to safeguards in perpetuity. That is a point which I had made to [U.S. National Security Adviser Stephen J.] Hadley way back. 'You and I played a role on the night of March 1 [2006] in producing this. Now you can't go back on that. That approval came from your President.' So I

think there, the derogation of that [commitment] will not be affected by the [right of return]. That is more or less the line we have taken. This was a problem we have because that is a legal issue for them, not a policy issue. We have tried our maximum to enable them to say that we have not broken any law or bent any law beyond any point, so that they cannot come back and tell us that. So where there was a legal impediment, we have tried to find some way around it, but this I think is an excellent fix, the negotiating team felt. It certainly has the approval of [DAE Director of Strategic Plans] Dr. Grover and Dr. Kakodkar. That's why I had him there. He had said, 'You can always ring me up.' I said I want you there every second, every minute!

**But he was not present in the actual negotiations?**

No. I told him, if things break down, they will accuse me... 'What do you expect of a policeman, he can't think strategically!' But you are an icon as far as India is concerned. If there is breakdown, let them at least say you were not involved in the negotiations. But I'll pass every single bit of it through you so if you have any, I mean, we had lots of discussions and we had to moderate each other's positions, but finally he was fully on board. Just as we did on July 17 [2005] night.

**Were you constantly in touch with the PM?**

Not constantly, but I knew he was worried. So I talked to him, first on July 18, then 19 and 20, when we felt things were not collapsing, we are moving towards resolution.

**In the negotiations last week, was there a point where you realised you were over the hump?**

July 18th. That was the Hadley meeting. There were the two basic issues of reprocessing and right of return which were finalised. And it was obvious I had an ally. And safeguards. For us the three key issues were reprocessing, immunising of strategic reserves, and safeguards. All commitments the PM had made. And there were others like sequencing and so on.

On the 18th, we had the impression that these three would be sorted out. I had two rounds with Hadley entirely one to one. And a two-hour round with myself, Burns, and Hadley. We had altogether eight hours involving Hadley. I think our negotiating group had a tougher time. There were the State Department lawyers and all that. I take my hat off to our negotiators. What I did was easy. The difficult part was what [Indian High Commissioner to

Singapore] S. Jaishankar, Dr. Venkatesh Verma [from the Prime Minister's Office], and Grover did with Burns. Because there were lawyers. With Hadley it was easy; you basically make a pitch and if he was willing or half way willing, it was ok.

**Did we have lawyers?**

No, our country is not litigious like that. We don't have prenuptial agreements before one gets married here! But our team was solid. I must say you have to really give credit to the two stalwarts from the DAE — Dr. Kakodar, who stayed away but his presence permeated right through, and Dr. Grover; they fought every inch of the way. Because whatever were the big ticket items we got, putting the concepts into language was always difficult.

**Is it the case that in the unforeseen event of a nuclear detonation by India, the continuous running of Indian reactors will be unaffected?**

On paper, they have said it will be uninterrupted. What we have tried to say is for disruption — so this will be treated as disruption. Now certainly I don't have to tell you that if there is a detonation, or what I would say a unilateral detonation — we have provided in this for a mutuality in that — when you read the full text you will see that when we refer to July 18, there is a provision that if the U.S. tests, i.e. there is a reciprocal commitment. Then we have provided for multilayered consultations, in which the national security concerns if something happens is — I mean the dreaded word detonation has not been said anywhere.

But if there is a unilateral detonation on our side, I presume there will be political consequences irrespective also. We recognise that. But what we want is a legal document so that we have a leg to stand on.

We've talked in terms of a time lag by which alternative supplies can be brought, all that has been provided, so that's why I am saying the text is good, but the text is as good as its implementability. I think the U.S. and India will hopefully not — at least for the next 20 or 30 years — be seen as antagonists who are fighting a major conflict, so I think both sides will be interested in [agreeing].

**Just so that we are clear on this point, India can continue to use American supplies until such time as replacements come, even if they want it back?**

That is the sum and substance of what the text says. Whether that happens, I am not God here, though I must say God played his role in this.

## **PART - II**

**If you step back and take a big picture view, why in your assessment is this nuclear deal so important for the United States? What is the larger strategic purpose behind it?**

I don't know, you'll have to ask them. OK, there is always the question that everybody knows the answer to, that the U.S. wants India on its side. You know, all kinds of things. It's a possibility. I am not denying it. But during the negotiations, in the ones I have been involved in, never was there any suggestion that we would like you to be in a strategic partnership with us to a degree higher than what we have at the moment. So the presumption would be, and perhaps there is some weight to it, that the U.S. would like a country like India, a fellow democracy and so on, to be in step with what they are up to and all that. [Pauses] I think this was primarily driven by President Bush's regard for Dr. Manmohan Singh and his point that we need energy; that the energy deficit is our biggest problem. For whatever reason — I know President Bush is not the most popular man in the world — but in every discussion I have been privy to, he has always shown a great deal of regard for what India has achieved, a billion people, a million problems, and a democracy. He repeats this all that time. So a lot of it has been achieved by him...

Clearly we have not conceded anything up front other than what we have always stood by. Now, whether they expect us to be grateful to them, I suppose they'll have to wait and see, but then it's a post-dated cheque as far as they are concerned.

I find, certainly this administration — at least the three or four people I am privy to — is looking forward to the possibility of India emerging. I know that Dick Cheney is painted in the darkest of dark colours, but my impression is that they'll be happy if India made the kind of progress that, so I look upon it in a benign way, not overlooking the fact that there may be another strategic purpose. But right through the discussions, no one has tried to say India and the U.S. should be partners vis-a-vis country A or B or China.

**Speaking of Cheney, what did you discuss with him?**

I found him very positive as far as India is concerned. For us, that is the most important thing. But he didn't bring up any issues of contention, he

didn't raise things like Iraq or Iran. It was a broadbrush. But he was positive on the Indo-U.S. nuclear deal.

**How much of the 123 logjam did he clear up?**

There had been a lot of prior consultation. Each one knew what the other was up to. And I think they have a far better seamless [system of] information moving up and down. So by the time we met Cheney, we had cleared most of the ... But there is nothing like clearing until the text is frozen, and that happened after that meeting. You can't really say everything was done because of him, or that it had all been done before him. Some of the reports have been a bit too much. Of course, each one played their role.

**Is there a possibility that the deal may give rise to unreasonable expectations on Washington's part, expectations India may be unable or unwilling to fulfil? That we should be willing in the future to play in Asia the role of a Britain? Have we ever given them cause to have such expectations?**

We have certainly never given them that ... Thanks to our many friends within the government and outside, even if you wanted to say a half-truth on this, we are afraid lest it travels back! There are several issues on which all of us have strong views but we are afraid to express that lest someone on the U.S. side uses that as an index or indication that we want to do much, much more. We are conscious that if the USS Nimitz can't come to Indian waters without us having to write letters, speak, what not; so to go beyond that is, we have never said anything.

**But unrealistic expectations?**

I don't know. The American administration is sophisticated enough to realise that it is one thing to have realistic expectations, but unrealistic ones, I am not sure. I would presume that there is comfort with India. I find that across the board. It's possible, though I have not looked at the issue closely, that with China, in many other parts of the world, everyone is full of admiration for the juggernaut that China is, but there is a certain amount of concern and discomfort as to how it is going. In that sense, even if we are not a very efficient democracy, there is a great deal of comfort. People are comfortable.

**One of the next steps on which the Americans are very keen is for India to sign the Access and Cross-Servicing Agreement to allow the U.S. military easier access to Indian facilities. Where do things stand? Is it true that the Government has reservations about signing the ACSA?**

Reservations in this sense, because we are unsure how far we can go and how far will we be compromised. We have not been able to reconcile in our minds on the question. It's really a question of overcoming certain concerns, basically. So I think we are looking at it with a fine toothcomb over and over and over again to see that, is it beneficial, or are there some hidden disadvantages. So we will work on that.

**Is one of our concerns the fact that we don't want Indian facilities to be used in the event of military action by the U.S. somewhere in the region?**

I think there are three or four issues there though I don't want to explain all of that just now. See, finally the point is, we are extremely conscious of our sovereignty issue. Are we giving up our sovereign rights in this matter if we enter into an agreement of this kind, would we have the opportunity to sort of step back if and when a situation arises? We need to, we haven't focussed as much on this as we have focussed for instance on the 123 agreement ... Also, the issue is one of timing. If you do that and then this, we don't want to be seen as having sort of provided an opportunity for the critics to say 'Oh, you have already conceded this much and therefore you are now doing this.' We want to look at the civil nuclear cooperation agreement as a standalone. It has nothing to do with anything else... Now that this is out of the way, perhaps we might have a little more freedom to look at some of these issues. There is the Container Security Initiative pending, more for legal issues. That will also probably get done. But we also have to keep in mind that people should not see each of these as further slippage... We have, first and foremost, a coalition government, and second, I don't think the country is yet willing to recognise that the U.S. is a benign power, which it certainly is not, and I think we have to be careful. I mean we have the whole G-77 and Nonaligned Movement. We can't ignore this.

**In spite of Condoleeza Rice's advice to us...**

Well, we were a little surprised that somebody like her should have made it in such a blunt way. This is the whole problem with the whole U.S. side. The same thing could have been said, 'Now there are no two blocs, I suppose there are opportunities to look at things differently'... You don't have to say, 'Forget NAM, forget your friends.'

### **089. Interview of Prime Minister Dr. Manmohan Singh with the Kolkata based daily *The Telegraph*.**

**August 11, 2007.**

In an exclusive interview to *The Telegraph*, the Prime Minister said: "I told them that it is not possible to renegotiate the deal. It is an honourable deal, the cabinet has approved it, we cannot go back on it. I told them to do whatever they want to do, if they want to withdraw support, so be it...."

"He was referring to his conversation with the CPM's Prakash Karat and the CPI's A.B. Bardhan on Tuesday night (August 7), hours after the Left released a statement on the nuclear deal.

In a frank conversation, the Prime Minister said he was "not angry but anguished" at the harsh tone and tenor of the Left's reaction and made it clear that the UPA-Left relationship could not be a one-sided affair.

Replying to a question, he said: "I don't get angry, I don't want to use harsh words. They are our colleagues and we have to work with them. But they also have to learn to work with us.

"Although he did not raise his voice, those last 10 words had a hint of steel which underlined the Prime Minister's new resolve to take on the Left. There was no immediate response from the Left leaders, Singh said, adding: "They haven't thought it through."

In the course of the interview, the Prime Minister made it clear that the Left had a flawed understanding not just of the 123 Agreement but also of India's intrinsic strength and its enhanced status in the world.

On the nuclear deal itself, he said: "It is an honourable deal which enlarges India's development options, particularly in regard to energy security and environmental protection, and it doesn't in any way affect our ability to pursue our nuclear weapons programme. We have not surrendered an iota of our freedom in this regard; not an iota of our sovereignty.

"In this context, he referred to the interview in *The Hindu* newspaper today with R. Chidambaram, the former chairman of the Atomic Energy Commission and currently the government's principal scientific adviser. "I cannot improve on what he (Chidambaram) has said. He has said that all three conditions (there will be no effect on the strategic programme, there will be no deceleration in our three-stage nuclear power programme, and

there will be no effect on our advanced R&D programme) have been met.

"Asked why then was the Left objecting to the deal, the Prime Minister said: "I don't know... (but) they seem to have a problem with the United States." Elaborating on his own stand, Singh added: "I want India's relations to improve with all powers and we have been doing that - with the US, with Russia, with the EU, with France, and particularly with China. We have had a breakthrough with China, a historic agreement where we have defined the principles that will outline the border agreement...."

" On the Left's fears that the 123 Agreement would draw India further into a strategic alliance with the US, rendering it an American satellite, Singh said: "How can we ever become anyone's satellite? Yes, we live in an increasingly interdependent world but the challenge before us is to forge new linkages, widen our strategic options and, at the same time, guard against the negative side of the process of globalisation.

"Although he did not directly attack the Left's stand on the US as outdated or alarmist, he made his meaning clear by referring to the way communist countries were dealing with the superpower.

China, he pointed out, had a huge trade surplus with the US but was not worried about losing its independence. "Look at Vietnam, look at China (the way they are engaging with America) - out of fear of dealing with the US, we cannot become a frog in the well," Singh said.

If the Prime Minister was "anguished" at the Left's obvious lack of trust in him to do right by the country, he appeared equally dismayed at their low levels of confidence in the nation. "India, with a billion people and with such a diversity of languages and cultures and religions, with its functioning democracy and respect for rule of law is a unique country; we are a role model for the world.

"By railing against the nuclear deal, the Left was "underestimating the intrinsic strength of India, of India's capacity to defend its national interests", he felt.

**090. Interview of Secretary, Department of Atomic Energy and Chairman of the Atomic Energy Commission Anil Kakodkar with *the Hindu*.**

**Chennai, August 11, 2007.**

**Q.** What compelled the Department of Atomic Energy to go in for this '123' agreement with the United States when it is on course with its indigenous three-stage nuclear power programme? Where is the need to import light water reactors (LWRs)?

**Ans.** The fundamental priority remains the development of the three-stage nuclear power programme. Even in the programme of 20,000 MWe of nuclear power by 2020, which provides for PHWRs [pressurised heavy water reactors], a number of FBRs [fast breeder reactors] and an AHWR [advanced heavy water reactors] run on thorium, there was a provision for eight imported LWRs of 1,000 MWe each. The objective is that while we open up the huge energy potential in our thorium resources through the development of our three-stage programme, we also look for additionalities in the near-term through imports.

Similarly, if the civil nuclear cooperation comes about and we are able to import natural uranium, we can also set up more indigenous PHWRs. So this international civil nuclear cooperation is to get additional nuclear power generation capacity in the near term, without in any way affecting our three-stage programme or the strategic programme or our domestic R&D activities.

We should also look at it from the point of view of possibility of exports. For example, our PHWRs are the smallest, commercially competitive systems worldwide. It may be of interest to several developing countries ... Once the international civil nuclear cooperation opens up, it should be possible for us to sell our reactors and technology to other countries ... who may have an interest in them just as it should be possible for us to buy reactors from other countries... The embargoes are there at present. If the restrictive regime which is operating around us goes away, it is certainly good for a greater share of nuclear power in the total power generation capacity.

**Q.** What are the areas in the 123 agreement that have satisfied you? What are the areas with which you are disappointed?

**Ans.** I have always viewed the possibility of opening the civil nuclear cooperation as an additionality<sup>1</sup>. These additions will not in any way impinge on our domestic development of the three-stage nuclear power programme,

1. Earlier on August 4 in their reaction to the agreement immediately after the publication of the text, Mr. Kakodkar and Mr. M. R. Srinivasan former Chairman of the Atomic Energy Commission extended their welcome to it. Mr. Kakodkar, described it as "a satisfactory arrangement" which would enable India to receive international civil nuclear cooperation while at the same time, preserving India's programme relating to strategic areas, its three-stage indigenous nuclear power programme, and research and development. M.R. Srinivasan, former Chairman, AEC, called it the best agreement we can enter into at this point of time and this is the way to move forward.

"This is the best compromise that can be worked out at this point of time with which we can live." He, however, added, "Of course, we must be alert and make sure that subsequent steps are not taken to lead us to make further concessions or erode our position." The agreement had, "to a larger measure," broken "the logjam" that led to the isolation of India from international civil nuclear cooperation for the past 30 years and also denial of technology related to reprocessing, enrichment and heavy water production. Dr. Srinivasan, who is now a Member of the AEC, said the agreement should be looked at in the backdrop of India wanting to generate nuclear power in a big way in the near future. To pursue its three-stage nuclear power programme, India needed access to international technology. It was time to add to substantially to its nuclear power generation, using Fast Breeder Reactors. India needed to make additions to its indigenous nuclear power programme by importing Light Water Reactors (LWRs). "This agreement will give us that opportunity," he said. Asked about the provision in the agreement that "transfers of dual-use items that could be used in enrichment, reprocessing or heavy water production facilities will be subject to the Parties' respective applicable laws, regulations and licence policies" and whether this meant that transfer of these technologies to India would be subject to a review by the U.S. Congress, Dr. Srinivasan said the U.S. Atomic Energy Act of 1954 stood in the way of the U.S. supplying these technologies to other countries. So the Americans found it difficult to accommodate India's request at this point of time for the transfer of reprocessing, enrichment and heavy water production technologies to India. "However, there is a door that can be left open for future negotiations as an amendment to this agreement," he said. What was the guarantee that the review would be favourable, he was asked. His reply was that these technologies related to dual-use equipment. "It is our hope that changes will be made and arrangements will come about for other nuclear suppliers [to provide these technologies to India]. We already have these technologies.

But when we take up these technologies for larger industrial use [that is, massive generation of nuclear power], we would like to have international equipment and processes. That way, we can look to the future. We have to break the logjam," the AEC member said. Asked whether India had broken the logjam through this agreement, he said, "to a larger measure." He was asked whether the agreement insinuated the possibility of a nuclear test by India by stating that the Parties "agreed to take into account whether the circumstances that may lead to termination or cessation resulted from a Party's serious concern about a changed security environment or as a response to similar actions by other States which could impact national security," Dr. Srinivasan's reply was this: "Yes, it is correct. The 123 agreement does not refer to any nuclear test at all. The U.S. Atomic Energy Act of 1954 will apply... The U.S. cannot treat India as a nuclear weapon State under the NPT [Nuclear Non-Proliferation Treaty]. We fall between two categories. This is a special arrangement. So this is a fallback provision and there is some comfort to the Indian side that consultations and conditions will emerge. Our hope is that there will be no further nuclear test by anybody, especially the U.S., China and Pakistan."

our strategic programme, and our R&D. Secondly, if we set up nuclear power stations which are acquired from outside, then there should be an assurance that there will be no interruption in their operation. With whatever spent fuel that will arise in these power stations, it should be possible to reprocess and recycle [plutonium] so that we can get the benefit of 50 to 60 times more energy. Also, there should be no difficulties in terms of spent fuel management in accordance with our domestic policy of reprocessing and recycling in a closed fuel cycle mode. This agreement provides for all this. These are our requirements and they are met ... This agreement is a practical solution, which meets all our requirements. It is a practical way forward. So it is satisfactory.

**Q.** There are three central issues: India's right to reprocess the spent fuel into plutonium from the reactors to be imported; uninterrupted fuel supply for these imported reactors; and India's voluntary moratorium on nuclear testing, which it does not want to convert into a bilateral legality with the U.S. Are you satisfied in all these areas?

**Ans.** I think so. There is an upfront reprocessing consent right. There is an assurance of uninterrupted operation of reactors. In terms of tests, the unilateral voluntary moratorium we have remains as such. There is no conversion of that into a bilateral legality. So I think it is satisfactory.

**Q.** The U.S. has only given its consent to make a request to it to allow us to reprocess the spent fuel from the imported reactors. The consent may come after a year and a half. How can you say upfront consent has been given?

**Ans.** This needs to be clarified. First, that there is a consent for reprocessing is very explicitly stated in the same Article [6(iii)] in the beginning: "the Parties grant each other consent to reprocess or otherwise alter in form or content nuclear material transferred pursuant to this Agreement." So this consent right is upfront. There is no ambiguity about it. Now the important point to recognise is that you need to establish arrangements and procedures with regard to safeguards, physical protection, storage and environment, and such other parameters. The agreement spells out the standards for these purposes.

Parties will agree on arrangements and procedures, and consultation for this purpose will start in six months from the date of the request and it will be completed in one year. So it is not one year and a half. It is one year from the date of the request that arrangements and procedures will be in place.

**Q.** "Arrangements and procedures" seem to be a loaded term. Can the U.S. not impose any number of conditions under that, and delay granting India the reprocessing rights?

**Ans.** No, no. For what does the Agreement talk about "arrangements and procedures"? It says, "These arrangements and procedures shall include provisions with regard to physical protection standards set out in Article 8, storage standards set out in Article 7, and environmental protections set forth in Article 11 of this Agreement, and such other provisions as may be agreed by the Parties. Any special fissionable material that may be separated may only be utilised in national facilities under IAEA safeguards." So these arrangements and procedures have been clearly spelt out, and also the standards to be adopted are spelt out. There is no ambiguity about that.

**Q.** The Agreement says that India should build "a new, national facility dedicated to reprocessing safeguarded nuclear material under IAEA safeguards." Supposing the U.S. insists that we should show them the design of this reprocessing plant and picks holes in it?

**Ans.** When you sign up safeguard arrangements with the IAEA, certain information has to be defined but it is to the extent of safeguardability. It is not necessary that every information has to be given. Only information about safeguardability has to be given because we must satisfy that safeguards can be satisfactorily put in place. All these with respect to the IAEA. There is no issue on that. We have done that in the past.

**Q.** Reprocessing is at the heart of India's three-stage programme. Is there a diabolical game to block India from going ahead with its second and third stages and saddle it with imported reactors?

**Ans.** We should go by what is stated in the Agreement. It clearly states that upfront consent rights [for reprocessing are granted]. There is a clear provision for completing the arrangements and procedures within one year from the date of the request and we can make that request the day the Agreement is in place. Afterwards, you can build the facility, get IAEA safeguards established and carry on with reprocessing. That is an activity between us and the IAEA.

Over and above that, the agreement has a non-hindrance clause, which says that there cannot be any hindrance or interference in India's unsafeguarded programme or programmes involving military nuclear

facilities and so on. So there is an explicit statement in the agreement itself - a legal provision that we can carry on our programme unhindered, according to our policies. Similarly, we can carry on with the reactors which are supplied to us under this agreement. We can reprocess the fuel supplied under this agreement and we can re-use the plutonium, derived after reprocessing the spent fuel, in safeguarded national facilities. So it is quite clear.

**Q.** The four FBRs that India will build before 2020 will not be under safeguards. After these four, whatever FBRs India builds, it can determine which will come under safeguards and which will not.

**Ans.** Yes. It is for India to decide. Where we are using fuel derived from the spent fuel of imported origin, we will put them under IAEA safeguards.

**Q.** This agreement seems to be full of verbal jugglery. For instance, in Article 5 (2), it says, "Transfers of dual-use that could be used in enrichment, reprocessing or heavy water production facilities will be subject to the Parties' respective applicable laws, regulations and licence policies." So it is clear that the Hyde Act, the U.S. Atomic Energy Act of 1954, its Non-Proliferation Act of 1978 will apply to this agreement, and all these three deny reprocessing, enrichment, and heavy water production technologies to India. Does it mean that India will not get full, civil nuclear cooperation from the agreement although it promises that?

**Ans.** Let us look at it the following way. As I said earlier, we are talking about our ability to derive full benefit out of imported fuel, using our ability to reprocess and recycle the nuclear material and derive 50 to 60 times more energy potential compared to what is possible in once-through use. This is one part. With regard to reprocessing, enrichment, and heavy water technologies, the U.S. has not transferred these technologies to any country so far. So this agreement provides for a possibility of such transfers but that will require an amendment to this agreement. That possibility has been kept open.

With regard to dual-use items for use in heavy water, reprocessing and enrichment facilities, one should remember that these items do not involve sensitive nuclear technology. The agreement says that they can be transferred consistent with the Parties' respective applicable laws, regulations, and licence policies. That provision has been made.

**Q.**What do you mean by this?

**Ans.** In the sense, there is a positive forward-looking provision on transfers. It prevents an outlook of targeting these facilities. The point is we are able to carry forward our activities including reprocessing, enrichment and heavy water [production]. We are able to derive full benefits from international civil nuclear cooperation. So it is a satisfactory arrangement... In fact, it talks about full civil nuclear cooperation, reactors, fuel and aspects of associated nuclear fuel cycle. So it is a broad-based Agreement that covers all aspects of nuclear cooperation. Wherever we proceed with this cooperation, there is no possibility of any interruption. At the same time, there is a non-hindrance protection to our domestic activities.

**Q.** The same Article 5 (2) says, "Sensitive nuclear technology, sensitive nuclear facilities, heavy water production facilities and major critical components of such facilities may be transferred under this Agreement pursuant to an amendment to this Agreement." Does it mean that it will attract a review by the U.S. Congress?

**Ans.** I think perhaps yes. But that is in future when the two countries decide to cooperate further in transfers in these areas - sensitive nuclear technologies that will require an amendment to this agreement ... The important point to recognise is that the agreement does not say that they will not be transferred. They have kept an opening for the future.

**Q.** So there is full civil nuclear cooperation?

**Ans.** I think so.

**Q.** There is a cloud of uncertainty even about the uninterrupted fuel supply for the reactors to be imported. Article 5 (6) (b) (i) says, "The United States is willing to incorporate assurances regarding fuel supply in the bilateral U.S.-India Agreement on peaceful uses of nuclear energy under Section 123 of the U.S. Atomic Energy Act, which would be submitted to the U.S. Congress." Does it mean it requires the Congress' ratification?

**Ans.** The whole document will go to the U.S. Congress. This entire thing [agreement] is a cut and paste of the March Separation Plan. It is entirely identical. And the U.S. is making a commitment that it will get this done. They will have their arrangements and they will join with other countries and they [other countries] will support building a strategic reserve of fuel [for India] to guard against any interruption. There are these multi-layered assurances including that if there is a disruption of fuel supply, India will have the right to take corrective measures. There is a good amount of

protection. The agreement says that it will provide "for corrective measures that India may take to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign supplies." So uninterrupted operation of the reactors is assured in the agreement.

**Q.** The agreement says, "If the IAEA decides that the application of IAEA safeguards is no longer possible, the supplier and the recipient should consult and agree on appropriate verification measures." Isn't this a backdoor entry for the American inspectors to our safeguarded facilities?

**Ans.** No. Not at all. It is very unambiguous. First of all, the agreement talks only about IAEA safeguards. The determination on application of safeguards rests only with the IAEA. Even if it comes to a situation where the IAEA determines that the application of safeguards is not possible, which is almost an impossibility - even if the IAEA were to determine that - what is there in the agreement is that there will be consultation between the supplier and the recipient on verification measures. Verification measures are not the same as safeguards ... Verification means you basically verify that the material that is supposed to be there is there. You are assured that there is no diversion.

**Q.** The Americans can terminate the Agreement before its expiry period of 40 years by giving us notice.

**Ans.** We can also terminate ... The whole agreement is balanced on both the sides.

**Q.** If the Americans terminate the Agreement before the end of 40 years, will the imported reactors, however, continue to be under safeguards in perpetuity? Isn't it an imbalance?

**Ans.** Our ability to continuously run the reactors is also ensured. If the agreement is terminated, we can still run the systems using the strategic reserve of fuel. Only no new reactors will come.

**Q.** Supposing India conducts a nuclear explosion and the U.S. terminates the Agreement and wants to take back the reactor vault, steam generators, coolant channels, etc. Is it possible to take back to the U.S. all these equipment, which will be full of radiation?

**Ans.** It is practically not possible. Even if they do, they have to pay for it. We can use that money to set up other systems.

**Q.** Will the reactors to be imported be turn-key or will the Nuclear Power Corporation of India Limited (NPCIL) build them after importing the equipment like it is doing with the Russian reactors at Koodankulam in Tamil Nadu now?

**Ans.** That depends on the contract for the reactors.

**Q.** In sum, do you feel that this Agreement is in consonance with the July 18, 2005, Joint Statement by Dr. Manmohan Singh and the U.S. President George W. Bush and the Separation Plan?

**Ans.** I think so... I already said this is a satisfactory arrangement.

**091. Statement by Prime Minister Dr. Manmohan Singh in the Lok Sabha on the Civil Nuclear Energy Cooperation with the United States of America.**

**New Delhi, August 13, 2007.**

Mr. Speaker Sir, I rise to inform this august House that the Government of India has reached Agreement with the Government of the United States of America on the text of the bilateral Agreement on Cooperation for Peaceful Uses of Nuclear Energy. ... (Interruptions)

This Government has kept Parliament fully in the picture at various stages of our negotiations with the United States. We have never shied away from a full discussion in Parliament on this important issue. I have myself made statements on several previous occasions - on July 29, 2005 soon after my return from Washington, on February 27, 2006 during which I took Parliament into confidence regarding our ongoing discussions with the United States on the Separation Plan, and on March 7, 2006 following the visit of President Bush to India. ...(Interruptions) I also made a detailed statement in the Rajya Sabha on August 17, 2006 conveying certain solemn commitments to which I shall return shortly. ... (Interruptions)

Our Government has adhered scrupulously to Parliamentary traditions and practices. We have in fact gone far beyond any previous Government. ... (Interruptions)

After the conclusion of the Agreement, we have also briefed many of the

parties represented in Parliament on the details of the Agreement.

Sir, the Agreement is about civil nuclear energy cooperation. It is an Agreement between two States possessing advanced nuclear technologies, both parties having the same benefits and advantages. The significance of the Agreement lies in the fact that when brought into effect, it will open the way for full civil nuclear energy cooperation between India and the United States. We have negotiated this Agreement as an equal partner, precisely because of the achievements of our scientists and technologists in overcoming the barriers placed around us in the past. This is an Agreement based on the principle of mutual benefit. ... (Interruptions)

There has been considerable public debate and discussion on various aspects of the Agreement. On August 17, 2006, I had given a solemn commitment to Parliament and to the country regarding what we can agree and cannot agree with the United States to enable civil nuclear energy cooperation with India. I had stressed that it must be within specific parameters, which I had shared with Parliament. This was an unprecedented measure of transparency on our part even in the midst of complex negotiations.... (Interruptions)

I had given Parliament my assurance that the Government will make every effort so that the vision of the Joint Statements of July, 2005 and March, 2006 becomes a living reality. I believe that we have redeemed that pledge. In concluding this Agreement, we have ensured that the autonomy of our strategic programme is fully maintained, and that Dr. Homi Bhabha's long-term vision remains our guiding principle ... (Interruptions)

With your permission, I wish to draw the attention of this august House to the main features of the Agreement in some detail. It would become evident that the commitments I had made to Parliament, including those on August 17, 2006, have been fully adhered to.... (Interruptions)

The concept of full civil nuclear cooperation has been clearly enshrined in this Agreement. The Agreement stipulates that such cooperation will include nuclear reactors and aspects of the associated nuclear fuel cycle, including technology transfer on industrial or commercial scale. It would also include development of a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of our reactors.

A significant aspect of the Agreement is our right to reprocess US origin spent fuel. This has been secured upfront. We view our right to reprocess

as a key element of a closed fuel cycle, which will enable us to make full use in our national facilities of the energy potential of the nuclear fuel used in our reactors. ... (Interruptions) This important yardstick has been met by the permanent consent for India to reprocess. ... (Interruptions)

India will establish a new national reprocessing facility dedicated to reprocessing foreign nuclear material under IAEA safeguards. ... (Interruptions) India and the US will mutually agree on arrangements and procedures under which such reprocessing will take place in the new facility. ... (Interruptions) Consultations on arrangements and procedures will begin within six months of a request by either party and will be concluded within one year. There is no ambiguity with regard to the commitments of both countries.

Any special fissionable material that may be separated may be utilized in national facilities under IAEA safeguards. Thus, the interests of our three stage nuclear programme have been protected. ... (Interruptions)

The United States has a longstanding policy of not supplying to any country enrichment, reprocessing and heavy water production facilities. ... (Interruptions) This Agreement provides for such transfers to India only through an amendment. Forward-looking language has been included for dual use transfers of enrichment, reprocessing and heavy water production facilities. We hope transfers will become possible as cooperation develops and expands in the future. ... (Interruptions) It is important to note that no prohibition that is specifically directed against India has been included in the Agreement. ... (Interruptions)

### **The Principle of Reciprocity**

The principle of reciprocity, which was integral to the July 2005 Statement, has been fully safeguarded in this Agreement. There is no change in our position that we would accept only IAEA safeguards on our civilian nuclear facilities. This would also be in a phased manner and as identified for that purpose in the Separation Plan, and only when all international restrictions on nuclear trade with India have been lifted. India will not take any irreversible steps with the IAEA prior to this. ... (Interruptions)

### **Certification**

This Agreement emphasizes the desire of both countries to cooperate extensively in the use of nuclear energy for peaceful purposes as a means of achieving energy security on a stable, reliable and predictable basis.

This Agreement further confirms that US cooperation with India is a permanent one. There is no provision that states that US cooperation with India will be subject to an annual certification process. ... (Interruptions)

Hon. Members may recall that the 18th July 2005 Joint Statement had acknowledged that India be regarded as a State with advanced nuclear technology enjoying the same advantages and benefits as other States with advanced nuclear technology, such as the US. ... (Interruptions) This Agreement makes specific references to India and the United States as States possessing advanced nuclear technology, both parties having the same benefits and advantages, both committed to preventing Weapons of Mass Destruction proliferation. ... (Interruptions)

### **Safeguards**

As agreed in the March Separation Plan, India has accepted only IAEA safeguards that will be reflected in an India-specific Safeguards Agreement with the IAEA. We have not consented to any provision that mandates scrutiny of our nuclear weapons programme or any unsafeguarded nuclear facilities. ... (Interruptions) There are explicit provisions in the Agreement that make it clear that this Agreement does not affect our unsafeguarded nuclear facilities and that it will not affect our right to use materials, equipment, information or technology acquired or developed independently. ... (Interruptions) India and the United States have agreed that the implementation of the Agreement will not hinder or otherwise interfere with India's nuclear activities including our military nuclear facilities. Nothing in the Agreement would impinge on our strategic programme, our three-stage nuclear power programme or our ability to conduct advanced Research and Development. ... (Interruptions)

### **Fuel Supply Assurances**

I would like to reiterate that the March, 2006 Separation Plan provided for an India-specific Safeguards Agreement with the IAEA, with assurances of uninterrupted supply of fuel to reactors that would be placed under IAEA safeguards together with India's right to take corrective measures in the event fuel supplies are interrupted. An important assurance given is the commitment of support for India's right to build up strategic reserves of nuclear fuel to meet the lifetime requirements of India's reactors. ... (Interruptions) This Agreement envisages, in consonance with the Separation Plan, US support for an Indian effort to develop a strategic

reserve of nuclear fuel to guard against any disruption of supply for the lifetime of India's reactors. The Agreement reiterates in toto the corresponding portions of the Separation Plan. It has endorsed the right of India to take corrective measures to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supply.... (Interruptions)

Hon. Members will agree that these provisions will ensure that there is no repeat of our unfortunate experience with Tarapur.

### **Integrity and reliability of our strategic programme, autonomy of decision making and future scientific research and development**

In my statements of March 7 and August 17, 2006, I had assured Parliament that the Separation Plan would not adversely affect our strategic programme, the integrity of the three-stage nuclear programme and the autonomy of our Research and Development activity. ... (Interruptions)

This agreement does not in any way impact on India's ability to produce and utilize fissile material for its current and future strategic needs. Our right to use for our own purposes our independent and indigenously developed nuclear facilities has been fully preserved. The Agreement also provides for non-hindrance and non-interference in our activities involving use of nuclear material, non-nuclear material, equipment, components, information or technology and military nuclear facilities produced, acquired or developed independently for our own purposes. ... (Interruptions)

### **Cessation of cooperation**

An elaborate multi-layered consultation process has been included with regard to any future events that may be cited as a reason by either Party to seek cessation of cooperation or termination of the Agreement. Both Parties have agreed to take a number of factors into account in their consultations so that the scope for precipitate or unilateral action is reduced. Cessation of cooperation can be sought by the US only if it is prepared to take the extreme step of termination of the Agreement. India's right to take "corrective measures" will be maintained even after the termination of the Agreement. ... (Interruptions)

In the case of termination of this Agreement and cessation of cooperation by either Party, each has the right to seek return of nuclear material and equipment supplied by it to the other. However, before the right of return is exercised, the Agreement commits the Parties to consult and to take into

account specific factors such as national security, ongoing contracts and projects, compensation at market value, physical protection and environmental issues. India and the United States have agreed to consider carefully the circumstances that may lead to termination, including a party's concerns about a change in the security environment or a response to similar actions by other States that could impact on national security. The Agreement stipulates that the two parties recognize that exercising the right of return would have profound implications and consequences for their relations. ... (Interruptions)

From India's point of view, our primary objective is to ensure the uninterrupted operation of our nuclear reactors, in the context of the detailed fuel supply assurances provided in the Separation Plan and these are now reflected in full in the Agreement. The Agreement specifically states in regard to fuel supply assurances and India's right to take "corrective measures" that there will be no derogation of India's rights in this regard, including the right to take "corrective measures" to ensure the uninterrupted operation of its reactors. ... (Interruptions) This reflects the balance of obligations consistent with the understandings of the July Statement and the March Separation Plan.... (Interruptions)

... (Interruptions)

Among the significant and innovative features of this Agreement are specific mention of the right to run foreign supplied reactors 'without interruption' and to take 'corrective measures' in the event of fuel supply disruption. ... (Interruptions) This has been made possible by crafting the provisions in a manner that provide for explicit linkages and interlocking of rights and commitments contained in the Agreement. ... (Interruptions)

The Agreement does not in any way affect India's right to undertake future nuclear tests, if it is necessary in India's national interest. ... (Interruptions) Let me hence reiterate once again that a decision to undertake a future nuclear test would be our sovereign decision, one that rests solely with the Government. There is nothing in the Agreement that would tie the hands of a future Government or legally constrain its options to protect India's security and defence needs. ... (Interruptions)

If I might sum-up, this Agreement does not in any way inhibit, restrict or curtail our strategic autonomy or capabilities. Our rights to pursue our three-stage nuclear power programme remain undiluted. ... (Interruptions) In the unlikely event of cessation of cooperation, there is no derogation of our

rights with regard to corrective measures. Our reprocessing rights are upfront and are permanent in nature. Advanced R&D programmes and IPR Protection are fully safeguarded. ... (Interruptions)

Mr. Speaker, Sir, as I have said, this is an Agreement for cooperation between India and the US on peaceful uses of nuclear energy. Its genesis is the shared perception between India and the US that both our countries need to address their energy challenges, and address them in a manner that is sensitive to concerns about the environment. ... (Interruptions) For India, it is critically important to maintain our current GDP growth rate of 8 to 10 per cent per annum if our goal of eradicating poverty is to be achieved. The energy implications of this growth rate over the next couple of decades are enormous. ... (Interruptions) Even if we were to exploit all our known resources of coal, oil, gas and hydropower, we would still be confronted with a yawning demand and supply gap. ... (Interruptions)

India's three-stage nuclear power programme holds immense promise for the future. The unique thorium-based technology would become an economically viable alternative over a period of time following sequential implementation of the three stages. ... (Interruptions) We must, in the meanwhile, explore and exploit every possible source of energy. Nuclear energy is a logical choice for India. Indigenous supplies of uranium are highly inadequate and hence we need to source uranium supply from elsewhere. ... (Interruptions) In a globalised world, technology is always a premium item and we look forward to expanding our horizons in this regard as well. We intend to carry forward our cooperation with other countries in civil nuclear energy, in particular, with major nuclear suppliers such as Russia and France. ... (Interruptions)

We already have a comprehensive nuclear infrastructure. We have a corps of skilled and technically qualified manpower in this sector. ... (Interruptions) It makes sense for us to leverage this valuable asset. As hon. Members are aware, our target for the year 2020 is 20,000 MW of nuclear power generation.... (Interruptions) It is quite modest. However, if international cooperation once again became available, we could hope to double this target.... (Interruptions)

On the basis of the Indo-US bilateral Agreement and the finalisation of an India-specific Safeguards Agreement with the IAEA, which is being taken up shortly, the Nuclear Suppliers Group is expected to adapt its guidelines to enable international commerce with India in civil nuclear energy and all dual use technologies associated with it. This would be the beginning of

the end of the technology-denial regimes against India that have been in existence for over three decades. ... (Interruptions)

Apart from its direct impact on our nuclear energy programme, this Agreement will have major spin-offs for the development of our industries, both public and private. High technology trade with the US and other technologically advanced countries will expand rapidly. ... (Interruptions)

I wish to draw attention to another major gain for India from this initiative. We will be creating opportunities for our scientists to participate in the international exchange of scientific ideas and technical know-how and to contribute to the global effort to deal with the world-wide challenges of energy security and climate change. This includes the International Thermonuclear Research Reactor or ITER project, in which India has already joined as a full and equal member along with a handful of technologically advanced countries. ... (Interruptions)

In discussions on this subject, questions have been raised about Government's commitment to an independent foreign policy. I have clearly spelt out the Government's position in this regard in my statements to Parliament in March and August, 2006. I had specially underlined that the pursuit of a foreign policy that is independent in its judgement is a legacy of our founding fathers and an abiding commitment of our Government. India is too large and too important a country to have the independence of its foreign policy taken away by any power. Today, India stands on the world stage as an influential and respected member of the international community. There is independence in our thought and independence in our actions. ... (Interruptions)

I would like to reiterate that our engagement today with all global powers like US, Russia, China, EU, UK, France, Germany and Japan is unprecedented. Engagement with West, East, South East and Central Asia has been significantly stepped up with visible results. We are building new frontiers in our ties with Africa and Latin America. In South Asia we seek to develop a peaceful environment, one which is conducive to ambitious developmental targets. I urge those who question our commitment to an independent foreign policy to display the same degree of confidence in India, as others from outside do. ... (Interruptions)

Sir, thus, there is no question that we will ever compromise, in any manner, our independent foreign policy. We shall retain our strategic autonomy. At the same time, we must not forget India's long-standing commitment to the

noble ideas of nuclear disarmament and our refusal to participate in any arms race, including a nuclear arms race. Our commitment to universal, non-discriminatory and total elimination of nuclear weapons remains undiminished. It was this vision of a world free of nuclear weapons which Shri Rajiv Gandhi put before the UN in 1988 and this still has universal resonance. ... (Interruptions)

Sir, we remain committed to a voluntary, unilateral moratorium on nuclear testing. We are also committed to negotiate a Fissile Material Cut-off Treaty or FMCT in the Conference on Disarmament. India is willing to join only a non-discriminatory, multilaterally negotiated, and internationally verifiable FMCT, as and when it is concluded in the Conference on Disarmament, subject to it meeting our national security interests. ... (Interruptions)

Despite changes in Government and changes in political leadership we have always tempered the exercise of our strategic autonomy with a sense of global responsibility and with a commitment to the ideals of general and complete disarmament, including global nuclear disarmament. This Government believes that our commitment to these ideals and our efforts to realize them must continue, and continue with even greater vigour, now that we are a nuclear weapon state. The possession of nuclear weapons only increases our sense of responsibility and does not diminish it ... (Interruptions)

Pending global nuclear disarmament India has maintained an impeccable non-proliferation record. As a responsible nuclear power, India will not be the source of proliferation of sensitive technologies. We stand for the strengthening of the non-proliferation regime as the infirmities in this regime have affected our security interests. We will work together with the international community to advance our common objective of non-proliferation... (Interruptions)

There are now other landmarks to cross before the goal of India joining the international mainstream as a full and equal partner becomes a reality. We have to finalise an India-specific Safeguards Agreement with the IAEA. Thereafter, the Nuclear Suppliers Group has to agree, by consensus, to adapt its guidelines, we expect without conditions, to enable nuclear commerce with India and to dismantle the restrictions on the transfer of dual use technologies and items to our country. The US Administration is to secure requisite approval from the US Congress. The completion of these next steps will mark the practical realization of this initiative... (Interruptions)

Our negotiators deserve credit for delivering to the nation an Agreement, which can potentially transform the economic prospects of our country. It is an Agreement that will enable us to meet the twin challenges of energy security and environmental sustainability, and remove the technology denial regimes that have, for decades, been a major constraint on our development. At the same time, it will bring India the recognition it deserves thanks to the outstanding achievements of our scientists in nuclear and space sciences as well as other high technology areas.

**SHRI BASU DEB ACHARIA** : Sir, the Indo-US Deal is against the interest of the nation. This will adversely affect our independent policy. We are opposed to the harmful provisions of the Hyde Act. The Nuclear Deal should be renegotiated. That is why, we are walking out in protest of this.

**(At this stage, Shri Basudeb Acharia and some other Hon. Members left the House.)**

**DR. MANMOHAN SINGH**: Mr. Speaker Sir, this historic initiative has received the steadfast support of President Bush and senior members of his Administration. The strengthening and enhancement of our bilateral relations is an objective that has received his unstinting personal support and commitment. This Agreement is a shining example of how far we have progressed... (Interruptions)

Finally, Sir, let me end by saying that we have achieved an Agreement that is good for India, and good for the world. I am neither given to exaggeration nor am I known to be self-congratulatory. I will let history judge; I will let posterity judge the value of what we have done through this Agreement. In days to come it will be seen that it is not just the United States but nations across the world that wish to arrive at a new equilibrium in their relations with India. This agreement with the United States will open new doors in capitals across the world. It is another step in our journey to regain our due place in global councils. When future generations look back, they will come to acknowledge the significance of this historic deal... (Interruptions) Thank you, Sir.

**092. Press release of the Prime Minister's Office on meeting with General Secretary of the Communist Party of India (Marxist) Prakash Karat to discuss issues connected with bilateral Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, August 14, 2007.**

The Prime Minister, Dr. Manmohan Singh and the External Affairs Minister, Shri Pranab Mukherjee met Shri Prakash Karat, General Secretary of the CPI (M), here today and discussed the issues connected with the bilateral Civil Nuclear Cooperation Agreement between India and the United States.

Some of the points regarding the agreement were discussed. The CPI (M) General Secretary stated that he would put it to the party's politburo which will meet over the week end.

Shri. Karat and the Prime Minister reiterated that efforts would be made to sort out the issues<sup>1</sup>.

---

1. Media report said that soon after the breakfast meeting, Mr. Karat had a meeting with Communist Party of India general secretary A.B. Bardhan and briefed him on the deliberations. Mr. Karat told *The Hindu* that the Government presented its view and he reiterated the Left parties' stand, including the suggestion that the deal not be operationalised. He highlighted the apprehensions on the implications of the Hyde Act passed by the U.S. Congress. The Prime Minister also spoke to West Bengal Chief Minister Buddhadeb Bhattacharjee on the nuclear issue.  
(The BJP Parliamentary Party met under the chairmanship of L.K. Advani and decided to press for a debate in the Lok Sabha under Rule 184 and in the Rajya Sabha under Rule 168. BJP spokesperson Vijay Kumar Malhotra told journalists that the party hoped that when a discussion took place in Parliament, "parties opposed to it would show their opposition through vote." At the meeting, Mr. Advani said that since the Jana Sangh days, the party was in favour of the country possessing a nuclear bomb.)

### **093. Response of the Official Spokesperson to a question regarding Australian Prime Minister's telephone call to Prime Minister.**

**New Delhi, August 16, 2007.**

The Prime Minister of Australia Mr. John Howard called Prime Minister Dr. Manmohan Singh today to inform him of the decision of the Australian Government regarding sale of uranium<sup>1</sup> to India. The Prime Minister thanked Prime Minister Howard. It was agreed that the matter would be discussed further at the official level.

- 
1. On the day (August 16) the Australian Prime Minister Howard informed Prime Minister about Australian decision to sell uranium to India, addressing a press conference in Canberra he drew parallels between India, on one side, and China as also France and even Taiwan, on the other. He said: "It will strike many Australians as very strange that it is acceptable to sell uranium to China but it is not, no matter what arrangements you have, acceptable to sell uranium to India. In the 1990s, before France signed the Nuclear Non-Proliferation Treaty, we sold uranium to France, and we also sold uranium to Taiwan." Asked about the reaction by Pakistani leaders, he said "that could, in part, be influenced by the context of sensitivity between India and Pakistan regarding uranium." He said the uranium sales would be "one key element of a comprehensive package of measures" that Canberra "is taking to strengthen" ties with India. Hailing India as "the world's largest democracy," he described it as "an increasingly influential regional power, and an important potential strategic partner." Australian Foreign Minister Alexander Downer had, earlier, indicated that plans to enter into an exclusive safeguards pact with India could be benchmarked against Canberra's uranium export accords with China, the U.S, and the U.K. He cited economic data to reinforce the case. He said "In Australia, it will create increased exports and jobs over the longer term. The [uranium] industry already generates 658 million Australian dollars annually in exports. And, India will be a large and growing market. India will build 11 new [civil nuclear] reactors ... and need up to 12,000 tonnes of uranium per annum to [the year] 2032 ... The use of nuclear power today already reduces global emissions [of greenhouse gases] by more than two billion tonnes a year." It may be recalled that when the Australian Foreign Minister Alexander Downer met the EAM Mr. Mukherjee on July 31 in Manila on the sidelines of the ASEAN meetings he "assured" India of "cooperation" in the civil nuclear energy sector. Mr. Downer, making an independent statement, hailed the successful completion of negotiations between India and the United States as a "very positive and historic development ... which is very much in Australia's interest." He emphasised that "the relationship between Australia and India has never been stronger." As economic partners, and "on security and strategic issues, Australia and India are collaborating at a level not seen before." Briefing Indian journalists in Manila Mr. Mukherjee said Mr. Downer had told him that "the Australian Cabinet will soon be considering the issue of sale of uranium to India." Australia had

---

expressed its willingness to "cooperate" with India in the Nuclear Suppliers Group (NSG) so that its guidelines could be amended for the supply of know-how and equipment to India in the civil atomic energy sector. However, "nothing can be done without the International Atomic Energy Agency's India-specific arrangement," which was one of two issues "required to be done," Mr. Mukherjee said. Noting that "Australia is becoming an important source for resources for the rapidly growing Indian economy," he said Canberra's uranium supplies could follow the finalisation of the IAEA's India-specific arrangement." Asked whether Canberra had indicated that its proposed uranium supplies would be bench-marked against Australia's recent accord with China for the supply of the same resources, Mr. Mukherjee said, "Don't try to compare [India] with China . Because, China is a nuclear-weapon state, which India is not [under the Nuclear Non-Proliferation Treaty]." Mr. Downer said the U.S.-India civil nuclear initiative "will have important non-proliferation and environmental benefits." Australia, he said, "shares with the IAEA the goal of engaging with India as a constructive and responsible partner in preventing proliferation of weapons of mass destruction." "It is in the international community's interest" that India, with "advanced nuclear technology," had now agreed to sustain its own nuclear weapon-testing moratorium. The above development was welcome particularly in the backdrop of earlier pronouncements from Australia. On May 23, Australian Minister for Federal Resources Mr. MacFarlane had categorically rejected any possibility of uranium sale to India unless it signed the NPT. "The Australian uranium industry can prosper without India, that's my answer. We have a prohibition on the basis they have not signed the NPT," he told The Age newspaper. It may be recalled that during the visit of Prime Minister's Special Envoy Shyam Saran to Australia in March, the Australian Prime Minister Mr. Howard appeared to leave open the prospect of Australian uranium sales to India when he said, "We see India as a very responsible country. The relationship between Australia and India is growing. It's a very important relationship. They will be considerations that we will bear in mind."

**094. Statement of External Affairs Minister Pranab Mukherjee in the Lok Sabha on certain issues in respect of Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, August 16, 2007.**

... (*Interruptions*)

**The Minister of External Affairs (Shri Pranab Mukherjee):** Sir, the hon. Members, in the morning, raised certain issues in respect of the deal with the US on the authority of the nuclear test ... (*Interruptions*)

... (*Interruptions*)

We did not have any authentic version of the statement of the spokesperson of the State Department of USA<sup>1</sup>. But as the hon. Members raised this matter on the basis of the media reports, I think, I should clarify the position and I am doing so now.

India has the sovereign right to test and would do so, if it is necessary in the national interest. The only restraint is our voluntary unilateral moratorium on nuclear testing, declared by the previous Government and being continued by the successor Government. There is nothing in the bilateral agreement that would tie the hands of a future Government or legally constrain its options. A decision to undertake a future nuclear test would be India's sovereign decision, resting solely with the Government of India. ... (*Interruptions*)

... (*Interruptions*)

**Shri Pranab Mukherjee:** Nowhere – I repeat, nowhere – in the bilateral agreement on Cooperation for Peaceful Uses of Nuclear Energy with the United States of America, is testing mentioned. The bilateral cooperation agreement contains elaborate provisions in Articles 5 and 14 to ensure the continuous operation of India's reactors. These include fuel supply assurances, the right to take corrective measures, and a strategic fuel reserve for the lifetime of India's reactors in case of cessation of cooperation<sup>1</sup>.

Thank you.

---

1. What exactly did U.S. State Department spokesperson Sean McCormack said that led to the question being raised in Parliament? Did he say that the deal "will be terminated" if India conducted a nuclear test? Or did he say the proposed 123 agreement had

---

provisions that in the event of a nuclear test, all nuclear cooperation would be terminated? Mr. McCormack's statement on the testing issue is not mentioned in the U.S. State Department's transcript of the press conference of August 15. *The Hindu* quoting diplomatic sources trying to find out the authenticity of the statement, but could not. On the basis of media reports, they felt Mr. McCormack was approached at the end of the news conference the previous day and probably gave out the two sentences that was raised in Parliament. Their subsequent interpretation by the media led to further confusion among strategic analysts. His original statement in all probability was: "The proposed 123 agreement has provisions in it that in the event of a nuclear test by India, then all nuclear cooperation is terminated." The word testing is not to be found in any of the nine sub-clauses dealing with termination and cessation of civil nuclear cooperation. The External Affairs Minister's position was further fortified the next day (August 17) by the Chairman of the Atomic Energy Commission Anil Kakodkar in his inaugural speech of the new premises of the Centre for Applicable Mathematics of the Tata Institute of Fundamental Research (TIFR) in Bangalore. He said there was no prohibition on conducting a nuclear test in the 123 agreement. Allaying fears that India's sovereignty might be undermined with the nuclear deal, Dr. Kakodkar said: "Everything (about the deal) has been worked out in great detail, especially regarding the nuclear test. In the text there is a no-hindrance clause, which states that there will be no hindrance to the activities of both the countries outside the co-operation... There will also be no hindrance from outside to domestic activities." Stating that India's nuclear-related activities would not be affected if the deal was ever terminated, he said: "In order to make sure that the cessation and termination does not create difficulties with running the nuclear programme, a series of steps have been defined...It has to go through a process and cannot be abrupt." The agreement provided for the creation of a strategic stockpile to last the lifetime of the reactor. The fuel could come from the United States or other sources, thereby ensuring continuity of supply. He said the agreement met the three requirements for a successful deal: the continuation of India's research and development; the continuation and enlargement of the three-stage nuclear power programme; and the conduct of India's autonomous strategic programme. "We have our own domestic nuclear policies which we have announced, which remain unchanged and in place." However in Washington the spokesman of the State Department McCormack said "I think you're all familiar with the provisions in the 123 Agreement. And certainly, that provides the (US) President options in acting, in the event that there is a test." When asked whether the US fear that India may one day continue with its nuclear tests, he said that the US does not encourage any country to test nuclear device. "...a variety of officials from the US have said essentially the same thing, and that is that we are not testing and I don't see advanced nuclear countries around the world testing. And certainly, we don't encourage other states to do that," he said. "But, you know, again, the whole issue, is India is sovereign, but we're not encouraging any states to test at this point," he added.

**095. Report on the speech of Chairman of the Atomic Energy Commission Anil Kakodkar at the Centre for Applicable Mathematics of the Tata Institute of Fundamental Research.**

**Bangalore, August 17, 2007**

There is no prohibition on conducting a nuclear test in the 123 agreement inked between India and the United States, Anil Kakodkar, Chairman of the Atomic Energy Commission and Secretary of the Department of Atomic Energy said in Bangalore on the 17th August. He was speaking at the inauguration of the new premises of the Centre for Applicable Mathematics of the Tata Institute of Fundamental Research (TIFR).

Allaying fears that India's sovereignty might be undermined with the nuclear deal, Dr. Kakodkar said: "Everything (about the deal) has been worked out in great detail, especially regarding the nuclear test. In the text there is a no-hindrance clause, which states that there will be no hindrance to the activities of both the countries outside the co-operation... There will also be no hindrance from outside to domestic activities." Stating that India's nuclear-related activities would not be affected if the deal was ever terminated, he said: "In order to make sure that the cessation and termination does not create difficulties with running the nuclear programme, a series of steps have been defined...It has to go through a process and cannot be abrupt."

The agreement provided for the creation of a strategic stockpile to last the lifetime of the reactor. The fuel could come from the United States or other sources, thereby ensuring continuity of supply.

He said the agreement met the three requirements for a successful deal: the continuation of India's research and development; the continuation and enlargement of the three-stage nuclear power programme; and the conduct of India's autonomous strategic programme. "We have our own domestic nuclear policies which we have announced, which remains unchanged and in place."

**096. Speech of Prime Minister Dr. Manmohan Singh while laying the foundation stone of Rajiv Gandhi Urja Bhavan.**

**New Delhi, August 20, 2007.**

This is a very proud and solemn moment for all of us. I am very happy to be here today to lay the foundation stone of the "Rajiv Gandhi Urja Bhavan". In doing so, I join all of you and millions of our countrymen in honouring the memory of a great son of India. We pay tribute to Rajivji's commitment to India's energy security by observing this day as 'Akshay Urja Divas.' I am very happy that Soniaji is present on this auspicious occasion. Her deep and abiding commitment to the ideas and ideals we associate with Shri Rajiv Gandhi is a source of tremendous inspiration for our people.

Shri Rajiv Gandhi was a visionary. He thought about the future of the nation and was passionately committed to the development of a modern India. As a visionary, dreamer, idealist and an energetic leader, he wanted to harness modern science and technology for the development of our country and for the welfare of our people.

Rajivji's dreams in the fields of telecommunication and information technology have been realized to a very substantial degree and we see it all expressing itself in our everyday life. In laying the foundation stone for this building we recognize Rajivji's deep and abiding commitment to India's energy security. India's sustained economic development is vitally dependent on our energy security and on the simultaneous promotion of sustainable and environment friendly energy technologies.

Today, when we aim for a 10% growth rate, we must recognize the critical importance of energy security. By energy security, I refer not merely to the assurance of the supply of energy in ample quantities. Real energy security implies assured supply of good quality energy at affordable prices. India's energy needs, which will grow with the pace of economic development, cannot be met with oil and gas for long. Currently, the total domestic production by Indian companies is less than 1/3rd of our current domestic consumption of hydro-carbons.. As we know, oil and gas reserves in India are quite limited though there is always a scope to discover a new reserve through exploration. As we grow, our growing import bill for imported crude oil will put an unbearable and unsustainable burden on our economy.

These facts compel us to think of a new strategy to deal with the rising energy demand. We need, therefore, a new paradigm of energy security to

address our development needs. This paradigm would have to focus on several issues: a less-energy intensive path of development, an increasing use of non-conventional and renewable energy sources, also aimed at reducing carbon emissions, and improving efficiency in production and consumption. Such a strategy would have to be based on coordinated development and judicious use of domestic as well as global resources. This will require exploring new technological options, new financing means, identifying new sources and building new bridges with new partners including global partners.

We need, therefore, to develop all our energy resources, viz, coal, gas, oil, hydro and nuclear along with renewables, such as wind and solar power. Moreover, there are many options of using alternative fuels and technologies. From a long-term perspective, nuclear energy and solar energy can play an important role in addressing our energy security needs. Our Government is committed to the development of nuclear energy. As for solar energy, we are blessed with an abundance of this source and it could be a major energy resource in years to come. We must, however, invest more in Research and Development for commercial use of solar energy. We also need to examine the potential of hydrogen as a fuel of the future. Hydroelectric resources too should be optimally utilised to reduce our dependence on fossil fuels.

Several non-conventional energy resources fall in the domain of high technology, and are presently commercially not viable. The immediate need is to develop these technologies to make such energy available to the masses in the shortest possible time.

Our National Common Minimum Programme has made a commitment to develop our renewable energy potential. Our Government has launched the Rajiv Gandhi Vidyutikaran Yojana to provide electricity to all households by the year 2009.

I am very happy to know that Rajiv Gandhi Urja Bhawan will undertake holistic research in all forms of clean and renewable energy sources to make Rajivji's dream come true. The technologies that will emerge from here will have to be commercially viable. Energy is a scarce resource. We must learn to properly price this resource. Energy supply should be economically viable and environmentally friendly. I am happy to learn that this R&D center will focus on commercial viability of alternative technologies and energy sources.

It is extremely important that our people are made aware of the economics of energy. In our country we have excessively interfered with proper energy pricing. Each time our utilities have to raise rates and our oil companies have to raise prices, extraneous considerations come in.

I urge all political parties to appreciate the vital national interest of pursuing a sound energy security strategy. India is on the move and we must be able to address our growing energy demand. No Government can afford to shirk this responsibility and hope to find favour with the people. That would not have been Rajivji's approach to such matters of vital national importance.

I congratulate the Ministry of Petroleum and Natural Gas, ONGC and Rajiv Gandhi Urja Bhawan for beginning this new great venture, aimed at addressing the challenges facing our Energy Security. I assure you of our government's full support for all your worthy endeavours.

**097. Interview of External Affairs Minister Pranab Mukherjee  
with the daily *Indian Express*.**

**New Delhi, August 21, 2007.**

[External Affairs Minister Pranab Mukherjee has emerged once again as the troubleshooter for the UPA as it navigates its deepest crisis ever. In between attending Parliament and office, he spoke at length with The Indian Express on the future of the Indo-US nuclear deal, his attempts to get the Left to budge. Excerpts:]

**So, the Indo-US nuclear deal is on course?**

There are different stages (of the deal). We have initialed, not signed it. We have initialed separate texts of the 123 agreement. The next step is we negotiate with IAEA for India-specific arrangements. That negotiation has not yet started. Then we have to go before the Nuclear Supplier Group (NSG). There are 45 countries and we have to meet them all. They have to agree - via consensus, not voting - to amend the guidelines to agree to supply nuclear material to India. The third process, of course, is ratification by the US Congress. The Congress will either vote for it or they will reject it. Unless all these processes are complete, one cannot say the deal is over. At best, you can say it's in process.

**Do you expect the political crisis to affect the various stages in this process?**

Diplomacy never works like that. That you start here today, then stop and restart. It's a continuing process. Talks are going on with these 45 countries for the last two years. But it will be wrong to presume that anything has been finalized in any of these areas.

**Is there a fallout of the Left's opposition on India, internationally?**

That you will still have to assess. Ten-12 days have passed since Parliament session began but there have been hardly any proceedings. It's too early to make an assessment of the impact of this opposition on the international community. But surely people know that in a large democracy like India there will be divergence of views. So what is happening is not unexpected.

**What are the implications of India backing off from the deal at this stage?**

There are always implications. Every international agreement has its implication. Therefore, agreements are meant for implementation not for fun. For India, this agreement is important because of access to nuclear energy and access to high technology.

**You are the chief troubleshooter, after a week of discussions with the Left, you think they have a case to feel ignored?**

All this has not to do with something off-the-cuff. There has been a process of discussion and debate. It began during the Prime Minister's visit to USA in July 2005. Then there was a Joint Statement of the two leaders and a discussion in Parliament, discussion in the Cabinet, discussion in the political establishment. After the passage of the Hyde Act in December 2006, there was another discussion. It hasn't been as if someone decided one day that the deal has to be done.

**Was there enough consultation with the Left?**

It's not as if they did not protest (earlier). But they expressed their satisfaction when all queries were answered by the Prime Minister in October 2006. All points raised by Mr (Sitaram) Yechury were answered by the Prime Minister. Therefore, when negotiators started negotiating on the text of the 123 agreement, we told them what our parameters were. These parameters included the separation plan of 2006, the PM's commitment to Parliament.

Now our contention is that in the text of the agreement we have been able to get these points of view fully listed. Their point is that fine, up to August 2006 you got it reflected, but after that in December 2006, the Hyde Act was passed and they are not accepting our explanation - the position we are taking is that the Hyde Act is an enabling provision and there are two contracting parties in the Hyde Act. India is not a party to it. The relevant parties are the US administration and the US Congress. The Hyde Act binds only them.

But they say, no, the Hyde Act binds them (USA) but in the Hyde Act there is a provision that the implementation of the 123 agreement will be as per national law and as the Hyde Act constitutes their national law so they are taking a different view.

**Is this justified?**

I feel the Hyde Act has no relevance because substantial parts of the Hyde Act and the concerns expressed by the Left are in the sections which are advisory in nature. And in December 2006, as per President Bush's administration, they said that by mere signing the Act and putting my assent does not construe my adoption of the philosophy or the foreign policy of the nation because many of these areas are of an advisory nature. And I am sticking to that. But the Left says no, this is not merely advisory, they are binding in nature and that is why they have asked for this assessment.

**How difficult has the last week been?**

When you are running a coalition this type of differences come up. We have to admit that we do not have a simple majority...we have to carry others who are supporting us. We have to carry the UPA partners and Left supporters since they are an important component of our Government. To what extent we shall be able succeed or not, only the future will tell.

**So you are continuing your efforts to end the impasse?**

We want to carry the Left with us. I don't know if I will succeed. At the same time, I don't believe in pessimism.

**If the Left withdraws support, is mid-term poll a possibility?**

I do not know because up to now, I have not heard anything about of that sort. They have said that if you proceed further there will be serious consequences.

**098. Welcome Address by Dr. Anil Kakodkar at Tarapur Atomic Power Station 3&4 dedication function.**

**Tarapur (Maharashtra), August 31, 2007.**

All of us in the atomic energy family are extremely delighted to welcome our Prime Minister Dr. Manmohan Singh here at Tarapur today. Tarapur has the proud privilege of hosting country's first nuclear power station as also the latest and largest power unit designed and built indigenously based on our own domestic technology. The two 540 MWe Pressurised Heavy Water Reactor Units that would be dedicated to the nation by our Prime Minister are state-of-the-art nuclear power plants that compare well with the latest international bench marks. The same design with suitable modifications would become the 700 MWe unit, that would be the next PHWRs to be constructed in our country.

PHWRs constitute the first stage of our three stage nuclear power programme and feed the fuel to fast reactors in the second stage where alongwith power generation, we also would produce more fuel, propelling growth without dependence on mining or import of uranium. Fast reactors would, thus, enable large scale deployment of thorium based power generation systems which undoubtedly remain the key element in our search for long term energy independence based on energy resources available within the country.

We will continue to pursue our robust three stage development programme with accelerated pace and with full confidence to achieve the essential long term objective at the earliest possible time. We are, however, conscious of the pressing energy need today and we are fully prepared to bring in additionalities through international civil nuclear cooperation. The possible unshackling of the technology embargo regime that has operated around us for decades without success, is a welcome opportunity which we should be able to exploit without any adverse impact on our autonomous domestic research and development and implementation of our three stage nuclear programme.

I would like to use this opportunity to thank our Prime Minister for his leadership role in efforts to secure for India a rightful place in Committee of Nations and I, on behalf of my colleagues assure him that we would spare no efforts as always to support these efforts by way of national technological capability and bring benefits to the nation through technology, energy and

national security. In so doing, we will further consolidate ourselves as a responsible country with advanced nuclear technology.

Let me also use this opportunity to welcome H.E. Shri S.M.Krishna, Governor, Maharashtra, Shri Vilasrao Deshmukh, Chief Minister, Maharashtra, Shri Prithviraj Chavan, Minister of State in PMO, Shri M.K.Narayanan, National Security Adviser and all other dignitaries, colleagues and friends present here. We have been the beneficiaries of your continued support and encouragement.

Finally, I would like to once again congratulate all my colleagues involved in Tarapur 3&4 projects on this important occasion when result of their outstanding and unique efforts is being dedicated to the service of the nation by the august hands of our Prime Minister.

**099. Speech of Prime Minister Dr. Manmohan Singh while dedicating the Tarapur Atomic Power Station -3 & 4 to the nation.**

**Tarapur (Maharashtra), August 31, 2007.**

I am truly honoured to be here today for the dedication of Units 3 and 4 of the Tarapur Atomic Power Station to the Nation.

Tarapur is where India's quest for developing nuclear energy began in 1969. Tarapur is a shining example that India can do it; that we can overcome hurdles. It, therefore, holds special significance for our country's journey towards the building of a strong and self-reliant economy. Tarapur stands as a tribute to the visionary leadership of Pandit Jawaharlal Nehru and Dr. Homi Bhabha and to all those nuclear scientists and engineers who have helped to translate that magnificent vision into reality. Their hard work has today earned us a place among the leading nations of the world in the area of nuclear technology. On behalf of a grateful nation, I salute all the scientists and engineers for this great national effort.

I would particularly like to compliment the Nuclear Power Corporation of India and all those in the Department of Atomic Energy, Indian industry, our R&D facilities and Universities who have made the development of TAPS 3 and 4 possible. It is truly an outstanding effort, achieved in the face of adverse circumstances and challenges of the last few decades. I

congratulate each and every one of you. This is a moment of pride for all Indians.

The development of our indigenous capability in the area of nuclear power generation demonstrates that where there is a will there is a way.

Starting from humble beginnings in the 1960s, the country today has seventeen power reactors, largely Pressurized Heavy Water Reactor plants. Those that we have developed are state-of-the-art facilities. As we move forward on development of fast breeder reactors and thorium reactors, I have no doubt that we would in the future exercise global leadership in these technologies.

There can be no greater tribute to our capabilities than the fact that Units 3 and 4 of TAPS have been commissioned ahead of schedule and well within the sanctioned cost.

Why do we place so much importance on nuclear energy? I have no doubt whatsoever that the sustainability of our long-term economic growth is critically dependent on our ability to meet our energy requirements of the future. When a country of the size of India begins to grow at the rate of 9% per annum, with the prospect of even higher rates of growth, energy becomes a critical issue.

A lot has been written and said on what our energy requirements will be. A few simple truths stare us in the face. First, our proven resources of coal, oil, gas and hydropower are totally insufficient to meet our requirements. Second, we do not enjoy the luxury of an either - or choice. India needs energy from all known and likely sources of energy. Third, the energy we generate has to be affordable, not only in terms of its financial cost, but in terms of the cost to our environment.

Nuclear power is recognised as an important and environmentally benign constituent of the overall energy mix. There is today talk the world over of a nuclear renaissance and we cannot afford to miss the bus or lag behind these global developments.

We are fortunate to have vast thorium resources, which we must harness. India's three-stage nuclear power programme thus forms the bedrock of our long-term strategy. This unique thorium-based technology will become an economically viable alternative over a period of time.

At the same time, our uranium resource base is limited. We have, therefore,

consciously opted for a closed fuel cycle approach ever since the beginning of our nuclear power programme. We need to expeditiously develop fast reactor technologies and intensify efforts to locate additional uranium resources in the country. Government will extend its full support in this regard.

Even as we pursue our three-stage programme, it is necessary to look at augmenting our capabilities. We need to supplement our uranium supplies from elsewhere even as the DAE has taken a number of laudable steps to maximize output within the limited resources. We must take decisive steps to remove the uncertainties that result from shortfall in fuel supplies to avoid disruptions in our nuclear power production programme.

We need to pave the way for India to benefit from nuclear commerce without restrictions. We need to enable our industries to gain access to cutting edge technology, and we need to create opportunities for our scientists to participate in the international exchange of scientific ideas and technical know-how.

We have set a modest target of 20,000 MW of nuclear power generation by the year 2020. This can be doubled with the opening up of international cooperation.

This cooperation will not be dependent on any one country and we will source supplies from many of the countries in the Nuclear Suppliers Group including the United States, Russia, France and Japan. However, our international cooperation with these and other countries cannot become effective until the Nuclear Suppliers Group adapts its guidelines to enable nuclear commerce with India. The NSG itself has made it clear that they will not do so till the India specific Safeguards Agreement with the IAEA is finalized.

Once these and other steps are taken, India can commence civil nuclear cooperation with all the 45 members of the Nuclear Suppliers Group. This will signal the end of our international isolation of the past few decades. India is now too important a country to remain outside the international mainstream in this critical area.

I have full confidence in our scientists and engineers and believe that the removal of iniquitous restrictions and shackles on our programme will enhance our indigenous capabilities. We will do nothing to hurt our capacity to solve our problems ourselves. The pursuit of self-reliance will continue to be the key principle of our policy. A strong nuclear energy programme is in our vital interest and is important for our scientific development, energy needs and national security. It will add to our capabilities and strength as a united nation.

With your dedication and track record of accomplishments, I am confident that our domestic technological capability will only grow in strength. Our country is fortunate to have a person of the eminence and distinction of Dr. Anil Kakodkar to guide the development of the country's nuclear programme.

Finally, I must also compliment all of you for the impeccable safety record of our nuclear industry.

With these words, I dedicate Units 3 and 4 of the Tarapur Atomic Power Station, India's first 540 MWe nuclear power plant, to the service of the Nation.

**100. Statement made by External Affairs Minister constituting a Committee of certain political parties to go into the issues raised by the Left Parties in relation to the India - US Nuclear Cooperation Agreement.**

**New Delhi, August 31, 2007.**

In view of certain objections raised by the Left parties on the Indo-U.S. bilateral agreement on nuclear cooperation, it has been decided to constitute a committee to go into these issues.

1. The composition of the committee will be announced shortly.
2. The committee will look into certain aspects of the bilateral agreement; the implications of the Hyde Act on the 123 Agreement and self-reliance in the nuclear sector; the implications of the nuclear agreement on foreign policy and security cooperation.
3. The committee will examine these issues. The operationalisation of the deal will take into account the committee's findings<sup>1</sup>.

---

1. Some members of Parliament had demanded constitution on a Joint Parliamentary Committee to go into the issues. The Government, however on August 31 rejected the demand for a Joint Parliamentary Committee (JPC). Clarifying the position of the Committee in the Lok Sabha on the same day, External Affairs Minister Pranab Mukherjee said there would be no JPC on the deal since no international agreement had ever been subjected to the scrutiny of Parliament. "This is an internal arrangement between the United Progressive Alliance and the Left," Mr. Mukherjee said. With regard to the character of the Committee the matter was further clarified by the Parliamentary Affairs Minister

---

Priyaranjan Dasmunsi, when he said the committee was not a government committee, but set-up between the coalition partners to sort out differences. The Government was aware that the matter was the property of the House, and it was committed to a debate. All political parties would be taken into confidence before the "final shaping [up] of things." Regarding discussions with the IAEA, Mr. Dasmunsi added, as no dates have been fixed for a meeting between India's representatives and the International Atomic Energy Agency, there cannot be any question of putting such negotiations "on hold." He was responding to persistent questions from the media whether the joint statement by the United Progressive Alliance and the Left parties on the India-United States nuclear deal implied that the government put further talks with the IAEA and the Nuclear Suppliers' Group "on hold" as had been demanded by the Left. The setting up of a committee to discuss with the Left the issues related to the deal was not a game of one-upmanship, he said. It was an effort to address the concerns expressed by supporting parties of the UPA. The Minister said there was no question of the UPA and the Left trying to put each other down. In his view, the key sentence in the joint statement meant that when the nuclear deal was operationalised the UPA would keep in mind the committee report. The findings of the committee and the preceding discussions "will strengthen the hands of the government." He insisted that no treaty or bilateral agreement was ever scrutinised by a Joint Parliamentary Committee since there was no requirement for that.

In pursuance of the above step to constitute the Committee, the names of the 15 members, six each from the Congress and Left parties and one each from UPA constituents RJD, DMK and the NCP were announced. Mr. Mukherjee was named the convenor of the committee while his cabinet colleagues A K Antony, P Chidambaram, Kapil Sibal, Saifuddin Soz, Prithviraj Chavan, Lalu Prasad of RJD, T R Baalu of DMK and Sharad Pawar will be the other members. It was announced that Left parties will be represented by Prakash Karat, Sitaram Yechury (CPI-M), A B Bardhan and D Raja (CPI), Debabrata Biswas (Forward Bloc) and T J Chandrachoodan of RSP.

The committee would go into certain aspects of the 123 bilateral agreement, implications of the Hyde Act on the deal, and self-reliance in the nuclear sector and the implications of the nuclear agreement on foreign policy and security cooperation.

**101. Statement by Chairman of the Atomic Energy Commission Dr. Anil Kakodkar at the 51st General Conference of the International Atomic Energy Agency.**

**Vienna, September 19, 2007.**

**Mr. President,**

Let me first of all congratulate you on behalf of my Government and on my own behalf, on your election as President of the 51st General Conference. I am sure, under your able Presidentship and with the support of your team and the Secretariat of the Agency; this General Conference will be able to accomplish the tasks before it.

I also take this opportunity to welcome the entry of Kingdom of Bahrain , Republic of Burundi , Nepal , Republic of Congo and Republic of Cape Verde to the membership of the International Atomic Energy Agency (IAEA).

Over the past half century, the growth of the Agency and India's nuclear energy programmes have evolved side by side. The Agency has contributed immensely to harness the benefits of nuclear energy and its applications for all mankind. India , home to a sixth of global population with a sound and time-tested philosophy of life, too has evolved its own nuclear technological capability, realised on the basis of self-reliant domestic development for the welfare of its people. Our Bhabha Atomic Research Centre Training School which has provided almost the entire human resource for our nuclear programme has also completed fifty glorious years and our Prime Minister was with us only a fortnight ago for the graduation function of its 50th batch.

On the occasion of its 50th anniversary, it is gratifying to recognise the unique place that the IAEA has within the UN system. The prestige, credibility and authority of IAEA in this new century rests to a very good measure on the consistent good work done by its Secretariat under the wise leadership of Dr El Baradei especially for the past critical decade. My delegation would like to pay handsome tributes to the Director General and the dedicated staff of IAEA for their professionalism, impartiality and core competence in serving the Member States in accordance with the Statute of the Agency. IAEA's achievements in the past half century have much to contribute to rekindled hopes for a peaceful atom in coming years.

**Mr. President,**

The world today is at the threshold of a paradigm shift. There is greater awareness today than ever before about the serious consequences to humanity as a whole arising out of the threat to global climate which seems to be at the cliff edge. This situation has come about as a result of unmindful and unsustainable use of fossil energy by a small fraction of world population in industrially advanced societies. On the other hand, a larger part of world population is now on a rapid economic development path. It would require enormous amounts of energy resources to bridge the deficit between the emerging demand and current supply which is very low in the developing world even compared to global average per capita energy consumption. It seems impossible to sustain a tension-free society with 20 or 30 times less per capita energy access in the current interdependent world so closely connected through modern-day communications. It is estimated that meeting development aspirations of these large populations which are now well capable of buying their necessities would raise serious energy sustainability issues and consequent escalation of fuel prices that would affect us all. One needs to look at nuclear energy in this context. Energy associated with processes involving the nucleus of an atom is several million-fold higher than the energy associated with processes that involve electrons that orbit around the nucleus. The latter forms the basis of energy through burning of fossil fuels. Thus, a kilogram of uranium can be a source of a million times more energy as compared to a kilogram of coal or a kilogram of hydrocarbons. Non-emission of greenhouse gases that have threatened the global climate is also a feature of nuclear energy that is catching the imagination of even some of those who earlier opposed it. As a matter of fact, nuclear energy released through fission or fusion of atomic nuclei and solar energy that we receive from the sun are the only two viable basic energy sources capable of meeting our long-term energy needs. We also cannot escape the fact that the sun derives its energy from nuclear fusion. There is, however, a serious fear of the unknown. Such concerns are natural and have been faced by humankind whenever there has been a paradigm shift in things around it. Whether it is in learning to live with fire or advancing from horse carriages to locomotives and automobiles, man has gone through similar dilemmas. But eventually, he has mastered the new technology and accessed its benefits, overcoming the fear of the unknown. In the absence of such foresight and conviction, we could not have made progress. In the case of nuclear energy we are, however, talking on an altogether different scale. Given the population pressure and the need to provide a

good quality of life to all, we must evolve ourselves as a society that can benefit from this high-intensity energy source without the risk of its misuse.

**Mr. President,**

India with its one billion plus aspiring population and one trillion dollar economy with steady 8% plus GNP growth requires enormous amounts of sustained and reliable energy supply. It is estimated that India would need around 7000 TWh of electricity annually and an additional and larger quantum of primary energy to meet requirements of fossil fluid fuel replacement. While accessing this huge energy supply is a major challenge, we are also fully conscious of the environmental impact of such growth in energy use particularly if it takes place in the business-as-usual mode. In this context, I would like to draw your attention to what our Prime Minister said at the recent Heiligendamm meeting and I quote, "India's GHG emissions are among the lowest in per-capita terms. Moreover, being only around 4% of the world's emissions, action by us will have a marginal effect on overall emissions. Nonetheless, we recognize wholeheartedly our responsibilities as a developing country. We wish to engage constructively and productively with the international community and to add our weight to global efforts to preserve and protect the environment. We are determined that India's per-capita GHG emissions are not going to exceed those of developed countries even while pursuing policies of development and economic growth. We must work together to find pragmatic, practical solutions, which are for the benefit of entire human kind". unquote

**Mr. President,**

India has been pursuing its robust three stage nuclear programme designed to maximize the energy potential from its domestic uranium and thorium resources and contribute around 25% share of electricity generation in the country by the year 2050. The objective is to realize the huge energy potential that is realizable from these nuclear energy resources without having to add to the global carbon dioxide burden. The programme is moving ahead steadily with the first stage consisting of indigenously developed Pressurised Heavy Water Reactors (PHWRs) well into a commercially successful programme. The second stage has commenced with the construction of 500 MWe Prototype Fast Breeder Reactor (PFBR) which is now fairly advanced. The third stage is about to begin with the start of construction of a technology demonstrator, the 300 MWe Advanced Heavy Water Reactor (AHWR). The three stages are being implemented

sequentially to reach the goal of large scale thorium utilization and are linked through their respective fuel cycles which are also well underway.

Kaiga-3 (a 220 MWe PHWR) which achieved its first criticality on 26th February, 2007 within 5 years from the first pour of concrete, was synchronized to the grid on 11th April, 2007 and started commercial operations on 6th May, 2007. With completion of Kaiga-3, there are now 17 nuclear power reactors in operation, the total installed capacity being 4120 MWe. The Indian nuclear power sector has achieved over 270 reactor years of safe, accident free operations. Major Ageing Management activities including Enmasse Coolant Channel Replacement (EMCCR) were completed in NAPS-1 and the reactor is expected to come back on-line shortly. With this, four PHWRs (RAPS-2, MAPS-1&2, NAPS-1) now have their coolant channels replaced.

The first cycle of Peer-reviews of all the operating stations by WANO has been completed. RAPP-5 unit has also undergone a Pre-Startup Peer Review by an expert team of WANO. This was the second review of its kind in India ; after TAPP-3 which was reviewed last year. The next Biennial General Meeting (BGM) of WANO will be hosted by India , in 2010 at New Delhi.

Construction activities are underway in full swing at six other reactors - three PHWRs, two LWRs and a 500 MWe PFBR. Of these, two reactors (RAPP-5 and Kaiga-4) would see start of fuel loading during the year. On completion of the reactors currently under construction, there will be 23 reactors in operation with installed capacity of 7280 MWe. The detailed design and engineering of the indigenous 700 MWe PHWR is progressing according to the set time schedule. The Government has given in-principle approval for setting-up of 4x700 MWe PHWRs at two sites and 4x1000 MWe LWRs at another two sites in the country. Establishment of a new Uranium mine and mill at Tummelepalle has also been approved by the Government.

For accelerating the growth of the fast reactors in the country, development of metallic fuel, which would offer high breeding capabilities is being carried out on priority with the aim of its deployment around the year 2020. The next four fast reactors after the PFBR, which are proposed to be commissioned by 2020 will however, continue to use oxide fuel. These future reactors will incorporate refinements in the design and construction, to achieve reduction in capital as well as operational costs, on the basis of experience with the PFBR. The objective is to bring down the unit energy cost substantially as compared to PFBR. Enhancement of the burn-up of the fuel from the present target of 100 GWd/t to 200 GWd/t is recognized

as an important step for reduction in the fuel cycle cost. Towards achieving this target, the development of advanced cladding and structural materials including the oxide dispersion strengthened alloy have been initiated. The expertise generated and the experience gained in this development process will be further harnessed for developing structural materials for the Test Blanket Module being developed by the Institute of Plasma Research as part of the fusion energy programme.

Towards closing the fuel cycle of PFBR, a fast reactor fuel cycle facility (FRFCF) has been planned with its construction to commence next year. The facility is expected to be operational, in time to process the irradiated fuel discharged from the PFBR. The production of the mixed oxide fuel for PFBR has already commenced.

I had mentioned in my last year's address in this Conference about excellent performance of our indigenously designed mixed carbide fuel for FBTR and about our successful reprocessing of the high burn-up carbide fuel from FBTR after a short cooling period. I am happy to inform that fissile material recovered from reprocessing has now been fabricated into mixed carbide fuel. This fuel will be loaded into FBTR during the next reload schedule. Closing the mixed carbide fuel cycle has been an important milestone for us in our fuel cycle activities related to fast reactor program. I may also add here that we are now operating FBTR with an expanded hybrid core consisting of mixed carbide and mixed oxide fuel. The high Pu MOX now forms about 20% of the FBTR core.

**Mr. President,**

We are looking forward to the possibility of opening up of international civil nuclear cooperation. We expect such cooperation to be sustainable, free from interruptions and consistent with our national policy of closed fuel cycle. With a view to significantly augment nuclear power generation capacity in the near-term through imports, as an additionality to the ongoing indigenous programme, a Site Selection Committee has evaluated coastal sites in the country for the reactors to be set up in a convoy mode.

The initiatives also open up the possibility of export of reactors and services. India today is the only country to have a live technology, design and infrastructure for small PHWRs with a unit capacity of 220 MWe, which have a great potential for export, particularly to countries with small grids wishing to enter nuclear power generation, with relatively modest investments and infrastructure. Given the large manufacturing base and

relatively low manufacturing costs, there is also a potential for India becoming a manufacturing hub for equipment and components for the global nuclear industry.

We have been actively pursuing the design and development of Advanced Heavy Water Reactor which will mainly use thorium based fuel and has several advanced safety features. In fact, this reactor would meet the objectives of a futuristic system that would have to meet higher safety, economics, sustainability, long term radioactive waste minimisation and proliferation resistance goals. Pre-licensing safety appraisal of this first-of-a-kind design was completed by the Indian Atomic Energy Regulatory Board. A large Critical Facility for validating reactor physics design of the unique core of the AHWR is under commissioning at BARC. We expect this facility to provide important data that would further improve our understanding of the thorium based reactors.

In the Compact High Temperature Reactor (CHTR) being designed in India , it will be possible to extend the core life up to a period of fifteen years. A liquid metal natural circulation loop employing Lead Bismuth Eutectic alloy as the coolant has been installed to study the CHTR behaviour. Parallely, designs of 600 MWt High Temperature Reactor (HTR) for hydrogen production and 5 MWt Multi-purpose Nuclear Power Pack (MNPP) are also currently underway.

India has been exploiting research reactors for basic research, neutron radiography, shielding experiments, testing of reactor components including neutron detectors, trace element analysis, etc. We are currently planning to construct a 30 MWt Multi Purpose Research Reactor (MPRR) capable of providing a maximum thermal neutron flux of  $6.7 \times 10^{14}$  n/cm<sup>2</sup>/sec and fast neutron flux of  $1.7 \times 10^{14}$  n/cm<sup>2</sup>/sec. The new reactor will meet the increasing requirements of high specific activity radio-isotopes and would also provide enhanced facilities for basic research in frontier areas of science and for applied research related to development and testing of nuclear fuel and reactor materials. Further, the reactor will have features to enable its conversion to an Accelerator Driven System at a later date.

The superconducting heavy ion LINAC project has reached a major milestone in July, 2007 with all seven accelerator modules energized to accelerate <sup>28</sup>Si beam to an energy of 209 MeV, highest achieved so far in the country.

We have indigenously developed another supercomputer named ANUPAM-AJEYA which has attained a sustained speed of 3.70 Teraflops, twice that

of the speed of its earlier version ANUPAM-AMEYA system. The new system comprises 256 dual-core, dual CPU computing nodes, each processor running at 2.66 GHZ with 4 GByte of main memory. The system will be upgraded shortly to achieve speed exceeding 4 Teraflops.

Our contributions in the area of nuclear agriculture, biology and health have always been significant. As of now, 29 crop varieties have been gazette notified by the Ministry of Agriculture, Government of India for commercial cultivation in the country. For processing of biodegradable waste, 14 indigenously developed Nisargruna biogas plants have been set up in the country so far. On April 26, 2007, KRUSHAK Irradiator at Lasalgaon in the State of Maharashtra became the first Cobalt-60 gamma irradiation facility to be certified by the United States Department of Agriculture-Animal & Plant Health Inspection Service (USDA-APHIS) for phytosanitary treatment of mangoes. Consequently, this year, the facility enabled export of 157 tons of mangoes, mainly of Alphonso and Kesar varieties, to the United States of America, after a gap of 18 years.

As in the past, we have been closely interacting with the Agency as partners in development. India was one of the founder members and a strong supporter of INPRO. We have noted with great satisfaction the progress made in this important activity of the Agency. In particular, the recent step to initiate, under Phase-2 of INPRO, several collaborative projects under Joint Initiative mode has a great potential to facilitate cost effective development of solutions relevant for global deployment of next generation advanced nuclear energy systems. We once again stress the need to provide full budgetary support to the INPRO activities, recognizing its immense potential to lead to global enhancement in the availability of safe and economical nuclear energy to meet the future demands.

In the area of Nuclear Security & Physical protection, India along with IAEA has been organizing workshops/training courses for the Asia & Pacific region and serves as Regional Resource Centre. So far, we have conducted four Regional Training Courses on Physical Protection of Nuclear installations and also a Regional Training Course on the Physical Protection of Radioactive Sources. In addition, we have conducted Regional Training Courses on Advanced Detection Equipment and on Response to criminal or unauthorized acts involving nuclear or other radioactive material and also a Regulatory Authority Information System (RAIS) Training Course. We are about to deposit our instrument of ratification to the amendment to the CPPNM.

**Mr. President,**

Global nuclear energy renaissance which has become a necessity and appears to be well on cards, however, rests today on a very fragile foundation. We need to build robust inclusive partnerships on an objective, reliable and predictable basis with a holistic mutual understanding and trust. The need to adopt fuel recycle to maximize energy availability makes it even more necessary. We are all justifiably concerned about the risks related to safety, environment and proliferation arising out of irresponsible behaviour of state and non-state actors. However, we need to be even more concerned about the vastly enhanced security risk to which future generations would be exposed as a result of direct disposal of spent fuel leading to plutonium mines when a large part of radioactivity decays. There are, thus, risks and challenges. But they are within the professional competence of nuclear energy community. A judicious combination of technology and institutional control with every responsible partner being a part of the solution, rather than being seen as a problem, can in fact provide the answer.

Thank you, Mr. President

**102. Speech of Finance Minister P. Chidambaram at the Wharton Leadership Lecture: "Indian Business - From Local to Global" at the Wharton School, University of Pennsylvania.**

**September 27, 2007.**

There is a nice feeling when one is at a University. More so, when one is at this University's best known school, the Wharton School. I am grateful to the Dean, the faculty and the students for inviting me to deliver a talk as part of the Wharton Leadership Lectures.

I noticed that in recent years you had invited the CEOs of some of the best known companies in the United States - Xerox and Starbucks, Microsoft and PepsiCo, and Tyco and McKinsey. What do these companies have in common that have made them successful as well as household names? Each one of them is the child of an innovative idea and a leader in its business. There are many Indian business leaders who would qualify on

the grounds of innovation and leadership to take a place in this series. I am here to speak on their behalf but I hope that, in due course, you will invite one of the true business leaders of India to deliver a lecture.

The India story is now too well known to you. What is not known is the fact that innovation and leadership in Indian business go back over a hundred years. India's most famous business house, the Tatas, started their steel mill exactly one hundred years ago. Even before that, Indian business leaders had ventured into cotton textiles, jute and banking.

All the factors of production - land, capital, labour and organization - were present in India. Yet India missed the industrial revolution. The few who dared to cross over from trading to manufacturing were perforce constrained to remain local - producing locally for the local market.

Why local? Before independence in 1947, the levers of the economy were in the hands of the British and they did not allow any Indian entrepreneur to grow except under the shadow of a British company. After 1947, the Indian preference for Fabian socialism expressed itself in the form of myriad controls. The first controls on foreign exchange were imposed in 1947. In 1955, export and import trade was severely restricted. Practically, nothing could go out and nothing could come in, unless one was willing to violate the law. There was an extensive licensing regime in the manufacturing sector that restricted capacity, production, product mix, marketing and prices. The regime also deprived Indian business of capital and technology - but it gave the "entrepreneur" a captive market and protected his business against competition. In such an atmosphere, it was not surprising that most businesses preferred to remain local.

Nevertheless, under the surface, there was latent creative, innovative and entrepreneurial energy. Dani Rodrik and Arvind Subramanian have, in an IMF Working Paper, observed that the growth in the Indian economy (witnessed in recent years) has been in some measure an outcome of important cumulative elements that were being built up even before the reforms got underway.

What changed everything for Indian business was the shock of liberalization. In 1991, in the space of six weeks, exports and imports were, by and large, made free; exchange controls were relaxed; licensing of manufacture was virtually abolished; and Indian business was put on notice that the earlier dirigiste model would make way for an open and competitive economy. Before the financial year was over, further measures were announced that

marked the completion of the initial phase of reforms.

**Indian business responded in three different ways.**

In the first category, an entrenched group of largely family-owned businesses got together to oppose the policies of liberalization. While some quickly realized their folly and withdrew from the group, others persisted. They refused or were unable to change, and as a result many of them have been dethroned from their pedestals. They now operate as small players, and they are in diverse industries such as automobiles, textiles, jute, bicycles, sugar and cement.

In the second category, many businesses quickly restructured and, in many cases, shed some businesses and focused on their core competence. They became lean and competitive. Younger family members took over the reins, engaged consultants, brought in professional managers, boldly accessed the capital market, introduced new products and services, and learned to operate in a competitive environment.

In the third category, new kids turned up on the block. They were first generation entrepreneurs. Or they were Indians who had migrated abroad and built successful businesses: for example, software or other hi-tech companies in the Silicon Valley. More than anyone else, they foresaw quite early the opportunity in India and were willing to take risks. Many companies currently in the list of the top 10 or top 50 did not exist 15 years ago.

Meanwhile, more policy changes were underway. Between 1991 and 1996 and again between 1996 and 1998, the laws and regulations governing the economy were completely overhauled. After some initial hesitation, more reform measures were undertaken between 1999 and 2002. The present government that assumed office in May 2004 has continued the process of reforms, especially in the infrastructure sector, capital market, the financial sector and taxation.

Indian business has responded to these changes with remarkable agility and speed.

One of the consequences of a fiercely competitive market economy is the need to remain close to the market and to retain market share. There is no room for sloth or inefficiency. Growing the market share and remaining close to the market are the principal factors driving Indian business to go from local to global. The other factors that encourage Indian business to go

global are the need to procure natural resources like minerals and ores; ensure energy security; access new technology; seek patents; leverage R & D capabilities; obtain a new product mix; find a strategic partner; build complementary businesses; establish forward and backward linkages; and enlarge the balance sheet and raise cheaper global capital.

Besides, many Indian companies are led by technocrats. They are driven by innovation. Any business driven by innovation, in order to keep its competitive edge, has to secure a global presence. Indian companies in the fields of information technology and biotechnology are taking that road.

There is also the desire to be the best or among the best in the world. Some Indian firms are already there: one of our companies is the largest producer in the world of rayon fibre and another is the largest producer of PTA. The second largest producer of paraxylene and the third largest producer of two wheelers are Indian companies. Indian companies are also racing to the top in sectors such as pharmaceuticals, castings and forgings, paints, digital recording devices and wind energy equipment. It is but natural that a world-class or a world-size company seeks a world presence.

A recent report in Business Week said that India's moment is evident and that Indian outfits dominate this year's list of Asia's top 50 companies. There are a dozen companies in the list ranging from automakers to a mortgage lender to pharmaceutical producers. The report concluded that the Indian companies represented have plenty in common: smart management, low costs and - increasingly - aspirations to join the elite ranks of multinationals. The list is, according to the report, a testament to the remarkable resilience and endurance of Indian companies. Three of the 12 companies belong to a reputed conglomerate, two are drug makers born around the time of India's independence in 1947, the baby of the bunch is a producer of wind turbines, and the list is completed by the subsidiary of a multinational and a state owned electrical equipment company.

Forbes magazine has included 7 home grown Indian companies in its list of the top 200 most respected companies. Fortune's Global 500, published in July 2007, includes six Indian companies.

The India growth story has also helped. As you know, India's GDP has been growing, on average, at the rate of 8.6 per cent since 2003-04. In particular, 2006-07 was a splendid year that returned a growth rate of 9.4

per cent. The manufacturing sector grew by 10.9 per cent and the services sector by 11.0 per cent.

Corporate balance sheets are larger and corporate profits are higher, giving Indian businesses the financial muscle to take on new challenges. Valuations have soared, enabling companies to raise large amounts of equity capital. The reforms in the Indian financial markets have led to efficiency gains in financial intermediation, and leading business houses are able to borrow cheaply in the Indian market. We have also allowed corporates to borrow abroad, and there is a rush to raise funds through the external commercial borrowing route.

I am aware of the so-called Investment Development Path (IDP) theory. According to that theory, in the initial stages of development, a country receives FDI flows. Once a country reaches a certain level of development, outward investment takes place. I do not know if India's current level of development and Indian companies' outward orientation fit in with that theory. Till 2005-06, Indian firms' outward investment was very modest. In that year, the outward investment was US \$ 2.9 billion. In the next year, 2006-07, it shot up to US \$ 11.0 billion. FDI flows into India also shot up to a new high of nearly US \$ 20.0 billion in 2006-07. The two stages of accelerated FDI inflows and accelerated FDI outflows appear to have converged in India, marking a break with the conventional IDP theory. In my view, this is not unusual if we recall Michael Porter's principle that it is not nations that compete, it is companies that compete.

The Federation of Indian Chambers of Commerce and Industry (FICCI) has conducted a study of 307 overseas acquisitions by Indian companies between 2000 and 2006. Their total value is estimated at US \$ 20 billion. 28 per cent of the acquisitions were in the IT/software/BPO sector. This was followed by healthcare and pharmaceuticals, automobiles and chemical fertilizers. 32 per cent of the acquisitions were in the United States, followed by acquisitions in the United Kingdom and Europe.

The acquisition urge has seized both big and small Indian companies. Not only manufacturing companies and service providers, but also smaller firms doing contract research have coveted overseas opportunities in areas such as clinical research, bio-equivalence and data management.

The Confederation of Indian Industry (CII) has launched a portal that will create an ecosystem of emerging Indian multinationals. It will assist in sharing knowledge and providing credible information on exploring new

markets abroad. Companies will have a platform to discuss common themes and the challenges they face in the context of globalization.

Ladies and Gentlemen! This is the new face of Indian business - mature, confident, strong, responsible, hungry for growth, and ready and willing to be among the best in the world. Hence they are going from local to global. Ask any businessperson, and he or she will tell you that this is the best time to have a business in India and also find your way to do business in other countries of the world.

### **103. Briefing points by Official Spokesperson on the meeting between External Affairs Minister and Director General, International Atomic Energy Agency.**

**New Delhi, October 10, 2007.**

- External Affairs Minister met DG, IAEA Mohammad ElBaradei this evening. During the discussions, EAM expressed his appreciation of the work of the Agency under Dr. ElBaradei's leadership and the cooperative relationship that India enjoyed with the Agency. He also appreciated Dr. ElBaradei's personal contribution to the relationship and to its further strengthening and development.
- Dr. ElBaradei said that India was both a recipient and supplier in the field of peaceful uses of nuclear energy. Dr. ElBaradei also recalled that he had spoken since 2004 of the need for India to take its rightful place as an equal partner in the global nuclear order.<sup>1</sup>
- They also reviewed other developments of common interest.

---

1. About India-IAEA talks, ElBaradei said: "There is no deadline to start formal talks with us. ...there is a domestic political dialogue on..... we are ready whenever the Government of India is ready. It is for India to decide....I did not ask Pranab Mukherjee this question." "I want India to be a full partner of IAEA. India needs nuclear energy. Without nuclear energy it is difficult to maintain 10 per cent growth rate.... The [India-specific] safeguards agreement is not important as we already have a couple of safeguards agreements with India. It is a standard procedure that we have in civilian nuclear sector. ..As a friend of India, I would like to see India making full use of nuclear energy to enable it to sustain its 10 per cent growth rate."

#### **104. Reaction of Prime Minister Dr. Manmohan Singh to questions on nuclear agreement with the United States at the *Hindustan Times* Summit.**

**New Delhi, October 12, 2007.**

(Dr. Manmohan Singh inaugurated annual *Hindustan Times* Summit with a written speech and then responded to questions, in the next session.)

Asked whether he had staked his personal prestige on the nuclear deal and its failure would make him appear a weak Prime Minister, Dr. Singh said he would be disappointed if the deal failed to materialise but the government was trying to reconcile its differences with the Left parties.

"We are not a one-issue government. We have made changes in various areas ... but in life one has to take certain disappointments and move on to the next." "...

If the deal does not come through, that is not the end of life," Dr. Singh replied to another query.

"In politics, we must survive short-term battles to address long-term concerns," he said.

Dr. Singh pointed out that his observations on the nuclear deal published in *The Telegraph*<sup>1</sup> were in response to a public statement by the Communist

---

1. The Prime Minister remained hopeful that the issue would be resolved with discussions in due course. When he met a group of Non-Resident Indians in New Delhi on October 23, he told them that he had not given up on the nuclear deal. Dr. Singh also told the group led by U.S.-India Political Action Committee (USINPAC) Chairman Sanjay Puri that he was still hopeful of a solution to the logjam over the deal which meets the assurances he had given to the Parliament. USINPAC Director Robinder Sachdev told Press Trust of India after the meeting with Dr. Singh that they got a feeling that he was open to the idea of discussion on the deal in Parliament. A 10-member delegation, comprising top politically active Indian-American businessmen, was in the capital to interact with leaders across the political spectrum and understand their stand on the nuclear deal. Mr. Sachdev said the Prime Minister also noted that the BJP had opposed the deal citing certain strategic issues and expressed readiness to convey to them that the strategic component has been taken care of. He said Dr. Singh also told them that the deal did not compromise India's position to pursue an independent foreign policy. The Prime Minister also thanked the Indian-American community for backing the deal and lobbying in its favour in their adopted homeland. "The delegation is visiting India to educate themselves about the difficulties faced by the deal and convey it back to the Indian-American community," Mr. Sachdev said. Again on October 29 speaking to the news conference in New Delhi along with the German Chancellor, Prime Minister said

parties. "I don't think I have overstepped ... I am conscious of my responsibilities, what I should say and what I should not say."

Dr. Singh said the India-U.S. agreement "is an honourable deal that is good for India and good for the world." Referring to the differences over the deal, he said, "We are in the realm of politics," where there were differences of perception. "We are trying to reconcile the divergent points of view. I have not given up hope that reason and common sense will ultimately win the dayT."

(The Congress President Ms. Gandhi disagreed with a questioner that the Left was being unreasonable on the nuclear deal. "No, I don't think they are being unreasonable. We have to understand the Left. They have certain ideology, they have some views. They are merely stating their views. Naturally, we are working together. We have to understand their views and we have to take note of what they say." ...Ms. Gandhi also spoke about the imperatives of the "dharma of coalition ... [which is] to work together, try and understand and accommodate each other's view.")

---

that India's nuclear deal with the United States had been delayed but was not dead. "There is some delay but we have not reached the end of the road."(Left parties have threatened to withdraw support for Singh's ruling coalition if the nuclear deal went ahead, which could lead to the fall of the Congress-led government.) Earlier, US Treasury Secretary Henry Paulson had said in New Delhi that Indian approval of the nuclear energy deal with the United States would be seen positively by global business, "I believe it would be perceived positively by the global business community if it goes through," Paulson told journalists accompanying him on his four-day visit to India. He would not be drawn on whether business would view it negatively if the deal did not go ahead. He said, Washington valued the fact that India was a vibrant democracy and said democratic processes needed to work for the country to come to a conclusion on the nuclear deal. "Let the process in India work on the civilian nuclear deal," Paulson told a business conference. Paulson said growing ties between the United States and India were broader and deeper than any single transaction.

**105. Media Report of Interaction of Prime Minister Dr. Manmohan Singh with the media on 'Civil Nuclear Cooperation' on board the Special Flight while returning to New Delhi after his visit to Nigeria and South Africa.**

**October 18, 2007.**

*The Hindu* Reported on October 19:

'On board Prime Minister's special aircraft: Prime Minister Manmohan Singh rejected the Bharatiya Janata Party's demand for his resignation on the issue of the nuclear deal with the United States, and expressed hope that the agreement could still be operationalised.

\* \* \* \*

Asked whether the nuclear deal was "dead" or he still had hope, he said: "I have mentioned that there are some difficulties. We are in a coalition. We have to find a way out and I have not given up hope."

To a question whether Brazil and South Africa, both members of the Nuclear Suppliers Group, were forthcoming in their support to India on cooperation in use of nuclear fuel for peaceful purposes, he said, "well, I think we have to resolve our problems at home and the process is on. Our discussions with the members of the NSG will take place only after we have an India-specific safeguards agreement with the IAEA. Only after that the NSG members will consider cooperation with India. They will come in only after we have sorted our problems that had arisen you all know about it."

On the U.S. State Department's comment that the deal should be completed before 2008 end and whether he was hopeful about it, he said: "Well, I think we will make every effort."

Asked if the failure to have a consensus at home on the nuclear agreement had adversely affected his image and work, Dr. Singh said, "when something doesn't work out the way you plan, it does have an effect. But I said last week in India we are not a one-issue government. We have lots of things on our agenda. We have done many things and there are lot of things to be done. So I think there is a setback in one direction but I would not say that is the end of life."

**106. Report on the meeting between the United Progressive Alliance - the Left Parties Coordination Committee on the Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, October 22, 2007**

External Affairs Minister Pranab Mukherjee said on October 22 that members of the United Progressive Alliance-Left committee on the India-U.S. civilian nuclear deal expressed the hope that the operationalisation of the deal would take into account the findings of the committee.

Reading out a brief prepared statement at the end of the fifth meeting of the committee, Mr. Mukherjee, the convener of the 15-member panel, said, "Issues currently before it [the committee] would be addressed in an appropriate manner and the operationalisation of the deal will take into account the Committee's findings." He said the next meeting would be held on November 16.

"The committee continued its deliberations in a constructive and cordial atmosphere on the issues that have been raised concerning the implications of the proposed India-U.S. bilateral agreement on civil nuclear energy cooperation, including the implications of the Hyde Act on India's nuclear programme and its pursuit of an independent foreign policy," Mr. Mukherjee said.

He said the committee had before it "further inputs sent by the Left parties." The UPA would give its reply in due course, he added.

The meeting was attended by all members of the committee, except Finance Minister P. Chidambaram, who was out of the country.

Most of the discussions of the committee were reported to be complete. This meeting held detailed deliberations on the Hyde Act, its implications on the 123 Agreement and India's foreign policy.

(It was clear from the statement that the mechanism of the committee was still at work and the government was not expected to proceed with operationalisation of the nuclear deal, the main demand put forward by the Left parties. Asked if the nuclear deal was off, Communist Party of India general secretary A.B. Bardhan said the statement reiterated the position as on August 30 — at the time of the formation of the UPA-Left committee

— that its findings would be taken into account before the government proceeded with the deal. He said the statement pointed out that operationalisation of the deal was being put off until the findings of the committee were finalised.)

(Earlier in the day, UPA allies met at the Race Course Road residence of Prime Minister Manmohan Singh to discuss the strategy for the committee meeting. UPA chairperson Sonia Gandhi attended. The four Left parties — the CPI(M), the CPI, the Forward Bloc and the RSP — also held a meeting before the committee meeting.)

**107. Address by Chairman of the Atomic Energy Commission  
Dr. Anil Kakodkar at the Bhabha Atomic Research  
Centre.**

**Mumbai, October 30, 2007.**

Dear Colleagues,

We have assembled here today to pay homage to our Founder Dr. Homi Jehangir Bhabha on the occasion of his 98<sup>th</sup> birth anniversary. Dr. Bhabha gave us a vision and a road map for development of atomic energy programme in India. This was based on some fundamental realities. It is for this reason that his vision is largely valid even today. Founder's day is an important occasion to take stock of what we are doing, recalibrate our actions vis-à-vis our vision and to rededicate ourselves to realize the vision of our Founder.

There can be no doubt that nuclear energy has to form an inevitable part of the energy mix for our country. Given the ten to twelve fold increase in our electricity generation that is necessary to support our economic growth and issues of energy resource sustainability and global climate change staring at us, the importance of nuclear energy will only grow with time. The three stage nuclear power programme and the philosophy of self reliance, the two most important legacies of Dr. Bhabha, are based on the ground realities of modest uranium and vast thorium reserves that exist in India as well as the very sensitive nature of nuclear technology. Dr. Bhabha went ahead with Jaduguda Uranium mine fully recognizing the very lean ore grades there at a time when restrictions to fuel import were not as

severe as they are today. On the other hand, while we were still in a very nascent stage of our reactor technology development and choice of reactor technology for the first stage was still under review, he went ahead with establishment of Tarapur reactors through import. Dr Bhabha's ideas about the road map to realize autonomous domestic technological capability and to use external cooperation to leap frog were very clear. Self reliance did not mean isolating ourselves but rather keeping several options including the 'do it yourself' option ready at hand so that the country is not subject to vulnerabilities of any kind.

We have come a long way in building our domestic technological capability in nuclear power and nuclear fuel cycle area. Nearly half of the 10,000 MWe programme for the first stage based on Pressurised Heavy Water Reactors (PHWRs) is already in place. Another eight units of 700 MWe, the unit size for our next PHWRs would complete the full potential of the first stage that the known reserves of natural uranium in the country would permit. NPCIL has already demonstrated construction, operation and economic performance matching global standards and has the capability to construct all these eight units and more simultaneously. Our current challenge is to augment uranium production to match the needs of operating power reactors.

Opening of new mines is a time consuming activity. Efforts of last 6-7 years have resulted in opening of new mines at Turamdih and Banduhurang and starting of a new uranium processing mill at Turamdih. With the deliveries of uranium from Turamdih the situation will start easing out. Construction of a new mine and mill at Tummalapalli in Andhra Pradesh has been approved by the Government and is about to start. We also hope to be able to take up Uranium projects in Meghalaya and Karnataka to be followed up by projects in Rajasthan and other places. Most of these deposits have been known for a long time. The present fuel demand supply mismatch would not have arisen, had these projects been pursued in the same spirit with which Dr. Bhabha started activities at Jaduguda. We are determined to move ahead with the growth of our PHWR programme and realize the planned 10,000 MWe of PHWR capacity in the shortest possible time. I would like to compliment our colleagues in NPCIL for their professional approach to programme management. They have excelled in all domains of their activities specially the innovative fuel management strategies to maximize fuel use efficiency, large scale rehabilitation activities and efficient construction and operations management. All other units of DAE such as NFC, UCIL, BARC, IREL, RRCAT, IGCAR, HWB and AMDER involved

with fuel cycle and other activities have put in their best to support these efforts and deserve our fullest compliments.

I would like to mention at this stage that our uranium exploration programme has seen a paradigm shift in terms of far greater mobilization of resources and technologies and we should not rule out a PHWR capacity much larger than 10,000 MWe, should we be successful in finding more uranium. Given the capability of our uranium geologists and the unprecedented programme thrust, I see no reason why this should not happen.

Moving on to the second stage, PFBR construction is progressing satisfactorily. Reprocessing of high burn up fuel discharged from FBTR is providing valuable experience. Nuclear fuel reprocessing and refabrication is crucial to success of our second stage programme. We need to realize robust commercial scale operations both in terms of PHWR back end fuel cycle activities as well as closing the fast reactor fuel cycle. We now have a very large programme in this area with some important technological achievements. We will remain focused in this endeavour including on development of short doubling time metallic fuel cycle in the long run.

We are looking forward to launch of construction of 300 MWe Advanced Heavy Water Reactor. Besides being a technology demonstrator for large scale Thorium use, this reactor represents an advanced reactor system that would meet all objectives of a 4<sup>th</sup> generation system.

The three stage development programme is thus very much on course and has seen faster progress in recent years than any time before. One must, however, understand and appreciate the sequential nature of this technology deployment strategy. The nuclear properties of Thorium, while would permit sustaining a given power generation capacity to make full use of energy from our vast thorium reserves, do not permit growth in power generation capacity. Large scale deployment of thorium has thus to await enhancement of power generation capacity through fast breeder reactors to a requisite level. This is not a matter of reactor technology choice but inherent nuclear properties of thorium

Our efforts look at international civil nuclear co-operation have to be seen in this background. We have insisted and would continue to insist that such co-operation can not be allowed to hinder our strategic programme as well as our three stage programme. We have also insisted on our requirement to reprocess and recycle the spent fuel so that we not only have the additionality in the near term, which is very desirable, but also

have the ability to establish an order of magnitude larger power generation capacity along with its fuel supply, for the future. We must recognize the long term benefit of such energy resource in light of gaps in our future energy resource availability.

We have also started looking beyond the three stage nuclear power programme chalked out by Dr. Bhabha. Several new nuclear energy technologies that are emerging are of special importance to us. Accelerator Driven Reactor Systems are important to us since they would permit growth even with Thorium fuel cycle and at the same time facilitate greater flexibility in incinerating long lived actinides and fission products. High temperature reactor systems are necessary to be able to move towards hydrogen economy in which nuclear form a major primary energy source. Fusion energy offers the hope of realizing a lasting solution to the energy problems of the world. I am happy to note that we are advancing on all these fronts.

As is customary, let me now recount some of the important achievements during the year:

Kaiga-3 (a 220 MWe PHWR) which achieved its first criticality on 26<sup>th</sup> February, 2007 within 5 years from the first pour of concrete. With completion of Kaiga-3, there are now 17 nuclear power reactors in operation, the total installed capacity being 4120 MWe. The Indian nuclear power sector has achieved over 270 reactor years of safe, accident free operations. Major Ageing Management activities including Enmasse Coolant Channel Replacement (EMCCR) were completed in NAPS-1 and the reactor is expected to come back on-line shortly. With this, for PHWRs (RAPS-2, MAPS-1&2, NAPS-1) now have their coolant channels replaced.

The first cycle of Peer-reviews of all the operating stations by WANO has been completed. RAPP-5 unit has also undergone a Pre-Startup Peer Review by an expert team of WANO. This was the second review of its kind in India; after TAPP-3 which was reviewed last year. The next Biennial General Meeting (BGM) of WANO will be hosted by India, in 2010 at New Delhi

Construction activities are underway in full swing at six other reactors – three PHWRs, two LWRs and a 500 MWe PFBR. Of these, two reactors (RAPP-5 and Kaiga-4) would see start of fuel loading during the year. On completion of the reactors currently under construction; there will be 23 reactors in operation with installed capacity of 7280 MWe.

The superconducting heavy ion LINAC project at TIFR has reached a major milestone in July, 2007 with all seven accelerator modules energized to accelerate Si beam to an energy of 209 MeV, highest achieved so far in the country.

During the year, RRCAT also started a new R&D program to find a deeper basis as to why superconducting cavities built out of niobium display a large spread in the accelerating gradients achieved. I was glad to see that this effort has resulted in a patent application filed by the RRCAT team and hope that our efforts in this upcoming RF superconducting technology area will remain at the forefront.

I am happy that as part of our involvement in the most advanced international accelerator project, viz the large hadron collider being built at CERN, we have fully met all the commitments we had made. I know that the support provided by our scientists and engineers for commissioning the subsystems of LHC has been deply valued. The DAE-CERN collaboration under the new Protocol on "Novel Accelerator Technologies" has also blossomed in the last year. We have not only contributed to design of transport line for CLIC test facility-3 (CTF-3) but have also made headway in the fabrication of components for CTF-3. For the LINAC-4, (the front end of CERN's Superconducting Proton Linac project) RRCAT has carried out the development of a modulator needed to drive the klystron and its fabrication is under way. This development will directly contribute to our own ADS program. CERN has also provided us useful hardware for our accelerator related programs.

Our collaboration with Fermilab was started during the year with a focus on the design and development of superconducting RF cavities and cryomodules for different applications. In recent months this activity has gained momentum and some of our young engineers have visited Fermilab and contributed to the R&D programs there. I foresee that this experience in superconductive technology development would prove extremely beneficial when we undertake building later stages of high intensity proton accelerator for our ADS program and am happy to note that a strong domestic program has been launched in this direction.

The synchrotron radiation source Indus-2 set up by the Department at RRCAT, Indore has continued its steady advance during the year and substantial progress was made on the installation of two more beam lines. RRCAT also built and installed a new RF cavity on Indus-1 which has improved the performance of this storage ring.

At VECC development of RIB capability is continuously moving forward.

In field of lasers, RRCAT has broken fresh ground in developing lasers and laser based systems required for various Departmental programs. I am happy to see that notable progress has been made in the development of equipment required to inspect the dissolver tank of a fuel reprocessing set up and an optical fibre based temperature sensor for use at Kalpakkam as well as an upgraded fuel pellet inspection system made for NFC's use.

It is also heartening to see that after last year's campaign at Narora Atomic Power Station, when a laser based system developed at Indore was used for en-masse coolant channel replacements in a PHWR, with tremendous saving in time and man-rem consumption, the RRCAT and NPCIL team is gearing up to deploy this technology at the Kakrapar PHWRs. This shows the strength of the indigenous technology and I wish to compliment all the persons involved in this development and successful deployment.

In the field of biomedical applications of lasers, RRCAT team has developed a real time optical coherence tomography (OCT) set up, with a hand held probe, which has been used for imaging of human skin and animal models for oral cancer. I am also glad to see that our basic research, involving development of new techniques for manipulation and sorting of microscopic objects (like, single cells) and then carrying out studies on them, has also made notable progress.

In the area of laser plasma studies with high power lasers, I am happy to see that the RRCAT team has used their state of the art Tera Watt Ti-sapphire laser system to perform the first charged particle acceleration experiments in the country. They have realized accelerated electrons of up to 70 MeV energy and opened up a new avenue of producing and using such beams. In these programs scientists from KEK, Japan were also involved.

Human resource development is another area where we have immensely benefited from the foresight of Dr. Bhabha. However, the challenges posed by the major expansion that we foresee in our programme, new technological areas that we need to work on and the external attractions necessitate new initiatives. Many of them such as diversification of induction channels including linking up with other institutions, networking among DAE institutions and creating new academic programmes and institutions are now in place. I expect these initiatives to not only match the programme requirements in terms of knowledge domains but also create a new culture of organic linkages between advanced contemporary research and new

innovative technologies. Given that we would be working on several areas that would be globally unique, such an environment would be of crucial importance.

Friends, as I have mentioned earlier, we remain committed to Dr. Bhabha's dream of developing a strong national capability in atomic energy for the benefit of our people. We do so in a comprehensive way covering all potential areas and remain conscious of timely deliverables that are expected of us. To achieve this objective in a vastly expanded programme, we have to work in several inter-related and overlapping teams. Many of them would also involve members from external agencies. Team work has been our strength and our best homage to the memory of Dr. Bhabha would be to carry the team working capability to a new high. I am sure all of us will take up this challenge come out successful.

**Good luck to you all.**

### **108. Response of Official Spokesperson to a question on telephone conversation between External Affairs Minister Pranab Mukherjee and United States Secretary of State Condoleeza Rice.**

**New Delhi, October 30, 2007.**

External Affairs Minister Pranab Mukherjee had a telephone conversation with US Secretary of State Condoleeza Rice in the late evening of 29th October, 2007. The conversation covered issues of mutual interest including the India-US Agreement for Cooperation on Civil Nuclear Energy and regional issues<sup>1</sup>.

---

1. Media reports quoted State Department Spokesman McCormack to say that during the conversation, Rice conveyed to EAM that the US was keen on moving ahead with the civilian nuclear deal. State Department Spokesman said the civilian nuclear deal was the "primary" focus of the telephone conversation between Rice and Mukherjee. Asked if Rice is "still hopeful" of the accord that has run into political trouble in India, McCormack said "she (Rice) still supports it going forward. We have conveyed that to the Indian Government at different levels.  
"They (Indian leaders) are working through some domestic politics. I know that there is

---

an intense debate within India, right now, concerning the civil nuclear deal with the United States.

“The Indian people and the Indian political system are going to have to work out whatever resolution of that debate there will be. But we continue to urge the Indian Government to move forward with this deal. And we are prepared to move forward with it as well,” McCormack said. Rice underlined to Mukherjee “the same points that we can continue to support the agreement, continue moving forward with the agreement” the spokesman said. He said the resolution to the political discussions in India are for the Indian political system to resolve....we continue to support moving forward with the agreement”. McCormack ruled out any possibility of a renegotiation of the deal. “I don’t believe that there’s any consideration of that or any discussion of that on either side at this point,” McCormack said.

Meanwhile on October 30<sup>th</sup> the Chairman of the Atomic Energy Commission Anil Kakodkar cautioned that if the India-US nuclear deal did not go through, “India will have to slash at least 6,000 MW from its projected 20,000 MW by 2020.” Replying to a query whether the Department of Atomic Energy’s projected nuclear power capacity of 20,000 MW would be scaled down if the Indo-US deal did not come through with the current uncertainties, Kakodkar said, “definitely yes. By at least 6000 MW.” “It is possible to realise DAE’s projected 20,000 MW by 2020 only if there is international civil nuclear cooperation,” Kakodkar told the media on the sidelines of the 98th Founder’s celebration of Bhabha Atomic Research Centre. In mid 1990s, DAE had projected an ambitious programme 20,000 MW keeping in mind 10,000 MW from Pressurised Heavy Water Reactor programme, 2500 MW from Fast Breeder reactors and 8,000 MW from imported Light Water Reactors (especially from Russia). Even at that time (mid 1990s), 8000 MW was planned from the Russian nuclear cooperation. But although Russians were still interested in giving that much, unless the current international politics is set right, it may not be possible, Kakodkar said. Kakodkar said “it is important to set the international politics right to enhance the international cooperation in nuclear power programmes. This has to be carried out through diplomatic channels,” he said. Asked whether India could get fuel from any non-nuclear suppliers’ group countries, he said “yes, we can but we have to set right the international politics first.” Delivering the founder’s day speech, Kakodkar said Homi Bhabha himself was in favour of import of reactors and used the external cooperation to leap frog to realise enhancement of domestic capability.

**109. Interview of Chairman of the Atomic Energy Commission  
Dr. Anil Kakodkar with the *Hindustan Times*.**

**New Delhi, November 4, 2007.**

India was firm on securing “clear and unconditional” exemptions from Nuclear Suppliers Group (NSG) countries while continuing the current process of discussion on a safeguards agreement with the IAEA, Atomic Energy Commission chief Anil Kakodkar said.

“For us, protection of India’s interest is paramount. If this is achieved, then the prospects of the Indo-US civil nuclear cooperation deal getting through would certainly brighten,” he told reporters here after his return from Vienna.

Noting that the current negotiations with IAEA on India-specific safeguards had no fixed “timeframe” Dr. Kakodkar said: “It is a complex exercise we wish to complete as fast as we can.”

He said any agreement “we sign in this regard should meet all requirements of national interests”.

Asked whether the Indian negotiators in Vienna faced any “roadblocks” during discussions with IAEA officials, Kakodkar said: “I always walk on ground.”

He said the India specific safeguard agreement with IAEA was a very “broad-based document” and a “fairly detailed exercises”.

On the response the Indian side was getting from NSG countries in the light of the current talks, Kakodkar said, “It is generally positive from the 45-member group.”

On reports that China was inclined to support India on the pact with the US, Kakodkar said, “I am happy to know that.”

He said India expected a “two-way traffic” with respect to the proposed agreement and the Indian industry too should have its share of business if it is concluded.

“We will let you know” was his reply when asked when he was likely to join the Indian team of negotiators in Vienna again.

Earlier, Kakodkar lauded the contribution of the Walchand Industries Ltd,

where he went to attend a function, towards the country's defence preparedness as well as atomic, missile and space research programme.

"The group has been providing vital components for our missions with a cutting technological edge making India self-reliant by overcoming many hurdles. Walchand Industries' contribution to the field of Atomic Energy has been immense," he said.

**110. Question in the Lok Sabha: "Use of Thorium as Fuel".**

**New Delhi, November 21, 2007.**

**Will the Prime Minister be pleased to state:**

- a) Whether Thorium can be used as a fuel for generation of atomic energy in the country;
- b) if so, the details thereof;
- c) the estimated quantity of Thorium available in the country at present, state wise;
- d) whether the government has formulated any scheme for generating nuclear power through Thorium;
- e) if so, the details thereof; and
- f) the capacity of power projects which can be established in the country by using thorium?

**The Minister of State in the Prime Minister's Office: (Shri Prithviraj Chavan):**

(a) to (f): A statement is laid on the Table of the House.

**STATEMENT**

- a) Yes, Sir.
- b) While Thorium by itself is not a fissionable material, on irradiation in a reactor, it can be converted to Uranium – 233 which can be used to produce nuclear energy. India has vast resources of Thorium and thus it offers an enormous energy source to meet our future

requirements. Utilization of Thorium for energy production in the long run is one of the most important objectives of our atomic energy programme.

- c) The estimated reserves of Monazite which contain about 8 % Thorium in different States are as follows:

<b>States tonnes)</b>	<b>* Resources (in Million</b>
Andhra Pradesh	3.73
West Bengal and Jharkhand	1.45
Kerala	1.37
Tamil Nadu	1.84
Orissa	1.82
<b>TOTAL</b>	<b>10.21*</b>

\* Inclusive of indicated, inferred and speculative reserves

- d) and e): Yes, Sir. India has formulated a three-stage nuclear power programme to optimally use its modest uranium and vast thorium resources. Large scale thorium utilization is contemplated in the third stage of this programme, where Uranium-233 bred in Fast Breeder reactors of the second stage will be used together with thorium.

The government has taken a number of steps to develop appropriate technologies for the utilization of thorium. A few of the major steps are:

- 1) Setting up the research reactor Kamini at Kalapakkam using Uranium-233 fuel obtained from irradiated thorium. The reactor has been operating since 1997. The fuel for the reactor is bred, reprocessed and fabricated indigenously.
- 2) Irradiation of thorium fuel bundles in research reactor at Trombay and in Pressurised heavy Water Reactors (PHWRs) has been carried out.
- 3) Design and development of Advanced Heavy Water Reactor (AHWR) using thorium based fuel. This reactor will serve as a technology demonstrator.

- f): Around 150,000 GW-yr electricity potential exists in India using domestic thorium through the route of breeder technology.

**Shri Rajiv Ranjan Singh Lalan:** *Mr. Speaker, Sir, it is a strange thing that on the one hand the government has accepted that there are enormous deposits of thorium in the country and we can after processing in nuclear reactor convert them into Uranium-233; and that can be used in nuclear energy. In such a situation on the one side there are enormous deposits of thorium and on the other side the government is compromising with national interests in entering into an agreement with the USA. The statement of the Chairman of the National Nuclear Power Corporation which has come in the papers, he said that the country has resources of natural Uranium support is 10, 000 mw.*

**Mr. Spaker:** Put your Supplementary, please.

**Shri Rajiv Ranjan Lalan:** *You are saying two different things. You say that there is required supply of Uranium. The government in replying to the statement has said and given figures to indicate the quantity of monazite with Thorium contents is 10.21 million tones. We want to know how much more Thorium can be available besides what has been indicated? What is the quantity that can be obtained and the quantity of nuclear energy we can get from that?*

**Shri Prithviraj Chavan:** Sir, the hon. Member has said a lot of things and placed a lot of questions. Let me, at the outset, say that India has limited resources of natural Uranium. We have plenty of resources of Thorium. As a matter of fact, we have the second or third largest reserve of Thorium in the world. But the problem is that Thorium by itself is not a fissionable material. Thorium can be used to produce power only indirectly. Only naturally fissionable material available in the world is Uranium-235, which we are producing in Jharkhand.

That is why when we launched our Nuclear Energy Programme, Dr. Homi Bhabha very carefully charted a 3-phase programme to utilise Thorium in the third phase. We have now completed our first phase using natural Uranium, which is available within the country, and that is used in Pressurised Heavy Water reactors.

What the CMD of the Nuclear Power Corporation said was that using Indian natural Uranium resources, we can reach a programme of 10,000 megawatt. Currently, we have a nuclear energy capacity of 4,200 megawatt. This can

be taken to 10,000 megawatt for 40 years. After that, our natural Uranium will be over. Therefore, in order to get to the Thorium cycle, we need a second stage, which is the fast breeder reactor stage. The first one is being built at Kalpakkam. [r2] We expect that to start in a few years' time.

Unless we have a sufficient quantity of fast breeder reactors, which breed more Plutonium than they consume - Plutonium is also a fissionable material. It is a manmade material. We cannot go on to the third phase. It is a very calibrated programme. I would like to dispel, this impression, that the Government of India is not going ahead with the Thorium programme although we have plenty of Thorium resources.

I would like to clarify, Sir, that we definitely intend to use Thorium; but Thorium cannot produce electricity by itself. It has to be first converted into fissionable isotope, Uranium-233 which can be done in a fast breeder reactor. Therefore, unless we build sufficient capacity of fast breeder reactors, which we have just started building, we cannot go on to generating electricity from Thorium. Our ultimate objective is to be energy independent of the fossil fuels by using Thorium, of which we have plenty of resources. I agree with the hon. Member that we have plenty of Thorium but it cannot be used today.

**Mr. Speaker:** I think it is a very exhaustive answer.

**Shri Rajiv Ranjan Lalan:** *Mr. Speaker, Sir, It is an exhaustive answer but there are many contradictions. The CMD of the National Nuclear Power Corporation's statement suggested that we have the capability to produce 10,000 mw nuclear power for forty year; (interruptions)...we have uranium...interruption....*

**Mr. Speaker:** Please come to your question.

**Shri Rajiv Ranjan Lalan:** Sir, I am only asking a question. The Minister's statement has contradictions. I have to point to that....

**Mr. Speaker:** You need not comment on his reply. You put a question.

**Shri Rajiv Ranjan Lalan:** *I am drawing his attention to the contradiction and not commenting; The perceived situation that we have, instead of pursuing them we are compromising with our interests, According to our information thirty years ago there was an experiment with Thorium, and according to that we can convert Thorium -233 into nuclear*

*energy...interruptions...in the last thirty years why did the government did not develop this line of research. We uranium deposits would be exhausted in forty years. Can we depend on that? Why has the government not explored this line.*

**Shri Prithivraj Chavan:** Sir, I would like to dispel this allegation that we have not done anything about the Thorium programme. I have said repeatedly that in order to produce energy through Thorium indirectly, we need sufficient quantity of Plutonium which can only be produced through the Uranium that we have, when we run a 10,000 megawatt programme on natural Uranium that we have. We generate Plutonium by reprocessing waste fuels. Therefore, we have to build sufficient quantities of Plutonium which we will consume in the second phase in the fast breeder reactor. Only then, can we start integrating Thorium.

About the technology for the use of Thorium, the complete R&D has been done in India. We can use it. But we cannot cut short the cycle of building a very large fast breeder reactor programme. Unfortunately, physics is like that. It is not the lack of wanting by the Government of India. It is a very well-crafted three-stage programme by Dr. Bhabha. We are on to it and ultimate energy independence will come when we go on to the Thorium cycle which will take a number of years. Unfortunately, we cannot do it tomorrow. We have to build a very large capacity of fast breeder reactors which we are going to do.

**Mr. Speaker:** I do not know how many physicists are here. But, I would like to undertake some courses on this Plutonium, Uranium and Thorium.

**Shri Prithviraj Chavan:** We would like to invite them to BARC.

**Mr. Speaker:** Very good. I will do that.

**Dr. Laxminarayan Pandey:** Mr. Speaker, Sir, *The Minister has accepted that there are vast deposits of Thorium in the coastal areas of Kerala and other coastal states, To utilise these deposits a Kamni scheme was prepared at Kalapakam. Work on this is progressing and foreign entities had also shown interest in this and said that in comparison to Uranium, Thorium was safer; We can produce this in good quantities and the Minister has said in his statement that we have the capacity to produce about one a half lakh gigabite of energy per annum. What are the international agencies doing in this regard and whether thorium for this is available? Why are you not using this possible source for production of nuclear energy? The action*

*that the government should have undertaken, why it has not been taken? There are many coastal areas where thorium is found in big quantities. Sethu Sumundram is one of them; there are similar areas in Kerala; in all these areas Thorium is available in sufficient quantities. What are the government's plans for this scheme? And because of this the shortfall in energy production what steps are being taken to fill that gap and the delays in this regard; and the steps to remove those bottlenecks etc?*

**Shri Prithviraj Chavan:** Sir, I would like to repeat that the Indian scientists, no matter how hard they try, cannot change the laws of physics. It is basic physics that in order to consume Thorium and convert Thorium to a fissionable Uranium-233 isotope, which does not occur naturally, it is a manmade isotope, we need plenty of Plutonium, which also does not occur in nature. Plutonium is also a manmade fissile matter, which is only possible to be made through the first stage. We have certain reserves of Plutonium. I have repeatedly said that unless we have sufficient quantity of Plutonium, which we will use in our fast breeder programme along with naturally occurring Uranium-238 isotope, we cannot go on to Thorium programme. The technology of Thorium programme is completely developed by us. We have indigenously developed that technology, but the problem is availability of Plutonium which can only be generated gradually. In the fast breeder programme, we generate Plutonium.

Please believe me and I would like to assure the House through you, Sir, that we will not delay even one day to start the Thorium programme. The moment we can do it, we will do it because that is the only way we can achieve some kind of energy independence.

I will give you some numbers also. The current production of electricity in the country is about 700 billion units from all sources – coal, water etc.

**Mr. Speaker:** Let us have a discussion one day. On the main discussion, we will do this. Members are interested more in political Thorium.

**Shri Prithviraj Chavan:** Sir, I will just end with one sentence. When we have the Thorium programme, we can generate electricity from Thorium of about 13 lakh billion units compared to 700 billion units that we are producing today. So, there is plenty of capacity.

**Prof. Basudeb Barman:** Sir, while I appreciate the steps taken by the Government to develop appropriate technologies for utilisation of domestic resource of Thorium, may I request the hon. Minister, through you. Sir, to

enlighten the House about the progress of work at Kalpakkam and Trombay in regard to generation of electricity on commercial basis, that is, when we may be going to get the technologies as developed in research reactor Kamini, pressurised heavy water reactor and advanced heavy water reactor using our domestic Thorium as the reactor fuel, transferred to operating units for generation of electricity on commercial basis?

**Mr. Speaker:** This is such a long question!

**Prof. Basudeb Barman:** When are you going to get it?

**Mr. Speaker:** In which year?

**Shri Prithviraj Chavan:** Sir, there are two scenarios. One scenario is when we have the international cooperation, for which the Government of India is trying at various levels and also trying to persuade the House to allow us to go for international collaboration, which will give us enough Uranium. In that scenario, the speed up may be much faster. If we do not get international collaboration and we are not able to import Uranium, then we have limited resources of Uranium. That has to be understood. Our technology, whether it is Kamini Research Reactor or the Advanced Heavy Water Reactor that we are planning which will start using Thorium, is completely on track and on schedule. But unfortunately, unless we have sufficient quantity of Plutonium, we cannot go to a major commercial programme. That is the limitation.

**Prof. Basudeb Barman:** Am I to understand that there is no time schedule of the Government for using domestic Thorium?

... (Interruptions)

**Mr. Speaker:** It will happen as soon as possible.

... (Interruptions)

**Mr. Speaker:** We have taken 15 minutes on this question.

**Prof. Ramgopal Yadav:** *Sir, The Minister has twice said that Thorium was not a tenable material. To convert that into Plutonium 233 i.e. to make it tenable material, we have to work on that. I would like to say that Uranium is available in natural form. In that is the Thorium 237 isotope. That is enriched through nuclear reactors and convert into Uranium 235 and 233 and this generates atomic energy. I want to know that the nuclear base of*

*the power project, produces material for the nuclear bomb. Now in the deal with the United States, it is stated that the talks with the NSG will be only for Uranium; there is no mention of the Thorium. IN the deal with the US again there is no mention of Thorium: did it mean that we want to always stay dependent on others?*

**Mr. Speaker:** It is too complicated for me.

**Shri Prithviraj Chavan:** Sir, I do not want to correct some of the facts that the hon. Member has stated here, but he is right in a way that what we get naturally is a mix of Uranium-238 and Uranium-235. Only Uranium-235 is a fissionable Isotope, and Uranium-238 is not. Uranium-238 Isotope is a fertile material from which you can produce Plutonium. I do not want to get in more details.

Kindly allow me to clarify that India is one country that is deficient in Uranium, but we have got sufficient Thorium resources. Most of the nuclear capable countries have large stocks of Uranium. Hence, they have not looked at the Thorium option like we have. I would like to take this opportunity to assure the House that Indian Thorium utilization technology is perhaps more advanced than any other country in the world. We do not require Thorium technology from anybody, but what we require is the basic Uranium, which we have in limited quantity. Therefore, the only purpose of going in for international collaboration is that our nuclear programme — for which we have completely developed indigenous technology — can be taken further. The nature has not endowed us with large Uranium resources, and they are only limited to about 70,000 tonnes and they will exhaust one day. Therefore, in order to convert Uranium to Plutonium, and then use Thorium is going to be a long cycle.

The hon. Member who asked the previous supplementary asked about the timeframe. We have the exact timeframe based on Indian programme completely, and another timeframe — if the House permits — for international collaboration in the field of nuclear energy.

*(Text in italics is unofficial translation from the Hindi text)*

**111. Question in the Rajya Sabha: “Nuclear fuel supply from Russia”.**

**New Delhi, November 29, 2007.**

**Will the Prime Minister be pleased to state:**

- a) whether Russia has agreed to supply nuclear fuel to India from Angarsk International Uranium Enrichment (AIUE) Centre set up by it for supply of uranium to countries with nuclear energy programmes under International Atomic Energy Agency safeguards;
- b) whether Government has approved two nuclear power projects at Rawatbhata in Rajasthan and Kakrapara in Gujarat to be built during Eleventh Plan;
- c) whether fuel supplies facility could be considered for units being set up through Russian assistance in the county; and
- d) by when these projects are likely to start functioning?

**The Minister of State in the Prime Minister’s Office (Shri Prithviraj Chavan)**

(a) to (d)A Statement is laid on the Table of the House.

**STATEMENT**

- (a) No, Sir. Russian Federation has agreed to supply fuel for life time of Kudankulam Units 1 & 2 under a bilateral agreement.
- (b) Yes, Sir. Government has in principle, approved setting up of two 700 MWe PHWR Units each at Rawatbhata in Rajasthan and Kakrapar in Gujarat.
- (c) Two Light Water Reactors of 1000 MWe each are presently under construction, in co-operation with Russian Federation, at Kudankulam, Tamil Nadu. The life time fuel supply for these reactors is covered through a sovereign guarantee of Russian Federation.
- (d) Kudankulam reactors (units 1&2) are expected to commence operation in the year 2009.

**Shrimati Prema Cariappa:** Sir, I would like to know from the hon. Minister whether the Government has any proposal for setting up of any other nuclear

power projects apart from the two in the States of Rajasthan and Gujarat, which are mentioned in the question.

**Shri Prithviraj Chavan:** Sir, we have already got a Cabinet approval for setting up new nuclear power plants at Rawatbhata and Kakrapara. In the Eleventh Plan period, we would be setting up six new Pressurised Heavy Water Nuclear Reactors. The sites are not yet decided, but all these PHWR will be of increased capacity of 700 MW each.

**Shrimati Prema Cariappa:** Sir, I would like to know: What is the policy or do you have any other plan for smaller units to be set up in other States?

**Shri Prithviraj Chavan:** Sir, India's nuclear power programme started with indigenous 220 MW Pressurised Heavy Water Reactors. We have graduated and upscaled the design to 540 MW, which is functioning perfectly well in Tarapore. Now, we intend to take it to 700 MW scale. Setting up of smaller reactors is economically not a good idea. So, we are actually going in for increased capacity. There is a plan and we want to set up, as I already said, six new 700 MW reactors with indigenous technology. Further, Light Water Reactors with international cooperation would be set up provided international cooperation goes through.

**Shrimati Shobhana Bhartia:** Sir, I would like to ask the hon. Minister, through you: Is it necessary that NSG curbs are lifted before India can access fuel from Angarsk, and can Russia sell us new reactors again before the NSG and IAEA guidelines are changed?

**Shri Prithviraj Chavan:** Sir, I would like to explain that Angarsk facility is a proposed facility with a new architecture of international cooperation in assured fuel supply. This is the facility which should be jointly set up by Russia and Kazakhstan, and it has been incorporated only in September this year and likely to start producing in 2050. But the point is, whatever international fuel that we are getting for our Kudankulam 1 & 2 reactors, is covered by the sovereign guarantee of Russian Federation and that is going on. Any new reactor, purchases from either Russian Federation or any other country, will necessarily depend on the IAEA clearance and NSG clearance — unconditional waiver of energy.

**Dr. K. Kasturirangan:** Sir, through you, I would like to ask the hon. Minister as to what is the status of the uranium ore prospecting in this country. And, what are the plans for upgrading the Atomic Mineral Division's capability to make it a more effective organisation for atomic minerals prospecting in India?

**Shri Prithviraj Chavan:** Sir, as the hon. Member is aware, most of our uranium comes from Jaduguda mines in Jharkhand. This month itself, we laid the foundation stone of a new uranium mining and processing facility in Andhra Pradesh. There are prospects of setting up uranium processing facility at a further location in Andhra Pradesh, in Karnataka, and, major facility in Meghalaya. Work is in progress. Environmental clearances are being sought. The only new site launched this month was in Andhra Pradesh. I think, we will be definitely self-sufficient to sustain a programme of 10,000 MW with our indigenous uranium, not more than that.

**Dr. K. Kasturirangan:** Sir, the second part of the question was with regard to the Atomic Minerals Division's capability.

**Shri Prithviraj Chavan:** Sir, I did not reply to part (b) of hon. Member's question. Sir, the Atomic Energy Department has extensive plans for augmenting the Atomic Minerals Division, which looks for the nuclear materials in the country. As it does not come from the main question, I will be able to give more details about it if a fresh question comes up.

**Prof. P.J. Kurien:** Sir, during the recent visit of the hon. Prime Minister to Russia, there was a press report that an agreement would be signed with Russia with regard to supply of nuclear reactors to India. It was said that such an agreement was ready but it could not be signed at the last moment. Later on, there was a report in the press that the inability to sign that agreement emanated from our inability to sign the nuclear deal with the United States. Therefore, I would like to know from the hon. Prime Minister, — since we could not sign the agreement with Russia — whether that has anything to do with our inability to sign the agreement or nuclear deal with the United States. I would like to know the Government's position on this stand.

**Shri Prithviraj Chavan:** Sir, I would like to take this opportunity to clarify this confusion about the future supplies of Russian nuclear reactors to us. Sir, in January, 2007, when President Putin visited India, a Memorandum of Intent was signed by the Government of India to purchase four additional reactors to be sited at the existing Kudankulam. It was a Memorandum of Intent. There is a word going on for signing the inter-governmental agreement, which will be required to go further. With regard to this agreement, as the hon. Prime Minister said, the work is in progress and it is being considered. But let me categorically tell the House that no operation for further supply of any international reactor would be possible, which includes four possible Russian reactors, without clear IAEA Safeguards

Agreement being signed and a clear and unconditional waiver from NSG. That is very clear. It cannot be operationalised without NSG waiver.

Answering another supplementary the Minister said:

**Shri Prithviraj Chavan:** Sir, we are mixing lot of things together. The agreement with United States is to seek waiver from the US law. What we are trying to seek from the international community is an unconditional waiver from the Nuclear Suppliers Group's guidelines to allow India to engage in an international civil nuclear commerce.

So, unless NSG guidelines are waived for India, which will follow the IAEA safeguards agreement which is being negotiated now, unless NSG guidelines are changed, there cannot be any nuclear commerce, leave apart the reactors, with any country that includes Russia. Therefore, I have clarified that the inter- Governmental agreement is being negotiated. But, signing that agreement, you cannot operationalise the agreement; you cannot buy anything from Russia unless there is an unconditional waiver from NSG to permit India to engage in trade.

**Shri Shahid Siddiqui:** Why can't we go to the NSG with the Russian agreement? Why can't we do that? Why do we have to ...(Interruptions)..

**Mr. Chairman:** Let the hon. Minister finish please.

**Shri Prithviraj Chavan:** Sir, we are not even a Member of the NSG. We are not going to the NSG. The only agency we have already gone to is IAEA. We have offered certain of our facilities for IAEA safeguards inspection procedure, which was not earlier under safeguards. And, that is a part of overall deal with America. Once the IAEA safeguards agreement is negotiated, the international community, the NSG, will take up India's case for waiver. Unless that happens, I would like to say, it has been made amply clear by the hon. Minister of External Affairs in the other House yesterday and the Prime Minister has also clarified this a number of times, that this purchase of Russian reactors, which we want, and four reactors will be located at Kudankulam in Tamil Nadu, the site where first two reactors are already located. We want to install four more reactors. But what can we do unless there is permission for civilian nuclear trade? Under the NSG waiver, there is no point; it will be a dead letter. ...(Interruptions)..

## **Debate in Parliament on Civil Nuclear Energy Cooperation Agreement:**

### **Select Speeches**

#### **Lok Sabha: November 28, 2007.**

- (i) Rupchand Pal (CPI-M)
- (ii) L. K. Advani (B.J.P.)
- (iii) External Affairs Minister Pranab Mukherjee

#### **Rajya Sabha: December 4-5, 2007**

- (i) Sitaram Yechury (CPI-M)
- (ii) Yashwant Sinha (B.J.P.)
- (iii) Mrs. Kanimozhi (DMK)
- (iv) D. Raja (C.P.I)
- (v) External Affairs Minister Pranab Mukherjee

**112. Speech of Communist Party of India (Marxist) Member of Parliament Rupchand Pal in the Lok Sabha on the debate on the India – United States Civil Nuclear Energy Cooperation Agreement.**

**New Delhi, November 28, 2007.**

\* \* \* \*

**Shri Rupchand Pal: (Communist Party of India – Marxist):** Sir, at long last, this august House has got an opportunity to discuss a very very important deal, the Indo-US Civil Nuclear Cooperation Deal. It has a serious bearing on the future of this country, its economy, its relationship with other countries, its nuclear programme and its energy security. It is good that we are discussing it today and we are thankful to you, Sir, the Leaders of the Government and all the concerned that this opportunity at last is given to us.

In the last Session, we have been insisting on such a discussion on this important deal but we had been denied of it because of interruptions by the main Opposition. We could well understand the reason as they continued to be confused about their stand vis-à-vis the Nuclear Deal. Firstly, it is they who had initiated it and the hon. Prime Minister had very rightly mentioned, when the delegation of the BJP met him, that it is your baby. But they want to put the ownership of the baby in a different language. What is the language going to be? We will come to know of it because different voices are being heard on it. One is by Shri L.K. Advani, the hon. Leader of the Opposition who, at a point, said, "No, no. We are in full agreement with the deal."

**Prof. Vijay Kumar Malhotra:** *You clear your stand.....(interruptions)*

**Shri Rupchand Pal:** Now some Opposition Leaders are writing articles and making speeches. They are speaking in different voices. According to the BJP, they have no objection to the strategic alliance with the US and 14 rounds of secret discussions have taken place. Fourteen rounds of discussions have taken place between Shri Jaswant Singh and Mr. Strobe Talbott. Of course, they took place in different places and most of them were secret discussions. I demand from the Government what have been the issues that have come out in the latest news engaging India. Mr. Strobe Talbott tells us a lot of things that without the concurrence of the Government, without taking into account the national consensus about our foreign policy,

without taking into account our national interests, certain commitments have been made. As it happened for their wrong economic policies, the claim for India shining when India was suffering, the people had put them in right place. So, also when people come to know about their position *vis-a-vis* their surrender to the US pressures. But we expected something different from the UPA. It is because when the Common Minimum Programme was being framed, at that point of time might be that some suggestion has come –the strategic relations with the United States and the Left had categorically stated ‘no’. We cannot be a party to it. So, there was a demarcation of the UPA *vis-a-vis* its independent foreign policy and the policy of the previous NDA Government which has a definite tilt towards US for a strategic alliance which by now is revealed in more than one document.

Now, when the Government, the hon. Prime Minister, had come out with a joint statement on 18<sup>th</sup> of July, 2005, at the very beginning, the Left had expressed certain apprehensions. It is not that overnight the Left woke up and said, ‘no’, we cannot agree to it. If you go without our consultation, and as we are a supporting partner, we cannot be a party to it. We did not say like that. We say that we cannot be a party to it. We have serious reservations in respect of various provisions in the 123 Agreement itself. Then, on the basis of that there have been certain discussions. We have raised nine points where we differ and we have serious reservations *vis-à-vis* the Draft. The hon. Prime Minister in August gave some assurances. Then in 2006, December came the Henry Hyde Act which was reconciliation between what came out, how to give the exemption, what sort of waiver should be given in the US Atomic Energy Act 54 etc.

Sir, under the leadership of Henry Hyde, a Draft was prepared and after the Left came to know the provisions in the Draft, we made it to the Government that these are the nine areas where the Left and the nation want to be reassured by the Government. In August, the hon. Prime Minister came out with reassurances and assurances on all those points. But to our dismay, we found that in the Hyde Act December, 2006, most of the important assurances given by the hon. Prime Minister on the floor of the House were trampled and ignored. This was in relation to technology transfer, in relation to fuel supply, in relation to congruence of Indian foreign policy with the US foreign policy, specific reference to Iran, un-interrupted fuel supply and on very many other issues. We shall come to that one by one.

The hon. Prime Minister had categorically stated one thing - the nuclear cycle in its entirety, This is very important. But we found that it was selective.

It was selective even in respect of lifting the sanctions. Transfer of sensitive technology as well as transfer of dual use technology was denied. The Government claims that from a regime of technology denial, we are entering into the mainstream global nuclear arena; we are a recognised nuclear power also. But that was not so. It is not only in respect of the technology transfer but also in the case of fuel supply, the assurance given was very vague. We have the experience of Tarapur. We found that there was no assurance regarding the uninterrupted fuel supply. This was taken up again and again. The Government is trying to make out saying: "No. There is an assurance." Even in the case of termination, what will happen? There is a termination clause. What is the termination clause? In case the Government of India goes in for a nuclear explosion, then the termination can take place. The termination can take place for various other reasons and extraneous reasons directly unrelated to the civilian nuclear energy also. In the case of a termination of the agreement, the fuel supply, the reactors, equipment and everything will have to be returned. Although there is a clause on which the Government is trying to argue a lot saying: "No. In that case, the US is saying that it will help us to take corrective measures", yet you relate the 123 Agreement to the Hyde Act. It is a very broad point.

The relationship between these two is important. Would you find that only the US Congress can go for the permanent waiver and just condone you? The Hyde Act specifically mentions that the US will stop any other country from providing the fuel supply in such a scenario. That means, you are nowhere. That is the issue that we have been making. Canards have been spread saying that we are doing it at the behest of China; we are doing it for that and we are doing it for this. So, canards have been spread. Is it not wise to ask whether our nuclear reactors will have uninterrupted fuel supply? What is the guarantee? You are going in for the agreement with the International Atomic Energy Agency in perpetuity. But nuclear fuel supply is not going to be in perpetuity. It is conditional. Is it not wise to ask this question? The whole gamut of the fuel issue, these extraneous issues are there. Our patriotism is being questioned. We have the experience.

Several times, the Communists have been charged saying that they are unpatriotic. But the history says something else. There are the best men and women in the country who sacrificed most for the freedom of this land, who suffered most for 30-40 years in jail, some of whom have been Members of this House. We have made suggestions about Indo-China border. We have said that it should not be resolved by an armed conflict but by dialogue. The Government is doing it. Others believe that this is the right way. For making

our suggestion, we are accused. Today also when we are saying the right thing, we have been abused like anything. But we are not going to take it lying down. We are asking: "What about your uninterrupted fuel supply?"

Now, I am coming to all the nine points given by the hon. Prime Minister. What will happen to our strategic autonomy? If we look into the speeches prior to this agreement, we do find that it had started long back during the talk between Shri Jaswant Singh and Mr. Strobe Talbott. They talked about military exchange, strategic alliance and to have a new regional architecture in Asia to contain China and very categorically in a writing very recently it is being said by no less a person than the Chief Interlocutor Mr. Nicolas Burns that it is an age of anti-Americanism. Yes, throughout Latin America, countries like Brazil, Argentina, Mexico, Ecuador and Bolivia are opposing the United States of America. Look at the world, Russia is standing up against any threat which it could not do a few years back. It is a changed world. Even inside America, - I am not naming – the present President is the most hated person amongst Americans.

**Mr. Speaker:** It need not be said like that.

**Shri Rupchand Pal:** Sir, I have not named anybody.

**Mr. Speaker:** All right, but let us discuss with dignity.

**Shri Rupchand Pal:** Sir, we have cooperated with them in Iraq. Some others have also done in other parts of the world. In the United Kingdom, those who have supported America have gone out of power, in Australia also they have gone out of power and in Japan also they have gone. So, this is the age of anti-Americanism. This is the admission made by Mr. Nicolas Burns and in this age, what is required? What is required, according to that article, is that in Asia, we must have a new regional architecture, new military status, naval exercises, new friends and it is being said in the same article that "US is only just beginning to realize the benefits of this relationship for its interests in South and East Asia". So, you can well understand the situation.

Sir, why are the 'Henrys' of America losing their sleep? I am not naming anyone. Mr. Henry Hyde has done the job elsewhere and some other 'Henrys' are coming here, meeting the people in the Government, meeting the Opposition leaders and all that. Once in a millennium one benefactor has come, losing his sleep. We are questioning the Agreement and saying that we are not going to be benefited by it. They say, 'No, it is in your

benefit', although we know it is in their benefit. Repeatedly it is being said that it is in their benefit for creating a new regional architecture in Asia. For a new Asian NATO, they need India. Once they wanted to balance Pakistan and India, there was talk of composite dialogue and all that, I am not going into that here. But now they want India. What do they say? The July statement says that the Indo-US Nuclear Deal is one part of it. They say there will be collaboration in the fields of agriculture, education, economy, politics, military and it is a total package and in the midst of the total package, there is one deal. In the language of Mr. Nicolas Burns, it is the centerpiece. That is not all. So, they want us to ignore our independent foreign policy. They are openly saying that non-alignment is an old thing and telling us to leave it. Again and again they are telling us not to go in support of Iran. They want us to ignore Iran and unfortunately we have been doing it. Twice India voted against Iran in the International Atomic Energy Agency. Our Indian delegation was amazed by the directive that has come from the top quarters. How is it? Our friend is Iran. Civilisation contacts are there. On the Republic day, we had an honoured guest from Iran. We have our relationship. We depend so much on our oil supply from Iran. Why should we? But we did. In nine cases, they said, 'India, you are going to be rewarded and Iran is not behaving properly, they are going to be punished. Help us to punish Iran'. Is it the way, Indian should pursue its independent foreign policy?

Was it the legacy we had from our Freedom Struggle – a well tested Non-aligned Policy on the basis of a national consensus? It is a new multi-polar world, unilateralism. It has been admitted by Nicholas Burns day by day that they are getting isolated amongst new friends. At such a time, we should stand by America and isolate ourselves, at their dictate. We should refrain from undertaking the Iran-Pakistan-India Gas project on their instance which had vote against Iran. It is very unfortunate.

This is not simply a vision of an independent foreign policy strategic programme. The hon. Prime Minister's argument is that there is an economy growing like anything, nine per cent or nine-and-a-half per cent. They can go on saying anything because it has nothing to do with the common people. Even his Cabinet Minister has admitted that this growth, this percentage is not reflected amongst the people. As per their own report 70 per cent of the people of India are living on Rs.20 a day.

In the perspective for growth, we need more energy. Who can deny it? The Left is not denying it. Have they any policy? The only policy document

they have got is the Eleventh Plan Parikh Document on Integrated Energy Policy. There what they have said. Have they got any vision? They have said 2020, 2030 and so many things. Have they got any national policy on the energy mix? How do you calculate this? What is the study? What is the analysis? What is the cost of imported reactor? Nothing has been done and suddenly comes the nuclear renaissance. We cannot miss the bus. Bus to which end, to what goal, whose goal?

Nuclear renaissance is a hype. In America itself, no nuclear plant has been set up for 30 years since Three Mile Island disaster. They are depending, GE, etc. and all other nuclear companies, on outside sales only. Even the international document says that it is now 16 per cent of global electricity consumption. It is an international body. If you want, I can read it. In this our Rev. Pachauri Saheb *hon'ble Pachauri Sahib, who is Noble Laureate, it is in his report, it is study group's report*, that it is only 16 per cent and with the best endeavour you can reach at 18 per cent *on the basis of climate change, as the basis of energy security what is it that we don't have*. The people have been telling – the MP is here, he has written to me and spoken to me – that there is 60,000 MW potential in hydro electricity. What is the difficulty? There is no money. Only in the North-East, this potential is there, the study says that and we have not exploited it. Have you no coal reserves? Is it exhausted? Is there no clean technology available in India today? Is there no Coal Bed Methane (CBM) or no liquefied coal? I would like to know whether you have any national coal use and national coal policy. There is nothing like that. In such a scenario, you are opting for the nuclear energy which is costly. According to a draft calculation in Kudankulam, it was calculated that it would be – even after Russian concession or security help – Rs. 3.50, and the nuclear cost would be around Rs. 4 to Rs. 5. It is not cheap. Now the question is that if it is not cheap, why are you going for that? If you have so much to pay – our independent foreign policy, our strategic programme, our own domestic nuclear programme, we have to go at their instance, they may use nuclear blackmail in various situations which they have done – why should you go for it? Is it to benefit them? Their ailing nuclear industry will be rejuvenated and more jobs will be created there. It is the admission of Condoleezza Rice. But it will be done at the cost of India. We have so much of employment. We will have no jobs. There, we will have jobs because there nuclear reactors will come.

We have a self-reliant programme. We are not against nuclear energy. We want an appropriate, judicious, nuclear energy mix. We are being told

that there is no money; resources are not available. Suddenly, we are opting for the most expensive nuclear energy at their instance. Is it going to help us? No. What I want to say is that if you go for the cost benefit, it is being said that 123 Agreement is different from the Hyde Act, why we are worried about the Hyde Act. Who says this? Sir, 123 Agreement is in conformity with the Hyde Act. Wherever there is no dispute, it is okay. If there is any dispute, their national law will prevail. It is very specific. The Left had put its viewpoint on the relationship between the 123 Agreement and the Hyde Act very categorically as to what is the international position, what is the Vienna Convention about international treaties and all these things. They are hurrying up saying China has done it. **China is a nuclear weapon State.** China is a party to NPT. Why are you comparing yourself with China? The contract between China and the United States is being guided by international law. Ours is guided by US national law.

This has happened in such case, say, about the fast breeder reactor in Japan and all these things and in all such areas. What has happened in the case of Japan? So, Indo-US nuclear deal is put on a level which is detrimental. They say, no, the present President has assured us in writing. What is the use of this writing? The future President will go by the American law only. In such a situation, what we have been saying is that it is okay, if you are so eager that we should not miss the bus, which bus I do not know, for which goal, that also I do not know. We have the experience of ENRON. Have you forgotten that? It is not only about the price; we have said so many things about it. We have said: "Do not do it." They say: "No, it is a different world." In a different world, you have gone for ENRON and Maharashtra people will tell us better as to what is the situation.

I would just like to take this opportunity to tell the Government that ultimately – the Left has told you – you can go to the international atomic energy. But, what for? We want a concrete assurance about the uninterrupted supply. That you have not done for the Russian Programme; you have not signed it. It is a different issue, I am not going into that Kudankulam issue. The re-assurance from IAEA has to be according to India's specific requirement because it will be India specific safeguard. I would like to know from the hon. Prime Minister as to what the India specific safeguard is. What is the guarantee?

You are saying that our fast breeder reactors will also be under the supervision of the international agency in perpetuity. Our nuclear scientists have said that our fast breeder reactors are superior to others in certain

areas. We work on a particular nuclear cycle by which you can use the spent fuel, enrich it and go on.

Now, nuclear waste management is a big problem to the Western world. In such a situation we have certain advantages. But putting the fast breeder reactors under the supervision and under the safeguard, will it be helpful to us?

Now, I come to re-processing. It is very vague. It is notional only. Whatever assurance has been given is only notional. They say that under a dedicated arrangement, we should have this use of spent fuel and all these. What is the cost? So, it is not a simple question of a strategic alliance. It is surrendering to their pressure. As they are getting isolated, they want to get India also to be isolated. It will harm us immensely at the WTO level in our negotiations. Our friends are in G70, G77, and G90. Against whom are we fighting? China, India and Brazil are fighting against the American agricultural subsidy. They are our friends. In so many international bodies and also in the emerging bodies, we are all friends. What message will it go now? After 60 years of India's Independence, India did what India has never done. They mentioned this in their speeches.

The Congress Party people can read these aspersions about how they had been dealing with Soviet Russia and others during the time of Pandit Nehru. They had the audacity to mention that the Soviet weapons were flooding in the Indian military. We have 126, Multi Role Combat Aircraft ...  
(Interruptions)

**Mr. Speaker:** Now, please conclude.

**Shri Rupchand Pal:** Please give me one minute. Apart from that, they are saying that India should simultaneously open up banking, India should open up insurance and India should open up foreign retail. In such a scenario, we think that this Government is not applying its mind to the dangers in the Deal itself.

It is said that 90 per cent of the Indian civilian nuclear reactors would be under the supervision of IAEA. How do they calculate? That is the question I am asking. Nicholas Burns, who is the Chief Interlocutor, himself is writing that 90 per cent of the Indian civilian nuclear reactors will be under the supervision of IAEA in perpetuity. That also is in perpetuity. Then, we know their concept of democracy. They are saying that with India, they will just stabilize democracy in so many countries. What will happen to our

relations with so many other countries? We know as to what sort of democracy they have. We know what happened in Iraq and what happened in Afghanistan. Now, strangely we find the Government voice in terms of its support to Palestine and in relation to various other Middle-East issues. It is toned down so substantially. We apprehend that the pressure has started to work on them. Sir, I am concluding now.

He further says that 'the military co-operation is impeded by the fact that much of the Indian Military still uses a considerable amount of Soviet Union equipment. A significant Indian Defence purchase from the United States, for example, of the new Advanced Multi-role Combat Aircraft that the Indian Air Force take, would be a great lead forward.' So, 123 is not 123; 123 is also 126, that is, their aircraft.

He says about the Indian Arms Bazar, Indian Insurance Market, Indian Banking, Indian Retail and India as an ally to guard the seas and the Navy. And, they are insisting on PSI, Proliferation Security Initiatives. They are insisting on many other such Agreements, which we did not agree earlier.

We know, very recently the nuclear materials equipped ship had come. There are Australia, Singapore, the US, Japan and India. What signal had it sent? What was the reaction to our neighbours? What happens? It is the logistic agreement that the fuel services would be allowed and they would take the fuel here, and they would just wait in the Indian Ocean or the Bay of Bengal. They are waiting. Will not our neighbours be surreptitious about us? For the fault of America, we will have to suffer, we will have to be punished. It had happened long back. When these people were agreeing to send the Indian troops to Iraq, the whole august House woke up and said: "No." But still they were hesitant. There was no condemnation. They used the only word 'deplorable'.

Sir, I am just concluding.

**Mr. Speaker:** It should be actual concluding.

**Shri Rupchand Pal:** I am concluding.

About the timetable, they are hurrying up and saying: "By January, you must have to do this; this has to go to the US Congress" as if their Parliament, their US Congress is superior to the Indian Parliament. The Indian Parliament must discuss it. Let there be a sense of this House. We know that in our Constitution, there is no provision of ratification of any International Treaty. We shall discuss it later on when the time comes.

But it is our earnest appeal. We have submitted our viewpoints. On the PM assurances with regard to all the reservations we had made regarding the Draft Bill, most of them have been trampled down by the Hyde Act. Our apprehensions have been proved true repeatedly. Please take the sense of the House. Do not proceed further because of the majority of this sovereign House is against this very, very important Deal, which has a serious bearing on the future of this country, on the future economy of this country, on our nuclear programme, on our self-reliance and on our relations with other countries in an emerging multi-polar world.

Thank you.

**113. Speech of the Leader of the Opposition in the Lok Sabha  
L. K. Advani while participating in the debate in the Lok  
Sabha on the India-United States Civil Nuclear Energy  
Cooperation Agreement.**

**New Delhi, November 28, 2007.**

**Shri L.K. Advani: (Bharatiya Janata Party):** Mr. Speaker, Sir, though it is not the first time that we are discussing this particular matter, but I still believe that at this point of time, this has become a very important debate in the history of Parliament.

Just now, Shri Rupchand Pal, while concluding his speech, said that he would like a sense of the House to be taken so far as this issue is concerned. I for one see no reason why the Government should not have agreed to have this discussion under Rule 184 of the Rules of Procedure and Conduct of Business. I can understand that irrespective of what the vote is, the Government may say that the Constitution does not obligate us to seek ratification for any international treaty. Therefore, you have expressed an opinion. There are occasions when the House expressed its opinion.

**Mr. Speaker:** May I interrupt you for a second? When I had given my ruling on the notice under rule 184 in the last Session, I had not consulted the Government. Therefore, Government's willingness has no relevance for me. It is because you said why did the Government involve.

**Shri L.K. Advani:** I accept it. But I think that so far as the sense of the

House is concerned, it has already been expressed on several occasions. Once when we staged the walk-out against something that had been said on this particular issue from the Government side, almost all sections of the House walked out. In fact, from even the UPA, the Left Parties also walked out with us. There have been other occasions also. I am not going to go into that.

Today, the Prime Minister is here and I would like to recall that when first he met President Bush way back in the year 2005 when exactly this debate started in the country among political parties, among thinking sections of the people, a question was posed to him two days after his Joint Statement with President Bush had been issued on Nuclear Cooperation. The question posed to him at a Press Conference held in Washington on 20<sup>th</sup> July 2005 was this. "Mr. Prime Minister, do you see any resistance coming forward from your Allies—obviously, they had an inkling of what is likely to happen—and the Opposition?" So, despite what my friend Mr. Rupchand Pal may say about Strobe Talbot and all that, they knew that on this particular issue, we had certain very strong reservations. So, the question posed was: "Do you see any resistance coming forward from your Allies and the Opposition in putting the new India-US Policy to practice, and will you seek a Parliamentary consensus or approval to the new direction you seem to be taking in Foreign Policy?" So, they take it for granted that it is a new direction in Foreign Policy that this Government is taking.

The Prime Minister Dr. Manmohan Singh replied: "Well, the Parliament in our country is sovereign. It is my intention to make a Statement in Parliament when I go back home, and it goes without saying that we can move forward only on the basis of a broad national consensus." Now, my first poser to the Prime Minister is this. Do you see this broad national consensus before which you have used the word, "only if there is a broad national consensus"? In this country, we do not have any provision in the Constitution for a referendum as is there in some other countries.

But so far as Parliament is concerned, I am sure that you are aware, everyone is aware that there is no consensus on this particular deal. So, when it is obvious that there is no broad consensus on this deal, why are you so rushing into this deal? Why? I cannot understand this. Why can you not think in terms of what we have suggested all along? Think of ways of re-negotiating the deal.

Their objection is not to the deal so much. You could see it even in the first

sentence itself. It is either anti-Americanism or anti-BJPism which becomes the guideline for all of them. So their very first sentence is that they are against any kind of strategic partnership with the United States. We are not. We are not. So, when people quote me, Strobe Talbot or Jaswant Singh's book or my statement which I made, I simply emphasized this. While in the discussions in the other House, many times it may seem that the CPI(M)'s opposition and the BJP's opposition is identical. No, it is not identical.

The difference I wanted to stress in that particular statement which was supposed to be a shift in my stand. No, there has been no shift all along. I would like to tell you one thing. It is true that in the last Session, this issue could not be discussed as it ought to have been. Why? It was because after all, we said why we cannot have a Joint Parliamentary Committee on this. The Government did not agree and instead first said what has been done is signed and sealed and it is not negotiable and therefore, we cannot have a Joint Parliamentary Committee going into it. But it was a surprise for the country to find that instead of a Joint Parliamentary Committee in which all could have participated including the Left, you formed a Committee of the UPA and the Left. How do you explain it?

Today, my second poser to the Prime Minister and the Government is this. What has been accomplished by this joint committee of the UPA and the Left till now? From the Press all that we see is that the Committee met and decided to meet on this day again. Very often these days it appears that while the Congress is particular about the deal and says '*bachao* the deal' the Left, especially the CPI (M) suddenly says '*bachao* Bengal'. Not only that, but the kind of flip flop that you are making makes me feel that you are no longer concerned with the deal; you are more concerned with the timing of elections. You do not want an election now and therefore, you say, 'All right, you go ahead with IAEA, talk to them and we will see later'. We have a veto with us. Do not deceive yourself and do not deceive the country. ... (*Interruptions*)

**Shri Rupchand Pal:** We are not deceiving. ... (*Interruptions*)

**Shri L.K. Advani:** You are where you are, but it is certainly expective of a party which is part of a coalition, which is part of an alliance not to behave in this manner. I will see their outlook later. I will come to the deal itself.

I was surprised to find that in one of his earlier statements made in Parliament, the Prime Minister said on 13.8.07 :

“As I have said, this is an agreement for cooperation between India and the US on peaceful uses of nuclear energy. Its genesis is the shared perception between the India and the US that both our countries need to address their energy challenges ...”

I can understand that we are looking at it from the energy point of view, but I do not see how America also is looking at this deal from the point of view of energy. What is mentioned in this statement is ‘its genesis is shared perception’. The US is certainly not looking for nuclear energy as a major option, leave alone the most important option to meet its energy challenges; we may be. I can say that we have our energy concern which I share, though I do not agree that this is going to be a solution to that, but the US is certainly looking at this from a strategic angle. This is the difference. They are not looking at it from the energy angle.

**The Minister of External Affairs (Shri Pranab Mukherjee):** Would you just concede for a second?

If you just go to the second sentence of the 123 Agreement, which is an agreement between the India and the USA, it says:

“Recognizing the significance of civilian nuclear energy for meeting growing global energy demands in a cleaner and more efficient manner...”

This is the agreed text of an agreement. The agreement is yet to be finalised. Therefore, both USA and India recognise the need of sharing the common perceptions of energy.

**Shri L.K. Advani:** Thank you, Shri Pranab Mukherjee. I can only endorse what my friend Shri Rupchand Pal just now said, namely, that there has been no nuclear reactor that has come up in America for many many years. Therefore, ... (*Interruptions*)

**Shri Pranab Mukherjee:** You just see what you said a few seconds ago, and what was my contention.

**Shri L.K. Advani:** No, I can understand that you can have it in a format, but so far as reality is concerned, the reality comes out very clearly in other statements that they have made. I will quote them later on. ... (*Interruptions*)

**Shri Pranab Mukherjee:** You can give your own argument, and I have no problem with it.

**Shri L. K. Advani:** It is my conviction that while our concern is energy, their concern has been all along strategic. The strategic approach adopted by Shrimati Indira Gandhi in 1974 and pursued further by Shri Atal Bihari Vajpayee in 1998 is to see that it is contained. This is their principal objective, which I will prove just now.

They are not concerned too much with this as for them it is only Russia and China who have the right to build-up nuclear arsenal. So far as India is concerned, they are opposed to it irrespective of which Government is in power whether it is the Congress Government or the NDA Government. ... *(Interruptions)*

**Shri Rupchand Pal:** We are advocating universal disarmament.

**Shri L.K. Advani:** I can quote even a recent statement that: "Our approach on the nuclear weapons is clear from the very beginning. India must not go in for weaponization in the nuclear field." This is your statement, and I can understand it. ... *(Interruptions)*

**Shri Rupchand Pal:** We are supporting universal disarmament.

**Shri L.K. Advani:** Sir, Dr. Manmohan Singh in the famous statement made at the Tarapur Atomic Power Plant on August 31 said that: "India cannot afford to miss the nuclear bus." He said that: "There is today talk the world over of a nuclear renaissance, and we cannot afford to miss the bus or lag behind these global developments."

The UPA Chairperson, Shrimati Sonia Gandhi, went a step further while speaking at Jhajjar in Haryana when she said that: "Those who are opposed to the deal are not only enemies of the Congress, but also of India's development." I do not know why people should use words like enemy in this context meaning both the Left Party, who are allies to the Government, and the NDA, which is certainly opposed to the Government. We are political adversaries, and none of us are enemies of any other Party. But this statement mentioning 'enemies of development' is difficult to believe.

I have with me the Integrated Energy Policy Report of the Expert Committee set up by the Planning Commission. It was released in August 2006. It has taken into account all the promises made in respect of energy in the nuclear deal. The Committee was headed by Dr. Kirit S. Parikh, and Dr. Anil Kakodkar, Chairman of the Atomic Energy Commission (AEC) was also a Member on the Committee. I would like to quote just one portion of it. The Report says that: "Even if a 20-fold increase takes place

in India's nuclear power capacity by 2031-2032, the contribution of nuclear energy to India's energy mix is also, at best, expected to be 4.0 - 6.4 per cent." This is the total. It further says that this is an optimistic scenario, and possibilities of imports of nuclear fuel would be made possible if the Indo-US Agreement is not impaired. Only then, there will be this scenario – 4 to 6.5 per cent. Now, how can this be called a Deal to ensure energy security for the country? Certainly not; it is so obvious. Let us not delude ourselves.

It is true that my Party, the BJP, earlier the Jan Sangh, has been the only Party – in 1964, China had its nuclear blast at Lop Nor — which in 1964 itself moved a Motion in the Lok Sabha, but in 1966, we formally adopted a Resolution in our Party's National Council at Varanasi that India must build up a nuclear deterrent of its own. I can tell you that in those days all other political parties criticized us, scoffed at us, and the argument was that we could not afford it; India just could not afford it because our resources were very limited. But we drew strength from the fact that the Principal Architect of India's Nuclear Programme, Dr. Homi Bhaba. He was among those who favoured India becoming a nuclear weapon State, and he said it very clearly. So much so that in one of his very significant speeches made on All India Radio on 24<sup>th</sup> October, 1964, the same year as China had its nuclear blast at Lop Nor, he said: "Atomic weapons give a State possessing them in adequate numbers a deterrent power against attack from a much stronger State." This was the statement that he made in 1964 just a few days after the Lop Nor blast, though at that time the Government's policy, the Government was headed by Pandit Nehru, was that we would develop our nuclear programme, that our nuclear energy would be used only for peaceful purposes, and that it would not be used for weaponizing the country.

Our Party became the sole Party to be an advocate of this and it is going on since then till today. So, when in 1998 Vajpayee ji became the Prime Minister, he was able to make all the other parties in the Coalition agree to this that we must develop a nuclear deterrent of our own. On the 19<sup>th</sup> of March, the NDA Government took office, and on the 11<sup>th</sup> of May, we had these Pokhran-II blasts. I can say, at that time, we were criticized within the country not only by the Left Parties, but even by the Congress Party. The present Prime Minister was Leader of the House in the other House and he criticized us. His criticism was that the consequences for our economy would not be good; it would damage our economy; economic sanctions would be imposed on us, and the consequences would be these.

Sir, I think Mrs. Gandhi did the right thing when she departed from the policy laid down by Pandit Nehru, and in 1974, shortly after the Indo-Pak War in which War, America had sent its nuclear-armed Seventh Fleet to the Bay of Bengal.

**Shri N.N. Krishnadas:** At that time, the Soviet Union protected us.

**Shri L.K. Advani:** Therefore, if Soviet Union protects us or helps us, my Party has always been grateful to it. We were in favour of the Indo-Soviet Defence Agreement that we signed shortly after the War. We are not like you in which you have a closed mind in respect of America. You would not talk about America. So far as we are concerned, even at that time, we had favoured... (*Interruptions*)

**Shri N.N. Krishnadas:** We are against American imperialism.

**Mr. Speaker:** Advani ji, do not reply to it.

**Shri L.K. Advani:** They are not worthy of reply.

**Mr. Speaker:** But you have replied to that.

**Shri L.K. Advani:** I concede to the Speaker's advice. He thinks that you should not be replied.

**Mr. Speaker:** I said that you should not get diverted because your speech is a very important speech.

**Shri N.N. Krishnadas:** You always take advice from the hon. Speaker.

**Mr. Speaker:** It is better to take advice from me than anybody else, so far as the issue of running the House is concerned.

**Shri N. N. Krishnadas:** It should always be like that.

**Shri L.K. Advani:** Therefore, my first point to the Government is, do not try to mislead the people by telling them that this is for energy purposes only and anyone who is opposing this is in a way standing in the way of India's development. I think that we need energy. I may even mention something that relates to our period in Government. Recently, many negotiators came from America to persuade us to support this Deal. It made me feel that even more than the Government of India it is America which is interested in this particular Deal. One of the people who met me and who has been involved in this nuclear programme of America, he

originally happens to be an Indian who has lived in Mumbai, belongs originally to Goa, and has written an excellent, a very comprehensive book on India's nuclear policy and nuclear doctrine. His name is Ashley Tellis. I am not going to mention anything that he spoke to me personally. I would not mention it; it is not proper. But I have seen one of his interviews on Rediff.Com in which the question was that why no Deal was struck with the Vajpayee Government of this kind. His answer was that the Deal could not be reached because the Vajpayee Government did not offer much to the US in exchange for the Agreement. We got more from the Government of Dr. Manmohan Singh. The next question was: "What is it that you wanted from the Vajpayee Government but could not get?" The answer was: "I am afraid, I cannot answer this question." Now, this made me make some enquiries into those who were in the matter at that time. I am told that so far as negotiations with our Government are concerned, at that time, there was never even a suggestion that there would be a ban or a curb on our right to test. Secondly, we were willing to open only two reactors for inspection – two out of sixteen – by the IAEA and no more. There were other matters also on which we could not agree, but the sum and substance is that this particular statement, "that we could not get from the NDA Government what we were able to get from Dr. Manmohan Singh's", I do not know how to see it.

But what I do see is that Mrs. Gandhi went in for Pokhran-I. The other day the name that was mentioned, Mr. Paul, Henry – one Henry came to see me also (Henry Kissinger) – and I casually happened to tell him that my Party has always been in favour of India becoming a nuclear weapon State, which Pandit Nehru and subsequent Governments up to Mrs. Gandhi's, were not in favour. I even mentioned that Shri Morarji Desai was also not in favour of it, and we were in that Government. But Mrs. Gandhi, after US sent that nuclear-armed Seventh Fleet, was prompted to go in this direction. When I said to him, "Your Government", I meant the Government at that time, he smiled and his reaction was, "Well, I have been personally blamed for that."

Whatever that was I cannot say. But this much I can say that Mrs. Gandhi took a step in the right direction when she thought in terms of building India as a nuclear weapon State. In between there were several Governments, in one of which Shri Venkataraman was Defence Minister. He is publicly on record having complimented Vajpayeeji when a book by Vajpayeeji was being released, and saying, "While I was Defence Minister, all the things in Pokhran were ready. Everything was ready. I also went and inspected it at the last moment and I found everything in order. The scientists were there

and everything was there. But we somehow failed to do it because we came under pressure. I compliment you for disregarding all kinds of pressures and going in for Pokhran II". Shrimati Gandhi did India proud when in 1974 she conducted Pokhran I. Shri Atal Bihari Vajpayee did India more proud by completing the process - that was the first step really – and conducting Pokhran II.

Mr. Prime Minister, are you determined to ensure through this deal that there will be no Pokhran III? Is that your desire? Our objection to this particular deal is principally because this deal prohibits India from making another test. Our feeling is that today India is at a stage where it is in a position to gradually build up an effective nuclear deterrent against all our hostile neighbours. I am told that we are going in for it. Well, very good. But this is also true that the 123 Agreement says that national laws will prevail. American national law will prevail on this insofar as our strategic partnership is concerned. Section 106 of the Hyde Act bans Indian testing. It also specifies the consequent punitive actions that might follow including America's right of return of nuclear reactors and other materials sold to India. The 123 Agreement upholds applicability of national laws to govern its implementation. Hence, the 123 Agreement cannot override the Hyde Act. This has to be understood.

This was very clearly explained by Nicholas Burns himself when a reporter asked him in a Press Conference. "In the Hyde Act US Congress made it quite clear that if India were to test a nuclear weapon, American cooperation with India would cease. If you are giving India assurances that there will be no interruption in its fuel supplies regardless of what happens, how does that comply with the law?"

This is a very pertinent question posed by a journalist. Look at the answer that Mr. Burns has given. He states, "First of all, we were quite careful when we began this latest phase of negotiations and we reminded the Indian Government that since the President and the Prime Minister had their two agreements of July, 2005 and March, 2006, something else has happened. The United States Congress had debated over six, seven months those agreements and the Congress has now passed the Hyde Act. So, we had to make sure that everything in this US-India Civil Nuclear Agreement, the 123 Agreement was completely consistent with the Hyde Act and well within the bounds of the Hyde Act itself".

So, this kind of trying to tell us that the 123 agreement does not mention Hyde Act, the 123 agreement does not mention all these restrictions, this is misleading us. No, it is not true.

The two essential parts of the clarification given by Burns are - firstly, he invited the Indian negotiating team that in terms of sequence of events, the Hyde Act comes after the two agreements between Dr. Manmohan Singh and President Bush; and secondly, we had to make sure that anything in this US-India Civil Nuclear Agreement, the 123 Agreement was completely consistent with the Hyde Act and well within the bounds of the Hyde Act itself.

Sir, in its present form, in the final form, the US legislation adopted the NSG guidelines, imposed extraneous conditions on India, this is what Dr. Manmohan Singhji said in Rajya Sabha on August 17 – if in the final form, the US legislation be adopted the NSG guidelines, impose extraneous conditions on India, the Government of India will draw the necessary conclusions consistent with the commitments I have made to Parliament.” This is your own statement. Are these consistent with the assurances given in both Houses that under no circumstances, would we accept the kind of restriction on our right to - you have said in this House also - test? Though it is said that provisions have been made which call for discussion and we have to convince the American side...

**Mr. Speaker:** If you yield?

**The Prime Minister (Dr. Manmohan Singh):** Since you have quoted me on India's right to test, what our Government has committed on this issue of testing is no more than what your Government had done that we are committed only to a unilateral moratorium and that if in our wisdom, if necessity arises that this country has to have a test, there is nothing in this agreement which prevents the exercise of that sovereignty.

**Shri L.K. Advani:** Correct. I had anticipated this comment of yours that after all, we had unilaterally decided to impose the moratorium but a country which unilaterally decides to have a moratorium on the point which we have reached, can unilaterally decided to disregard that. On both occasions – whether it was in the case of Mrs. Gandhi in 1974 or in 1998, in the case of Shri Vajpayee, America did try to penalize us. Though in 1974, the sanctions imposed on us were far severe; and secondly by 1998, India had arrived at a stage where even the severe constraints could not do us much harm so that practically they had to withdraw them. But on both occasions, the consequences followed.

Here, we are inviting consequences by signing for them this agreement that if we test, the consequences, the right on return of America. This would be something which we never agreed to. You imagine something

like that happens and sometime later, some other Prime Minister has to reply in this House. What will happen? How can he defend that we have agreed to it? We have agreed that if we test, then, you have the right to take back our nuclear reactors and you have the right to take back other related necessary materials. We would have never done it.

Unilaterally, they are doing it and trying to penalize us is one thing, and by virtue of a pact, we do it and we agreed to it. We are opposed to this kind of infringement. I regard it as an infringement of India's sovereignty. That we will explain why a test became necessary? China did this; Pakistan did this; so and so country did this. They say, no, we are not satisfied. It is for them to be satisfied that the argument that we have for going in for a test is justifying. This is the Pact and we have agreed to. We said that if you are not satisfied, you can take back all this.

Mr. Prime Minister, the whole thing is so apparent that no self-respecting country should agree to it. I am sure that if Mrs. Gandhi were there; if Shri Vajpayee were there, they would not have agreed to this kind of encroachment of our sovereignty.

Sir, I had mentioned about Dr. Bhabha being an advocate of India becoming a nuclear weapon State. These days, while studying the whole thing, I was surprised at least I did not recall it that way but a small thing that I had thought might be worth mentioning on this occasion. On 11<sup>th</sup> January 1966, just hours after he had signed the Tashkent Declaration, formalizing the end of hostilities in the war with Pakistan, the Prime Minister Shastri died of a heart attack. This is a casual mention of a fact.

Just two weeks later, on January 24, on the very day Shastri's successor Indira Gandhi was sworn in as the Prime Minister, Dr. Homi Bhabha was killed while on a trip to Europe, when the plane in which he was flying collided with Mont Blanc in France. India's impressively large nuclear establishment was suddenly left without any official plan or policy to give a direction.

Now, it makes me wonder – was it just an accident? I do not know. I have no further information than what I have come across in this. To me, it seems a mischief that a person who was the head of our nuclear establishment and who had not kept it secret to himself and who had publicly said that India should have a nuclear weapon, dies like this. And he had publicly said, in reply to a question during a Press Conference, which I had participated in, as a Journalist in those days, that if the Government of India were to give me clearance, our own atom bomb would be ready within

18 months to two years. Such a person suddenly being killed in an accident of this kind, it does make me wonder. Maybe, you have more facts about those days, but I do not have. I thought, I might put it on record, that it is to me an enigma and a mischief.

In the same context, I would say that today we are outside the Nuclear Weapons' Club. Why? It is only because of the Non-Proliferation Treaty. The NPT Act passed in 1967 and implemented in 1970 said that only those countries which have developed a nuclear weapon of their own before 1970, would be deemed as nuclear weapon States. I today wonder if we had not committed that mistake, in those days, in the 1960s and had gone by Dr. Homi Bhabha's advice, we would have been a part of that club.

He even requested Pandit Nehru that we should have it. But Pandit Nehru said, 'No. Not so long as I am there and I would not favour it'. If we had done it at that time, we would have been a part of this Nuclear Weapons' Club, before 1970 and all the debate that is now taking place, would not have been needed. We would not have been in this situation. We are now being pushed into the non-proliferation regime in this manner because we need nuclear energy; and therefore, they are taking advantage of it, by pushing us into the non-proliferation regime.

I must compliment Mr. Nicolas Burns, the US Under Secretary of State for Political Affairs, who was one of the main negotiators and the Principal Spokesman for all that had happened. He said that this deal brings India back into the Non-Proliferation mainstream in a way, it was never before. It is true. Never before had any Prime Minister agreed to this. But we agreed to this.

He went on to say that – he did not talk about 'energy' – this deal is the centrepiece of Indo-US strategic relationship. I am not against strategic relationship; I am not against strategic partnership. But this strategic relationship and partnership is in the nature of a junior or of an unequal partner; India cannot be an unequal and a junior partner of America or of Russia or of any other country. India, this one billion strong Indians, is a proud nation, which cannot be subservient or junior to any other country.

My objection to this particular deal is principally because firstly it bars our right to test.

Secondly, it makes us a junior partner in this partnership with America.

Thirdly, whatever we may say, they have also said that it is not merely IAEA but even American inspectors can come and see the nuclear reactors that

are opened. You have assured us the other day that under no circumstances you will allow Americans to come here and see, yet it is there.

I would say that if in the sixties we would have done what Dr. Homi Bhabha advised us to do, we would not have missed the nuclear weapon club or the nuclear weapon bus. We missed it. Now, let us not commit ourselves to that situation in perpetuating. This particular 123 deal says that it will last for 40 years.

One of the leading papers of Delhi, one of the leading editors who had been a Member of the Congress Party at one time, Shri M.J. Akbar wrote on that day that it is a day of dependence. After sixty years of Independence are we going to sign a deal which make us dependent for 40 years? 123 deal itself says that this will last for 40 years.

Only recently the Prime Minister went to Moscow, Russia. Among the journalists who accompanied him, one was a well known editor of *The Hindu*, Shri N. Ram. I saw an editorial in *The Hindu* after the Prime Minister's return. The editorial says: "According to Russian official sources an inter-governmental agreement, presumably on par with India's 123 Agreement with the United States, was fully prepared for signatures during the Summit but the Indian side backed out at the last moment." I do not know why. I do not know what the proposed agreement was. Why the Indian side backed out? *The Hindu* itself says that it was according to the Russian official sources. This is what he gathered. Shri N. Ram is a very responsible editor.

I would urge the Government to come to Parliament clean on this matter. What exactly happened? What was the proposal? What transpired? Why did you back out if you had agreed to it earlier? All these things must be known, otherwise, some of the complaints people have about how independent is our direction of Foreign Policy would certainly come under question mark.

I shall conclude my remarks by saying that 123 Agreement, as it stands, is unacceptable to the nation because it is deeply detrimental to India's vital and long-term interest. Let me say that hereafter if NDA gets a mandate, we will re-negotiate this deal to see that all the adverse provisions in it are either deleted or this treaty is rejected completely.

Thank you, Sir.

**114. Speech of External Affairs Minister Pranab Mukherjee while replying to the debate in the Lok Sabha on the Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, November 28, 2007.**

\* \* \* \*

*(Before the start of the External Affairs Minister's reply Shri L.K. Advani and some other Members left the House.)*

**The Minister of External Affairs (Shri Pranab Mukherjee):** Mr. Deputy-Speaker, Sir, I would like to express my gratitude to all the hon. Members who have participated in this discussion from 2 o' clock in the afternoon till now. Twenty-nine hon. Members have made their contribution. I expected that the principal Opposition party, the Leader of the Opposition would remain to listen to the reply to the points, which he raised but after all we are living in a world where all the parliamentary norms, etiquettes and courtesies are thrown to the wind. Therefore, I am not surprised to know the behaviour of the BJP and other NDA partners are not unexpected to do this. I am a small fry. But for the first time in the history of this country, the hon. Prime Minister of the country was not allowed to speak on August 13, 2007 when at the earliest opportunity, in deference to the parliamentary customs, etiquettes and systems, he took the opportunity to explain to the House the agreed text of the 123 Agreement. I would say, in the course of my observation, I would try to cover the various points which the hon. Members have made but even the beginning has a beginning. This 123 Agreement, this discussion is practically the continuation of the discussion which should have taken place in the Monsoon Session. Shri Rupchand Pal has correctly pointed out while raising the discussion that because of the obstruction of the principal Opposition party, it could not take place. Nonetheless, I am happy that we have the opportunity to clarify a large number of issues which have been raised by the hon. Members. Sir the Prime Minister has articulated his views on this important arrangement which is proposed to be entered with the USA. First of all I would like to clarify one point which the Prime Minister also mentioned on a number of occasions. This 123 Agreement with the USA is with the completion of this process, which has three stages – one stage, an agreed text between USA and India has been worked out, which has been frozen; the second stage, to enter into an India-specific safeguard arrangements with IAEA, which is

the supreme international body to supervise all matters related to international atomic energy. India is one of the founders of this body in the early 1950s and has contributed in its own way in strengthening this most important and vital regulatory body of the international atomic energy. We are neither a stranger nor a new comer to IAEA; like many other international bodies, India is one of the founders of IAEA.

The short point which I wanted to flag at the initial stage is that this agreement will provide us the passport to enter into agreement on nuclear trade with a host of other countries. The fact is that after the first explosion of 1974 and also after the second Pokhran Test in 1998, there had been sanctions.

The Leader of the Opposition, while making his observations, boasted that his Government had been able to persuade USA to remove all sanctions. Most respectfully, I would like to submit that it was not. A number of Indian entities are still not allowed to participate in many international events related to the nuclear matters. I would not use the word 'apartheid'. But the hard, cold fact is that despite having the talent, our experts, our engineers and our scientists had been denied access to many areas.

One of the Government owned organizations is included in the entity list which is a very important defence organization and some of their activities come under the scanner of USA, as per their own domestic laws. We may like it or we may not like it, but this is the reality. Therefore, an attempt was made to cross the hurdle; once we cross this hurdle, it would be possible. But for crossing this hurdle, the support of 45 countries including USA, Russia, France, China in the NSG and about 30 plus countries in the IAEA group, is needed and this is to remove the restrictions of having access to the nuclear trade, having access to the nuclear technology, to come at par and remove the constraints which are prevailing today. A major part of the speech of the Leader of the Opposition was devoted to boasting, that they have done a great job, by having the second Pokhran test. He told the Prime Minister – that was the burden of his song – that India has sacrificed the right to test, of which he is very proud of. his observations he himself stated that his Party came to power on 19<sup>th</sup> of March, 1998 and they conducted the test on 11<sup>th</sup> of May, 1998 in less than 30 days. Not even a child will believe that a nuclear test can be conducted in less than 30 days. Everything was ready.

Here I would most respectfully like to remind the hon. Members that we had a policy from day one and the policy was enunciated by no less a person than the Father of Nation Mahatma Gandhi supported by Pandit

Jawaharlal Nehru. We are a strong believer in total nuclear disarmament. We did not sign NPT, not because we wanted nuclear weaponisation but because we considered it as a fraud treaty. It is discriminatory. It is creating nuclear haves and nuclear have nots. We did not want to participate in this discriminatory fraud Treaty where two classes of nuclear haves and nuclear have nots are created.

He lamented that he could have entered into the nuclear club if Mr. Nehru did not commit that mistake. Pandit ji did not commit any mistake. He saved the world from impending Third World War but for his policy of non-alignment, taking strong position on various international issues starting from the peace initiative in Korea to condemning the nationalisation of Suez Canal in 1956, attack on Egypt on the issue of nationalisation of Suez Canal in 1956 and preventing the total assault on Egypt through persuasive. World was saved from a catastrophe.

When in 1974 Shrimati Indira Gandhi went for the nuclear explosions, it was not for indulging in weaponisation. Those speeches were made on the floor of this and the other House. They are on record of this and the other House. She categorically mentioned: 'I wanted to have the technology. I wanted to test the competence of the Indian scientists, Indian technicians and Indian engineers'. The purpose was the peaceful use of the civilian nuclear programmes. It was not war-mongerism.

It was taken further in the 3<sup>rd</sup> Nuclear Disarmament Conference by young Prime Minister, Shri Rajiv Gandhi. He told the whole world: 'I am ready. My engineers, my scientists and my technologists are ready. We are just screw drive away from the weaponisation programme. We can do it. We can do it right now. But I want to assure the international community that I will not cross the threshold level.'

We used to have a pledge from 1974 till 1998, almost quarter of a century that we shall keep our options open. We did not fore-close the option. That was the message which Shri Rajiv Gandhi conveyed to the world community: 'I want universal, non-discriminatory, verifiable disarmament where both horizontal and vertical proliferations would be stopped and if the international community agree I will not graduate myself from the threshold level to the nuclear weapon states. That is the philosophy. Perhaps, it is beyond the comprehension of the Leader of the Opposition and his Party, that is why, he found fault with it. I cannot contradict what he said because it is unfair. Unnecessarily he has brought the name of a distinguished son of this country, the former President of India. But the

fact of the matter is that Mr. Venkataraman was the Defence Minister during the Prime Ministership of Shrimati Indira Gandhi and not during the Janata Party and not even after that. Therefore, it is totally unacceptable. This is the factual position. The Leader of the Opposition could have made his home work that Mr. R. Venkataraman was the Defence Minister from 15<sup>th</sup> January, 1982 till the day he was elected as the Vice President of India in July 1984. At that point of time, the Prime Minister was Shrimati Indira Gandhi. Who will believe in this House and in the whole country that Mrs. Indira Gandhi abandoned the nuclear testing programme under pressure from the United States of America. He started by saying – which I have to contradict and the Prime Minister also had to contradict – that the USA is not interested in the energy programme. The very second sentence of the 123 Agreement starts with the energy programme.

He asked why did we not go to the Joint Parliamentary Committee. I explained it on the floor of this House itself. I explained that the Constitution was made by the mighty minds of the then India who devoted their lives to the service of this great nation. In the debates of the Constituent Assembly I found that this issue was debated and the constitutional position was made quite clear. Subsequently, the Supreme Court has also made it quite clear. I would just like to quote one judgement of the Supreme Court in the case of Union of India and another versus Azadi Bachao Andolan and another. In paragraph 18 of the judgement of case No.2004/10 SCC, the Supreme Court said:

“The power of entering into a Treaty is an inherent part of the sovereign power of the State by article 73. Subject to the provision of the Constitution, the executive power of the Union extends to the matters with respect to which Parliament has power to make laws. Our Constitution makes no provision making legislation a condition for the entry into an international treaty in times either of war or of peace.”

That is the constitutional position. That is the latest interpretation of the Supreme Court of India. But any international treaty is not *ipso facto* operationalised if it requires any legislative backing. Then the appropriate legislature and in this case, the Central Parliament, will make the legislation under Entries 10 and 14 of the List I of the Seventh Schedule. It is this House itself. That is not so remote memory. In 1994, when we signed the WTO Agreement, an international treaty, and accepted the Intellectual Property Rights to execute that and to put into effect that obligation, we

had to amend the Patents Act of 1973. That was to provide the product patent which was not available in respect of three items, namely, pharmaceutical, agricultural and food items. That was done by making an enactment in the Parliament. Never has the hon. Prime Minister said that he will not come to Parliament. The statement which Shri Advani quoted, it clearly says so and that is why when the joint statement was issued after 18<sup>th</sup> July, 2005 we debated it in Parliament. After the Separation Plan, March 2006 we debated it in Parliament. We debated it in Parliament on 6<sup>th</sup> August, 2006 and again we debated it in Parliament in 2006 when the Hyde Act was passed and at the earliest opportunity the agreement was signed in August. I think, it was sometimes on 1<sup>st</sup> August, 2004 and the hon. Prime Minister came to Parliament on the 13<sup>th</sup> of August. My colleague, the hon. Minister of Parliamentary Affairs assured the BAC that look on the basis of the Prime Minister's statement we will take it up on the next day. Where have we said that we do not want to carry the people with us?

Somebody from that side suggested that there should be a political consensus. The hon. Prime Minister should take the initiative. He took the initiative and to my mind, excuse me for saying this, he took extra initiative, which was perhaps not necessary, several times as soon as it was signed and the Leaders of the principal Opposition parties, and the NDA leaders were invited. What was their initial reaction? Their initial reaction was that they congratulated the negotiators and they came out and told the waiting media persons outside. After that suddenly they discovered that this agreement cannot be accepted.

Shri Advani also pointed out that there will be no tests. Do you not want Programme III? Whether one wants Programme III or not is a different matter. But I myself on the floor of this House in August last stated that yes we will not hesitate to conduct the test if it is necessary for the country to have this nuclear test keeping in view our security requirement. A question was asked, what is the guarantee that we can go for test? What is the guarantee that we will have it? If one would have read the text — it is not a very big text, there are only 17 clauses and it does not run into hundreds of pages — then one would have found out article 5(vi) (b) assures continuous fuel supply and article 14.8 suggests that it will not affect the military programme. I am reading the first portion of the article.

“The parties affirm that the purpose of this agreement is to provide for peaceful nuclear cooperation and not to affect the un-safeguarded nuclear activities of either party.”

Our strategic programme is un-safeguarded. We have not given it to them. He claimed because somebody gave some interview that what he could not get from Mr. Atal Bihari Vajpayee, we got from the Government of Dr. Manmohan Singh. He gave an example that we gave only two reactors of existing reactors to be under safeguarded. But all future reactors were to be brought under safeguard arrangement and that was the conclusion which the NDA Government did with the USA. What did we do you will find in the text. We said that these six reactors we are giving for safeguard. In future, what the reactors will provide for safeguard, it will be decided by us and not by you. In the text of the agreement, we have one word that our military programme will not be affected. I do not know, if they do not believe the Prime Minister of India, Minister of External Affairs of India, the commitment which we have made in this language of the 123 agreement, when the Prime Minister gave assurances to our Left friends in respect of nine points which were raised. Our job was to ensure that in this 123 agreement, all these nine points are protected.

Sir, just for the recapitulation of the hon. Members, I would like to explain what are these nine points – Full Civilian Nuclear Cooperation; Principle of Reciprocity; Permanent waiver – not temporary, not annual certification; recognition of India as a State possessing advanced nuclear technology; acceptance only of IAEA safeguards not any bilateral safeguards; Safeguarding the integrity and reliability of our strategic programme; rejection of any moratorium on production of fissile material. So, like a responsible sovereign entity, we have said that we will enter into negotiations. There, our position is very clear. It must be non-discriminatory, it must be verifiable and it must be equal. Nothing short of that is acceptable to us and we will not enter into this arrangement and safeguarding our legal right to carry out a nuclear test if that is deemed to be necessary in the national interest. That means, if you want at some point of time that a test is necessary, we will do it. But I reject the concept of Shri L.K. Advani and his Party that India should not carry on universal, non-discriminatory disarmament which is our ultimate goal and even in this session of the United Nations General Assembly, we have tabled a resolution backed by almost 27 countries and we will continue to do so.

The question was raised that why we entered into an arrangement among the UPA and Left Parties. This is not a Parliamentary Committee. This Committee is not appointed by the Prime Minister. This Committee is appointed by the Chairperson of the UPA. It does not consist only of the Members of Parliament. There are three non-parliamentarian members of

that Group. This is an informal group to work out the differences between our supporters and ourselves. So, what has the Parliament to do with it? In Parliament, when we are debating it on the floor of the House, when we are discussing it, I do not have any objection if they say: "We will like to support our party." We will, of course, have to take the approval of the Congress President. I cannot decide it. But they have never expressed their intention that they will like to support the UPA. Let them change their policy. Therefore, this is absolutely an unacceptable position.

So far as safeguard is concerned, we have assured you what is the outcome of it. The outcome of it is that we are going for the India-specific safeguard arrangements. Negotiation will take time. It is a technical negotiation. In that technical negotiation, we will continue and we will like to say three important points which our Left Front repeatedly argued in our Group. When we are insisting that we will like to ensure in the India-specific safeguard arrangements with the IAEA assurance of fuel supply, right of India to have clear strategic reserves to meet the situation in the case of uninterrupted fuel supply, if it is interrupted, if there is a breakdown to meet that situation, there should be a strategic reserve for the fuel and the recognition of our strategic programme by accepting the separation plan which this Parliament is aware of, which has been placed on the Table of this Parliament and which the United States Administration has accepted.

Now, I understand there is an issue about the Hyde Act. If you want to interpret everything with the Hyde Act, I cannot help it. Nobody can help it. The Hyde Act, as Shri Tarit Baran Topdar has correctly pointed out, is a legislation enabling the US Administration, the US President to have a waiver to enter into a civilian nuclear programme with India, which is a non-NPT country, which is a nuclear-weapon country not recognised but a nuclear weapon-country which is having strategic programmes. As per the 1954 Act, the USA cannot cooperate with that country. Therefore, in that Act, they require a waiver. That waiver has been provided by the Hyde Act. While providing the Hyde Act, one thing has been pointed out. Who is to interpret the Hyde Act? I have myself stated that there are many prescriptive and extraneous issues in the Hyde Act which are not binding on us. How can it be binding on us? As a law passed by the Indian Parliament is not binding the US Congressmen, similarly a law passed by the US Congressmen may be binding on the US Administration but not on India. The only binding agreement on India is the 123 Agreement. I will most respectfully submit to the hon. Members to show me one clause. Yes, I know that somebody will get up and say that the question of the national law is there. Yes, that is the standard practice of all

international agreements. It is equally true that in Clause 14, there are references to the Vienna Convention and references to the international laws in case of disputes. That was the mandate which we gave to the negotiators to enter into negotiation with their American interlocutors. We told them quite clearly, I myself at one point of time when I had to intervene, told: "Look, this is unacceptable." I told them that the nine points which the Prime Minister specifically referred on the floor of Parliament and gave his commitment are to be preserved in the text and there will be no reference to the Hyde Act. Most respectfully, Mr. Deputy-Speaker, sir, I can claim that we have done it. What did President Bush say? He is the Chief Executive of America? How is he interpreting the Hyde Act? Mr. Advani is depending on the interpretation of some Under Secretary – I would not mention his name – but I am quoting from the statement of the President of the United States of America, not the statement of any Under Secretary. I do not make any reflection on the Under Secretary or their officers. But the Chief Executive of the United States of America said:

"Today I have signed into law HR 5682, an Act containing Henry J. Hyde US-India Peaceful Atomic Energy Cooperation Act of 2006. The Act will strengthen the strategic relationship between the United States and India and deliver valuable benefits to both nations. Section 103 of the Act purports to establish US policy with respect to various international affairs matters. My approval of the Act does not constitute my adoption of the statement of policy as US foreign policy. Given the Constitution's commitment to the Presidency of the authority to conduct the nation's foreign affairs, the executive branch shall construe such policy statements as advices."

This is the comment of the President of the United States of America and my young friend Mr. Jyodiraditya Scindia very aptly explained it while participating in the debate.

So, my most respectful submission would be that we are accepting the obligations under Section 123 of the US Atomic Energy Act of 1954, not under the Hyde Act. The Hyde Act is an enabling provision. That is for the US Administration to deal with it and they have assured us that it would not stand in their way of implementing the commitment which they made in the Joint Statement of July, 2005 and in the Separation Plan of March, 2006. Therefore, Mr. Deputy-Speaker, Sir, I would like to, most respectfully, submit that let us look into the 123 Agreement.

I am not going into the larger aspects of foreign policy debate, but I would like to emphasize a couple of points. Much has been said about the voting in the International Atomic Energy Commission Board. I think we have explained about it several times here. There had been two occasions where we did it and we explained why we did it. It was because at that point of time we were given to understand that if we accept the amendment of the European countries, then the matter will be within the Board of IAEA and it will not be referred to the UN Security Council because if it is referred to the UN Security Council, then they will issue sanction as they have issued two sanctions on Iran. But in the last one in February, 2006, the position and the voting pattern which we had was that a large number of countries including the Non-Aligned countries like Russia and China and we were together. In my intervention in the conference of 45 countries of Europe and Russia, while stating India's position on Iran when I was asked to state our position, I made it quite clear that Iran is an old civilized country and a very proud nation. I do not feel that issuing sanction after sanction is going to resolve the problem. Iran will have to be engaged in the dialogue process and the most appropriate forum is IAEA. The latest voting which has taken place there – no voting, where it has been again decided — along with China, Russia, Malaysia and large number of other countries, non-aligned countries, we have decided that yes, diplomacy is to be given a chance. This is a complicated issue. It will take time.

Why should we be scared of any country? Yes, we have strategic relationship. What is wrong with it? Most respectfully I would like to submit that it is not alone USA, I have strategic relationship with Russia, with China, with Indonesia, with Japan, with Singapore, with France, with Germany, with European Union. I have strategic relationship with ten countries.

**Md. Salim:** All encompassing!

**Shri Pranab Mukherjee:** No, not all encompassing. It is depending on the nature of relationship which we want to have. There has been substantial improvement in the relationship with China.

During the visit of Chairperson of UPA, the type of warmth she felt at the top most premiership of People's Republic of China is envy of anybody, any world's statesman and that is the meeting of her after the election. She was the first person from outside to visit People's Republic of China. In a short span of last nine months, I had four interactions with the Chinese Foreign Minister and the Prime Minister's visit is to come very shortly.

I have no doubt that in between they are saying the discussions which we had with President Hu Jintao at Heiligendamm at the margin of G-8 and G-5 countries and with Premier Wen Jiabao in Singapore speaks of the best relationship between our two countries. It is not possible for me to disclose everything what transpired between Premier of China and our Prime Minister. But I am quite confident that so many people are saying so many things about their cooperation even in the area of civilian nuclear programme. I am quite confident that if we cross the hurdles which we are having we will be able to have that.

Questions have been raised why Prime Minister did not sign the agreement with Russia. We have explained it. He explained it when the occasion arose and the reason was very simple. We are waiting, because after all these arrangements are to be made and to be operationalised; and for operationalisation, we shall have to go with IAEA India-specific Agreement. We will have to arrange the NSG guidelines and when we are in this process, Memorandum of Understanding with Russia about four reactors and Kudankulam and as soon as the process is ready, we will be able to enter into that agreement. That is the reason I was saying that this is some sort of a passport. Once I have the international passport visiting all countries, I have the option to choose which country I will visit. It is not necessary that I may take passport in the name of visiting one country, but it is not necessary that I shall confine myself only to that. It will be open. Surely, we want interaction. Lot of violations etc. has been called. The initiator of the discussion, Rup Chand *babu*, said that it is only 15 per cent of the world energy requirement. It is correct. Today I have 1,28,000 megawatt power generation capacity; nuclear energy is only 3,900 megawatt. We are not talking of today; we have to talk of future.

Today our import of oil is 100 million tonnes. If we are importing these 100 million tonnes at the cost of \$ 100 per barrel, and if the entire thing was passed on to the consumer, one can easily understand what could have been the cost of energy. But simply because it is absorbed by somebody in the form of subsidy does not mean that the cost of the energy is getting less here. Coking coal also we are importing. It is not that we are just depending on them. The Prime Minister has emphasized that we want energy; we want access to the technology on thorium, the three-tier. Even in the text of the Agreement itself, you will find that our three-staged civil and nuclear programme, which was the dream child of Homi Bhabha, the architect of Indian nuclear programme, has not been diluted at all. If we have just thorium; I am told by some reports that I have received where I find on plutonium the

experts are telling that the nuclear power generation capacity can be raised from 10,000 megawatt to around 500 thousand megawatt exclusively using the contents from spent fuel discharged from PHWRs following the Plutonium 239, Uranium 238, fuel cycle in FBIs. Surely, it is not of today. It is of tomorrow. But we shall have to think of tomorrow.

Mr. Rajiv Gandhi thought in the mid-eighties of the revolution in Information Technology. Many of us did not believe in it. Today, India is on the top of Information Technology (IT). Many of us opposed computerization. Today, we are going for that.

**Railway Minister:** (*Shri Lalu Prasad Yadav*): *We too opposed it.*

**Shri Pranab Mukherjee:** *Now, you are helping...(interruption)*

Therefore, Mr. Deputy-Speaker, Sir, I would not like to take more of your time. I have covered some areas. Yes, there will be discussions; we are having discussions. As I mentioned, we have a mechanism with the Left, UPA. *Lalu ji*, *Sharad ji*, and *Baalu ji* are the Members there; I am also there. We are discussing among ourselves and we are trying to resolve it. The Leader of the Opposition has assured us, and it has been echoed by some of his followers, that if they have the mandate they will renegotiate it.

I will just conclude my observations by narrating one incident. It happened not in this House but it happened in the other House. I was a Member of that House at that point of time. It is being told today that sovereignty has been mortgaged. Mr. Deputy-Speaker, Sir, fortunately or unfortunately, whatever it may be, I am in the Government of several Congress Prime Ministers from the seventies. At least, I have been accused not less than three times of mortgaging India's sovereignty. Once I mortgaged India's 'sovereignty' when I entered into an extended funding facility with IMF by borrowing five billion SDRs. When we returned the last installment of 1.2 billion SDRs, I told in one of my speech: "Many of you told me, like self-styled Cassandra prophecy that I will come out of the IMF building on a stretcher. I have come out of the IMF building with my head on my shoulder and on my foot, and not on the stretcher."

Similarly, again when we signed the WTO Agreement, they said that 'sovereignty' had been mortgaged and it went to such an extent. I can understand that. The Left opposed then and the Left opposed now.

Now, as I mentioned, the Indian Patent Act, 1973 was to be amended as per the International Agreement of IPR. Twice that Bill was rejected in the

Rajya Sabha under the command of a great Member of the BJP who later on became the Minister in the NDA regime. ... (*Interruptions*) I will not take the name of the Member of the other House. But the funny part is this. After some time when the table was turned, when they were in the Government, twice India lost in the international dispute settlement mechanism of WTO. Then, the same Party came to us – I was sitting in the Opposition and Dr. Sahib was the Leader of the Opposition – and said: “If you support, we will like to amend the Indian Patent Act.” It was sometime in 2000. I talked to the Congress President. She said: “If you consider that the Bill is good and in the national interest, simply by accident of changing the seat need not necessarily change the policy.” So, with our support, the Bill was passed, and the only change was made. The Member-in-charge of the 1994 Bill was Pranab Mukherjee as the Commerce Minister and in 2000 the Member-in-charge was Shri Murasoli Maran, and except the year no further change was brought, which was rejected by them, and they had to plead to the Congress Party to support the Bill. Therefore, let us not be... (*Interruptions*)

**The Minister of Parliamentary Affairs Minister of Information and Broadcasting: (Shri Priya Ranjan Dasmunsi):** That is why they left the House without listening your speech. ... (*Interruptions*)

**Shri Pranab Mukherjee:** Therefore, let us not be carried by the emotions. Yes, let us calculate, let us debate, let us discuss and let us try to find out how the issues could be resolved.

Mr. Deputy-Speaker, Sir, as the hon. Prime Minister has assured the hon. Members umpteen number of times, I would like to submit most respectfully that the process is not yet complete. Whenever any major step in the process had been taken, we came to Parliament. After the Joint Statement, we came to Parliament. After the Separation Plan we came to Parliament. Again we came to Parliament. After the Hyde Act we came to Parliament. After agreeing the Agreed Text on freezing it, we have come to Parliament. Again we will come to Parliament.

With these words, I thank you, Sir, for giving me this opportunity.

**Shri Rupchand Pal:** Sir, I had made several important points but the hon. External Affairs Minister has not covered them in his elaborate reply. One is about the relationship between 123 Agreement and the Hyde Act. There are public comments by important USA administrative people about the relationship. I am not going into that. I want to know whether the 123

Agreement will override the Hyde Act or the Hyde Act will override the 123 Agreement while making a reference to the international practice and all these things.

I had asked whether the fast breeder reactors are also being put under safeguards. ... (*Interruptions*)

**Shri Pranab Mukherjee:** The answer is 'no'. ... (*Interruptions*)

**Shri Rupchand Pal:** Okay. Now, our Indian negotiator is in the process of negotiating about India's requirement, that is, India's specific safeguard. I would like to know whether the Government has anything in mind as to what may be the requirement because this is a grey area. In re-processing, there is a notional idea given and nothing concrete. I would like to know how India is going to be benefited.

We find that they are telling that these are the benefits, namely, jobs would be created, their ailing nuclear industry would be rejuvenated, they would have something of a new architecture in Asia and all these things. But what is the benefit that we are going to derive has not been clearly stated in the long reply of the hon. Minister.

Then, things in regard to selective transfer of technology, in regard to nuclear reactor, and in regard to dual use have not been cleared by the hon. Minister of External Affairs. Similarly, about the energy mix, whether the nuclear energy at any point of time is going to help us in a big way ignoring our coal sector, ignoring our hydel sector, ignoring our renewable energy sector!

Sir, I am really disappointed that the hon. Minister did not cover all these important points.

**Shri Pranab Mukherjee:** Most respectfully, I would like to submit that if the hon. Member was a little careful, I mentioned about what I require from the IAEA. I mentioned three specific areas. It is not for the first time that India is going to have a safeguard arrangement with the IAEA. Whenever we buy a reactor from outside, we have to make it with the IAEA. There is a standard format. But what is India specific? About the India specific, I referred to these three areas in details. They are assurance of the fuel supply, right to create the strategic fuel reserves, and recognition of the separation plan, in other words, recognition of the strategic programmes. We should expect to have them. For that, the negotiations are going on. These are highly technical details, which are being worked out by the experts. I am not an expert. I am a layman like you. Therefore, here, we

are normally guided by them. We are quite confident that they will protect our interests.

So far as the energy mix is concerned, I started my observations by saying that we are not looking at only today, we are also looking at tomorrow. Now, everybody is talking about the climate change. We cannot keep it under the carpet. About the cost of the technology, which the Prime Minister is meeting, and which will be again strongly advocated in the Bali Conference that as the developing countries cannot sacrifice their development, therefore, they will have to be compensated by giving adequate access to the clean energy technology at an affordable cost. The whole world, especially the advanced countries are looking at the markets of China and India. I think, they have made some calculations that 50 per cent of a few trillions dollar worth trade will be only between our two countries.

Therefore, these are the areas, where we are concentrating on, and the Planning Commission is working on it.

**Shri Basu Deb Acharia:** Sir, taking into account the views expressed by the majority of this House, I want a categorical assurance from the hon. Prime Minister that the Government will not proceed further. This should be treated as a sense of the House. I want this assurance from the hon. Prime Minister.

**Shri Pranab Mukherjee:** Most respectfully, I would like to submit that I started my observations by saying that the debate, which could not take place in the Monsoon Session is now taking place. It is just a small step towards the process. Unless the process is complete, where is the question of taking the sense of the House? Let the process be completed. I also assured that at the end of every stage, I will come to the Parliament and I will discuss with you.

Thank you.

**115. Speech of Member of the Politbureau of the Communist Party of India (Marxist) Sitaram Yechury in the Rajya Sabha while participating in the Short Duration Discussion on Indo – US Nuclear Deal.**

**New Delhi, December 4, 2007.**

**Shri Sitaram Yechury(CPI-Marxist):** ..... But, Sir, I would only like to recapitulate very briefly that in the first debate that we have had here, the Prime Minister was kind enough to accept the nine assurances that we sought from him and, at that stage, I remember I had stated that we would be willing to accept those as the sense of the House. At that time, the Hyde Act was not passed by the U.S. Congress. Subsequently, when the Hyde Act was passed, we had another debate in December and in the conclusion of that debate the Prime Minister had categorically assured that (a) they would come back to the House before the 123 agreement was finalised or frozen, and (b) none of the assurances that were made would be violated and the Government would stand by all the assurances that had been given. But, unfortunately, Sir, the assurances the Prime Minister had given, at least on three counts, we think, have been violated in the 123 agreement text. I would come to that subsequently. But, since they have been violated, I would only urge upon the Government not to proceed on this deal not only because of our opposition or the opposition from the other sections of this House but also because it is in violation of the Prime Minister's own assurances to the House, which I hold as the most sacrosanct and I do not think that those can be violated. Therefore, we urge the Government not to proceed further on this deal because of this important reason.

Secondly, Sir, before I come to the content of why I am making this assertion that the Government should not proceed, I would also touch upon the fact that much has already been said and stated that our opposition to this deal stems from our ideological perception of being anti-American. I would like to set the record straight. Sir, it is not that we are anti-American. In fact, on the contrary, we are not anti-American people; but, I think, we are pro-American people because 61 per cent of the American people, in the latest opinion poll, have said that they do not endorse and they are not with the Bush Administration's or the present Government's policies in the U.S.A. So, we are with the American people and not with the Administration and we are anti-American imperialism and not anti-American or anti-American people.

Secondly, Sir, also, I would like to clarify that much is also made out that our opposition stems from an extra-territorial loyalty. I have gone on record in this House, it is there in the proceedings, that we take our decisions and our positions purely and entirely on the basis of what we perceive as India's national interest. And it is on that basis we are saying that this deal is not in the interest of India. I would come to the details of why I am saying so a little later. But, this is not on any so-called extra-territorial loyalty. We have stated very clearly that even if China were to endorse this deal, we would still continue to oppose this deal because we think this is not in India's interest and, therefore, I want to make this clear again before I come down to the actual details of why we are opposing this deal.

Having said this, I would like to discuss this deal, as I said, without repeating what we have said on the two earlier occasions in the context of the pretext for the deal, the context of the deal, the text of the deal and, of course, the sub-text of the deal which I will try and elaborate.

First, let us take up the pretext. What we have been told is that this deal is absolutely essential for India's energy security. If I may say so, on the last occasion, I had read out to this House the Planning Commission's assessment on our energy scenario and this was also read out subsequently by various other participants. So, I do not want to repeat that. But on the point about India's energy security, we have to bear in mind the followings. India's current power generation is 1.27 Giga Watts. At the current rate of the GDP, this needs to grow at 337 GW by 2016-17. There is no doubt that if this is not achieved, India's pace of development would be arrested. The moot question, however, is whether nuclear energy expansion is the only or the best option that we have today. In 2006, 3.9 GW of nuclear power was generated, that is, 3 per cent of our total power generation. In the most optimistic scenario, the Planning Commission estimates that this could go at best to 20 GW by 2016, over just over 6 per cent of our production at that point of time. So, all this is happening for that 6 per cent and for this 6 per cent are we and should we today sacrifice and mortgage our, what we believe, sovereignty, and in that sense be vulnerable to pressures from US imperialism. Further, Sir, given the abundance of coal reserves in India, the Planning Commission estimates that thermal energy would dominate power generation in India, and as far as hydro electricity is concerned, given the potential of nearly 150 GW, we have today only installed capacity of 33 GW. A huge untapped potential exists in hydro electricity. Now we have discovered large quantities of gas in the country and that option is also available apart from solar and wind options. So, has there been cost

benefit analysis done by any agency of the Government how and why we are preferring this nuclear option? Why I am saying this, Sir, is also the cost of it. It is often said that this 123 does not relate to the *aam aadmi* or it does not relate actually to the future of India, of the Indian people. Just consider the following. The estimates have told us or show us that the nuclear power being used for energy production is most expensive of all options. The Prime Minister himself has publicly said that we are targeting, say, 40,000 MW to be produced by nuclear energy by 2020 and 2025. Out of this 40,000 let us presume 10,000 MW would come from our own domestic reactors, that leaves 30,000 that to be generated from nuclear energy and if this 30,000 MW is generated through imported nuclear reactors, the cost estimation for every MW will be 11 crores of rupees, that is, for this 30,000 we will be spending 3,30,000 crores of rupees. The same 30,000 MW if we produce through thermal it will be 4 crores per MW and the same if we produce through hydro electricity or through gas, it will be 3 crores per MW. So, the cost differential is something to the tune of two lakh crores plus. Now if this two lakh crores plus was used in the field of education, we can build new 2.5 Navodaya Vidyalayas in our country. Sir, 100 students can be on scholarship educated up to Class XII, that is, the option, the cost differential can educate 2.5 crore Indian boys and girls and give them quality education which we are forgoing because of using this most costly option. Out of the same amount of money, if you spend on health, you can create 20,000, hundred-bed hospitals, quality hospitals in this country and meet the health needs of our population. The question is why are we going into this expensive option at the expense of keeping our children illiterate, at the expense of not treating those people who require health attention? At that expense, why are we going in for such an expensive option? This is something for which there is no clear answer so far. The other pretext that is given, Sir, so, I think in terms of cost benefit analysis this is the most expensive option we have and as a result not only the most expensive option we are denying the *aam aadmi* whatever we could have given to him because whenever we say some issues of people's welfare must be taken, there is always this argument that there is a resource constraint. If there is a resource constraint, why are we using our scarce resources to satisfy, let us say, the orders to multinational corporations in a country, which has not installed a new nuclear power reactor in the last two decades? The USA does not install them but it wants to sell their nuclear reactors to us. So, we end up buying their nuclear reactors and generating profit for them while, in our own country we deprive our own children from going and getting quality education or our own elderly senior citizens from getting

quality health. Now, this is something not permissible if we want a real modern prosperous India. So, from that point of view, I think, this is a very big folly that we will be entering into, and, I think, there must be a re-think done by the Government on this scope. The other pretext also, Sir they say, is that if we enter the deal, then, we will be breaking the nuclear apartheid that is there on India or that we will be sitting on the nuclear high table of the world. I will come to that later, Sir, because all these are illusions. This is an illusory claim. If you go through the text and sub-text of the 123, then, you will see that this is an illusory trend. Therefore, the pretext for going into this deal, in my opinion, is very faulty and in fact, it is something that cannot substantiate the need for us to enter into such a deal.

If that is the case, Sir, then what is the context in which we have to see this deal? The deal, Sir, is not only to be seen in terms of the nuclear commerce or the nuclear benefit that is generally being propagated. We have the Under Secretary of State of the United States of America who has gone on record to state that there are at least four related benefits to this agreement as well. The first concerns non-proliferation. I am quoting, Sir, "For 30 years, India has been on the outside of that system, of non-proliferation. With this agreement, India will open up its system to international inspection and it puts the majority of its civilian reactors under IAEA safeguards. This deal now brings India back into the non-proliferation mainstream in a way it was not before." If this is the US claim, Sir, and this is what they want to bring us into, the non-proliferation regime through the backdoor, then, all the principle positions which we have supported that the Government of India has taken all along, which we have supported, that we will not sign the NPT because it is a discriminatory treaty, all that, falls flat. So, we think that there is a larger design that is involved in this deal. The next benefit that he talks about is on the position of, and I quote, "The agreement also sends an important message to nuclear outlaw regimes such as Iran and that is the fact that we have already mentioned a number of times and the Hyde Act refers to Iran and our foreign policy positions which have to be incongruent with what the US position will be." The third related benefit he talks about is the fact of military cooperation and of military sales. As much as they are interested in 123, Sir, in no unambiguous terms he talks of great military commerce with India and their target is 126 and not 123. And 126 is the combat aircraft, the military aircraft, that we are going to buy and they are hoping through this deal that they will cement India into a closer military cooperation. This, again, being the case, Sir, what we are now entering into, in my opinion, is a deal which actually takes India closer to the US positions on global issues as well as on regional strategic

concerns; and what is being done is to drag India into or suck India into the vortex of being a subordinate ally of United States of America; and it is this subordinate ally status which we think is not in India's interest at the present moment. Why it is so, I will come to later. But the fact remains that this is something on which we cannot afford to do now. I will, Sir, if time permits, also say certain very derogatory things that have been said about us and about our former Prime Ministers by the US Under Secretary of State. I am quoting, Sir. "The benefits of these historic agreements are very real for the United States. For the first time in three decades, India will submit its entire nuclear programme for international inspections etc." Secondly, he says that, "If India were to conduct a nuclear test, the United States would have the right under US laws to seek the return of all nuclear fuel and technology."

"...shipped by US firms." That apart, the important point on our foreign policy issue is, "This Agreement will also send a powerful message to nuclear outlays like Iran. If you play by the rules as India has, you will be rewarded..." — Please underline the word 'rewarded' — "...If you do not, you will face sanctions and isolation." So, this is the clear message that the US's Official Spokesman is saying that India is being rewarded for being, as they said, 'playing by the rules.' And, who define the rules — the United States of America. You play by their rules, you will be rewarded. If you do not play by their rules, you will not be rewarded like Iran. That is why we have these apprehensions. In the present context, if you look at the pressures that are put on India, unfortunately, we think that these pressures are already at work. When the Hyde Act talks of Indian Foreign Policy being congruent with that of the United States of America, where it refers to, on three occasions on Iran, they expect India to toe that line. We have seen in the past on our votes in the IAEA. I am not going into that. We had discussed that earlier. But, now, what do we see? The trilateral meeting between Iran, Pakistan and India on the Iranian Gas Pipeline which we say is very necessary for us, for our energy augmentation, the same argument that is given for nuclear deal, the same argument for energy augmentation and it is a cheaper option, but, then, you have not attended that meeting. You had not gone there. Why? The answer needs to be given. Is it under the US pressure? The UN has imposed some sanctions on Iran. But, the US has extended and gone ahead and imposed certain unilateral sanctions on Iran beyond the UN sanctions. We have not obliged to accept the US sanctions. But, yet, last week, your SBI denies the lines of credit to Iranian firms which want to import goods from India to Iran and you are not even permitting these exports to take place, because you have

not permitted them. Why? Again, under the US pressure! There is an Indian corporate house which has a multibillion dollar joint venture to be set up in Iran and they have now withdrawn from that. Why? It is under American pressure. If they do that, then their joint venture in the USA will suffer. So, all these are clear indications that we are already succumbing to these pressures when we need not succumb to the US pressures at all or US sanctions on Iran. But, we are doing this. And, this is sending a very, very serious ominous signal to what will be the future of our country's foreign policy. In this context, I would also like to bring about that there is a domestic context, since I am talking of the context, also which we cannot, today, ignore. All of us are being told that this nuclear deal that has happened is not certain flash in the pan, but is a part of overall growing relationship between India and the United States of America. Yes, Sir. We also recognise, after all, I agree with that point, and we also recognise the architecture for the present strategic alliance was laid under the NDA rule for the past six years. Though military cooperation with the USA began under the Narasimha Rao Government, but it was only after 1998 that a lot of this architecture of a strategic alliance with the USA had actually started. I was listening, with a great respect, to the intervention of the hon. the Leader of the Opposition this morning when we had expected the hon. Ministers who travelled abroad to come and explain to the House what happened in those visits. But, Sir, we have had these rounds of discussions personally with Mr. Strobe Talbot which we were informed by that gentleman and nobody else here. But, anyway, that is a different story. I am not going into that. But, what I am really concerned is that we were the first ones to have up in 2000 welcome the US National Defence Programme. In fact, the former Prime Minister articulates that India would be treated as US's natural ally. And, after the 9/11, we had written and offered our cooperation in the US war against terrorism or global war against terrorism and, to the extent, when the USA choose Pakistan, instead of India, the then Dy. Prime Minister, which is on record, says that, in fact, demon, 'This is the logic of geography and it was the logic that the USA chooses Pakistan, not India.' But, in any case, the entire process, which is important to note. Why? I will just come to that. In 2002, Bush Administration adopted a national security strategy.

This stated, "The US has undertaken transformation inputs, the US has undertaken transformation in its bilateral relationship with India, based on a conviction that US' interests require a strong relationship with India." Then, followed the next round of talks with them, which extended cooperation in space, nuclear, high technology and missile defence fields. So, this

background, we understand, Sir, which is the architecture because of which the deal has come. Our point of view is the following. We have extended support to the UPA Government precisely because, in our understanding, we wanted to keep, what we define as communal forces, away from power. But this support was based on a Common Minimum Programme. In that Common Minimum Programme, we have defined what will be our Foreign Policy direction; where it stated clearly that India will pursue an independent Foreign Policy, while strengthening relations with all countries, including the USA. There was no mention of any nuclear agreement in that. There was no mention of any strategic alliance in the Common Minimum Programme. Therefore, our support is based on the Common Minimum Programme. Our support to the UPA is based on the fact that we do not want the communal force to be in power. But we cannot allow the UPA Government to proceed to complete the agenda that was begun by the NDA Government, and that runs completely contrary to the basis of our support. Therefore, our appeal is that do not get into this situation, on an issue that is not there in the agreed Common Minimum Programme. And, if is not there in the Common Minimum Programme, we say that we are opposing this precisely also on that count that do not enlarge the agenda which has not been agreed upon. Therefore, do not take India to a course where we will end up being a subordinate ally of the United States of America.

Now, Sir, come to the text of the Agreement. In the text of the Agreement, this 123 Agreement is very clearly anchored within the Hyde Act. And, this is not I am saying so; this is the US Secretary of State who says it very clearly, I quote, "We have to make sure that everything in this US-India Civil Nuclear Agreement, the 123 Agreement, was completely in consistent with the Hyde Act and well within the bounds of Hyde Act itself." This is their own statement. I had discussed the Hyde Act and its implications in the last debate. We had discussed about how various extraneous issues, by which the USA is imposing conditions on us. We have also discussed the fact that the US President has, on many occasions, stated that many things stated in the Hyde Act were not mandatory on him to follow. But, then, remember every US President has a right to decide on this. If, once this President goes and the other President comes in and says, "Yes, I abide by what is being said in the Hyde Act", all those provisions can be invoked against India. Let us not be under any illusion that the present President is a great friend of India; therefore, being a great friend of India he has said that these are not applicable, or he is not mandated to actually some of these provisions, which would be an illusion. But, then, in a lighter vein and with due respect, please remember all those who had

considered George Bush as a good friend — the Prime Minister of Britain, the Prime Minister of Australia, the Prime Minister of Japan, the Government in Italy — many of them have met a fate that we don't want our Prime Minister, or, this Government to meet. We are supporting this Government; we want to support this Government. But, I do not want this fate to befall this Government. Therefore, I ask this Government to seriously reconsider this deal and not proceed ahead. (Interruptions)

**DR. Murli Manohar Joshi:** If they proceed ahead, what will you do? (Interruptions)

**Shri N. Jothil:** What will you do, if they proceed ahead? (Interruptions)

\* \* \* \*

**Shri Sitaram Yechury:** Mr. Deputy Chairman, Sir, I entirely understand the eagerness of Dr. Murli Manohar Joshi and Mr. Jothi, who think riding on our shoulders, they will get an opportunity to come and sit here. (Interruptions) We will not permit that ever. ..(Interruptions).. You please understand; that it will not be permitted ever. ..(Interruptions)..

**DR. Murli Manohar Joshi:** That means, supporting this Government is more important for you than to oppose this deal. This is clear.

**Shri Sitaram Yechury:** Sir, my agenda is ..(Interruptions).. Mr. Deputy Chairman, Sir, the agenda of my party; the CPI (M) ..(Interruptions).. For me and my party this agenda that is most important is that this nuclear deal should not be implemented. My agenda is not on the Government, whether it should stay or not. I want the Government to stay. I want this nuclear deal not to happen and that is the stated position of our party. ..(Interruptions).....

.....(Interruptions).. I am sorry to say, but, it is up to you. Sir, since you have reminded me of the time, I only want to say why this 123 Agreement is rooted in the Hyde Act. Article 2.1 of the 123 Agreement states, "Each party shall implement this Agreement in accordance with its respective applicable treaties, national laws, regulations, and licence requirements concerning the use of nuclear energy for peaceful purposes."

Now the question is, the respective national law for the United States America is the Hyde Act. Now, you cannot, therefore, be under the illusion that once the 123 Agreement has come, the 123 has superseded the Hyde Act. The U.S. itself is very clear saying that 123 Agreement is within the

Hyde Act, and it is anchored in the Hyde Act. Having done so, it would be a very, very dangerous illusion to think that these provisions of the Hyde Act are not applicable to us.

But, having said that, Sir, in the 123 Agreement itself there are three assurances which the hon. Prime Minister gave to this House, which I accepted, and we all accepted, but, which, I do not think, are met.

The first one concerns the uninterrupted fuel supplies. Yes, the 123 Agreement talks of uninterrupted fuel supplies till the life of the reactors. But, once the 123 Agreement is terminated, which can be done under the Hyde Act by any U.S. President who may come in the future, once that is done, the Hyde Act is very clear, it says that the moment 123 Agreement is terminated, supplies will stop. Not only will supplies stop, but the United States of America will work with all its allies to ensure nobody else supplies to us. And, that is also written in black and white. So, why are we going to an agreement where we buy those reactors at a cost, which I already explained? We have them with us, but we don't get the fuel. They threaten to take back those reactors also; bodily lift them and take them back. How is it that we are entering into an agreement where it violates the Prime Minister's own assurance that we will have uninterrupted fuel supplies.

The second assurance that the Prime Minister gave is that we will have full nuclear civilian cooperation. It is very clearly given in section 5 of the 123 Agreement that certain dual use technologies are barred from being transferred to India; whether it is on reprocessing, enrichment or heavy water. Okay, heavy water, we say that we are ourselves capable. We have enough of it here. We are, in fact, exporting heavy water. But, in any case, why should we be under any restrictive clauses saying that they will not be transferred to us unless this agreement is further amended? And the full nuclear cooperation clause, which the hon. Prime Minister assured us here, even that is not going to be fulfilled according to this text.

The third assurance is this. The hon. Prime Minister said that everything should be done on the basis of reciprocity. This is the word used by the hon. Prime Minister. You are going to the IAEA for talks now. You are going in to talks for saying that you will put your nuclear reactors under safeguards in perpetuity. But, we have just seen, the 123 Agreement can be terminated upon the will and whim of the U.S. President. If that is the case, if that can be terminated, why should India be subjected to a perpetual safeguards by the International Atomic Energy? If that is terminated, then, this also ought to be terminated. That reciprocity must be valued, and

must be upheld, and, therefore, even this is violated. So, on the question of uninterrupted fuel supplies, on the question of full civilian nuclear cooperation, and on the question of reciprocity, on these three counts; the three assurances that the hon. Prime Minister has given, this deal does not allow India to even uphold what the hon. Prime Minister stated in this House, when he gave the assurances to the nation. Therefore, Sir, this is as far as the text is concerned. Sir, you have seen the pre-text, you have seen the context, and you have seen the text. On all these three, this deal does not stand. One of the most important issues is: does it benefit our country or not? Sir, I just want to take two minutes if you permit me.....

The question, normally, being asked is: Why did we 'allow' the Government? I don't like to use this word; it is not that the Government should be allowed or disallowed. But, why is it that we agreed, let us say, to the Government proceeding to the IAEA when we first said that it should not be operationalised, that is, 'do not proceed to IAEA.' It is a very simple point which I want to answer, because a lot of people have expressed their surprise. Earlier, Sir, going to the IAEA for safeguard discussion and an agreement with the IAEA meant that post-IAEA, the Nuclear Deal was on an autopilot. After that it would go to the NSG where we are not members. Then it would go to the US Congress, and it will return to us only after everything was completed, for the final approval of the Cabinet. That is why, we said, "Do not proceed to the IAEA; otherwise, after that, there is no way we can control it.' Now, we are happy and we gracefully accept the fact that the Government has agreed that they will go to the IAEA, they will negotiate and see if these three assurances that the Prime Minister has given, which, today, are blatantly violated, can be extracted and without even putting their initials on anything, they will come back to the country, and, then, on the basis of that, further steps will be taken. So, that is the change that has happened, where the Government has now agreed that it will come back before even putting the initials, and, therefore, we agreed and cooperated saying, 'Yes, please proceed ahead'. But the point at issue is, Sir, we still continue to remain firm; we would want this deal not to go through, in the interests of India, for the various reasons that I have elaborated earlier.

There is also another important reason, Sir, the last one, which I would like to touch upon, that is, the question of our indigenous nuclear science development. All of us know, Sir, India is a country, which has one of the known largest deposits of thorium. All of us know that our scientists are battling against all odds and served the country so brilliantly in the past, are continuing to do their research in, actually, moving towards using thorium as

a fuel for our nuclear energy. Now, we want to reach the stage of using thorium for nuclear energy purposes. Now, all of us know, particularly, those who have done science, that in the transition, from using uranium towards using thorium, there is another intermediate stage that comes where plutonium is also used to a certain extent. Now, when you have a Uranium- Plutonium cycle, which will lead up to thorium cycle, the moment plutonium comes into the picture, plutonium as an input also goes into nuclear weapons. There are international safeguards you have submitted yourselves to; the moment you reach the stage of plutonium, anybody can raise his finger and say, 'Plutonium is coming, you are transferring this to use for your nuclear weapons; and, therefore, the safeguards will apply.' You subject yourselves to international inspections, including the US inspections. I suspect and we firmly believe that there is an international effort to try and ensure that India does not reach that stage where we can use thorium as nuclear fuel. If we reach that stage of using thorium as nuclear fuel, then, no country in the world can bulldoze or browbeat us; we are completely independent. So, it is in our interest to reach that stage, and, therefore, it is in our interest not to accept any conditions, not to accept any conditions which will not allow us to reach that stage. Therefore, we are not against nuclear energy, we are not against nuclear power. Two generations down the line, our coal will be exhausted, your bio-fuels will be exhausted, nuclear energy may be the only option, and, maybe, the only clean option. But, the point at issue is, nuclear energy now, at what cost? At what cost economically, what cost to our country's sovereignty, what cost of other pressures that we are going to expose ourselves to, the sort of vulnerability that we are going to expose ourselves to. We all are seeing what are the activities that the US imperialism is conducting in the world today. I don't want to repeat it; we have done that in the past. All of us, today, have also seen how the hegemonic tendency of the US imperialism is expressing itself in browbeating all other countries into submission into following them. And, what are they attempting to? Sir. To put it in a nutshell, the world, after the bi-polarity of the cold war period, is moving towards multi-polarity in international relations.

It is this movement towards multi-polarity that is being subverted and sabotaged by US imperialism, which wants to convert this world into a unipolar world under its tutelage. India cannot be party to this effort. India cannot be party to an effort where unipolarity is going to be imposed under the US imperialism's hegemony. That is why, I would like to urge upon the Government to seriously reconsider the path that they are following. Hold talks with the IAEA, come back and let us reconsider this. The hon. Prime Minister has himself stated in this House in the past that before they take any

further step, they would come back to the Parliament. This is a very healthy trend and we hope that that tradition will be maintained. Though it didn't happen before the 123 Agreement was initialised, nevertheless, subsequently, Government agreed to continue with this discussion. I hope that will be done and they would not take any hasty measures to rush into this deed.

Sir, my respected colleague, Jayaji, has passed on a note to me. I would like to end with this quote of Woodrow Wilson. It says, "I would rather lose a cause that will some day win than win a cause that will some day lose". And this is a cause that will lose, Sir. We cannot allow this agreement to go through, primarily, in the interests of our country, the future of our country, the future of our younger generation. Fifty-four per cent of India is below the age of 25 years. Give them education; don't spend money on profits for multi-national corporations. Give them health; don't spend money on profits for multi-national corporations. Produce the same electricity using your coal, your water, your gas, your heat and sun and your winds, and then, generate the jobs in India for all of us. And it is on the shoulders of this 54 per cent youth under the age of 25 that a new India will be built. It is for that new India that you must build your youngsters today. Invest in your youth; do not invest on profits for multi-national corporations.

With that appeal, Sir, I would once again urge upon this Government to give a serious rethink to this entire deal and to stop it now, before it is too late and we become victims of blandishment, which our country cannot and will not ever want to be.

Finally, Sir, ...(Interruptions)...I wanted to quote something to you. There was a very unsavoury comment by the US Under Secretary of State saying that so long as Mr. Nehru was the Prime Minister and India's autocratic Nehruvian policy of Non-alignment was there, this great vision of an Indo-US strategic alliance could not have ever unfolded. Now that Nehru is not there, now that Non-alignment is not there, now that all that is not there, is the Congress Party giving up its own legacies? It is the US Under Secretary of State saying this. I do not want to give up their legacy, Sir, because I think that was a joint inherited legacy of our nation in terms of foreign policy. We have all held a consensual opinion on our foreign policy and, therefore, let us together build a resurgent India by investing in our youth. This is our appeal, Sir, and we want, therefore, through you, the Government to reconsider this and not proceed on this deal any further.

**116. Speech of Bharatiya Janata Party leader Yashwant Sinha in the Rajya Sabha while participating in the debate on the India-US Civil Nuclear Energy Cooperation Agreement.**

**New Delhi, December 4, 2007.**

*Thank you, Deputy Chairman Sir. I am grateful to you that you have at least given the Bhartiya Janta Party the right to speak second' in this debate.*

*Deputy Chairman Sir, in the recent years I don't think any government's work or any government's proposal in the recent years has become as controversial as this India-America Nuclear Deal has become. Of course I cannot claim that I am as intelligent as the Prime Minister and I cannot even claim that whatever I am today is because of my studies in an international university. I don't make such claims but if somebody raises questions on my patriotism, then I will definitely fight strongly.*

*Deputy Chairman Sir, I regret to say that this whole matter which is there before us has involved not only political parties, ministers of the government of India but even the government officials have started getting involved in this dispute. Our Privileges Committee has let our Ambassador in the US off with just a warning. But not only are these type of comments on members objectionable but a comment on me personally that I speak without reading is completely objectionable and you may yourself think about it.*

*Deputy Chairman Sir, as far as the Bharatiya Janata Party is concerned, it has been discussed that our stand is changing, we have made a U-turn and it has been publicised knowingly. Not only us, but this has been publicised about our Left Party friends and along with them several other people as well. The Samajwadi Party leaders are sitting here, it has been publicised about them as well. And some other people as well about whom it has been publicised that they have changed their stand and their opposition has weakened. There is a conspiracy or a plot behind it. I wish to emphasise with full confidence that the stand of the Bharatiya Janata Party has not changed. Its stand today is the same as it was in the beginning.*

*I wish to remind this House that the first discussion on this Deal was held on 4<sup>th</sup> August 2005 in this house and our Party's Deputy leader, Smt Sushma*

---

1. Shri Sinha spoke immediately after the CPI (M) leader Sitaram Yeuchery, who spoke first.

*Swaraj while participating in this debate had told the Prime Minister that this Indo-US Nuclear Deal is a frightful mistake. We are of the same opinion today as well that it is a frightful mistake and the sooner that the government withdraws itself from this deal, it will be in the nation's interest.*

*What are our worries? Most importantly, we have three worries. The first worry is about our nuclear deterrent, our programme on nuclear weapons. The second worry is about the independence of our foreign policies and the third worry is about the independence of our nuclear policy.*

*When we talk about nuclear weapons, the whole house and the whole country understands that it is not just a question of numbers as to how many bombs one has but it is also a question of its quality and it is also a question of the Technical Excellence of Quality. I would like to clarify here that as far as our program on nuclear weapons is concerned, which we had courageously acknowledged and announced to the whole world in May 1998 about our country being a nuclear weapon state, this program is of no interest to either the Left Parties or to the Prime Minister. Because in May 1998 when it was debated, the Prime Minister and the Left Parties had opposed it.*

*Deputy chairman sir, it is not a coincidence that today on 4<sup>th</sup> December we people are discussing this issue because on 4<sup>th</sup> December, 1964 in Patna, the erstwhile Jan Sangh had its session and in that session, the proposal that was passed, it was said,*

*"Hence the working committee finds it necessary that all efforts should be made for making the nuclear bomb. It requests the Indian government to make the necessary changes in its policy."*

*Today on 4<sup>th</sup> December, 2007 we are assembled to discuss this issue. Our concern on the nuclear weapons program is that if a restriction on our future testing, that we cannot do any nuclear testing in the future, what will happen to the quality of our weapons?*

*I would like to ask the government this question. I know that whenever this question has been asked, the Prime Minister has again and again stood up and assured this House and the country that the 123 Nuclear Deal has no restrictions on testing and that we are free to test. It is not in the 123. Just now our friend Shri Sitaram Yechury was saying..... (Interruption).....he said that "the Hyde Act may route it." And we all know the provisions of the Hyde Act. The Prime Minister says that we are free to test. Deputy chairman sir, we are free to jump from the Qutub Minar. We only have to undergo the*

*consequences or the results of such testing. We all know that if we jump from the Qutub Minar, what will be the result. In the same way America has made it clear what will be the result if we test in the future. And that is why we are worried because technology does not remain static. The speed of technology never stops. Just like other countries are looking for going forward in their nuclear weapons or the technology associated with it, India will also have to do the same. And why do we have to do this? Because our nuclear doctrine which has been accepted even by this government, the main point of this nuclear doctrine is, which flows from this or which comes from this is "credible minimum deterrent". Now what do we do with a government which does not understand the difference between "credible minimum deterrent" and "minimum credible deterrent". On 7<sup>th</sup> March 2006, the Prime Minister had made this statement, suo moto statement, in which the words used by him were "minimum credible deterrent". Speaking on this, even our friend SHRI ANAND SHARMA who is a Minister of State, last year in August in a debate on this issue, he had also talked about "minimum credible deterrent". We had even interrupted him saying that it was "credible minimum deterrent" and not "minimum credible deterrent". But if our approach is minimalist, credibility is not the important thing, important thing is 'minimum', then there will be a difference in our approach and your approach. Deputy chairman sir, I was saying that we are concerned regarding this.... (Interruption)...*

**The Minister of State in the Ministry of External Affairs (Shri Anand Sharma):** Sir, he has taken my name. Last year, on 17<sup>th</sup> of August... (Interruptions). I am not intervening in the debate. Since Shri Yashwant Sinha has named me, I am very much within my right to respond. We have not said so. He is trying to give an impression that this Government has diluted; this Government has compromised when it comes to the 'deterrent'. That is not the truth. In that debate, in fact, what their Government had done was fully exposed, including the commitment that they had made to sign the CTBT, which his Prime Minister, Shri Atal Behari Vajpayee...(Interruptions).

**Shri Yashwant Sinha:** *No, if he is giving a lecture, let him give.... (Interruption)....I have no objection...(Interruption)*

**Shri Anand Sharma –** So do not put words in my mouth. We have not said so.

**Shri Yashwant Sinha –** Sir, Anand Sharma is not defending. He is levelling.... (Interruptions).....against us.

**Shri Anand Sharma** – No, I am not. You have named us.

**Shri Yashwant Sinha:** *Deputy chairman Sir, that is why we have some concerns regarding the nuclear weapons programmes. We are concerned, like Mr. Sitaram Yechury was just telling us, the intentions of the American administration, according to that if we get entangled or stuck in this Bill, then apart from other restrictions we will also be prohibited from testing in the future. And what is the new argument being given here? Our friend Mr. Kapil Sibal is sitting here. I have seen in the newspapers, in the TV channels, the argument of the government's ministers that what do we have to do with the Hyde Act.*

*The Hyde Act has nothing to do with us, we are only concerned with the 123 Agreement. Deputy chairman sir, I wish to draw your attention to what the Prime Minister had said in this House on 17<sup>th</sup> August, 2006. He said and I am quoting "we have concerns over both the House and the Senate versions of the Bill." When we expressed our concerns on the version in front of the American Senate and the provisions in it which should not be acceptable to us, the Prime Minister agreed with us and said "we have concerns over both the House and the Senate versions of the Bill". And after that he said, "The draft Senate Bill requires the US president to make an annual report to the Congress that includes certification that India is in full compliance of its non-proliferation and other commitments. We have made it clear to the US our opposition to these provisions even if they are projected as non-binding, even if they are projected as non-binding, on India as being contrary to the letter and spirit of the July statement. We have told the US administration that the effect of such certification will be to diminish a permanent waiver authority into an annual one. We have also indicated that this would introduce an element of uncertainty regarding future cooperation and is, therefore, not acceptable to us." This is what the Prime Minister said.*

*Sir, today I would like to request you, forget the annual certification, forget that once a year the US Congress and the congressional committees have to report. It has been written in the Hyde Act that "the two Committees will be kept fully and currently informed which creates an obligation upon the executive branch to inform the appropriate Committees whenever significant information becomes available rather than waiting to include it in a regularly scheduled report". Every time something happens, the US congress has to be informed. The Prime Minister said, and I quote, We oppose any legislative provisions that mandate the scrutiny of either our nuclear weapons programme or our un-safeguarded nuclear facilities." Again I quote from*

the Prime Minister's speech, "If in their final form, the US legislation or the adapted NSG guideline impose extraneous condition on India, you have my assurance that the government will draw the necessary conclusions, consistent with the commitments that I have made to Parliament."

*After that he said, and, I quote, " we cannot accept restrictions on India's foreign policy to be imposed such as on Iran irrespective of whether it is in the policy section or in the sense of the house section of the legislation. The Prime Minister had said this in this same house on 17<sup>th</sup> August last year. Again I am quoting, "Any prescriptive suggestions in this regard are not acceptable to us."*

*I again quote, "If the US Congress, in its wisdom, passes the Bill in its present form, the product would become unacceptable to India." I am again quoting, "it is clear that if the final product is in its current form, India will have grave difficulties in accepting the Bills." This the Prime Minister said. And Deputy Chairman Sir, this is known by the whole House that the Draft Bills that were there in front of the House International Relations Committee and the Senate Foreign Relations Committee, which became the final "Hyde Act" was much much worse. "Mr. Hyde" passed away, God bless his soul, but what he did was to combine the worst provisions of both the Bills and the "Hyde Act" came into being. Deputy Chairman Sir, I have this paper, Joint Explanatory Statement of the Committee of Conference. The Committee of both the Houses have written what happened in its Congress and they have then explained each and every clause of the entire Hyde Act. I would like to tell you and through you to this entire house the Joint Explanatory Statement of the Committee of Conference has this to say. " The Administration's proposed legislation would have given the President the authority to permanently waive these provisions for India, subject to the President's determination that India had achieved certain benchmarks."*

"In effect, the Administration's proposal would have given it excessive latitude in negotiating a Nuclear Cooperation Agreement with India, leaving Congress with little ability to influence the terms of that Agreement regardless of any concerns it might have. Both, the House International Relations committee and the Senate Foreign Relations Committee rejected this approach. **And after that what are they saying?** There is a Section 129 of the Atomic Energy Act, 1954. *They said, "The Administration's Bill would have made Section 129 inapplicable to such future actions on the part of India like testing, like violating IAEA safeguards, etc. The Congress has ensured that section 129 leading to termination of Cooperation would*

continue to apply”. And, I am quoting it further. “As further clarified in the section-by-section analysis included in this Report, the Conference believe that there should be no ambiguity regarding the legal and policy consequences of any future Indian test of a nuclear explosive devise. In that event, the President must terminate all export and re-export of US origin nuclear material, nuclear equipment and sensitive nuclear technology to India. The conferees expect the President to make full and immediate use of US rights to demand return of all nuclear-related items”. And, this is incorporated in Article 14 (2) of the 123 Agreement which says “The party seeking termination” — and this is very important, Sir — “The party seeking termination has the right to cease further cooperation under this Agreement if it determines that a mutually acceptable resolution on outstanding issues has not been possible or cannot be achieved through consultations”.

*And that is why what our friend Shri Sitaram Yechury was saying that when American officials say that they have followed all the provisions of the Hyde Act, they are absolutely right. They have not violated even one provision of the Hyde Act in the 123 agreement. There are a lot of things being said in this regard as well. and that is why I find I necessary to quote from the Joint Explanatory statement and I am quoting, “The US must ensure that any decision that the NSG makes regarding granting an exemption for nuclear commerce does not disadvantage US industry by setting less strict conditions for countries trading with India than those embodied in the conditions and requirements of this Act.”*

*A lot of our friends sitting on that side are saying it is a good thing, we will have this agreement with America and then we will leave them alone, we will not buy anything from them, we will buy everything from France, from Russia, and from other countries and America will be left gaping and it will be a windfall for us. there is no bigger stupidity, I am sorry for using that word, than this. In the Joint Explanatory Memorandum, it is not the government that will go before the NSG, it is the American government as don't have any standing in the NSG. America has promised that it will present our case in front of the NSG. And do you think that with the direction that the Congress has given, that will be ignored and we will be given a better chance at the NSG than what we have got in the Hyde Act.*

This is incorporated in Article 12(2)(a) of the Hyde Act which says and I quote, “ No country party to this shall secure unfair commercial or industrial advantages or restrict trade to the disadvantage of persons and undertakings of either Party or hamper their commercial or industrial interests, whether

international or domestic, fully protected in the 123 Agreement” ***which their Congress said.***

*And again they are saying* and again I am quoting, “ Equally important is the need to ensure that the U.S. Cooperation does not assist the Indian nuclear weapons programme directly or indirectly.” Again I am quoting, “Indian officials have publicly stated that under the US-India Agreement, India will be able to produce as much fissile material for weapons purposes as it desires. At the same time, however, many experts have said that there is no reason why India would need or want to increase that production significantly. The conferees hope that India will demonstrate restraint and not increase significantly its production of fissile material.” And this is very important and I would like the House to take note of this. I am quoting from the Joint Memorandum, “If civil nuclear commerce were to be seen, some years from now as having in fact contributed to India’s nuclear weapons programme, there could be severe consequences for nuclear cooperation, for U.S.-Indian relations, and for the world-wide nuclear non-proliferation regime.” The American Senate is warning us of “severe consequences”. *They are saying there will be* “ severe consequences” for US-Indian relations. Should we ignore this, should we forget it?

Deputy chairman Sir, the point that Sushma ji had made more than two and a half years back that from the time that we have been discussing this Nuclear Deal with America, all the statements that have come from their side are in one direction but the small number of statements from our side are in another direction. Their purpose is to get India into the non-proliferation Network regime in any which way. We are continuously talking about energy and that we are doing all this for energy and hence we have ignored the other aspects.

*Now about this 123 Agreement. There are three points, which were mentioned by Shri Sitaram Yechury also, the government is saying that we are going to have three big advantages – one is that nuclear isolation and nuclear apartheid will be finished. I don’t know why we have become so worried about this nuclear isolation in the year 2007? All the people I have talked to including scientists working in this field have said that all the restrictions that have been imposed on India from 1974 onwards, from the time Smt. Indhira Gandhi did the Pokhran-1 test, so many years have passed, 33 years have gone by, in these 33 years Indian nuclear technology has only progressed. we have only gone forward, can anybody here stand up and say that we have become backward? The Prime Minister has mentioned that there is some nuclear renaissance bus which we will miss.*

*The whole world is trying to get on to the Indian bus and we are worried about missing some other bus, I don't know which one. All the scientists that we have talked to have said that this nuclear isolation has proved to be a boon for India, not a bane for India. And parallel to this, in the joint statement issued in Washington on 18<sup>th</sup> July, 2005, the Prime Minister had said, 'India is a responsible State with advanced nuclear technology.' How did we become an advanced nuclear technology State which could make us stand at the same level as America? It is the hard work of our scientists, the hard work put into our technology that has levelled our stature with that of America. How did we get affected by Nuclear Isolation, and that is why we should stop this crying about Nuclear Isolation and Nuclear apathy. It has not made any difference.*

*As I said, we will have three advantages as well and what are these three advantages. One will be technology transfer, we will get advanced technology. Now in this 123 Agreement, the Article 5(2) says which I will read out to you, Sensitive nuclear technology, heavy water production technology, sensitive nuclear facilities, heavy water production facilities and major critical components of such facilities may be transferred under this Agreement, pursuant to an amendment to this Agreement. This Agreement has not taken birth, it has not even been signed as yet, and already it is talking of amendment of this. For this Amendment to be completed, first the deal has to happen, then the 123 agreement has to be signed and after that an amendment has to be made and only then we will get this sensitive nuclear technology..... (Interruption).....*

*After that the question of fuel supply comes, the biggest thing is the untruth that is being publicised by the government that we will get fuel supply for the lifetime of the nuclear reactor. A nuclear reactor has a life of thirty years, forty years and the fuel that will be required for 30-40 years, we will get it in one go. Now I don't want to go into the cost aspect of it, the Prime Minister who has also been the Finance Minister, Shri Pranab Mukherji, External Affairs Minister who is sitting here, he has also been the Finance Minister, they don't seem to have any worries about the cost. If somebody wants to open a thermal power station and he says that he will sit with the whole 30-40 years supply of coal supply, doesn't it have a cost, what will be its cost, nobody is saying but I want to say one thing here, where is the assurance for this. the assurance is in Article (6) and Article (6) says, The United States has conveyed its commitment to the reliable supply of fuel to India etc. Deputy chairman Sir, please pay attention to this, this whole Article 6 has been lifted.*

**Shri Kapil Sibal** - It is Article 5, sub-clause 6 and not Article 6.

**Shri Yashwant Sinha** – Okay. Article 5, sub-clause 6, a, b, 1,2,3,4 of Article 5, *this whole thing of Article 5*, it has been bodily lifted in the same language in which the Prime Minister had included it in his statement last March. *Now you can see how preposterous it is. It is so ridiculous. What does it say? That in March, 2006, at that time, it talks of the future and what is the future they are talking about : As part of its implementation of July 18, 2005 joint statement, the United states is committed to seeking agreement from the US congress to amend its domestic laws and to work with friends and allies to work in the energy. That was okay, in March 2006 they are promising that they would do this. now this 123 Agreement has come, it has happened and today Nicholas Burns' statement has come and before that the Prime Minister's statement said, This is cast in stone. It cannot be changed which means that not one word will be changed. It will go for approval to the American Congress and what will the American Congress say while giving approval? Deputy chairman sir, it will approve, the US is willing to incorporate assurances regarding fuel supply in the bilateral US-Indo agreement on peaceful uses of nuclear energy under section 123 of the US Atomic Energy Act, which would be submitted to the US Congress. I hope you have imbibed it. The US Congress will pass that after the 123 Agreement will be signed with India, in that the nuclear fuel supply assurance will be incorporated when it comes for approval to the American Congress. If our friend Shatrughan Sinha would have been here, he would have said, Daddu, this is the 123 Agreement, if you don't do it in this, in which will you do it?*

**Shri Anand Sharma:** You read the first two lines....(Interruption)....

**Shri Yashwant Sinha** - *Shri Anand Sharma, we have read all the lines....(Interruption).....*

**Shri Anand Sharma** – You are misleading.

**Shri Yashwant Sinha** – No, I am not misleading. The first two lines is, “ To further guard against any disruption of fuel supplies, the US is prepared to take the following additional steps”. What are the following additional steps? “That we will go to the US Congress after the 123 Agreement is signed. We will incorporate it”. Where is that assurance in this 123 Agreement? *I would like to challenge and ask that where is that assurance of fuel supply for the lifetime of the reactors? Will somebody tell me here at this time. Deputy Chairman sir, what did they promise, that it will become great, we will get the Right to reprocess. Not technology to reprocess, that is incorporated in*

article 14. *What does it say in Right to reprocess? It says you will not do it in campaign mode. In our existing facilities, we cannot reprocess. We will not get technology to reprocess. Forget it, we have the technology to reprocess. But how will that help us. We will be required to set up a dedicated facility to reprocess the imported spent fuel. And the arrangements and procedures for that, we will have a separate agreement with the US for that. Again an Agreement will have to be done. When that Agreement happens, it will again go to the Congress for approval. When it goes to the Congress for approval, who will be the President then? Mr. Bush is not everlasting, his term is going to come an end. Who will be the next President? Will he be a friend or not a friend? What will he do?*

**Shri Shahid Siddiqui** - *They are themselves saying that he will be a Democrat and he won't fit....(Interruption).....they are themselves saying that it will be a Democrat and there will be a lot of difficulty.*

**Shri Yashwant Sinha** – *I would like to say that whether it is sensitive technology or fuel supply or the right to reprocess which is being shouted to the whole world and the people are being influenced by these statements that we have got everything. We have not got anything. Everything is an untruth. I would like to emphasise and say that it is all false. To supplement what I am saying, I would again like to quote from the Joint Explanatory Memorandum. And what does it say?*

*“The US will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the life of India’s reactors”.*

*This is from March 2006. I am quoting:*

*“The Congress has not been able to determine precisely what was said on this matter in high level US-India discussions. The US officials testified, however, that the United States does not intend to help India to build a stockpile of nuclear fuel for the purpose of riding out any sanctions that might be imposed in response to Indian actions such as conducting another nuclear test. The conferees understand that nuclear reactor facilities commonly have some fresh fuel stored, so as to minimise bound time when reactor cores are removed. They endorse the Senate proposal, however, that there will be a clear use policy that any fuel reserve provided to India should be commensurate with normal operating requirements for India’s safeguarded reactors.”*

Again, I am quoting:

“The conferees understand and expect that such assurance of supply arrangements that the US is party to will be concerned with only disruption of supply of fuel due to market failures or similar reasons and not due to Indian actions that are inconsistent with the July 18, 2005 commitment such as nuclear explosive testing.”

**Mr. Deputy Chairman:** *Shri Sinha, you will have to leave some time for Mr. Arun Shourie also.*

**Shri Yashwant Sinha:** *Sir, I am finishing now. I wish that Arun ji gets full time because on this Nuclear Deal, if he does not know anything, then it is not worth knowing. That is why I want him to give time. We have covered this aspect and now about the foreign policy. Just now Shri Sitaram Yechury was saying, what happened to Iran? The LNG deal is over, the pipeline deal is over, what happened to State Bank of India, what happened to Essar company which is an Indian company, how it has taken back its proposal.*

How we had worked hard for participating in the Shanghai Cooperation agreement. We got included in it, we got observer status. As far as I remember, it has had two summit meetings. The other Prime Ministers, Presidents had time to participate in the Shanghai Cooperation agreements. But our Prime Minister did not have the time to participate in it both the times. Why? Because Shanghai Cooperation Agreement is not liked by America. So just to ensure that America is not unhappy, we will not go to the Shanghai Cooperation Agreement.

**The Prime Minister (Dr. Manmohan Singh):** Mr. Deputy Chairman, sir, I respectfully submit that the Hon. Member is levelling false charges. There was never any pressure on us or on me to join or not going to Shanghai meeting. All that I was interested was that if the Indian Prime Minister goes to these meetings, he should not sit in the side lounge, coffee lounge and not be involved in an active manner.

Shri Yashwant Sinha - *That is great, a lot of applauseÖ..(Interruption)*

**The Minister of Science and Technology and Minister of Earth Sciences (Shri Kapil Sibal):** of Your Prime Minister would have done that.

**Smt. Sushma Swaraj:** The Prime Minister is of the country. The Prime Minister is not yours or ours.

**Shri Yashwant Sinha:** Yes, of course. our Prime Minister never sat on any international high table. *It is there only in your destiny. Why didn't the*

*Prime Minister go? Because he did not want to sit in the coffee shop, he wanted to sit only in the main table. So we will wait when your hard work will bear fruit, your efforts will bear fruit and you will then go to the Shanghai Cooperation Agreement. This point should be noted by the whole house that till then our Prime Minister will not go to the Shanghai Cooperation Agreement Summit meeting, that is the meaning. But let us forget what has happened to Iran, what is happening to Russia but why didn't the Agreement on the four reactors of Kudamkulam take place. I have a few papers here in which it is absolutely clear that the Agreement was ready for signature with Russia. One or two days before departure, it was announced that the Prime Minister will sign the agreement for the four reactors in Kudamkulam. I am worried, I have also worked for some time in that ministry and hence I am worried as to what is happening to India-Russia relations. Where are we? Our Foreign Minister goes to Moscow and let alone the Russian president, he is not able to meet even the Russian Foreign Minister. Our Defence Minister goes to Russia. He is not able to meet the Russian President. Our Prime Minister goes, and as the leader of the opposition was saying today, he goes for 28 hours to Moscow and the Agreement on the four reactors in Kudamkulam does not get signed. Why doesn't it happen? Will the Prime Minister, Foreign Minister clarify to this house as to what were the difficulties encountered and what were the problems because of which this agreement with Russia could not go forward.*

**Dr. Manmohan Singh:** I am willing to do that right away and that will show, I think, what falsehood you are preaching in this House. It is true that there was a draft of an agreement for four additional reactors. But it has always been understood that that agreement can be operationalised only if India had the approval of the IAEA for an India specific safeguards agreement and also if India had the exemption granted to it by the NSG. Since these issues are now being debated and for the reasons which I do not have to go into, it was quite obvious that that agreement would not be operationalised in the absence of these two requirements which are now under discussion in various fora. The impression that you are trying to create, I think, the Russians fully understand it and all this false propaganda that is being made here and outside is not related to the facts of the case.

**Shri Yashwant Sinha:** *Deputy Chairman Sir, I am happy that the Prime Minister has clarified this in whatever words it may be. What I am unable to understand is that when Russian officials came to India before his visit, when India's foreign Minister went to Russia before his visit, when India's Defence Minister went to Russia before his visit and all this was arranged*

*beforehand, papers were ready for signature, then.....(Interruption).....and as we did in respect to the two previous reactors in Kudamkulan in terms of getting IAEA safeguard, reactor specific safeguard. And even if this doesn't happen, if this was NSG, if this was IAEA, after the agreement when they finish their procedures, then after that when the question arose of signing or operationalising it, then sir, couldn't our Prime Minister have signed first, subject to the NSG approving this.....(Interruption).... why doesn't he do it? I would like to again with full seriousness.....(Interruption)*

**Mr. Deputy Chairman:** *Mr. Yashwant Sinha, your time.....(Interruption)*

**Shri Yashwant Sinha:** *I would like to with full seriousness accuse the government that they did not sign because of American pressure. ....(Interruption)....it is absolutely clear, you came under the pressure of America.*

**Dr. Manmohan Singh:** Mr. Deputy Chairman, Sir, Shri Sinha is levying false charges against our Government. Perhaps he is reminded of his own performance, when as India's Finance Minister, he went to Japan and he was not allowed to meet the Finance Minister there. He thinks all people are like him.

**Shri Yashwant Sinha:** I am sorry, the Prime Minister has got personal...(Interruptions) Do you expect the Prime Minister to get so personal?(Interruptions)

**Mr. Deputy Chairman:** When you say that, you have to be prepared to take it also...(Interruptions) Why are you all getting up?(Interruptions) Yashwant Sinhaji, there is another speaker from your party and you have already taken 50 minutes. It is more than the allotted time...(Interruptions).... Please conclude...(Interruptions)

.....please sit down, sit down. Mr. Shahid, Mr. Shahid....(Interruption). Sit down....(Interruption)....Mr. Yashwant Sinha, Mr. Arun Shourie is there.....(Interruption)

**Shri Yashwant Sinha:** *Deputy Chairman Sir, I do not want to get personal but I am saying this with full confidence that the statement given by the Prime Minister just now in this House I fully incorrect. ....(Interruption)....It is incorrect. ....(Interruption). At a certain time the present Prime Minister was under another Prime Minister, I was the finance Minister and he was the financial advisor..... (Interruption)....What happens because of that, what happens is.....(Interruption)*

**Mr. Deputy Chairman:** *Please sit down. When your leaders are speaking, you kindly sit down....(Interruptions)*

**Shri Laloo Prasad:** *It does not speak well of Mr. Yashwant Sinha. When our leader Mr. Karpoori Thakur was the Chief Minister, he was his PA. ....(Interruption)*

**Mr. Deputy Chairman:** *What is this happening? (Interruptions) Please....(Interruptions)....What is this happening?.....(Interruptions)*

**Mr. Deputy Chairman:** *Please don't take this debate to this level.....(Interruption)..... Mr. Sinha, please conclude. Otherwise, Mr. Arun Shourie will not get the time.....*

**Shri Yashwant Sinha:** *Deputy Chairman sir, Mr. Laloo Prasad is absolutely right. Where am I refuting this. What he is saying is absolutely right. When Karpoori Thakur.....(Interruption).....when Karpoori Thakur was chief minister of Bihar, then I was his chief secretary. It is correct and Mr. Laloo Prasad used to come to my room with recommendations. ....(Interruption)....*

**Shri Laloo Prasad:** *.....(Interruption)...*

**Prof. Ram Dev Bhandari:** *our link was with Karpoori Thakur.... (Interruption)....he did not come into your room.....(Interruption)....*

**Shri Yashwant Sinha:** *And Deputy Chairman Sir, one day he came to my room with a recommendation. He said that that person had been in jail with him. I thought maybe he had gone to jail during the Jai Prakash movement. When the papers were taken out, it came to be known that he was in jail under Maintenance of Internal Security Act for some offence.*

*.....(Interruption).....*

**Mr. Deputy Chairman:** *What are you doing.....(Interruption)....Mr. Sinha, Please conclude. There are 34 members to speak. I have to regulate the time. Please cooperate.*

**Shri Yashwant Sinha:** *Sir, the last point that I would like to say is ....(Interruption)..*

**Mr. Deputy Chairman:** *Please conclude.*

**Shri Yashwant Sinha:** *Deputy chairman sir, when I was seeing the papers regarding this, I saw that when the Prime Minister had visited Washington in 2005, when he had signed on 18<sup>th</sup> July, and he had presented himself*

*before the media on 20<sup>th</sup> July, I have the transcript of his press conference. In the press conference, he was asked a question that "Mr. Prime Minister, do you see any resistance coming forward from your allies and the Opposition in putting the new India-US policy to practice and will you seek a parliamentary consensus or approval to the new direction you seem to be taking in foreign policy?" This was the question. And the answer was and I am quoting, "Well, the Parliament in our country is sovereign. It is my intention to make a statement in Parliament when I go back home, and it goes without saying that we can move forward only on the basis of a broad national consensus". It is another matter that he added something more to that that, "I am confident that what we have done and what we have achieved will command universal support of the thinking segment of our country". Now here people like us, people like Sitaram Yechury, people like Digvijay Singh, like Mr. Amar Singh and several others who are here who constitute the majority of this House, they do not belong to the thinking segment of the population. We are all unthinking people and that is why we are opposing it. I on behalf of my party oppose this Bill wholeheartedly and I would also like to announce that if we come to power, which we will, then we will re-negotiate this Bill and we will not let this Bill go forward. This is all I wish to say.*

[the text in italics is translated from Hindi text]

**117. Speech of Member of Parliament Shrimati Kanimozhi of the Dravida Munetra Kazagham while participating in the debate on the Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, December 4, 2007.**

**Shrimati Kanimozhi (DMK):** Thank you, hon. Deputy Chairman, Sir. I stand here today with humility and hope — humility for this august institution and hope for the future of this nation, which all of you and our predecessors have nurtured.

I am glad that my maiden speech to this venerated Chamber will help present my party's view on the all-important 123 Agreement.

My party and I firmly believe that the Agreement will benefit India by giving us full access to civilian nuclear technology without us having to sign the Nuclear non-Proliferation Treaty, and lift all the 33 years of unfair sanctions against us and allow us to maintain an independent military nuclear programme.

Some say that this is an unfair deal for India. The US Under Secretary, Nicholas Burns, the most often quoted man, in an interview to the US Press has said that the "United States is not going to suggest a similar deal with any other country in the world. India is an exception."

The New York Times and the Washington Post condemn the US Government for giving us too much. Pakistan has urged for a similar deal. Chinese papers and even American politicians have said that the US is trying to make India into a *de facto* nuclear power.

After all this, one cannot but conclude that the Indian Government and the Prime Minister must have done something good for the nation. Given the complexity and importance of this deal, it is understandable that people have questions and concerns about it, some genuine, some political.

Seeing it in the spirit of nation-building, our party leader, Dr. Kalaingar M. Karunanidhi, believes that the process of reconciling the differences over the 123 Agreement will not and should not unsettle the Government or disturb governance. It is an article of faith with him that if the Indo-US Nuclear Deal is fairly debated and clearly understood, concern will give way to consensus.

Sir, here, I would like to make it clear that our party and our leader have

never changed their position. We always supported it. We just wanted to have consensus and we thought that is the most important thing. India, along with China relies so heavily on coal for power. By 2020, China is preparing to produce more than 40,000 MW of electricity in its nuclear power plants.

We too have ambitions to generate 30,000 MW of nuclear power by 2020. But this will not be possible without the 123 Agreement. So, we will need to import nuclear fuel, such as uranium, for decades before our own Fast Breeder Reactor Technology becomes viable. Yes, we should also invest in developing our own thorium-based nuclear technology. But that is a long way away.

Plutonium, retrieved from spent fuel, is believed to be the key to India's energy independence. Plutonium reused with thorium, which is abundant in India, is said to yield 30 times more energy than conventional nuclear plants. But to reach there we have to take our first step.

Apart from strategic and political concerns, there are many environmental concerns too. Our worldwide industrial civilization runs on energy and 85 per cent of the world's energy is provided by the fossil fuels, coal, oil and gas. By burning fossil fuels, we inject 23 billion tonnes of carbon dioxide every year into the atmosphere, that is, 730 tonnes per second.

Sir, some environmentalists believe in the simplicity of solar cells and the pristine elegance of windmills and they refuse to accept the fact that they are quantitatively incapable of supplying the energy required. I do not mean to say that these renewable energies should be excluded; they are useful and have important niche roles to play. But, they can make only a marginal contribution to the growing energy needs.

For example, to replace just one nuclear reactor, such as the new EPR reactor which France is now building in Normandy, with the most modern wind turbines, they would have to be lined up all the way from Italy to Barcelona in Spain, which is about 700 kilometres. And, even so, they generate electricity only when the wind blows.

There is much talk about bio-fuels, like ethanol from sugarcane. The entire ploughable surface of the earth could not produce enough bio-fuel to replace present oil consumption, and it would also result in food crisis. By 2100, oil and natural gas reserves will likely be exhausted. This leaves only coal and nuclear energy. The idea of using more coal, the greatest contributor

to global warming, is simply not acceptable. One gram of uranium yields about as much energy as a tonne of coal or oil. Spent fuel can be reprocessed to separate out the 3 per cent of radioactive elements to be vitrified for safe and permanent storage. The remaining 97 per cent can be recovered and recycled.

Another argument against nuclear energy starts with disasters like the Three Mile Island and Chernobyl. Three Mile Island was the worst accident one can imagine. The core of the reactor melted down and much of it fell to the bottom of the reactor vessel. In spite of it, the radioactivity released was almost entirely confined within the reinforced concrete containment structure. As a result, no one was seriously injured. In fact, the Three Mile Island was a real success story for nuclear safety. Chernobyl was different. It had no containment structure. The reactor's faulty design made it unstable. A 600-ton graphite moderator caught fire and burnt for several weeks. Thirty-two people died within a few months, and about 200 more were severely affected and there were reports of many cancer cases. Chernobyl was the perfect example of what not to do with a nuclear reactor. But, in half a century, there have been far fewer fatalities due to civilian nuclear power industry mishaps than coal mine accidents which are common occurrences adding up to about 15,000 per year worldwide. Sometimes, bias is more ideological than factual.

Given how the global nuclear trade has been structured, the 123 Agreement is the only way we can get access to the nuclear technology and resources we need to fulfil our own power plans. Since India is not a signatory to the NPT, we are not part of the Nuclear Suppliers Group. This makes it difficult for us to conduct nuclear trade with the 45 member countries of the NSG. And, because of the sanctions, we are denied dual use technology which can be greatly useful in fields like nano-technology, medicine, information technology and related industries.

At a recent India-France meet on nuclear energy in Mumbai, the French, who were the only Government not to condemn our 1998 nuclear tests, told us that they could not supply us the nuclear technology until we conclude a safeguards agreement with the IAEA and get an okay from the NSG. Even Russia, our closest ally, which was supposed to supply us with four more nuclear reactors for the Koodankulam nuclear power plant in Tamil Nadu, have decided not to proceed with the deal. Russia, under a deal signed in 1985 by the then Prime Minister, Shri Rajiv Gandhi, and the Soviet President, Mikhail Gorbachev, was helping us to put up these plants.

However, after the break-up of the USSR, Russia joined the Nuclear Suppliers Group, which bans it from selling civilian nuclear technology to non-signatories of the NPT. The External Affairs Minister, in his statement, and today, the Prime Minister also, has explained clearly that India is waiting because we will have to go with an IAEA specific agreement for the arrangements to be operationalised.

This also means that the project will be delayed. The delay means that there is a delay in the Rs. 26,000 crore central investment in Tamil Nadu. Since May 2006, the Tamil Nadu Government has signed MoUs for setting up projects in Tamil Nadu which involves a total investment of Rs. 11,083 crores. This will employ one lakh and twenty five thousand people. In the present situation, an added 1800 mw of energy, which we could have got is being delayed, and, which would have translated into more industries, more power for agriculture, and, more employment. Here, I would like to recall our respected Prime Minister's words from his statement made on 13<sup>th</sup> September, "This agreement with the United States will open new doors in capitals across the world. It is another step in our journey to regain our due place in the global councils."

Hon'ble Deputy Chairman, Sir, by talking about the energy aspects of the Indo-US nuclear deal, I do not mean to gloss over the fact that the 123 Agreement will move us strategically closer to the United States. The old fears of colonization and western hegemony that have haunted our collective consciousness need to be driven out of mind. We need to develop the confidence and self-assuredness to realise that we are capable of collaborating closely with any nation without losing our independence in policy or action. Signing an agreement with America does not mean that we endorse everything it does.

Concerns are voiced that any agreement this Government signs with the Nuclear Suppliers Group could come with the rider that India would work towards signing a Fissile Material Cut Off Treaty (FMCT). Since the 123 Agreement gives us the freedom to separate our civilian and military nuclear installations, the deal poses no significant threat to our own strategic nuclear programme.

It is also important to underline, while 123 Agreement has got stuck in the binary of Indo-US ties, the fact that it will open India to trading in nuclear technology with almost any country. Much has been made of the fact that there is a provision in the agreement that the US President could withdraw supplies of nuclear fuel and recall any equipment subject to a one-year notice.

Hence, we would like the Government to assure the Members that it is not committed to buying nuclear technology only from the US. We would also like to know if other members of the NSG could bail out India in the event of any cessation in supplies from the US.

While these details are critical, we must resist allowing it to distract us from larger purpose. The 123 Agreement has not come into being for itself. Its framers from the BJP which initiated nuclear talks with the US to the current Governments in New Delhi and Washington, did see it, and, still see it as an essential part of our development quiver, which means, the upliftment of 300 million people out of poverty, gender and caste discrimination, rural neglect and illiteracy.

Sir, I would like to conclude with the words of our founder leader Anna, spoken in this very esteemed House in November, 1962 on a debate during the Chinese aggression. He said, and, I quote, "I enter the name of the DMK in the roll call of honour that is being now formulated for the safety, for the dignity and future of this country, this nation".

Thank you.

**118. Speech of Communist Party of India leader and Member of the Rajya Sabha D. Raja in the Rajya Sabha during the debate on the Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, December 4, 2007.**

**Shri D. Raja (C.P.I):** Thank you, Sir.

While initiating the debate on this crucial issue, my colleague from the CPM, had explained the position of the Left.? After listening to several speeches, I would like to reiterate certain things on behalf of the CPI as well as the Left.

Sir, we are a democracy. We have a vibrant and sovereign Parliament. It is imperative that the Government takes the Parliament and the people into confidence. The Government takes the political parties into confidence. I could hear some speeches in defence of the deal made by two eminent lawyers. But, I understand, the defence was so weak and they could not

defend the deal. But, they raised certain issues which need to be explained. As far as the Left is concerned, on 7<sup>th</sup> August, we came out with a statement in which we have asked the Government not to proceed further to operationalise the deal. There is no change in the position of the Left. Our position on 123 Agreement remains the same. Having said this, I must make it clear that we have taken the stand based on our own understanding. It is not something from a position some people tried to say that the Left has an obsession of anti-Americanism. It is not so. We oppose the deal from our own understanding and we are not anti-American that way. We have a great respect for the American people. Sir, Walt Whitman is a favourite writer of ours. We all admire the writings of Martine. It is not that anybody oppose for the sake of being Americanism. It is not the position of the Left. Having said that, I must also say, some people referred that we are doing it for China. It is not so. In fact, the US has an agenda. It is open as well as hidden. The US has got a great grand design on Asia. It has been acknowledged by many American scholars and ideologists. The US is striving for a grand design on Asia and the US wants India to be its military ally. Sir, the US wants that India to be a very dependable strategic partner. The US has various objectives for this. That is one reason why the US is more pro-active in getting this deal clinched. In fact, I would like to take a minute to quote what the US Secretary of State, Ms. Condoleezza Rice has said. While appearing before the Senate and the House Committees in April, 2006, she said,

- (1) This deal would benefit security by bringing India into the non-proliferation mainstream.
- (2) The deal will benefit the US consumers by reducing the pressures on global energy markets, especially carbon-based fuels.
- (3) The deal will benefit the environment by reducing carbon emission green house gases.....

The fourth point is the most important thing. This deal will benefit U.S. business interests through sales to India of nuclear reactors, fuel and support services etc.

And, fifthly, it goes on to talk about global partnership between India and the U.S. The same thing has been confirmed by Mr. Nicholas Burns when he said that this agreement will deepen the strategic partnership, create new opportunities for U.S. business in India, enhance global energy security and reduce India's carbon emissions. I again quote Mr. Nicholas Burns.

He said this and it is on record, "It will also send a powerful message to nuclear outlaws such as Iran. If you play by the rules as India has, you will be rewarded. If you do not, you will face sanctions and isolation."

This is the grand design of the U.S. on Asia. And, in fact, the U.S. wants India to be on its side, and some people think it is convergence of democracies. Even Mr. Ram Jethmalani was commenting upon it. It is convergence or union of two democracies and India should always align with the U.S. After all, when the democracy initiative was taken, when our Government contributed ten million dollars, if I remember correctly, to the Promotion of Democracy Fund, we did not agree with that. We criticised that. India and the U.S. cannot share the same perspective of economic freedom or political freedom. It is the U.S., which has attacked Iraq. I do not want to get into those details. But, what the U.S. is trying is, it is trying to drag India into this global strategy. That is why, the U.S. wants India to be its military ally. The U.S. wants India to play the role of, say, a kind of Israel in South Asia. The U. S. wants India to be part of a kind of Asian NATO.

I think, the Left was correct, when it decided to oppose the joint Naval exercise which was carried out in the Bay of Bengal along with Australia, Japan, the United States of America and Singapore. It was a joint exercise along with the U.S. military allies. We are not a military ally of the U.S. Why should India join such an ally? This is an important issue. The other issue, definitely, it has some impact on our foreign policy position. I must quote the CMP because the hon. Prime Minister and the External Affairs Minister are present here. It says, "Even as it pursues closer engagement in relations with the USA, the UPA Government will maintain the independence of India's foreign policy position on all regional and global issues. The UPA Government is committed to deepening its ties with Russia and Europe as well." This is what has been said in the CMP. But what happened in reality, I do not know. Iran was prepared for India-Iran-Pakistan gas pipeline. I think, we cannot find fault with Iran for this gas pipeline not coming up. It was, again, Condoleezza Rice, who openly challenged this gas pipeline project. It was an outright interference from the United States of America. Why should India succumb to it? I cannot find any evidence to accuse Iran for this gas pipeline not coming. I find that it has something to do with our understanding of the U.S. ties. Did we come under pressure from the U.S? That is one thing to think over. Not only this, there is the question of Russian reactors. The hon. Prime Minister did intervene in the morning and tried to explain the position.

But having said that, I must say that Mr. Ram, who accompanied our Prime Minister, who is the Editor of 'The Hindu', after returning from Russia, wrote explaining the non-deal with Russia. Let me quote: "Is there a linking between backing away, just before Prime Minister Manmohan Singh's Russia visit, from concluding an inter-Governmental Nuclear Agreement with Russia and an apprehension of American displeasure? Has the Government become one-trick pony?" This is what Ram writes. Still, there is an apprehension why that Agreement with Russia did not go through. It is an inter-Governmental Agreement and Russian Government was prepared. Even it could have used it as an argument to deal with the US. Why our Government did not agree to sign that Agreement, I do not know. But, here, during the debate, some people mentioned about China. We have got a better deal in comparison to China and other things. Maybe, I would like to ask them to see the Chinese Agreement also which says the China-US 123 Accord states "the Parties recognise with respect to the observance of this Agreement the principle of international law that provides that a Party may not involve the provisions of its internal law as jurisdiction for its failure to perform the Treaty." This is what the China-US 123 Accord says. I can quote what the Japan-US 123 Agreement says, because there is a misconception that we have gained a great deal in comparison to US-China deal, or, US-Japan deal. It is somewhat misplaced and, moreover, this 123 Agreement has an impact. The Hyde Act is the enabling Act; whether we like it or not. Mr. Nicholas Burns, on record, has made it very clear that the Hyde Act is an enabling legislation for India-US 123 Agreement. Mr. M. K. Narayan went on record to confirm that during negotiations all the requirements of the Hyde Act were taken care of. This is what I want to tell you. Therefore, how can one argue that the Hyde Act has nothing to do with India, we are bound by 123 Agreement only? The Hyde Act has nothing to do with India; 123 Agreement will override everything. I do not agree, or, I am not convinced of that argument. Maybe, in legal terms what others have been saying, whether that convinces them, that is my question, because it does not convince others.

Here, I must raise a few things with regard to energy. It is not that Left is opposed to nuclear energy. We understand the importance of nuclear energy and people talk about clean energy. We raised this issue, that is, Kyoto Agreement. It is the US, which is not signing that Agreement. The other day, our Finance Minister went on record that developed countries are responsible for emissions of all that which causes global warming and developing countries cannot be accused for that. Having said that, I must say India already has nuclear energy. I have a document, which gives

worldwide data for world nuclear power reactors, up to May, 2007. It says India has got 17 reactors under operation and we generate 2.6 per cent of nuclear energy, out of the total energy generated. Now, if this Deal goes through, what is the projection? By 2020, India will have 6.8 per cent nuclear energy. It means there will be an increase of 4.2 per cent. For 4.2 per cent, what is the economic cost we are making, or, what is the political cost we are paying? I do not want to go into the figures. It is a well known fact that nuclear energy is the most expensive and India's other sources also can be better option in the Indian context.

Hydel power, thermal power, solar energy, wind energy — all these things can be considered. In addition to that, we have developed our own indigenous nuclear technology. I must congratulate our scientists and technicians who have laboured and developed our nuclear technology against sanctions. I congratulate them; but why can't we think of something? A recent argument was that we do not have Uranium deposits and even if we have Uranium, its quality is very low. I do not know what is the scientific proof to show that Indian Uranium is low on quality, or that we do not have enough Uranium deposits. These things can be debated upon, but the option of nuclear energy cannot be treated as the best option. India will have to consider this. Of course, we want India to move towards faster growth. Even the 9.1 per cent growth that we talked of has started declining. Government will have to think of other macro-level economic policies to sustain a faster growth.

Having said this, I must move on to other issues which friends have raised, that is, the nuclear agreement will raise India to the high table of the Nuclear Club, or that we would get away from nuclear apartheid, or that there will be nuclear renaissance, or that there will be nuclear winter all over the world. I don't buy all these arguments because these are all epithets to hoodwink people. I do not know how far these are true. Even in the United States of America, they have not built new nuclear reactors and there has been nothing for the past three decades. They are looking for a big nuclear market in India and that is the major concern for the US behind pushing for this nuclear agreement. That is why, I say that this agreement is not in our interest. We cannot go against this agreement. This agreement is detrimental to our national interest. We cannot become a military ally to the United States of America. People think that India is a big nation, a big democracy; India cannot be taken for granted; India cannot succumb, and so on. But let us not forget — I do not mean to make comparisons — that even as a big nation, India was under colonial rule. We were ruled by several

imperial powers. We were ruled by the British; we were ruled by the Portuguese; we were ruled by the French. India was colonised. We should understand and draw lessons from our own history. That is why, India needs self-reliant development. India needs a self-reliant nuclear policy. India needs a self-reliant economic development. My question is, will this agreement help India to emerge as a stronger nation? With this deal, we cannot think of India emerging as a stronger, prosperous nation. In the name of India, in the name of our nation, I appeal to the Government not to rush through with this agreement and not to do anything in haste. Let the Government take the Parliament into confidence.

The hon. Prime Minister and External Affairs Minister have listened to all the speeches made on the floor of this House and I think the majority of opinion is not for the deal. Then, how is this Government going to take this deal into consideration? People talk about *aam admi*. Even we know what *aam admi* thinks and what they are, because we work among the *aam admi*. It is not as if only some people know what is in the minds of the *aam admi* while others do not know. We speak in the name of the nation. It is not that we have some other interests. My colleague, comrade Sitaram Yechury, spoke about Chinese support. Some Congress representative said that China is opposing it. I do not know about it. Let the hon. External Affairs Minister clarify whether China is opposed to India's position. One should not make such comments in the course of a debate. I do not know whether China is really opposing India's efforts or what is happening to Pakistan. But, finally, Sir, I must say that we must keep in mind whatever happens around us — what is happening in Pakistan; what is happening in Nepal; what is happening in Bangladesh; what is happening in Burma, and what is happening in Sri Lanka. We have a democracy. It is a vibrant democracy. We have a Parliament, a sovereign Parliament, a functioning Parliament.

Our democracy has taken strong roots. Political parties are responsible and answerable to people. Take the people into confidence; take the Parliament into confidence and take the political parties into confidence. Do not proceed further to operationalise this deal. This is the position of CPI and Left. Thank you, very much.

**119. Speech of External Affairs Minister Pranab Mukherjee relying to the debate in the Rajya Sabha on the India – US Civil Nuclear Energy Cooperation Agreement.**

**New Delhi, December 4 – 5, 2007.**

**The Minister of External Affairs (Shri Pranab Mukherjee):** Thank you, Mr. Chairman, Sir. First of all, I would like to express my gratitude to all the hon. Members who have participated in this debate. We started our discussions at 2.00 p.m. and we concluded our discussions without any lunch break at 11.30 P.M. There was no dinner break also. There was neither lunch break nor dinner break and it went up to 11.30 p.m. I had the privilege of listening to some of the very educative and interesting observations, some lengthy, some short. All the hon. Members who participated in the discussions made their contributions and I am grateful to them for x-raying the issues from different angles. Before I respond to most of the issues raised by the hon. Members, they have been responded to by a number of my colleagues. I would like to express my regret that I could not listen to the first part of the speech, not exactly the first part, the first few minutes of the speech, of Mr. Arun Shourie because I had to rush to my room for some urgent work, and I also missed the initial part of the observations of a couple of Members. However, throughout the debate I remained present here.

Sir, this is the fifth debate, if I recollect correctly, that we are having on India-US nuclear civil cooperation arrangement. After the Joint Statement issued by President Bush and Prime Minister Dr. Manmohan Singh in July, 2005, we had a discussion. After the visit of President Bush to India in March, 2006 and after pressing for a discussion on the separation plan, a discussion took place. Thereafter, on 17<sup>th</sup> August another discussion took place on the floor of the House and that discussion of 17<sup>th</sup> August had assumed some importance, in the sense, that certain pointed assurances, strictly speaking nine assurances, were sought from the Prime Minister by Mr. Yechury who initiated the discussion. This discussion was also initiated by him. The Prime Minister responded to all nine points. As regards its relevance, I will come to it later. Thereafter, we had a discussion, after the Hyde Act was passed in December. The Prime Minister could not respond to that debate—but he listened to the debate throughout staying in the House—because he had some throat problem. I responded to the debate which took place in December. This is the fifth debate and this debate was slated for the Monsoon Session. After the passage of the Hyde Act and

after the last discussion, another important thing took place that the 123 Agreement was initialled and the text was frozen. After the text was initialled, it was discussed with the leaders of the political parties. The Prime Minister invited the leaders of the principal opposition parties, the BJP and the Left. On the very first functional day of the Monsoon Session, the Prime Minister made a statement on 123 Agreement on the floor of the Lok Sabha and thereafter here. But, unfortunately, neither his speech was heard because of disruptions nor could the discussion be held in either of these two Houses. Therefore, we thought it would be better to have a discussion on this issue in the Winter Session.

The short point which I am trying to derive at is, this is one international agreement, as some of the old Members may remember, like the WTO Agreement which was discussed several times on the floor of this House and on the floor of the other House. Therefore, this international arrangement, civilian cooperation agreement between the USA and India has also been discussed several times. Now, many questions have been raised. I am not going into the technical aspects of the treaty because we have the privilege of having experts and eminent scientists like Dr. Kasturirangan, present in the House as Member. He participated in the debate and made his contribution. Legal experts like Shri Kapil Sibal, Dr. Abhishek Manu Singhvi and Shri Ram Jethmalani have analysed it from various legal angles. Knowledgeable Members like Shri Arun Shourie, the former Foreign Minister and Finance Minister, Shri Yashwant Sinha and many others, of course, the initiator of the debate, Shri Sitaram Yechury — I am not going to mention the name of everybody — made very valuable contribution. They presented how they feel about this agreement. In the course of the discussion, normally what happens is, sometimes, as we argue a case, we argue it to the extent that we forget all other aspects; in a Parliamentary debate, also sometimes, this type of approach takes place. The first point which I would like to emphasise is that too much interpretations have been given on the two nuclear tests which took place in 1974 and 1998. Hon. Shri Yashwant Sinha, former Finance Minister and External Affairs Minister, during the course of his observations, as yesterday was 4<sup>th</sup> December, referred to the decision of his political party, the then Jan Sangh, at the Working Committee Meeting in Patna, where they declared that India should go in for nuclear weapons. In 1974, the first test was conducted at Pokhran. It was followed by another, in May 1998, by the then NDA Government. In the debate, a substantial part was devoted to whether India retains the right of test or not, as if retaining the right of test is the crux of the whole thing. In the course of the discussion, it was also

attempted to project that what began in 1974, the leaders of the BJP are claiming that we took it to the logical conclusion in 1998 and this Government by signing this agreement or attempting to sign or finalise this agreement, is contemplating to give up that position. Most respectfully I would like to submit that from day one of the Independence of this country, starting from the Father of the Nation to Pt. Jawaharlal Nehru and all Congress Prime Ministers, they firmly made a commitment to total nuclear disarmament.

It is not correct to say that Mrs. Indira Gandhi went for the Test of 1974 because she felt jittery of the presence of the Seventh Fleet in the Bay of Bengal at the time of India-Pakistan War, on the eve of liberation of Bangladesh. Most respectfully, I would like to submit, Sir, it is not correct, because I can tell the House what she said immediately after the Test. I would like to read out her statement made on 18<sup>th</sup> May, 1974. She made her stand clear at a Press Conference; I am quoting from a book. I will take the name of the book also, where the statement of Mrs. Gandhi has been quoted. It was stated, "The Indian Government announces the blast without specifying the location and declares it as a peaceful nuclear explosion." She had said in that Press Conference, and I quote: "There is nothing to get excited about. This is our normal research and study. But we are firmly committed to only peaceful uses of atomic energy, not for weaponisation programme, as is being attempted to be projected." This point has to be understood very clearly. Later on, I will come to the issue of 'testing' or 'not testing'. And, four days after that, when the then Pakistani Prime Minister, Zulfikar Ali Bhutto, responded, then, she wrote a letter to him on 22<sup>nd</sup> May. While assuring the Pakistani Prime Minister, she said, "We remain fully committed to our traditional policy of developing nuclear energy entirely for peaceful purposes. The recent underground nuclear experiment conducted by our scientists, in no way, alters this policy. There are no political or foreign policy implications of this test." And, we are continuing this policy for long, even after 1974. That is the rationality. Again, what did the then young Prime Minister, Shri Rajiv Gandhi, said in the United Nations Non-proliferation Disarmament Conference? He clearly emphasised and told the international community, "I have acquired the capabilities. I do not require the help from anybody. India can manufacture weapons. India can weaponise the nuclear programme. But I can assure the international community that I will not graduate myself from the threshold level to a nuclear weapon State." From 1974 to 19<sup>th</sup> May, 1998, when you went for an explosion, the phrase which we used was: "India will keep its nuclear option open. It will not close its nuclear option." We may go in for weaponisation. We may not go in for

weaponisation. But what we demanded from the international community is, "If you agree to a complete elimination of the Weapons of Mass Destruction, if you agree to the total disarmament and complete test-ban, both horizontal and vertical, I am assuring the international community that India will not go for weaponisation, though I have the capability". In the scientist's language, it could be said, "India was just a screw-driver away from the weaponisation programme."

And it is obvious. The NDA Government came to power on 1<sup>st</sup> March, 1998 and went in for explosion in May. Am I to assume that in less than six weeks, you were able to make all the arrangements for the test, if everything was not ready? Therefore, this is a question of principle, firm commitment on disarmament, firm commitment on non-proliferation which embedded in our civilisation and in our history.

Therefore, you may have your own view. And there was a broad national consensus on that issue. Yes, from 1964, you have been saying that we want nuclear weaponisation. But, in 1977, when you were a major partner in the coalition Government, you did not go in for nuclear weaponisation. When you came into power and became the dominant partner in the Government, you did it. And don't try to preach the whole world that the Congress Government did not go in for nuclear weaponisation because of some pressure. The other day I was told that some Defence Minister has said that he was ready but because the instructions came from somewhere else, from the top, the test did not take place. Obviously, the indication was that the pressure came from some super power and that is why the test did not take place. It is not so. The nuclear weaponisation programme is kept a top secret in every part of the world. Only the Prime Minister or the Chief Executive and a couple of his advisers know about it. I read a book on Harry Truman who, as the President of the United States of America first dropped the atom bombs on Hiroshima and Nagasaki. As you know, he was the Vice-President and when President Roosevelt had died, as per their Constitution, he was inducted as the President. After 25 minutes of his swearing in, he was told by somebody, "Look, there is a weapon like this". As the Vice-President of the USA, he did not have the knowledge of the existence of this weapon. There is a book titled 'Where the Buck Stops' written by his daughter, Margaret. In that book, I had read it. And he did not believe it! He was always enquiring from and questioned his Security Adviser, "Please explain the strength of the weapon in terms of TNT". The Security Adviser — who is an expert; of course, a General — told him that the potentiality of that weapon could not be explained in terms of TNT. Therefore, I do not know which

Defence Minister had said this and what knowledge he had. But I can assure you from my own experience and on the basis of the principles and the philosophy of the Congress Party that we do not believe in nuclear weaponisation in a massive way. Yes, we want. When it came into existence, the pest came out of the tube, there was no question of putting the same pest back into the same tube; it became a *fait accompli*. And when it became a *fait accompli* and when you yourself in your nuclear doctrine clearly stated 'No First Use', 'No Use against Non Nuclear Weapon States', 'Voluntary Moratorium on Test Ban', it was accepted; we did not change the nuclear doctrine; we are pursuing the same.

Sir, I am a little scared; not scared, but a little confused, I must say. I must frankly admit that my knowledge in these matters is so little that I was a little confused when Shri Yashwant Sinha tried to play with the words 'credible minimum deterrent, whether it is minimal or whether it is minimum or whether it is credible'. I then asked my officers to brief me on this, and I found that you have used this phrase on four occasions. And this is the widely accepted phrase, 'credible minimum deterrent,' that we do not want to be a nuclear weapon State. That is the Foreign Policy; that is the philosophy. You also accepted it. That is why you put moratorium on tests. You gave the explanation. Yesterday, Shri Kapil Sibal explained in details, convinced the whole world that we have no intention of becoming a major nuclear weapon power. We want minimum credible deterrent from our security perspective. Mr. Sinha is a very knowledgeable man, an experienced man. What you have, what you don't have, what we would like to have, security and threat perception. It is not in absolute terms. It is related to who could be your potential adversary. Depending on his capacity, his potentiality, always the Government of the day will have to determine what would be the threat perceptions and what deterrent would be required. Repeatedly, it has been stated that 'yes, if we want; if we feel at some point of time that test is necessary from the geopolitical situation, defining of the weapons are necessary, we will do it. In 123 Agreement, it has not been banned. It has not been put that it will be prevented. I myself clarified on the floor of the House on 17<sup>th</sup> August of this year 'that yes, there will be no ban. And if India considers it necessary, it will undertake the test. As we did it in 1974; as we did in 1998; and the consequences will also follow. It is as simple as that. As it happened in 1974; as it happened in 1998. I entirely agree with one hon. Member that it is not necessary that we are compromising everything, we are sacrificing our indigenous programme. When you talk of energy, there is no need of ridiculing the concept of nuclear energy. An attempt has been made to query whether it will be beneficial to

*aam aadmi*; whether it will help the common people; whether we are diverting the resources. Most respectfully, I would like to submit, Sir, through you, to the hon. Members that so far as 123 Agreement is concerned, it is an enabling provision, it is an enabling framework. With this enabling framework, the restrictions which are there, of having nuclear trade with India, will be removed. And, of course, it is applicable to the United States of America and India. As per the 1954 Atomic Energy Act of USA — which has been subsequently amended — the United States of America cannot enter into any civilian-nuclear cooperation with any country which is not a signatory to the NPT. Therefore, the Administration does not have the authority. A waiver is required under that Act, and that waiver is to be provided by an Act passed by the legislature. The US Congress passed the Hyde Act, which enabled the US Administration to cooperate with us.

So much of discussion has taken place on the Hyde Act, I am not entering into the legal angularity because it has been well explained; and, after all, I am not a practising lawyer, I am a humble teacher. Therefore, I do not have the legal acumen to argue for, to argue against. But, from the plain and simple reading, and my understanding of this is, yes, in this Act there are so many observations. When the Act was passed, I myself described the Act, 'it is prescriptive, it contains so many extraneous elements, we are not obliged to have it, it is not binding on us.' Yes, as per the Hyde Act, there will be a requirement of Presidential determination. To have the Presidential determination, the President will have to report to the Congress. But, most respectfully, I would like to submit through you, Sir, that this is one-time. It has been explained in detail. When the U.S. President will go to the U.S. Congress with these States, which has been initialled and the text has been frozen, which has not been operationalised. There is no question of operationalisation till the entire process is complete; and, the process has just begun. Of the various stages of the process of operationalisation of 123 agreement, one is to agree on the language of the text. That has been done. Then the second stage is IAEA, the India-specific safeguards arrangement. After that, the third stage is the amendment of the NSG guidelines. At the fourth stage, along with these three documents, it will be referred to the American Congress which will be on the Table for 90 days. As per our practice, it is just 2 days, 3 days, 4 days and the Bill will have to be taken up for consideration if you have to introduce and there is a notice period. But they require 90 days! It will lie there. Once the ratification is done by them, then the respective countries will sign and the process of operationalisation will complete. We are just in the process and that process is yet to be completed.

Now, why are we going to have it? Much talk has taken place on energy. A lot of observations have been made. Here, I would just like to quote one observation made by no less a person than Pandit Jawaharlal Nehru, at the very initial stage of our Independence and economic development. I think, Mr. Natwar Singh is very well conversant with this letter and all the letters of Nehru because he and Dr. Karan Singh are associated with the Nehru Museum. This letter was written by the then Prime Minister to all the State Chief Ministers on 25<sup>th</sup> September, 1953, when he was camping at Ranikhet. What did he say? He says, and that has relevance and that is why I am quoting it: "In countries where power is cheap and abundant, as in the U.S.A., this aspect is not important. But where power is neither cheap nor easily available, the civil use of atomic power is of the greatest importance."

In another place of the same letter—it is a long letter, it also acted as a sort of guidelines to the State Chief Ministers —there also he says: "In this connection, it is interesting to read.." he was referring to an article written by Gordon Dean .."What Gordon Dean has to say about India; he says that India has the most advanced atomic energy programme in all Asia. Outside that of Soviet Union, she would have her first reactor within two years and with no help so far from the US. She has the necessary natural resources, some good talent and ambitious plans." This is of 1953. If we had good talent in 1953, if we had ambitious plans in 1953, most respectfully I would like to submit that, Sir, surely, today our capacity has not been reduced. That capacity has increased much more because today India is having an economy worth one trillion USD, India is having an export of more than 300 billion USD. The Budgetary transactions, which Pt. Jawaharlal Nehru wanted, were ridiculed by saying that it was less than that of the New York Municipal Corporation. Today it is more than 250 billion USD, both revenue and expenditure taken together. Therefore, we have that capacity. I am not going into all the technical details, but we require energy. Today our installed capacity is 1,28,000 MW. The Planning Commission has made some studies; the Atomic Energy Commission has made some studies. Even during the NDA regime some studies were made.

In fact, it is the NDA Government, which projected a target of 3000 MW capacity by 2030 if nuclear commerce is opened up to India. Therefore, the Planning Commission says that the integrated energy policy brought out by the Planning Commission clearly recommends import of the Light Water reactors to supplement the indigenous programme. The Nuclear Power Corporation of India, NPCIL, carried out a detailed study in 2005 on the economics of Light Water reactors. Based on their analysis, they formulated

a programme to set up nuclear generation capacity of 40,000 MW by the year 2020. Not very ambitious! Yes, true, today it is 3900 compared to 1,28,000 MW capacity. But for whole world today, it is 15 per cent. It is equally a fact that at some point of time they did not go for it. Even the advanced countries did not go, it is correct, that the USA did not go for in a major way for the nuclear power programme. The advanced countries did not go in a major way. But the situation has changed because of the growing climate consciousness, growing awareness of the environment, recognition of the fact of climate change, volatility of the international oil market, apart from its pollution and other difficulties. All these factors are leading to the situation where perhaps in our energy mix, — I am using the 'energy mix', it is not the only nuclear energy, — we shall have to make the optimum utilisation of all sources of energy- hydel power, thermal power, renewable energy sources, solar, waves, winds, all. The Government of India is actually doing it. It is not that we are not doing it. In a Group of Ministers under my chairmanship, we decided about compulsory mixing of methanol to the extent of 5 per cent and the desirable level of 10 per cent. It will have to be mixed with petrol and diesel.

This decision has already been taken and we are going to implement it. Luluji has taken up major cultivation of Jatropha in the lands of the Railways for encouraging bio-diesels. It has been pointed out, and rightly pointed out, that in our neighbouring countries, there is huge potential of hydel power. In our own country we have the problem. But, when we are debating, Mr. Chairman, Sir, most respectfully I would like to submit, particularly to those who have the experience of running the Government, just to score a debating point, they should not ignore the practical problems which we are facing in certain areas. What is happening in Tehri Dam project need not be required to be explained to the most knowledgeable Members of this House, where we had started in Nepal with an agreement initiated by me in 1996 as Foreign Minister. Maha Kali River and Panchveshwar Dam project has not yet been ratified by the Nepalese Parliament. I do not blame anybody. They have good reasons. But the fact of the matter is, it cannot be ratified. It cannot be implemented. Where it can be implemented it has been done. Look at Bhutan. We made a small beginning with Pukha and today with Tala project we are just having a beautiful cooperation. So, the short point, which I am trying to digest, Sir, is that our requirement would be 300,000 to 400,000 mega watts by 2020-2030. Therefore, we shall have to explore all the potentials. Sitaramji while presenting his case, very correctly pointed out that we cannot ignore health, we cannot ignore education. But most

respectfully I would like to submit that in respect of health and education, perhaps this Government has done what maximum could be done under the given situation and which is going to be approved by the State Chief Ministers in the Eleventh Five-Year Plan in the next NDA meeting.

**Shri Sitaram Yechury:** Not NDA meeting but NDC meeting.

**Shri Pranab Mukherjee:** I am extremely sorry. At NDC meeting which is going to be approved by the State Chief Ministers and the Central Ministers at NDC meeting. Gross budgetary support — I am not talking of the allocation, I am not talking of the IEBL and extra budgetary resources — to education has been stepped up by 12 percentage points, — percentage points — not in absolute terms from seven per cent to nineteen per cent. On health, it has been double and the hon. Member like Mr. Yechury is fully aware that today, we may like it or we may not like it but, the hard fact is that the core plan has become devious. Surely, Mr. Yashwant Sinha, with his long experience as Finance Minister, will bear me out because, practically, the Ninth Plan and the Tenth Plan have been implemented by him. He knows that the Plan has become practically the budgetary support. Therefore, it has been decided that yes, we shall have to go for that. We shall have to do it. There is no denial of the fact that we shall have to spend more on education, more on health, Health for All, Education for All. People are talking of how it is going to help the *aam aadmi*. Whenever we bring in any new ideas, yes, obviously we would like to examine it. We would not like to be taken simply by some ideas. But, please have some respect for experience.

Try to learn from the past experiences before just putting your objection. When Shri Rajiv Gandhi Government talked of IT revolution, what had happened? We expressed our concern as to what would happen to *Aam Aadmi*. How is he going to be benefited by IT? How is he going to be benefited by computerisation? He had taken it up with the concept of moving into the 21<sup>st</sup> Century. Today, India's leadership in the IT is the vision of that man. But, most respectfully we would like to remind this hon. House and ourselves that many of us did not accept that. We were sceptical about its use. Yes, with new ideas and new perceptions, there may be scepticism.

Therefore, the hon. Prime Minister always desire to have discussion. He is not running away from Parliamentary debate or discussion. He is trying to understand the different points of view. The discussion does not mean dictation. Somebody will say and you will have to accept it. Let us, frankly, exchange our views, ideas and see where we are wrong and where we are right. Please do not treat it as immodesty. I most respectfully submit what

Mr. Kapil Sibal was referring. I would like to complete the remaining half circle where he has left. It was not merely the criticism of the Dunkel Text. But, it was related to a specific programme. As all of you are fully aware, especially the hon. Members who have participated in this discussion, no international treaty is self-executive. An international treaty is to be implemented by the national law. That is why it is written that it will be implemented by the participant-countries as per their national laws. And, if the national laws are not in conformity, they are to be amended, as it has been in India's case. As per our scheme of the Constitution, this Parliament does not have the right to make legislation on the State List — List No. II. But, to implement an international agreement, if it required, the Parliament had the power. List - I of the Seventh Schedule has given this power to the Indian Parliament. This was the occasion. When Mr. Joshi and BJP friends, at that point of time, opposed seriously, I signed the WTO Agreement.

Dr. Najma Heptullah was the Deputy Chairman, she will bear me out, knew what I had to face. Mr. Digvijay Singh was also their member. They opposed very vehemently. We could not pass it first. Then, we went through an Ordinance. But the Ordinance has to be passed by the Houses. We had brought it. It was rejected by the Rajya Sabha. I can understand that. They opposed then. They are opposing now. Even when a further amendment we brought, after this Government came to power, I, along with Mr. Chidambaram and the Commerce Minister, had to spend many hours with them to meet their requirements and after that when we addressed their concerns, we amended that Act. But, I am talking of the first amendment to the Indian Patent Act where the product patent in the 1970 Act was not permissible. We had only the process patent, not the product patent. So, we were to do it at that time. Please remember, the bogey was that the life-saving drug prices will reach the sky. The Indian pharmaceutical industry will die, will collapse. All the multinationals are waiting to capture the Indian markets. But, today, Indian pharmaceutical industry is booming in the world.

It is one of the most advanced sectors. And, what happened, ultimately? I am not talking that. Mr. Siva says, "Don't have your policies linked with your place of seats". You opposed it; you opposed the Patents Act. As a result, there was a complaint in the WTO's dispute settlement mechanism that India had failed to provide exclusive marketing rights, or, amend its patent laws in respect of the IPR on certain product patents, including drugs, medicines, food products and certain other products, like, chemicals. You sent your best lawyers twice, including the then Attorney General of India,

Soli Sorabjee. They did their best. But you lost the case and you had to come back to the same House. We were sitting there. I consulted Dr. Manmohan Singh, who was the Leader of the Opposition at that point of time. He said, "Yes, we should support it." We talked to the Congress President. She said, "Look, mere accident of change of seat need not necessarily change the policy. If the policy was good, when you were Commerce Minister, the policy is equally good when Mr. Murasoli Maran is the Commerce Minister." And, we lent our support. The CPM opposed even at that time also. So, they are consistent in their opposition. I may not agree with that, but I respect that. The simple short point, which I am trying to drive at, Mr. Chairman, Sir, through you, is that please let us give it a try. Our intention is to try optimal utilisation of all sources of energy. When we are opening the nuclear market, it is not that all the multinational people will come, because these will be, at that point of time, commercial transactions. You will have to apply the application of your commercial mind, commercial judgement. Wherever you will find a cheaper cost-benefit ratio, you will have to be calculative, you will have to go there.

In the other House, I used the word 'passport'. It is some sort of passport. I may like to have a passport in respect of one country, but thereafter I have the facilities of travelling all over the world, depending on getting the visa. It is true and I do entirely agree with Mr. Chandan Mitra, when he says that our scientists did their best to overcome the crisis that we had to face during the sanction regime. I do appreciate it. I salute them. They have done a wonderful job, a yeoman service to the people of this country. But, as a responsible Government, is it not our responsibility, if opportunity comes, to provide them with the opportunity to facilitate so that they can show their talent? There is no denial of the fact. Nobody will disagree on this point, including those who are present in this House, that Indian scientists can do miracle, provided they get the opportunity. But, surely, I would not like to have a situation — this is my most respectful submission to you Mr. Chairman, and to the hon. Members, through you — where, if it is possible for us, we will not explore the possibility, we will not do our best to facilitate our scientists, our technicians, our technologies to have the maximum advantage all over the world. Why our DRDO would still be, in certain activities, under the NTT lease? It is there. It is since 1974 till today. I may like it, I may not like it. I may pass resolutions. I may condemn in the strongest terms. But that condemnation, that using of strong words is not going to help the DRDO come out of the NTT lease. If the sanction is there, sanction is there. This is the ground reality. In the case of Cryogenic Engines, yes, I had to face the problem.

We had to face this problem. Our Light Combat Aircraft Programme has been delayed because of that. But the question is: Why are they doing it? Why did they change it? Why was it not there in 1971? Today, everybody recognises that India cannot be simply sidelined or pushed aside. All over the world, our non-official ambassadors and persons of India origin are carving their own place by their own merit, by their own intelligence, and by their own hard work. You also recognise them. I must give you the credit. You first recognise it. We are following it. It is because of their contribution only. They are also influencing it; it is not something, which happened all of a sudden. If there was a strong bipartisan support in favour of this Agreement in the U.S. Congress, it was not merely because of the efforts of the administration. Yes, administration did its best. President Bush did his best. And, Secretary of State, Condoleezza Rice did her best. From their point of view, they did their best. But the Indians settled in America also made their own contribution. They have a sizeable influence there too. If we have these assets, should we not utilise them? Should we not explore that? This is my small submission to you, Mr. Chairman, Sir.

Another point, which has been, repeatedly, raised is on Iran. There is no denial of the fact, and, we have explained it a number of times also. Don't doubt our sincerity. Yes, we voted once in the IAEA Board against them. And, our intention was to ensure that it does not go to the Security Council because if it goes to the Security Council, and if it adds sanctions under Chapter 7 of the Security Council, the problems would be more. That is why, we tried to see if it could be avoided and have a compromise draft with the European countries. It was there. But, thereafter, we have not done that in the latest voting. We have, in collaboration with Malaysia, Russia, China and with a host of non-aligned countries, taken the correct position. What is that position? I attended the ASEM Foreign Ministers' Conference which took place in last May. Forty-five Foreign Ministers from different parts of the world; 27 of the European Union, Ten Foreign Ministers of ASEAN and about 7-8 from other countries attended it. I myself articulated the views of the Government of India that Iran is an old civilised country. It is a proud nation. We have civilisational links with them. I do not believe that merely by passing sanctions or threatening or hurting their national pride, you will resolve these issues. If these issues are to be resolved, they will have to be engaged, and they will have to be engaged in the appropriate national and international forum, that is, the IAEA. Some improvement has taken place because of all these efforts. In these areas, we shall have to work in collaboration with other countries. We are working on that. It is not necessary that if I have friendship with Mr. Sitaram Yechury, I cannot have friendship with Mr.

Yashwant Sinha. I can have friendship equally with Mr. Sitaram Yechury, Mr. Amar Singh, and Mr. Yashwant Sinha and with everybody. *Vasudaiva Kutumbakam* is our foreign policy. We do not consider anybody our adversary. We are careful and watchful. But, at the same time, we would like to have cordial friendship. Therefore, that is the approach, which we have, and we are having that. And don't doubt it. Don't doubt that whatever we are doing is to be looked at with some sort of suspicion.

You have overcome that stage. In 1977, you had it. That is why you had to give a new nomenclature to the Foreign Policy, to the Non-Aligned Policy. You came out with a formulation in 1977, after coming to power, for the first time, 'Genuine Non-aligned Policy', as if ours was spurious non-aligned policy. And, what was the element of the 'Genuine Non-aligned Policy'? I am a small man, Sir, of less than average intelligence. I could not understand what was the 'genuine non-aligned policy' which was followed between 1977 and 1980. You corrected that. I do agree; you corrected that. Between 1998 and 2003, you corrected that. But don't indulge in it. Simply because you are sitting on the other side of the Chair that whatever you did or whatever you believed when you were in office is to be done or is to be completely negated. That is not the approach because if we ought to live in coalition politics, we ought to be accommodative.

Sir, we have been attacked as to why we did this UPA-Left mechanism. I have no quarrel of inviting Mr. Amar Singh and his party to join us. I will be welcoming it. But, at that point of time, it was decided that if there is a misunderstanding among those who are supporting us, then let us try to sort that out. You know the exercise which you did — I would not like to mention the names; some of you are present here — at your personal level to iron out the differences between the AIADMK leader, Dr. Jayalalitha and the NDA before the first coalition Government, the first NDA Government collapsed. You did your best to iron out the differences. You did not succeed. That is a different issue. But that did not mean that there should be a parliamentary committee to look into it, there should be a parliamentary intervention to sort out the problem between two coalition partners. The arrangement which we are having today — I do not know — depends much on my colleagues, on our capacity to deliver goods. But we are making sincere efforts, sincere attempt to see how we can narrow the differences, how we can iron out the differences which we are having. And, I do hope it would be possible for us to find out the solution.

Sir, we are committed to the Common Minimum Programme. Our Foreign

Policy is independent. If somebody makes some comment, am I to accept it? I have been advised, not directly or by writing letters, but through public pronouncements, that the Non-Aligned Movement is a dead Movement. I also gave the reaction through public, through Press, that Non-aligned Movement is very vibrant. India's belief is firm on Non-Aligned Movement. The South-South Cooperation is absolutely necessary for the economic development and it is one of the important components of the Non-Aligned Movement.

In the decision-making process, there are many stages. Mr. Arun Shourie took the trouble of explaining in details what Condoleezza Rice said, what Nicholas Burns said at the different committee stages. Fine. You do it. You are a very highly educated and knowledgeable person. You know you want to go to the background. But, most respectfully, I would like to submit, when we introduce a Bill in Parliament, Indian Parliament, in our system, it goes to the Standing Committee. The Standing Committee invites evidence from all over the country. People come, depose their evidence; Government officers come and depose their evidence. The Committee listens, analyses, comes to a conclusion and makes its recommendations. The Government scrutinises it and after that when the legislation is passed, after passage of the legislation, who said at what stage in the decision-making is not relevant; what is relevant here is the product of these exercises.

The 123 Agreement is the product. There have been different stages. I don't say that you will be convinced by this argument; I have used this argument on earlier occasions also. But that does not mean that my argument is nullified, unless it is proven who is correct and who is not correct. The taste of the pudding is in its eating. I would like to submit most respectfully that I am repeating what I had said earlier. We are not bound by the Hyde Act. We are bound by the 123 Agreement, which is a bilateral agreement between India and the USA. If it fructifies, if it passes through all these stages, then it would be possible and it would be found in course of time, when it is put into operation, if it happens — I am saying that because there are so many hurdles — then we will know who was correct and who was not. Then we would have established the truth. Many presumptions were made on several issues. I am not going to the other issues which I remember. I had the privilege, fortunately or unfortunately, of being in the Government for quite some time with different Congress Prime Ministers. You have criticised many of our policies, but subsequently, it was established that we were correct and you were wrong. I am not saying that you would be proven wrong this time also, but let us try. We are

sincerely trying. We require energy. We require technology. We want this country develop; nine to ten per cent GDP is absolutely necessary. That is necessary for the *aam admi*, for job, for health, for education, for removal of illiteracy, to have adequate resources, much more than what we can spend today. And if we have one area, I cannot ignore the political compulsions. Today, whether I am here or you are here, you won't be able to pass on the entire buck of the cost of imported energy to the consumer however grumbling the Finance Minister may be. Political wisdom and compulsions will not allow that to happen. Therefore, we shall have to go in for the cost-effective energy. Yes, it is proved; everybody admits that the nuclear energy establishment of the reactors is definitely costly. But the technology is moving ahead. It is advancing. When in this country, we had the first mobile phone, what was its cost, and what is the cost of a mobile phone today? With the advancement of the technology, I would like to submit most respectfully, Sir, that nuclear energy, if it appears to be too costly today, perhaps, it will not appear that costly tomorrow. And let us not confine ourselves only to today. Let us look at the future. Let us look at tomorrow. Thank you, Mr. Chairman, Sir, for giving me this opportunity.

**Mr. Chairman:** Thank you. Now, the hon. Leader of Opposition wishes to seek a clarification.

**The Leader of the Opposition (Shri Jaswant Singh):** Mr. Chairman, Sir, it is not my intention at all to reopen or resume the debate that we have had since yesterday. I am very grateful to the hon. The Minister of External Affairs for the very valiant effort that he has made to covering the field in very general terms. I had some specific queries to ask, if only the Prime Minister would do us the courtesy of waiting while I ask clarifications. (Interruptions)

**Shri Pranab Mukherjee:** I am just informing you. He has a lunch commitment with the former Singapore Prime Minister, Lee Kuan. It is already time and, therefore, he had to rush.

**Shri Jaswant Singh:** I fully understand, Sir. I am grateful to the hon. Minister of External Affairs to have said this to us. But had the Prime Minister himself got up and said that he has a lunch to go to, the House would not have said, "No, you can't". These are the things... (Interruptions) Because the debate concerns the hon. Prime Minister. This kind of taking the House for granted or offhandedly has intrigued and disappointed us earlier and continues to disappoint us. ..(Interruptions)..

**Mr. Chairman:** Please, go ahead, Sir. (Interruptions)

**Shri Jaswant Singh:** Sir, his continued silence other than yesterday..(Interruptions)

**Mr. Chairman:** Please. ...(Interruptions)..

**Shri Jaswant Singh:** Sir, as the hon. Minister for External Affairs said, we should not score debating points. I quite agree because the subject is far too important to simply sink to a level of debating points. But there is a very fine verse from the *Ramacharita Manas*,..... Here, I may remind the hon. Minister for External Affairs that he has reinvented the reality of India's Nuclear Policy. It has never been. We have always admitted that it is practically not possible for any Government to have come into office and to have tested the nuclear devices that we tested in 1998. I shall not go into the entire history of the nuclear matter, Sir. But I do wish to correct because that is where the debating point comes in. ..(Interruptions)..

**Mr. Chairman:** Please, please. Silence please. ...(Interruptions)..

**Shri Jaswant Singh:** The hon. External Affairs Minister spoke of the then Defence Minister, Mr. Venkataraman. He has written in his biography that the nuclear test was planned. Indeed, he was ready to go down into the borehole to test the entire machinery, etc. Let us not forget that he was the Defence Minister and the party which hon. Pranab Babu has served so admirably and with such great distinction for so many years. Sir, I don't want to pursue it further. The hon. Prime Minister and everybody in the Treasury Benches have said, indeed my senior colleague in the other House, Mr. Advani, has said, that it is important that we take the sense of the House on such an important issue. He himself cited WTO. Don't be in a hurry. I appeal to the Government, wait a bit, convince the House, carry the people and Parliament with you and if you have to have the sense of the House, it is clear since yesterday's debate that a very large part of the House, which may constitute the majority, is not with you and is not convinced. Do make an effort again. What is the hurry to go now to a Republican Government? If you are lauding a bi-partisan support there, why don't you work for a bi-partisan support here? That is the answer. I would be very grateful, Sir, if the hon. Minister would give us a reply to that because I don't see that bi-partisan support just now.

**Shri Sitaram Yechury:** Thank you, Mr. Chairman, Sir. I compliment the External Affairs Minister for the valiant effort that he has made. But I must

confess that he has left me not fully convinced. So, my opposition to the deal continues. And, I would like to only remind, and only like to remind, Sir, remember, there was a reference yesterday to the visit of former US President Bill Clinton to India and also a reference to the fact that he had arm twisted, that is, US Administration then, arm-twisted more than 30 countries into signing the CTBT, which even we were prepared, India, at that point of time. Well, it did not happen mercifully. That is good. But, nevertheless, when Bill Clinton went back to the United States of America, the US Congress rejected the CTBT, and then Clinton turned around to the world and said, "Yes, I forced you to sign the CTBT, but my Congress rejected it. Therefore, I am sorry. This is democracy at work". If that is democracy at work, Sir, what's sauce for the goose is sauce for the gander. That is an old English saying. So, if that is democracy for the United States, this is democracy for us as well that here, majority of the House does not agree. And, therefore, I think, that in a very honourable way, we can actually tell the world that we are democratic people and we will abide by the democratic values.

So, this is our appeal to the Government.

**Shri Amar Singh (Samajwadi Party):** Sir, I associate myself with comrade Yechury.

**Shri Shahid Siddiqui:** Sir, I need a specific clarification...

**Mr. Chairman:** Please, do not interfere...(Interruptions). Mr. Siddiqui, you don't have the floor...(Interruptions). Will you please resume your place?...(Interruptions). This is not the subject under discussion.

**Shri Pranab Mukherjee:** Sir, first of all, I would like to respond to the common points which the Leader of the Opposition and Mr. Yechury have made and Shri Amar Singh has also associated himself with Mr. Yechury about the sense of the House and give values to the democracy. Before that, I would like to make one point. I have no intention of joining the controversy, because the period which he has referred, I have great respect for former President, former Defence Minister, Mr. Venkataraman, who was my colleague. I worked with him during 1970s. When he was the Member of the Planning Commission, I was Minister here. In fact, I replaced him as the Finance Minister when he went to Defence. Please, remember, he was the Defence Minister from 1982 to 1984 till he was elected the Vice-President. The Prime Minister of the country was Mrs. Indira Gandhi. Am I to believe that Mrs. Indira Gandhi, under the pressure of the United States of America, succumbed and compelled and gave up the test? I am

leaving it there. Sir, in respect of the sense of the House, we have never said that we will take the sense of the House. Let the process be completed. We have begun the process; the process is not yet complete. Let me complete....(Interruptions). Let me complete. This is most unfortunate that I have listened to them....(Interruptions).

**Mr. Chairman:** Order, please...(Interruptions).

**Shri Pranab Mukherjee:** What Mr. Yechury told...(Interruptions)...it is most unfortunate...(Interruptions).

**Mr. Chairman:** Hon. Members are requested to resume their places...(Interruptions).

**Shri Jaswant Singh: Sir, we are walking out.**

**Shri Sitaram Yechury:** Sir, we are also walking out.

**Shri Amar Singh: Sir, we are walking out.**

**(At this stage, some hon. Members left the Chamber)**

**Shri Pranab Mukherjee:** It is most unfortunate that they are running out. If it happened, it happened in the case of CTBT. It is not for the first time that American Senate rejected the proposal of the President. If it rejects the proposal, 123 Agreement, on which I will take the sense of the House, you please tell me, on which I will take the sense of the House, because the Bill does not come. The Bill does not come to exist....(Interruptions). Why are these people making noise? What type of people they are? Therefore, there is no reason. They have no case. They have left. It is for them to decide.

Thank you, Sir.

**Mr. Chairman:** The discussion on this subject is now concluded.

## **APPENDICES**

# **CIVIL NUCLEAR ENERGY COOPERATION WITH THE UNITED STATES**

# Blank

**STATEMENTS OF THE  
CONGRESS PARTY**

# Blank

## APPENDIX - I

### **Reaction of the Congress Party to the agreement reached between India and the United States on the Nuclear Cooperation.**

**New Delhi, August 3, 2007.**

The main partner in the ruling coalition United Progressive Alliance, the Congress on August 3 described the nuclear deal between India and the United States as a "historic agreement."

Once the deal was cleared by U.S. Congress it would get translated over the next few decades and help in meeting the rising domestic energy requirement, the party said.

Reacting to the 123 agreement, party spokesman Abhishek Singhvi said that both in the national and public interest, "India has extracted the best possible deal.

"The accord came after India was recognised both as a "*de jure* and *de facto*" nuclear power though it had "rightfully" not signed the Nuclear Non-proliferation Treaty.

The Congress would convey its appreciation to Prime Minister Manmohan Singh for his unshakeable faith in the deal though the Opposition cast doubts on the benefits that might accrue to the country.

He said the U.S.' efforts to legally bind India to the self-imposed moratorium on nuclear tests announced by the Vajpayee Government did not find a place in the 123 agreement.

The spokesman congratulated Dr. Singh, UPA Chairperson Sonia Gandhi on her efforts to deal with all constituents of the alliance, the Indian team of skilled negotiators and civil society who had all contributed to the deal.

## APPENDIX - II

### **Paper issued by the Indian National Congress on India's Nuclear Energy Programme and the 123 Agreement with United States.**

The nation is witnessing an intense debate on the agreement negotiated between India and United States of America on 'Civilian nuclear energy cooperation', taking forward the process initiated after the Joint Statement of July 18, 2005, when our Prime Minister visited the United States of America.

Inadequate information, cynical criticism and partisan politics have hijacked a mature and informed discussion in Parliament, thereby depriving the people of India their right and the benefit of information. The Indian National Congress - the Party which was in the vanguard of the freedom struggle and having led independent India to unassailable position of strength welcomes the debate. The Congress Party is willing to discuss this and any other issue of critical national import because of its unwavering commitment to a true spirit of democracy.

Any informed discussion must trace India's long and difficult journey to attain nuclear self-reliance. We must recall that the foundations of India's nuclear energy programme were laid in the early 1950's under the visionary leadership of Jawaharlal Nehru, who gave all required support to Dr. Homi Bhabha - the mentor of India's nuclear programme and his distinguished team. From the very beginning, Nehru made it clear that India's nuclear programme would be peaceful and dedicated to energy security. It needs mention that international cooperation was an integral part of this programme and the very first nuclear power station at Tarapur, commissioned in 1963, was with American assistance. The nuclear reactors in Rajasthan and Tamil Nadu followed with Canadian cooperation. Over the years, the international cooperation increased, with India reaching out to Russia, France and other countries.

In October 1964, the explosion of a nuclear device by China raised crucial security concerns and changed the nuclear discourse.

The five nuclear weapon States - USA, the USSR, UK, France and China came together in 1968 to sign a Nuclear Non-proliferation Treaty (NPT). The Nuclear Five, retained the full freedom to act in atomic matters and announced that for all others, nuclear cooperation was to be governed by

'International safeguards.' The world was divided into 'nuclear-haves and nuclear have-nots'. India refused to sign the NPT, describing it as discriminatory. It was a principled position, keeping in view India's security interest which demanded it to retain the nuclear option, if the circumstances so demanded.

In May 1974, India conducted a peaceful nuclear explosion at Pokhran in Rajasthan. This bold decision, could only be taken because of the leadership of Indira Gandhi, who was committed to make India self-reliant. Unfortunately, the world responded unilaterally and abruptly ended all cooperation in nuclear energy. India stood by its scientists who rose to the challenge of building an autonomous nuclear energy programme by using indigenous means and technology.

The USA led the creation of a 45-nation Nuclear Suppliers Group to control the international flow of nuclear raw materials and technology with adverse consequences for a country like India.

In May 1998, India conducted five nuclear tests at Pokhran and announced to the world, that it has acquired nuclear weapons in response to strategic compulsions, linked to weaponisation and nuclear proliferation in its immediate neighbourhood. The credit for making India nuclear capable belonged to the sustained research and development done throughout successive Congress governments. It was also a tribute to the nuclear scientists, who worked in the restrictive regime of denial of technology for over three decades to make that happen. Following Pokhran-II, India declared a voluntary moratorium on future nuclear tests and unveiled "no-first-use" nuclear doctrine, thereby assuring the world, that this credible minimum deterrent was meant for defensive purposes to protect itself from nuclear attack by any adversary.

The Congress Party policy on nuclear issues has been consistent and clear. It was reaffirmed in the Manifesto for the 2004 Lok Sabha elections, which said: "The Congress Party is committed to maintaining a credible nuclear weapons programme, while at the same time evolving demonstrable and verifiable confidence-building measures with its nuclear neighbours. It will take a leadership role in promoting universal, nuclear disarmament and working for a nuclear weapons free world order." At the same time, the Congress Party reiterated its resolve to work towards India's energy security in which all sources - coal, hydro, oil and gas, nuclear and renewables - will have to play an important role.

India's civilian nuclear energy agreement with USA has to be seen in this historical background. The primary objective, is to end India's isolation from the global mainstream and enable the country to participate in full international cooperation in nuclear research and technology. Such an understanding, was required to open the doors of cooperation with the 'Nuclear Suppliers Group', and also to ensure increased access to nuclear fuel and technologies from all countries, especially USA, Russia, France, Canada, Brazil and South Africa, to name a few. That alone will give the desired momentum to India's endeavour for adding more nuclear reactors to generate 20,000 MW of nuclear power by the year 2020, which will constitute 10% of India's power generation. India's energy needs are enormous, given its huge population and the pace of economic and industrial growth. It is therefore important for India to act with vision and foresight for its energy security. As the world is grappling with the threat of global warming and climate change, access to clean source of energy, especially nuclear, becomes imperative. There should be no doubt, that nuclear energy is going to be of increasing importance to India since the country has one of world's largest reserves of 'Thorium.' Its three stage nuclear programme, is, ultimately aimed at using thorium fuel for nuclear power generation. It is important to know that to reach that stage, India needs to set up more uranium fuelled reactors. Although India mines its uranium, it is universal knowledge that its own reserves are limited.

The civilian nuclear energy agreement treats India as a special case, placing it in a unique category, as a State possessing nuclear technology like the US, with both partners having the same benefits and advantages. This is also the first step to end the nuclear apartheid which has shackled India's nuclear research and development and increase electricity generation essential for our economic prosperity. We must remember that more electricity is required for our farmers toiling in the fields to power their pumps sets and irrigate their fields. The people in our villages and those living in urban slums also need power to light up their homes and lives. A responsive Government has embraced a correct approach to meet the genuine needs of its people.

It should be made clear that this agreement has been negotiated between two sovereign States - India and the United States. India has done this as an equal partner. The Government has pursued the negotiations with an unprecedented measure of transparency, which was underscored by three full debates in both Houses of Parliament. The Prime Minister, Dr. Manmohan Singh, had taken into account all apprehensions expressed by

the Opposition or even the supporting Parties and responded to each clarification sought. The Government, had given categorical assurances that any agreement reached will be within the defined parameters, guaranteeing India the right to reprocess, create strategic fuel reserve and access full nuclear cooperation with international community. There has been no departure and all the commitments have been fully honoured.

This agreement is not at the cost of the autonomy of our strategic nuclear programme; our indigenous three state Nuclear Programme and our research and development activities.

This document answers all doubts that have been raised on the Agreement and the unwarranted charges hurled at the Government's intent.

In a democracy there will always be different points of view - we recognize and respect that.

The Congress Party has always believed in evolving a consensus on matters relating to national security and foreign policy. It has protected the sovereignty and integrity of India and defended its right of independent decision making while responding to international developments. It is important to remember that, it was the Congress President's opposition articulated in a letter to then Prime Minister in June 2003 that stopped the BJP led NDA Government from sending Indian troops to Iraq. Let the people not forget that it was during the BJP-led regime that the shameful Kandahar episode took place when India's External Affairs Minister personally escorted dreaded terrorists to their freedom in December 1999. It was again during the tenure of the NDA that the External Affairs Minister engaged in prolonged negotiations with the USA Deputy Secretary of State, Strobe Talbott, without ever taking the Parliament or the nation into confidence.

These are just a few facts to remind the people of how foreign policy was conducted by those who are today questioning the UPA Government's national resolve.

The credit of bequeathing India an independent foreign policy rightly belongs to its architect Jawaharlal Nehru and the Indian National Congress. The Indian National

Congress has throughout placed India's national interest above politics. Any charge of India's strategic and sovereign interest having been compromised is preposterous and therefore deserves to be rejected. The Congress Party, has firmly been and firmly remains committed to defend India's freedom and supreme national interest.

## **1. Rising Demand for Energy**

For a developing country like ours one of the most important constraints on our economic growth is the availability of energy. The consumption of electricity in India is very low since most of our people do not have access to power. As the economy develops and as our incomes rise, the demand for electricity and other forms of energy will increase.

Our farmers know that over the years their demand for energy has gone up. Our farmers need power for their pump sets to irrigate their fields. Many farming operations are now getting mechanized and these machines need electricity. Rural households need electricity. The Government has committed itself under Bharat Nirman and Rajiv Gandhi Vidyutikaran Yojana to ensure complete electricity connectivity across the country.

But it is an unfortunate fact that we are unable to meet this growing demand. Most of our people still live in villages without regular and reliable power supply.

Our cities are also being starved of power. Most jhuggi-jhopris have no power supply at all. Even when electricity connections exist, most people are harassed by power cuts and load shedding.

Hence, a major challenge before us is to increase the supply of electricity in the country. This will allow every one of our households to be lit; it will allow our children to study under proper lighting at home and at school; it will allow our farmers, artisans and workers to use energy as a means of production; it will enable all of us to use electrical appliances that make life easier to live and, it will contribute to industrial development and better infrastructure and more efficient public transport.

## **2. Strategy to Increase Power Supply**

Our Government has been working hard to increase the supply of power in the country. There are many sources of energy supply. The most common means of generating electricity have been the burning of coal (thermal power), tapping the natural flow of rivers (hydro electricity) and burning natural gas and petroleum. Coal, gas and oil are all non-renewable resources. Moreover, burning coal and oil has a harmful effect on environment and contributes to pollution and global warming. Hydro-power is clean but not always green because large dams can destroy our natural habitat and displace people.

Modern science has enabled us to tap energy from renewable natural resources like wind, bio-gas and solar energy. However, these are still limited in their scope and potential. In the future we hope to generate more power from these sources. To develop new and affordable technologies to tap these sources of energy, and develop new clean coal technologies, we have to invest more in research and development and also seek international cooperation.

### **3. Importance of Nuclear Energy**

Modern science has also helped us discover a new source of clean and renewable energy. This is nuclear energy. Our first Prime Minister Pandit Jawaharlal Nehru recognized early that nuclear technology offered a tremendous potential for economic development, especially for a developing country aspiring to leapfrog technology gaps brought about by long years of colonial exploitation. India's indigenous nuclear programme was founded to address the challenge of energy security and attain self-reliance and technological independence.

### **4. Nuclear Energy is also Clean Energy**

Most scientists agree that pollution is contributing to global warming and to climate change. This can hurt agricultural production and harm all living beings on our planet. We must, therefore, reduce pollution that causes global warming. This requires environment friendly energy sources - clean and green energy.

Any means of producing electricity involves some waste and environmental hazard. The nuclear industry is unique in that it is the only energy-producing industry that has taken full responsibility for the disposal of all its wastes and meets the full cost of doing so. Nuclear energy also does not contribute to global warming.

Also the cost of fuel for a nuclear power station is much less than for an equivalent coal fired power station. Electricity from nuclear reactors in many regions is competitive with electricity produced from coal, even after providing for management and disposal of radioactive waste and the decommissioning of reactors. So, nuclear energy will be a clean and an affordable source of energy.

Presently, only three per cent of India's energy needs are met from nuclear sources. India plans to produce 20,000 MWe from the nuclear sector by 2020, increasing from the very low level of 3,700 MWe at present.

Increased share of nuclear power in the Indian energy mix will diminish the reliance on fossil fuels and reduce carbon emissions from India.

Many countries are actively developing nuclear power. It is of particular interest to rapidly growing and populous economies like China and India. No country would want to be too dependent on a single energy source.

Therefore, it is not a question of coal, hydro or nuclear but that we need a combination of various renewable sources of energy to ensure our energy security in years to come.

Indian nuclear scientists also wish to participate in global research projects so that our science and technology can develop. Nuclear science and technology have a high applicability in the field of medicine, in irradiation and storage of food.

Nuclear energy will enable us to meet the twin challenges of energy security and environmental sustainability. It will also have major spin-offs for the development of our industries, both public and private.

The 123 Agreement between India and the United States of America would put an end to technology denial regimes against India that have been in place for three decades and end India's nuclear isolation. It will open the doors for India to have civil nuclear cooperation as an equal partner with the USA and the rest of the world.

**5. India-US Agreement on Bilateral Civil Nuclear Co-operation India needs imported uranium to rapidly expand its capacity to generate nuclear energy.**

During Prime Minister Manmohan Singh's visit to the US in July 2005, the two countries - India and the US - carried forward an on-going dialogue towards resumption of civilian nuclear co-operation. This dialogue had started in the days of Pandit Jawaharlal Nehru but had been frozen since 1974, when India conducted a peaceful nuclear explosion.

President George Bush told the Prime Minister that he will work to achieve full civil nuclear energy cooperation with India as it realizes its goals of promoting nuclear power and achieving energy security.

President Bush would also seek agreement from the United States Congress to adjust U.S. laws and policies, and the United States will work with friends and allies to adjust international regimes to enable full civil nuclear energy cooperation and trade with India.

For our part, our Government reciprocally agreed to assume the same responsibilities and practices and acquire the same benefits and advantages as other leading countries with advanced nuclear technology, such as the United States. Reciprocally, India agreed to give an assurance that nuclear supplies for civilian purposes would not be diverted to her strategic programme.

Based on this concept, in March 2006, during the visit of President Bush to India, a Separation Plan was agreed upon by the two sides - according to which, India agreed to identify and place under IAEA safeguards 14 of her 22 thermal power reactors between 2006-14 in a phased manner.

In order to be able to enter into such a co-operation with India, the US Administration sought and obtained from the US Congress a legislative waiver from a stipulation in Section 123 of the US Atomic Energy Act of 1954 requiring full scope safeguards as a condition for civil nuclear cooperation.

An enabling legislation, called the Hyde Act, was passed in the US Congress in December 2006, to enable the US Government to cooperate with India. The Hyde Act is only a US law. It is not binding on India. We have entered into only a bilateral Agreement with the US, called "Agreement for Co-operation Between the Government of India and the Government of the United States of America concerning Peaceful Uses of Nuclear Energy."

This Agreement is not at the cost of (i) the autonomy of our strategic nuclear programme; (ii) our indigenous three stage Nuclear Programme; and (iii) our research and development activities. Our Government remains committed to all these.

## **6. Main Features of the 123 Agreement**

1. The Agreement could be a major contributor to our energy security. For India it is critical that we maintain our current economic growth rate of 8 to 10 per cent per annum if we are to achieve the goal of eradicating poverty. Inadequacy of energy supply is one of the primary constraints on accelerating India's growth rate. We are trying to expand all forms of energy production in a manner which takes care of concerns about environment. Nuclear energy is a logical choice in this context and can make a larger contribution to our overall energy mix. At present its share is only about three per cent. We have an ambitious programme to increase our nuclear energy generating capacity to 20,000 MWe by 2020 and double this by 2030. While our domestic three stage programme continues, using our own uranium

resources, this Agreement, by adding additional capacity quickly, would help us to reach that target soon.

2. The Agreement also opens the door for cooperation in civil nuclear energy with other countries. We are already discussing with France and Russia similar bilateral cooperation agreements on civil nuclear energy. Once the NSG adopts an exemption to its Guidelines we hope to operationalize all these agreements.
3. The Agreement places India in a special category as a "State possessing advanced nuclear technology", like the United States, with both parties "having the same benefits and advantages".
4. The Agreement provides for full civil nuclear energy cooperation covering nuclear reactors and aspects of the associated nuclear fuel cycle including enrichment and reprocessing.
5. The Agreement provides for nuclear trade, transfer of nuclear material, equipment, components, and related technologies and for cooperation in nuclear fuel cycle activities.
6. The Agreement contains a full reflection of the March 2, 2006 supply assurances, its linkage to safeguards in perpetuity and the provision for corrective measures in case of disruption of fuel supply.
7. The Agreement provides for the development of a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors.
8. The Agreement provides for the application of IAEA safeguards to transferred material and equipment. There is no provision that mandates scrutiny of our nuclear weapons programme or any unsafeguarded nuclear facility.
9. The Agreement explicitly provides that it will not affect the unsafeguarded facilities of either party and that it shall be implemented in a manner so as not to hinder or otherwise interfere with any military nuclear facilities or nuclear material produced, acquired or developed independent of this Agreement.
10. The Agreement grants prior consent to reprocess nuclear material, transfer nuclear material and its products. To bring this into effect, India will establish a national reprocessing facility to reprocess safeguarded nuclear material. Consultations on arrangements and

procedures will begin within six months of a request by either party and will be concluded within one year.

11. The 123 Agreement does not affect India's right to conduct nuclear tests in any manner.

## **7. 123 Will Not Harm Our Nuclear Weapons Programme**

Till now India's nuclear installations have not been separated between the military and civil programmes. Thus, when nuclear tests were conducted in 1974, the belief that these were fuelled by nuclear fuel supplied for civil nuclear energy led to sanctions being imposed against India. This resulted in denial of technology, fissile material and related support for our nuclear programme. Our first nuclear power plant at Tarapur, built with US help and based on US uranium supplies, was crippled without uranium supplies. It was a major setback to the three-stage programme as it imposed restrictions on imports of high-technology products, denied access to uranium from the US and other countries, prohibited transfer of nuclear technology-reactors, reprocessing etc. The US, Japan and some other countries imposed economic and financial sanctions -withdrew bilateral assistance and restricted support from multilateral financial agencies like World Bank and International Monetary Fund.

Our nuclear policy has been marked by restraint and transparency. India has maintained effective export controls on nuclear materials as well as related technologies even though we are neither a party of the NPT nor a member of the Nuclear Supplier's Group. India is committed to non-proliferation and the maintaining of stringent export controls to ensure that there is no leakage of our indigenously developed know-how and technologies. In fact, India's conduct in this regard has been better than some countries party to the Nuclear Non-Proliferation Treaty. India has not violated any international agreements and its record on non-proliferation has been unblemished.

Subsequent to the nuclear tests in 1998, the Government worked towards re-engaging countries like US to end India's nuclear isolation, project itself rightfully as a country with advanced nuclear technology and work towards greater international cooperation in areas of high technology and initiate measures to do away with technology denial regimes. The importance of the 123 Agreement is that it allows us to develop our civilian nuclear energy programme without hindering in any way our strategic nuclear weapons programme. The 123 Agreement does not stop India from proceeding further

with her strategic nuclear programme, which will remain separate, her indigenous three-stage programme, and her independent nuclear R&D.

## **8. Frequently Asked Questions About The India-US Agreement on Civil Nuclear Co-operation**

### **Q. Does the 123 Agreement affect our ability to conduct an independent foreign policy?**

A: Our Prime Minister has said categorically that our foreign policy is determined solely by our national interests and that there is no question of India being bound by a law passed by a foreign legislature. Government remains committed to the pursuit of an independent foreign policy which is a legacy of our national movement.

Our foreign policy will be dictated entirely by our national interest and this agreement in no way affects our ability to conduct an independent foreign policy. The 123 Agreement is a voluntary agreement between two equal partners. It states specifically that both India and the US wish to develop cooperation in the civil nuclear energy on the basis of mutual respect for sovereignty, and noninterference in each other's internal affairs. If anything, by contributing to India's energy security, the Agreement will increase our capacity to follow an independent foreign policy and our self-reliance.

### **Q: Will the 123 Agreement affect India's strategic programme?**

A: No. The Agreement, as Prime Minister stated on 13 August 2007 in the Parliament, is about civilian nuclear cooperation. There is no provision in the Agreement which limits India's right to build future nuclear facilities, whether civil or military. On the other hand, the Agreement includes a clause which explicitly ensures that the Agreement will neither be interpreted nor implemented in a manner that would adversely affect our independent and military nuclear activities. This Agreement therefore does not in any way impact on India's ability to produce and utilize fissile material for its current and future strategic needs.

### **Q: Does the Agreement affect our right to conduct nuclear explosive tests?**

A: No. The Prime Minister has stated on 13 August in the Parliament that the Agreement does not in any way affect India's right to undertake future nuclear tests, if it is necessary in India's national interest. A decision to undertake a future nuclear test would be our sovereign decision, one that

rests solely with the Government of the day. There is nothing in the Agreement that would tie the hands of a future Government or legally constrain its options to protect India's security and defence needs.

**Q: Will the Agreement have any adverse impact on our indigenous three-stage nuclear programme?**

A: Our rights to pursue our three-stage nuclear power programme remain undiluted. The Agreement fully preserves our right to use for our own purposes our independent and indigenously developed nuclear facilities. It also provides for non-hindrance and non-interference in our activities involving use of nuclear material, non-nuclear material, equipment, components, information or technology and military nuclear facilities produced, acquired or developed independently for our own purpose.

Our three-stage nuclear programme holds immense promise for the future. However the thorium-based technology, which would constitute the third stage, would become economically viable over a period of time following sequential implementation. Since our uranium supplies are inadequate we need to source it from elsewhere. While our three-stage programme continues, using our own uranium resources, this Agreement opens the door for international cooperation and would allow us to increase the share of nuclear energy. By separating our indigenous facilities from those that are imported, our own programmes will continue to grow.

**Q: Does the Agreement provide for fuel supply assurances for safeguarded reactors?**

A: The Agreement provides for US support for an Indian effort to develop a strategic reserve of nuclear fuel in order to guard against any disruption of supply for the lifetime of India's reactors. This is in accordance with the provisions of the Separation Plan of March 2006. The US has also agreed that in case a disruption of fuel supplies occurs, it would jointly convene with us a group of friendly supplier countries, including countries such as Russia, France and the United Kingdom to undertake such measures which would restore fuel supply to India. India also retains its right to take corrective measures in the event of disruption in the supply of foreign nuclear fuel.

**Q: The Agreement states that it will be implemented by both sides according to their national laws and regulations. The Hyde Act will be one of the laws which the US will need to follow in implementing this Agreement. How will it then fulfill its assurances?**

A: As far as India is concerned we are committed to the terms and provisions of the 123 Agreement only. The 123 Agreement does not mention the Hyde Act anywhere. There is no provision of the Hyde Act in the 123 Agreement which is undesirable from our point of view. The Hyde Act is an enabling legislation to permit the US Administration to negotiate bilateral nuclear cooperation agreement with India. It contained certain extraneous provisions and commitments on US and Indian foreign policy on which our external affairs minister commented, in his statement to Parliament on December 12, 2006: "We have always maintained that the conduct of foreign policy determined solely by our national interests is our sovereign right. We have also been clear that our strategic programme remains outside the purview of these discussions. We will not allow external scrutiny or interference with the strategic programme."

The US Administration has categorically assured that the Hyde Act enables it to fulfill all of the commitments it made to India in the July 18 and March 2 Joint Statements. President Bush has also made it clear while signing the Act on December 18, 2006 that he would consider certain provisions of the Hyde Act as only advisory.

**Q: Why is the approval of Parliament not required for this agreement?**

A: India follows a parliamentary model, as specified in our Constitution, wherein treaty making powers rest with the Executive. No bilateral treaty and agreement has ever been approved by the Parliament in the past. For instance the NDA Government had come to an agreement with the US called "Next Steps in Strategic Partnership" in January 2004, but this was never even made public. Even a major treaty such as the 1971 Indo-Soviet Union Treaty of Friendship was not brought to Parliament. Despite this, Government has kept Parliament fully in the picture at various stages of our negotiations with the United States.

**Q: Does it mean India will have to sign the Comprehensive Test Ban Treaty (CTBT) or the Fissile Material Cut-off Treaty (FMCT)?**

A: The Agreement entails no obligations for India to sign CTBT/FMCT. We, however, remain committed to a voluntary, unilateral moratorium on nuclear testing. We are also committed to negotiate an FMCT in the Conference on Disarmament. India is willing to join only a non-discriminatory, multilaterally negotiated, and internationally verifiable FMCT subject to its meeting our national security interests.

**Q: What happens to India's stand on Iran?**

A: The 123 Agreement is about cooperation for peaceful uses of nuclear energy. It has no reference to any extraneous issue or to India's relations with other countries.

**Q: Is it linked to any other issue such as purchase by India of aircraft?**

A: The Agreement is not linked to any extraneous commitment or obligation on India's part.

**Q: Have the PM's commitment to Parliament been fulfilled?**

A: Commitments made by Prime Minister to Parliament, including in his statement to the Rajya Sabha on August 17, 2006 have been fully adhered to.

**Q: What happens to our independent three-stage nuclear power programme?**

A: India's indigenous three-stage nuclear programme does not get affected by this agreement. Its full autonomy has been preserved.

**Q: Does the agreement mean India has to give up its nuclear weapons programme?**

A: The agreement does not affect India's nuclear weapons programme in any way. As a responsible nuclear state, India would continue to observe its voluntary moratorium on testing and its policies of credible minimum deterrence and no first use. These policies were enunciated by the NDA Government of Prime Minister Atal Behari Vajpayee.

## **STATEMENTS OF THE LEFT PARTIES**

### APPENDIX - III

#### **Press Release of the Communist Party of India (Marxist) on the India - US Nuclear Cooperation Agreement.**

**New Delhi, July 23, 2007.**

#### **The Indo US Nuclear Deal: Changes Not Acceptable**

The Indo-US nuclear deal was based on certain assumptions on the Indian side, which were spelt out by the Prime Minister in his statements in Parliament on July 29, 2005, February 27, 2006 and March 7, 2006. The key premises were that this deal would give "full" access to civilian nuclear technology, lift all existing sanctions on dual use technology imposed on India for not signing the NPT, and not limit India's strategic nuclear program. In turn, India had agreed to separate its civilian nuclear facilities from its military ones and place the former under IAEA safeguards. The other provisions in the agreement were that India would maintain voluntarily its moratorium on testing nuclear weapons and work with the US for a Fissile Material Cut off Treaty. The element that was not explicit in the agreement but obviously very much a part of the overall understanding reached between Bush and Manmohan Singh was that if India valued this nuclear deal, it would fall in line with the US's administration's positions on various issues including contentious ones such as Iran.

The CPI(M) had made clear at that time that an attempt to bind India to the US on foreign policy would not be acceptable and had also cautioned the Government on a further shifting of the goal posts while the agreement gets converted to concrete laws and measures. An earlier phase of this shifting of goalposts occurred during the testimony of senior White House officials before Congressional committees in September and November 2005. Whereas the Prime Minister had stressed the separation process would be a purely Indian decision, both Nicholas Burns and Robert Joseph repeatedly stressed that the separation plan had to be "credible", "transparent" etc., implying that the U.S. would have to sign off on it. Secondly, they said India could not expect to sign the same kind of safeguards agreement that the U.S. and other "official" nuclear weapons states had done with the IAEA. Unlike the N-5, India would have to accept safeguards in perpetuity. This flew in the face of the Manmohan Singh government's assurance that what India was accepting through the deal was exactly the same rights and obligations as the N-5, "nothing more, nothing less".

In the final run-up to the proposed enactment of an amendment to U.S. law authorising nuclear sales to India, further attempts are being made to shift the goalposts. The two versions of the Bill as drafted by the Senate Committee on Foreign Relations and the House of Representatives Committee on International Relations that are to be reconciled with each other prior to being passed, contain provisions which are not only a clear departure from the understanding contained in the Manmohan Singh-Bush agreement of July 18, 2005 and the Separation Plan tabled in Parliament, but also seek to permanently lock India's foreign policy to US requirements and subject its scientific research and development capabilities to intrusive inspections by the IAEA and even American inspectors.

It is clear that India's vote on the Iran issue in IAEA has been conditioned by the terms of the deal. Senator Lugar in his opening remarks in the Senate Foreign Relations Committee has approvingly noted "We have already seen strategic benefits from our improving relationship with India. India's votes at the IAEA on the Iran issue last September and this past February demonstrate that New Delhi is able and willing to adjust its traditional foreign policies and play a constructive role on international issues." It is also clear from the provisions of the two Bills that it is not a one-time concession that India is being asked to make in order to get US Laws modified after which it would be free to act, as it would please. While a number of provisions are in the nature of non-binding "sense of the house" clauses, the annual certification and congressional oversight contained in the Draft Bills mean that India risks losing its continued cooperation with the US on civilian nuclear matters if it "displeases" the US administration or the US Congress. If India imports reactors from US and reaches agreement on supply of fuel for its reactors, it would be vulnerable to any cessation of civilian cooperation. The deal therefore will act to compromise India's independent foreign policy. And since the proposed laws state very clearly that if the U.S. suspends supplies to India for any reason it must then push for the Nuclear Suppliers group (NSG) to also similarly restrict trade with India, it is not as if India would have the freedom easily to turn to other vendors in the event of an American-triggered disruption of supplies.

There are also other major shifts in the Bills passed in the above committees from the Manmohan Singh Bush agreement. One major shift is that while it agrees to relax the non-proliferation barriers, this relaxation is limited to only nuclear fuel and reactors. The sanctions on fuel reprocessing, enrichment and production of heavy water continues for *equipment and technologies*.

Let us take the issue of enrichment and fuel reprocessing. They both pertain to the fuel cycle. In the current Bills, Section 6 prohibits exports of equipment, materials or technology related to the enrichment of uranium, the reprocessing of spent nuclear fuel, or the production of heavy water. The Senate version enunciates the need to *further* restrict such equipment and technologies to India, which means that the current sanctions on a host of technologies considered as "dual use" would be still under embargo.

In the NPT, every country that signed the NPT even as a non-nuclear weapon state had a right to the full range of nuclear technologies including the nuclear fuel cycle. All they agree to renounce is the making of nuclear weapons. This of course allows countries to build up nuclear fuel enrichment capabilities for nuclear energy. As the enrichment technology is dual use, it can also be used to enrich uranium not only to fuel grade but also up to weapons grade, therefore developing bomb-making capabilities also. This is the route that India (as a non-NPT signatory) and North Korea (as an NPT signatory) had taken earlier, and that Iran is accused of trying. The US and its allies have been working for some years now to put the nuclear fuel cycle also outside the reach of most countries except a select few such as the Nuclear 5 and Germany, Japan, Denmark, etc. The numbers would be restricted to probably less than 10; and these would be the only countries allowed to have the fuel cycle. While the attempt to introduce such changes in the NPT has failed, the complex scheme of technology controls introduced as a part of the Wassenaar arrangement (countries acting together to limit access to technology in nuclear and missile areas) and various bilateral agreements are elements of this regime.

Bush had stated before his New Delhi visit that India would be the recipient of nuclear fuel but not be a part of countries participating in the enrichment and reprocessing of nuclear fuel. In this view, Iran and India would be no different. If India wants to build such facilities, it will have to do so on its own and would continue to face the existing technology control regime and the consequent embargoes.

India then will have access to nuclear technology but only for the limited purpose of getting fuel and reactors. It will not have access to the full range of technologies -- both nuclear and other dual use technologies. This is certainly a major departure from what the Prime Minister had assured the House that this deal recognises India as an advanced nuclear power and will allow access to full civilian technologies. And it certainly violates the fundamental premise of the July 18, 2005 statement that what the U.S.

would bring to the table in exchange for Indian concessions was "full civilian nuclear cooperation".

There are clauses in the two Bills regarding India agreeing to ban future nuclear weapons tests and capping of its fissile material stockpile. Both these measures would go against India's long held positions that any treaty on nuclear issues should not be discriminatory and impose restrictions on some countries while allowing others untrammelled right to nuclear weapons. Regarding the Fissile Material Cut-off Treaty negotiations, the Government of India, as traditionally held by India and enshrined in the New Delhi Declaration, should make this a part of negotiations for universal nuclear disarmament and not allow new obligations to be put on non-nuclear weapons states when the basic obligation of the nuclear weapon states in the Non Proliferation Treaty to disarm have not been fulfilled.

With the nuclear weapons states having refused to conduct "good faith disarmament negotiations" as per NPT provisions, the only negotiating chips today for the non-nuclear states is that any Test Ban and Fissile Material Cut-off Treaty must be in tandem with the nuclear weapon states giving a time table for disarmament. If they give a further set of concessions to the nuclear weapon states, they have no leverage for getting the nuclear weapon countries to disarm. It is in this context that India should examine whether through a bilateral agreement, it should forgo capabilities and rights that the U.S. and other nuclear weapons states are refusing to do. There is a real danger today of the U.S. actively developing a new range of nuclear weapons including bunker-busters and tactical nuclear weapons. Should India declare a moratorium on tests in such an agreement with the U.S., without the U.S. also agreeing to such a moratorium? The obligations on India and the US cannot be asymmetric and discriminatory in a bilateral agreement when India refused to sign the NPT and also opposed the CTBT and FMCT as discriminatory treaties.

If we take the objective of the Indo-US nuclear deal to be one of allowing export of nuclear fuel and reactors while simultaneously restricting India's fuel cycle capabilities and raising the cost of its strategic programme, then the Deal is different from what the Indian side believes or what the Prime Minister has stated in the Parliament. The agreement, as the Senate and the Congress committees have structured it, will not only put our independent foreign policy under pressure, but also tighten the screws on the Indian nuclear civilian R&D and strategic programmes. Further, many of the current technological embargoes would continue to remain. In the

bargain, India would have conceded a lot more than it would have gained: the gain is only nuclear fuel for the nuclear program and some access to reactor technologies.

The Government side has been talking of the Indo US deal being primarily a deal for the civilian nuclear energy. The Planning Commission's figures indicate that we would reach using the nuclear route a maximum of 10,000 MW of installed capacity by 2015 -- a meagre 5% of our electricity capacity -- and even this would require a considerably stepped up effort, well beyond what we have managed till date. In energy terms, the percentage is even smaller, a meagre 2-3 % of our energy needs will be met by nuclear energy as against 40-45% from the hydrocarbon route. In purely energy terms, giving up the cheap Iran gas route to invest in much more expensive nuclear power, makes little economic sense.

The last few months have shown convincingly that this Deal will not lift existing embargoes on technology, will keep Indian foreign policy a permanent hostage to the US, and impose a host of discriminatory restrictions on the Indian nuclear program. In its current form, the Deal will not be acceptable to the Indian people.

### **Annexure**

#### **Explicit Departures in the Senate and Congress Drafts from the Original Agreement**

**1. *Prime Minister: India will not compromise its strategic interests.***

A sense of the House resolution states India "has a foreign policy congruent to that of the US, and is working with the US in key foreign policy initiatives related to non-proliferation." ... "such cooperation will induce the country to give greater political and material support to the achievement of US global and regional non-proliferation objectives, especially with respect to dissuading, isolating and, if necessary, sanctioning and containing states that sponsor terrorism and terrorist groups; that are seeking to acquire a nuclear weapons capability or other weapons of mass destruction capability and the means to deliver such weapons."

Further, it states that the US "secure India's full and active participation in US efforts to dissuade, isolate and if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear

weapons capability (including the capability to enrich or process nuclear materials), and the means to deliver weapons of mass destruction."

While these sections are non-binding, taken together with Presidential certification and Congress and Senate approval for the 123 Agreement, imposes serious restrictions on India's independent foreign policy.

**2. *Prime Minister's Statement in Parliament: Full co-operation on civilian nuclear technology, which should include the complete fuel cycle.***

Senate: Section 6 prohibits exports of equipment, materials or technology related to the enrichment of uranium, the reprocessing of spent nuclear fuel, or the production of heavy water. The Senate version enunciates the need to further restrict such equipment and technologies to India which means that the current sanctions on a host of technologies considered as dual use would be still under embargo.

**3. *Prime Minister's suo motu statement on July 29 last year: "we committed ourselves to separating the civilian and strategic programme. However this was to be conditional upon, and reciprocal to, the United States fulfilling its side of the understandingÖ steps to be taken by India would be conditional upon and contingent on action taken by the United States."***

"Before voluntarily placing our civilian facilities under IAEA safeguards, we will ensure that all restrictions on India have been lifted."

Senate and Congress: There is an annual certification clause that can stop the co-operation. More importantly, India has to negotiate its agreement with IAEA before the final agreement for transfer of civilian technology is passed by the Congress. The current Bills enable the President to propose such a Bill to the Congress and Senate under the Section 123 of the Atomic Energy Act of the US, who have to both pass it for cooperation in civilian nuclear energy to take place.

- a) Section 8 requires annual Presidential certifications (written determination to the Congress) that India is meeting its commitments under the July 2005 Joint Statement, its Separation Plan, New Delhi's Safeguards Agreement and Additional Protocol with the IAEA, the 123 Agreement, and applicable U.S. laws regarding U.S. exports to India. [and also that it is cooperating with the US to prevent spread of fuel enrichment and reprocessing technology to countries that do

not already have "full scale, functioning enrichment of reprocessing plants" (obvious target Iran). So continued good certificate on Iran is a requirement here] The bill is an important step toward implementing the nuclear agreement with India, but is not the final step in the process. This legislation sets the rules for subsequent Congressional consideration of a so-called "123 Agreement" between the U.S. and India. A "123 Agreement" is the term for a peaceful nuclear cooperation pact with a foreign country under the conditions outlined in Section 123 of the Atomic Energy Act.

**4. *The March Agreement: US would take necessary steps to change its laws and also align the NSG rules to fulfil the terms of the Indo-US Nuclear Deal.***

Senate: It is now contingent on a unanimous resolution of the NSG on this issue.

"In addition, we require that decisions in the Nuclear Suppliers Group enabling nuclear trade with India are made by consensus and consistent with its rules."

**5. *The original agreement talked of an Additional protocol which the Prime Minister's statement made clear was an India Specific Protocol not covered under the protocols for weapon states or non-weapon states.***

In the Congress and Senate reading of the Agreement, they have been made into far more intrusive Model Additional Protocols of IAEA, which are currently, only accepted by some of the countries. India's civilian program will be safeguarded under this Additional Protocol as a non-nuclear weapons state. Under this protocol, IAEA can be used to delve into the past of each of the activities that have gone to build the civilian facilities, effectively allowing others to use IAEA to find out about India's strategic program and also our technology capabilities.

**6. *Assurance given by the Prime Minister on March 7, 2006 was that we are placing our facilities in perpetuity as reciprocally US is also guaranteeing fuel supply in perpetuity. In case the US defaults on its fuel supply agreement (as it did in Tarapur), it will ensure that other members of the NSG will take over its obligations.***

The Obama amendment to the Senate Bill passed on June 29, 2006, though a Sense of the House Amendment, states in Section 102(6): "The US should

not seek to facilitate or encourage the continuation of nuclear exports to India by any other party if such exports are terminated under US law." The House Bill goes a step further. In Section 4(d)-3 it states, "If nuclear transfers to India are restricted pursuant to this Act - the President should seek to prevent the transfer to India of equipment, materials or technology from other participating governments in the NSG or from any other source."

**7. *In the original agreement, India had agreed to work with the US for a Fissile Material Cut off Treaty (FMCT).***

This is now being used to restrict India's fissile material stockpile. This is also reiterated in the two bills.

Section 103 Declaration of Policy Concerning United States India Peaceful Atomic Energy Cooperation states:

To achieve as quickly as possible a cessation of the production by India and Pakistan of all fissile materials for nuclear weapons and other nuclear explosives devices;

Also the President has to report the efforts it has made with India and Pakistan for "disclosing, securing, capping and reducing their fissile material stockpiles"

**8. *In the original agreement, only IAEA safeguards were considered.***

In the Senate Bill, Section 107 End-Use Monitoring Program states that in case IAEA is unable to fulfil its safeguards obligations the President take Measures to ensure all material and its use is in conformity with it declared purpose. This includes physical verification and suitable access to be provided by India to US inspectors.

**9. *The military program had no monitoring requirement from IAEA or the US.***

In the Senate Bill, Section 108 Implementation and Compliance, the President to report to the Congress "significant changes in the production by India of nuclear weapons or in the types and amounts of fissile material produced." Further, under the Additional Protocol, an inventory of uranium from the mining of the stockpile has to be provided to the IAEA.

**APPENDIX - IV****Press Statement of the General Secretary of the Communist Party of India (Marxist) Prakash Karat on the nuclear cooperation with the USA.****New Delhi, August 11, 2007.**

The Left parties have been consistently expressing their opposition to the July 2005 joint statement with the United States, which includes the nuclear cooperation agreement. After the Hyde Act was adopted by the United States containing unacceptable conditions, the CPI(M) has been asking the government not to proceed with the negotiations for the bilateral (123) agreement. We do not share the optimism that India can become "a great power with the help of the United States". India is a country endowed with sufficient resources and self-confidence to carve out its own path of development.

The Prime Minister and the government must realise that this agreement is not acceptable to the majority in Parliament.

As far as the approach to the government is concerned, we will take our own counsel.

## APPENDIX - V

### **Press Statement issued by the Politbureau of the Communist Party of India (Marxist) on the India - United States Nuclear Cooperation Agreement.**

**New Delhi, August 14, 2007.**

The Prime Minister's statement<sup>1</sup> in Parliament does not shed any new light on the India US Nuclear Agreement that calls for a re-assessment on our part. He has reiterated his position on the agreement and has not addressed the issues that we have raised.

One of the more important issues raised by the Left right from the beginning is the link that the agreement has had on India's foreign policy. Here, the issue is not what the Prime Minister is saying but what his Government is doing. The Defence Framework Agreement of 2005, the Logistics Support Agreement being negotiated currently, joint naval exercises being planned and the stand on the Iran nuclear issue are there before us. Therefore, it is difficult to agree with the Prime Minister that this agreement has no impact on our independent foreign policy, especially when the US officials are busy selling the agreement to the US Congress on the strategic value of India aligning with the US as a consequence of the agreement.

Apart from the foreign policy, on other matters also the Prime Minister's statement does not address the issues we have raised. Some of these are given below:

1. The Prime Minister, for instance, has said that the annual certification does not find a place in the 123 Agreement, appearing to imply that therefore this clause of the Hyde Act is not being implemented. A simple reading of Constitutional practice of the US would clarify that this Annual Certification is an obligation of the US President, which he is bound to fulfil. That it does not find a place in the 123 Agreement is not relevant. The issue that we have raised is if a "good conduct certificate" is not forthcoming or if the US Congress does not accept the good conduct certificate given (on issues ranging from Iran to anything that may come up in the future) what would be the implications for the 123 Agreement. In our understanding, the US

---

1. See Document No.....

could terminate the Agreement with all its consequences for our civilian nuclear energy program.

2. The Left Parties statement has explained in detail, why we do not think that life term security for nuclear fuel has been achieved in this Agreement. What we have are assurances while the Hyde Act contains the provisions, which would cut in if the US terminates the Agreement. Under the Hyde Act, if this agreement is terminated, the US would not help India tide over the "disruption" but would be obligated to work with the NSG countries to stop all supplies. This is also the reason that Clause 2.1 makes clear that each party will operate this Agreement in accordance with its the domestic laws, meaning obviously the US and the Hyde Act.
3. On the issue of full access to technology for the fuel cycle, which the Prime Minister had assured the Parliament earlier, it is now clear that this will not be available to India. The Prime Minister has essentially confirmed this; the only concession finally secured is "forward-looking language".
4. The Prime Minister has also emphasised the gains made with regard to the right to reprocess spent US fuel. However, this is only a notional right at present and subject to conditions that may emerge in the future.

The Prime Minister's statement also talks about his belief that the NSG would give unrestricted right to nuclear fuel and technology "the Nuclear Suppliers Group has to agree, by consensus, to adapt its guidelines, we expect without conditions, to enable nuclear commerce with India and to dismantle the restrictions on the transfer of dual use technologies and items to our country". This is the same belief he had expressed in Parliament when he had stated that the US would give full access to civilian nuclear technology, an expectation, which he has now conceded has been belied. We see no basis for his continued optimism in this regard, particularly as the NSG functions on the basis of consensus and the US is supposed to steer the change of Guidelines on our behalf.

The CPI(M) reiterates its stand that the government should not proceed with operationalising the bilateral agreement.

## APPENDIX - VI

### **Press Release of the Communist Party of India (Marxist) on the resolution adopted by its Politbureau.**

**New Delhi, August 18, 2007.**

The Polit Bureau of the Communist Party of India (Marxist) met in New Delhi on August 17 and 18, 2007. It unanimously adopted the following resolution:

The Polit Bureau of the CPI(M) fully endorsed the stand taken by the Left parties on the bilateral agreement on nuclear cooperation with the United States. The statement of the Left parties has set out comprehensively the reasons why the agreement is not acceptable.

The agreement should be seen in the light of the Hyde Act passed by the US Congress and in the context of the wider implications of India being bound into a strategic alliance with the United States and its adverse consequences for an independent foreign policy, sovereignty and the economic interests of the people. The Polit Bureau is of the firm opinion that going ahead with this agreement will not serve India's interests.

Given the widespread opposition to the agreement and the fact that a majority in parliament do not support the nuclear cooperation deal, the government should not proceed further with the agreement.

Till all the objections are considered and the implications of the Hyde Act evaluated, the government should not take the next step with regard to negotiating a safeguards agreement with the International Atomic Energy Agency.

It is for the Congress leadership to decide on the matter which will have serious consequences for the Government and the country.

The Polit Bureau decided to take the issue of the nuclear agreement and the dangers of the strategic alliance with the United States to the people through a nationwide mass campaign.

The Left parties will be meeting soon to discuss all other related matters.

**APPENDIX - VII****Press Statement of the General Secretary of the Communist Party of India (Marxist) Prakash Karat rejecting the Bharatiya Janata Party's charge of Left not being serious about their opposition to the Nuclear Cooperation Agreement with the United States.****New Delhi, August 19, 2007.**

The BJP President, Shri Rajnath Singh, has charged the Left parties with not being serious about their opposition to the nuclear deal. He has cited the unwillingness of the Left to join hands with the BJP on the issue to substantiate this charge.

The Left parties opposition to the nuclear cooperation agreement with the United States has been clearly spelt out from the outset in 2005. We do not share the views of the BJP on the matter, since their approach has been to bargain with the United States for a favourable nuclear adjustment while accepting the status of a subordinate ally of the US.

The six-year record of the BJP-led government was infamous for its kowtowing to the US. The Jaswant Singh-Strobe Talbot secret talks, the visit of L.K. Advani to the CIA headquarters and the eagerness of the NDA government to become a "natural ally" of the US to the extent of considering sending Indian troops to Iraq, will not be forgotten by the Indian people.

The CPI(M) is certain not to have any truck with such a pro-imperialist party.

## APPENDIX - VIII

### **Article by General Secretary of the Communist Party of India (Marxist) Prakash Karat in the *Hindu* on the Left Parties opposition to the Civil Nuclear Energy Cooperation Agreement with the United State.**

**Chennai, August 20, 2007.**

The Left parties have called upon the United Progressive Alliance government not to proceed further with the civilian nuclear cooperation agreement with the United States. The bilateral agreement arrived at between the two governments in the end of July 2007 has resulted in a political crisis. At no time has an external agreement negotiated by the Indian government raised such a political storm as the nuclear cooperation deal with the United States. The last time there was strong opposition was during the negotiations for the Marrakesh treaty, which led to the setting up of the World Trade Organisation.

Without going into the complex and technical issues concerning civilian nuclear cooperation, it is necessary to take a wider look at the implications of the agreement. Is this only a nuclear cooperation deal or is it part of a wider agreement? If so, does it protect our capacity for an independent foreign policy and how will it affect our sovereignty? One can legitimately question whether India should partner the United States in the global democracy enterprise. "Regime change" and the implanting of democracy have yielded horrific results in Iraq.

The nuclear cooperation deal is only one part of the wide-ranging alliance that the UPA government has forged with the United States. This was spelt out by the Indian Prime Minister and the American President in the joint statement in July 2005 in Washington. This agreement covers political, economic, military, and nuclear cooperation. This alliance entails not just nuclear cooperation but talks of the two countries promoting global democracy, revamping the Indian economy to facilitate large scale investment by the United States, and a strategic military collaboration.

Prior to the joint statement of July 2005, the UPA government signed a ten-year Defence Framework Agreement with the United States. It is evident that without the defence agreement, the Americans would not have agreed to civilian nuclear cooperation. This seems part of a quid pro quo.

Repeated assertions that India's foreign policy will not be subject to external pressures have not evoked confidence after the Iran episode. Spokesmen for the Bush administration have often cited India's attitude on Iran to be a test. Even before the nuclear cooperation agreement was finalised, the government responded by voting against Iran not once but twice in the International Atomic Energy Agency.

The first serious conflict with the Left arose when the UPA government did a volte-face on the Iran nuclear issue. The government voted along with the U.S. and other Western countries in September 2005 and was not even prepared to go along with the position adopted by the bloc of Non-Aligned Movement countries.

The Left parties have been watching with disquiet the way the UPA government has gone about forging close strategic and military ties with the United States. The Left came out in strong opposition to the Defence Framework Agreement. According to this agreement, India is taking steps to interlock our armed forces with that of the United States in the name of "inter-operability." The framework agreement is leading to various steps like the Logistics Support Agreement and the Maritime Cooperation Pact. The Left has been vehemently opposed to joint military exercises such as the one that took place in the Kalaikunda air base in West Bengal. These exercises were held despite the strong protests of the Left parties and the Left Front government of West Bengal. The years 2005 to 2007 have seen a sharp increase in joint exercises between the two armed forces. This is now being extended to the "quadrilateral" exercises as desired by the U.S. with Japan and Australia in the September naval exercises in the Bay of Bengal.

The United States has been going about stating the obvious strategic and commercial benefits that will accrue from the nuclear deal. Apart from the sale of nuclear reactors, the U.S. is mounting pressure on India for military contracts to purchase fighter planes, naval ships, radar, and artillery. Along with steadily increasing military and security collaboration with Israel, India will find itself entangled in U.S. strategic designs in Asia.

A major reason put forth being made for the nuclear cooperation agreement is that it will help India meet its energy needs. This ignores the very limited contribution that nuclear power makes to our overall energy generation, which is just 3 per cent and cannot exceed 7 per cent even if the ambitious plans for expansion are implemented by 2020. To make India's foreign

policy and strategic autonomy hostage to the potential benefits of nuclear energy does not make sense except for the American imperative to bind India to its strategic designs in Asia.

Owing to the consistent pressure of the CPI(M) and the Left parties who had raised a number of questions regarding the draft legislation before the U.S. House of Representatives and Senate, the Prime Minister gave certain categorical assurances to Parliament on August 17, 2006. At that juncture, these assurances were in line with the concerns raised about protecting the country's interests on the three-stage nuclear programme we have adopted.

However, the situation changed after the U.S. Congress adopted the final legislation to give a waiver for nuclear cooperation with India. This legislation known as the Hyde Act runs contrary to most of the assurances given by the Prime Minister in August 2006. The Act includes provisions imposing restrictions on transfer of technology and barring access to dual use technologies, thus denying India a full nuclear fuel cycle. The U.S. President has to report to the Congress every year on how India is complying with the provisions set out in the Hyde Act. The Act enjoins on the administration the prevention of fuel supplies and equipment from other countries to India if the U.S. terminates the bilateral agreement. The argument that the bilateral text overrides the clause cannot be accepted, as the text also states that "national laws" will prevail. To say that the Hyde Act is not binding to India is irrelevant. The point is that it is binding on the United States.

Outside the sphere of nuclear cooperation, the Hyde Act contains directions on India's foreign policy and other security-related matters. There are nine references to India's role having to be one of support and complicity with U.S. designs on Iran.

After the Hyde Act was adopted in December 2006, the CPI(M) stated that it contained provisions that were contrary to the assurances given by the Prime Minister to Parliament on August 17, 2006. The CPI(M) repeatedly asked the government not to proceed with the bilateral negotiations for the 123 agreement until this matter was cleared up. But the government did not heed this advice. The United States is already moving for another round of sanctions against Iran in the United Nations Security Council. Indian companies have been warned not to export to Iran even non-lethal materials. The Iran-Pakistan-India gas pipeline will not proceed if this nuclear agreement is put in place, despite the government's protestations to the

contrary. It will be unwise and shortsighted for India to spoil its relations with Iran and other West Asian countries, given the vital role these countries play in fulfilling India's energy needs.

When the UPA government was being installed in 2004, a Common Minimum Programme was drafted. When the Left was consulted, we insisted on the deletion of a reference to "strategic relations with the United States." There is no mention of strategic ties with the U.S. in the Common Minimum Programme. But soon after, the government proceeded with forging a wider strategic alliance with Washington.

The Left parties have, after carefully assessing the implications of the 123 agreement, demanded that the government should not proceed further to operationalise the agreement. The objections to the deal have been spelt out in detail in the statement issued by the Left parties. The Left is clear that going ahead with the agreement will bind India to the United States in a manner that will seriously impair an independent foreign policy and our strategic autonomy.

A wise and expedient step for the government will be to acknowledge that there is widespread opposition to the agreement. The question is not whether it should be put to vote in Parliament or not. It is clear that a majority in Parliament is opposed to the agreement. The best course would be for the government not to proceed further with the operationalising of the agreement. Till all the doubts are clarified and the implications of the Hyde Act evaluated, the government should not take the next steps with regard to negotiating the IAEA safeguards, which are to be in perpetuity, and proceed to get the guidelines from the Nuclear Suppliers Group.

The Left parties continue to accord priority to having a secular government and keeping the communal forces at bay. However, this cannot be taken as licence by the UPA government to go ahead with a long-term agreement that has such serious implications for India's independent foreign policy and sovereignty.

## APPENDIX - IX

### **Press Statement of the Left parties on the political situation in the context of India-US Nuclear Cooperation Agreement.**

**New Delhi, August 20, 2007.**

The leaders of the Left parties met on August 20, 2007 at New Delhi. They discussed the political situation prevailing since the Indo-US bilateral nuclear cooperation agreement. They have issued the following statement:

1. The Left parties reiterate their stand taken on August 7, 2007 that in view of the widespread opposition to the agreement and the fact that a majority in Parliament is against it, the government should not proceed further with the agreement.
2. The Left parties wish to state that this would require not taking the next step of negotiations for the safeguards agreement with the International Atomic Energy Agency.
3. The Left parties can understand the setting up of a committee or any other mechanism which can go into the objections regarding the agreement and evaluating the implications of the Hyde Act for the nuclear cooperation deal. But this can follow only when the next step at the IAEA is not taken.
4. The Left parties appeal to all the parties in the UPA to see the reasonableness of the stand taken which is fully in the spirit of our parliamentary democracy and the government's commitment to the country's welfare. The Left parties await the response of the Congress leadership and the UPA to their proposal.

## APPENDIX - X

### **Resolution adopted by the Central Committee of the Communist Party of India (Marxist) on the Civil Nuclear Energy Cooperation with the United States.**

**New Delhi, August 23, 2007.**

The Central Committee of the CPI(M) fully endorsed the stand taken by the Polit Bureau that the bilateral agreement negotiated with the United States administration will bind India into a strategic alliance with the United States with long term consequences.

The Central Committee also considers the nuclear deal, as it exists, subject to the provisions of the Hyde Act which are binding on the US administration.

The Central Committee noted the various objections and apprehensions voiced by scientists, public figures and intelligentsia on the nuclear deal. Above all, it is a fact that the majority of the members of Parliament are opposed to the agreement.

This alone should make the government pause and not proceed further with the next steps to be taken to operationalise the deal. It is incumbent on the government, which commands a majority in Parliament only with the support of the Left parties, to heed the voices of opposition. It should examine the objections and clear the implications of the Hyde Act.

The Central Committee does not want the current crisis to affect the government. However, this is contingent upon the government not proceeding further with the agreement. The Central Committee, therefore, authorises the Polit Bureau to take whatever necessary measures to see that the agreement is not operationalised.

The Central Committee decided to take the issue of the Indo-US strategic relations, of which the nuclear agreement is a part, to the people through a mass campaign along with the Left parties. The way the tie-up with the United States is affecting the various policies which affect the people's livelihood, economic sovereignty and independent foreign policy will be highlighted in this campaign.

The CPI(M) and the Left parties will conduct this joint campaign from September 4 to 8 all over the country coinciding with the two jathas which are taking place in the same period against the joint naval exercises.

Further, the Central Committee decided that the Party must conduct its own independent campaign till the 15th of September.

## APPENDIX - XI

### **Announcement of a 15-member Committee of the UPA and Left Parties to look into the Civil Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, September 4, 2007.**

On September 4 night composition of a key committee, to be headed by External Affairs Minister Pranab Mukherjee, to look into the concerns of the Left parties on the Indo-US civil nuclear deal was announced.

The committee will have 15 members, six each from the Congress and Left parties and one each from UPA constituents RJD, DMK and the NCP.

Mr. Mukherjee will be the convenor of the committee while his senior cabinet colleagues A K Antony, P Chidambaram, Kapil Sibal, Saifuddin Soz, Prithviraj Chavan, Lalu Prasad of RJD, T R Baalu of DMK and Sharad Pawar will be the other members.

Left parties will be represented by Prakash Karat, Sitaram Yechury (CPI-M), A B Bardhan and D Raja (CPI), Debabrata Biswas (Forward Bloc) and T J Chandrachoodan of RSP.

(The Setting up of the committee last week was announced preventing a precipitate action by the Left parties which had rejected the nuclear deal and warned the government of serious consequences if it went ahead with operationalising the agreement.)

Announcing the committee on August 30th to address the concerns expressed by the Left, it was said that "the agreement will be operationalised taking into account its findings, a formulation open to varied interpretations".

The committee would go into certain aspects of the 123 bilateral agreement, implications of the Hyde Act on the deal, and self-reliance in the nuclear sector and the implications of the nuclear agreement on foreign policy and security cooperation.

## APPENDIX - XII

### **Open Letter from the Central Committee of the Communist Party of India (Marxist) to the Members of Parliament regarding Indo-US Nuclear Cooperation.**

**New Delhi, September 8, 2007.**

Dear Member of Parliament,

The Indo-U.S. bilateral agreement on nuclear cooperation has raised a number of issues which are of vital importance to the nation. Through this open letter we wish to place before you the considered views of the Communist Party of India (Marxist).

Ever since the Joint Statement issued in July 2005 during the Prime Minister's visit to Washington in which the civilian nuclear cooperation agreement was announced, there has been a debate in the country about the merits of such an agreement. Political parties, nuclear scientists, the media and concerned citizens have been expressing their views. Parliament has also discussed the agreement at various stages. However, the current debate is crucial as the bilateral text has been finalised and the Government is planning to take the next steps to operationalise the agreement.

It is our contention that the nuclear cooperation agreement should not be seen in isolation from the overall context of India-US strategic relations, its impact on our foreign policy and our strategic autonomy. Further, the nuclear cooperation agreement must be seen in the context of our energy security, access to technology and the development of the three stage nuclear programme.

The bilateral "123" agreement has also to be seen also in the light of the assurances given by the Prime Minister in his statement to Parliament on 17 August 2007.

The Left parties have asked the Government not to proceed with the next steps to be taken to operationalise the agreement.

#### **Implications of the Hyde Act**

Members of Parliament will recall that in August 2006, there was a debate on the draft law being discussed by the US Senate and the House of Representatives to amend the US Atomic Energy Act of 1954 to give

exemption for the proposed nuclear cooperation agreement with India. The two draft legislations before the House of Representatives and the Senate contain many provisions which were detrimental to India's interests.

The Prime Minister had given certain categorical assurances on the points raised regarding this draft legislation. The nine points which the Left parties had raised were covered by the Prime Minister's statement. However, subsequent to that, the Hyde Act (Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act" was adopted by the US Congress in December 2006.

Many of the provisions of the Hyde Act go contrary to the assurances given by the Prime Minister in August 2006. What are these?

- Under the terms set out by the Hyde Act, it is clear that the Indo-US nuclear cooperation would not cover the entire nuclear fuel cycle. It denies cooperation or access in any form whatsoever to fuel enrichment, reprocessing and heavy water production technologies.
- The denial extends to transfer of dual use technology and covers items which could be used in fuel enrichment, reprocessing or heavy water production facilities. Thus, dual use restrictions remain on technology transfers to India. Hyde Act section 102 (13) states, "The US should not seek to facilitate or encourage the continuation of nuclear exports to India by any other party if such exports are terminated under US law".
- Section 103 (a)(6) of the Hyde Act says US policy shall be "Seek to prevent the transfer to a country (India, in this case) nuclear equipment, materials or technology from other participating governments in the NSG or from any other source if nuclear transfers to that country (India, in this case) are suspended or terminated pursuant to this title (Hyde Act), the Atomic Energy Act of 1954 or any other US law".
- The Act concerns itself with areas outside nuclear cooperation and contains objectionable clauses to get India to accept the strategic goals of the United States. These issues are:
- Annual certification and reporting to the US Congress by the President on a variety of foreign policy issues such as India's foreign policy being "congruent to that of the United States" and specifically India joining US efforts to isolate and put sanctions against Iran [Section 104g(2) E(i)]

- Indian participation and formal declaration of support for the US' highly controversial Proliferation Security Initiative including the illegal policy of interdiction of vessels in international waters [Section 104g(2) K]
- India conforming to various bilateral/multilateral agreements to which India is not currently a signatory such as the US' Missile Technology Control Regime (MTCR), the Australia Group etc [Section 104c E,F,G]
- It is on the basis of the Hyde Act that the United States has negotiated the bilateral "123" agreement with India. Some of the harmful provisions of the Hyde Act are reflected in the bilateral agreement.
- The bilateral agreement, while superficially using the original wording of the joint statement of 2005, "full civilian nuclear cooperation" actually denies cooperation or access in any form whatsoever to fuel enrichment, reprocessing and heavy water production technologies. The statement of intent in the agreement that a suitable amendment to enable this access may be considered in the future has little or no operative value.
- Further, this denial (made explicit in Art 5.2 of the agreement) also extends to transfers of dual-use items that could be used in enrichment, reprocessing or heavy water production facilities, again a stipulation of the Hyde Act. Under these terms, a wide range of sanctions on a host of technologies would continue, falling well short of "full civilian nuclear co-operation".
- It is also important to recognise that the fast breeder reactors under this agreement would be treated as a part of the fuel cycle and any technology required for this would also come under the dual use technology sanctions. This would be true even if future fast breeder reactors were put in the civilian sector and under safeguards. Thus, India's attempt to build a three-phase, self-reliant nuclear power program powered ultimately by thorium would have to be developed under conditions of isolation and existing technology sanctions.
- Another key assurance that had been given by the Prime Minister was that India would accept safeguards in perpetuity only in exchange for the guarantee of uninterrupted fuel supply. While the acceptance on India's part of safeguards in perpetuity has been spelt out, the linkage of such safeguards with fuel supply in perpetuity remains unclear.

The assurance that the United States would enable India to build a strategic fuel reserve to guard against disruption of supplies for a duration covering the lifetime of the nuclear reactors in operation appears to have been accepted in the agreement. However, whether the fuel supply will continue even after cessation or termination of the agreement depends solely on the US Congress. The Hyde Act explicitly states that the US will work with other Nuclear Suppliers Group (NSG) countries to stop all fuel and other supplies to India if the agreement is terminated under US laws. Since this agreement explicitly incorporates domestic laws, it appears that fuel supply from the US will not only cease in case the US decides to terminate the Agreement but they are also required under the Hyde Act to work with NSG to bar all future supplies. The clause 5.6 on disruption of supplies therefore seems to be limited to "market failures" and not to cover a disruption that takes place under the clauses of the Hyde Act. In such an eventuality, the US will have to pay compensation to India but all future fuel supplies would stop. Therefore, the 123 agreement represents the acceptance of IAEA safeguards in perpetuity for uncertain fuel supplies and continuing nuclear isolation with respect to a substantial amount of technological know-how.

### **The Hyde Act and Supremacy of National Law**

The government has asserted that the Hyde Act is not binding on India. The relevant issue is that it is binding on the United States and this has been repeatedly stressed by US spokespersons.

Article 2 (1) of the 123 Agreement states, "The parties shall cooperate in the use of nuclear energy for peaceful purposes *in accordance with* the provisions of this agreement. Each party shall implement this agreement in accordance with its respective applicable treaties, national laws, regulations, and license requirements concerning the use of nuclear energy for peaceful purposes".

If the argument is that the reference to national laws is simply the case of binding towards the law, that will have a bearing on the conduct of different transactions under the 123 agreement, then what do we make of the reference to national laws in other places in the 123 agreement?

Thus, for instance, Article 5 (6) (a) in part states that "As part of its implementation of the July 18, 2005, joint statement the United States is committed to seeking agreement from the US Congress to *amend its domestic laws...*to create the necessary conditions for India to obtain full

access to the international fuel market.....". Article 5(6) (b) (i) states that "The United States is *willing to incorporate assurances* regarding fuel supply in the bilateral US-India agreement on peaceful uses of nuclear energy under Section 123 of the US Atomic Energy Act, which would be submitted to the US Congress". These clauses show that the need for conformity with "national laws" is not superfluous. If there is no direct reference to the Hyde Act in the 123 agreement, it is simply because and this is worth reiterating that the Hyde Act is the 'Act to exempt from certain requirements of the Atomic Energy Act of 1954 a proposed nuclear agreement for cooperation with India'.

### **Nuclear Power and Energy Security**

It is said that the Indo-US nuclear deal is central to our future electricity and energy requirements. At present, nuclear power generation capacity in India stands at 4,120 MW which is a little less than 3 per cent of our installed capacity of all power plants. One reason has been the nuclear isolation imposed on us resulted in the slow development of our civilian nuclear energy programme. However our scientists overcoming many hurdles did very well in indigenising the Pressurised Water Reactors, and then developing it further to 540 MW. The next stage is the fast breeder reactors, in which the Indian scientists are leading the world. The planned three stage nuclear programme would depend largely on technologies based on fast breeder reactors, and in the future, thorium as fuel. This programme requires far less uranium and lower dependence. Instead, the imported reactor route would focus much more on Light Water Reactors, which require much more uranium and are more expensive. Thus even the technology being offered will not necessarily be the best choice for India. Significantly, the mainstay of our nuclear power program - the fast breeder reactors - will still be under technology sanctions, as they would be considered a part of the fuel cycle.

The other reason is the techno-economics of nuclear power and its relatively high cost. Nuclear power plants are about 50% per cent more expensive, even when using domestic technology and equipment. If imported reactors for nuclear power are considered, the situation becomes worse: it will cost about three times as much to set up nuclear plants with imported reactors than coal based ones. It will also cost twice as much per unit - Rs. 5.10-5.50 as against Rs. 2.50 from coal fired plants.

According to the Planning Commission's study, the most optimistic scenario of nuclear power is 15,000 MW by 2015 and 29,000 MW by 2021. These

targets includes 8,000 MW of imported reactors. Even then, nuclear energy will only add up to about 7 per cent of our total installed capacity.

Going ahead with such an ambitious power programme dependant on imports will come at a high cost and will dry up investments in other sectors. Interestingly enough, nuclear power is not the energy of choice for most advanced countries. The US itself has commissioned its last reactor in 1996! Members of Parliament may recall the fiasco of Enron and its Dabhol power plants.

### **Implications for Foreign Policy and Strategic Autonomy**

The United States does not see the nuclear cooperation agreement as a stand-alone. It is part of American design to try in India a wide ranging strategic alliance which will adversely affect the pursuit of an independent foreign policy and our strategic autonomy. The facts speak for themselves.

Two weeks prior to the joint statement which announced the Indo-US nuclear cooperation agreement, India signed a ten-year Defence Framework Agreement with the United States in June 2005. This is being cited by the Bush administration as India's commitment to cooperate with the United States furthering its strategic interests in Asia.

- Two months after the nuclear cooperation agreement was announced in September 2005, India voted against Iran in the International Atomic Energy Agency, contrary to its stance earlier that Iran, as an NPT signatory, has every right to develop its nuclear technology for civilian purposes.
- This was followed by a second vote against Iran in February on the eve of President Bush's visit to India.
- Nicholas Burns, US Under Secretary of State, in his "On record briefing" after the finalisation of the 123 agreement said on July 27: "And I think now that we have consummated the civil nuclear trade between us, if we look down the road in the future, we're going to see far greater defence cooperation between the United State and India: training; exercises; we hope, defence sales of American military technology to the Indian armed forces." The United States is exercising tremendous pressure on India to buy a whole range of weaponry including the 126 fighter planes, radar, helicopters, artillery etc. worth multi-billion dollars.

Is the nuclear cooperation agreement going to bind India with the United States in a relationship which goes contrary to our cherished goals of national sovereignty and independent foreign policy and an economic development based on the priorities of our people?

The objections and the apprehensions raised by the Left parties and other parties, organisations and concerned scientists and citizens need to be examined before proceeding further. All we are asking the government to do is not to rush through with the next steps which are necessary to operationalise the deal.

We hope that you, as a Member of Parliament, which is the sovereign representative institution of the Indian people, will seriously consider these issues on this vital matter affecting our country's future.

### APPENDIX - XIII

**Extract from the Press Statement issued by the Central Committee of the Communist Party of India (Marxist) on the Civil Nuclear Cooperation Agreement with the United States.**

**Kolkata, October 1, 2007.**

Press Communiqué

(The Central Committee of the CPI(M) met in Kolkata from September 29 to October 1, 2007. It has issued the following statement)

\*

\*

\*

\*

The Central Committee heard a report from the Polit Bureau on the developments regarding the Indo-US nuclear deal. The Central Committee reiterated the stand adopted unanimously by it in its August 22-23 meeting which asked the government not to proceed with taking the next step of negotiating the text of a safeguards agreement with the International Atomic Energy Agency. The UPA-Left Committee on the nuclear issue is examining the various aspects of the Hyde Act and its implications for foreign policy and security related matters.

The UPA government should not proceed further on the next steps with regard to the nuclear deal till it can be discussed in the Winter session of parliament.

The Central Committee authorized the Polit Bureau to take appropriate measures to see that the Central Committee's stand is implemented.

\* \* \* \*

## APPENDIX - XIV

### **Press Statement issued by the Left parties on the India – US Civil Nuclear Energy Agreement.**

**New Delhi, October 8, 2007.**

The Left parties categorically reiterate that the nuclear deal with the United States is against the interests of India. Those who advocate the deal should know that India is capable of developing nuclear energy primarily on a self-reliant basis. We need not surrender our vital interests to America on this plea.

BHARATIYA JANATA PARTY**

## APPENDIX - XV

### **Press Statement issued by Bharatiya Janata Party leaders Yashwant Sinha and Arun Shourie containing the preliminary comments of the Bharatiya Janata Party on Indo-US nuclear deal.**

**New Delhi, August 4, 2008.**

The BJP has been expressing its reservations regarding the Indo-US nuclear deal from the very beginning. When the Joint Statement was issued at the end of the visit of Prime Minister Manmohan Singh to Washington in July 2005, Shri Vajpayee issued a statement in which he expressed his reservations about the deal, specially with regard to its impact on our strategic nuclear programme. He had expressed his apprehension at the proposed separation plan of our nuclear facilities between civilian and military. Later, when the separation plan was presented to Parliament, we expressed our opposition to it. We warned the Government of India when the Senate Foreign Relations Committee and the House International Relations Committee of the US Congress adopted the draft bills for enabling this cooperation between the two countries. We protested strongly when the Hyde Act was passed by the US Congress. We have consistently opposed the deal in Parliament whenever discussions on this deal have taken place.

None of our fears and apprehensions was ever given serious consideration by the Government of India. No effort was ever made by it to evolve a national consensus on this vital issue of national concern before making commitments to the US.

The text of the bilateral 123 Agreement has been made public on Friday, August 3, 2007. We have looked at the text and our preliminary comments are as follows:

- (i) Each party is required to implement this Agreement in accordance with its national laws and regulations and its licence requirements. There is no doubt, therefore, that the implementation of this Agreement shall be governed by the provisions of the Hyde Act of 2006, the US Atomic Energy Act of 1954, which are its national laws on this subject, and its licensing requirements relating to the supply of nuclear materials to India {article 2(1)}. The confidence with which US officials have asserted that the Agreement is Hyde act bound flows from this provision. Which act will India enforce on the US?

- (ii) The Agreement is supposed to lead to full civil nuclear cooperation between the two countries yet article 2(2)(d) talks of cooperation relating to "aspects of the associated nuclear fuel cycle". Aspects mean parts and hence all aspects of the nuclear fuel cycle are not covered under this Agreement.
- (iii) According to article 5(2) of the Agreement sensitive nuclear technology, heavy water production technology, sensitive nuclear facilities and major critical components of such facilities can be transferred to India only after an amendment to this Agreement has been carried out. The provision for such transfer should have been included in this Agreement itself instead of leaving it to a future amendment. It is a peculiar arrangement. Under the same provision, the US will retain the right of end-use verification of all its supplies. This will ensure that American inspectors will "roam around our nuclear installations", a fear which was completely discounted by the Prime Minister while replying to the Rajya Sabha debate on 17.8.2006.
- (iv) As far as fuel supplies are concerned, the commitment of the US in the Agreement is vague and futuristic. "The US is committed to seeking agreement from the US Congress to amend its domestic laws". This assurance in article 5(6)(a) of the Agreement and the assurances contained in article 5(6)(b) of the Agreement is not only bad drafting but deliberately repeats an old assurance given by the US at the time of the separation plan and remains as evasive as it was then. According to article 5(6)(c), the India specific Safeguards Agreement with the IAEA is to be negotiated on the basis of these evasive assurances and requires India to place its civilian nuclear facilities under safeguards in perpetuity.
- (v) India is required under this Agreement to establish a new national reprocessing facility dedicated to reprocessing safeguarded nuclear material under IAEA safeguards. If it is an agreement between two equal parties with reciprocal commitments, is the US accepting a similar provision for its reprocessing facilities? Is any such facility being created in any country belonging to the Nuclear Five?
- (vi) Following the cessation of cooperation under this Agreement either party shall have the right to require the return by the other party of any nuclear material, equipment, non-nuclear material or components transferred under this Agreement and any special fissionable material

produced through their use. {article 14(4)} Thus, notwithstanding the sugar-coated language which has been used in the Agreement to soften the blow, the fact remains that the US retains the right to recall all the supplies that it has made to India under this Agreement. What is worse is that under article 16(3) despite the termination of this Agreement, the safeguards in perpetuity will continue to apply so long as any material or equipment or any of the by products thereof remain on Indian soil.

Clearly, therefore, with regard to fuel supplies, reprocessing rights and the right to recall the equipments supplied, the US has maintained its position as in the Hyde Act. India, on the other hand, has accepted legally enforceable commitments in perpetuity.

There is nothing in the Agreement regarding the reprocessing of the spent fuel of Tarapur which has accumulated over the last 33 years.

Nuclear testing has not been mentioned in the Agreement. According to the Government of India this is a matter of great comfort for us. This view is entirely untenable. When national laws apply, which includes the NPT, the provisions of the Atomic Energy Act of 1954 and the Hyde Act of 2006 which specifically forbid nuclear tests, where is the question of India having the freedom to test once we enter into this agreement? In other words, we are being forced to accept a bilateral CTBT with more stringent provisions than the multilateral CTBT.

In his very first statement in 2005, Shri Vajpayee had raised the issue of the financial cost of separation of our facilities between civilian and military. The Government of India has kept mum on this. To this cost has now been added the cost of setting up a dedicated reprocessing facility, the cost of holding strategic fuel supplies for the life time of all our future reactors and the cost of mammoth and intrusive IAEA inspections.

In the separation plan prepared under the surveillance of the US, two thirds of our reactors will be put in the civilian category under safeguards. The recently refurbished CYRUS reactor will be shut down. In course of time, 90% of our reactors will be in the civilian category. In the ongoing negotiations in the Committee of Disarmament in Geneva, we have agreed to work together with the US for the early conclusion of the FMCT. We appear to have given up our insistence on international verification and all countries complying. All these, along with the intrusive provisions of the Hyde Act are bound to have a stultifying effect on our strategic nuclear programme.

The BJP is of the clear view that this Agreement is an assault on our nuclear sovereignty and our foreign policy options. We are, therefore, unable to accept this Agreement as finalised.

We demand that a Joint Parliamentary Committee be set up to examine the text in detail; that, after it has submitted its report, parliamentary approval be secured before this deal is signed; and that all further action on it should be suspended until this sequence is completed. The manner in which this agreement has been pushed through, leads us to further demand that appropriate amendments be made in the Constitution and laws to ensure that all agreements which affect the country's sovereignty, territorial integrity and national security shall be ratified by Parliament<sup>1</sup>.

- 
1. However there was a discernable shift in the BJP's position when on August 26 BJP Leader of the Opposition in the Lok Sabha L. K. Advani told the *Indian Express* in Hyderabad that there was no disagreement on the nuclear deal per se and as such there was no problem with the 123 agreement subject to certain steps being taken. However he did add that the proposed nuclear deal in the present form was an agreement between "unequals" and the BJP objected to such "strategic subservience". "We have always felt that India's nuclear deterrence is imperative in the national interest. It is, therefore, that we have firmly resisted becoming part of the non-proliferation regime, which is what the nuclear deal seeks to impose on us," he said. But he made it clear that if the UPA government could bring an amendment in the Atomic Energy Act to protect India's strategic independence then "there is no problem with the 123 Agreement." Mr. Advani said his party has pleaded that international agreements which impinge upon India's strategic independence or territorial integrity should be ratified by Parliament and an amendment to this effect must be made in the Constitution. He said it was his party which supported the UPA government on the vote against Iran at the IAEA as it did not want any other country in the neighbourhood to become a nuclear power. "Whatever that we do in the field of foreign policy has to be our choice... We regard it as odd that the American Hyde Act should be speaking about India's attitude towards Iran," he said. According to Advani, the 123 Agreement between US and China stipulates that it overrides all national laws. But the 123 Agreement with India, he said, says that its implementation is subject to national laws "As a party that has always stood for national interests, we are in favour of amending the Atomic Energy Act which will ensure that all our efforts to get nuclear fuel for our reactors and our independent strategic policy (nuclear weaponisation) will not be affected," he said.

## APPENDIX - XVI

### **Press Release of the Bharatiya Janata Party regarding the call by its President Rajnath Singh for Solidarity on Issues of National Importance by going beyond Ideological Differences.**

**New Delhi, August 18, 2007.**

BJP National President Shri Rajnath Singh today said that the time had finally come when the Left Front parties with complete honesty would need to walk the talk and match words with actions. Shri Rajnath Singh said that it was indeed ironical that while on the one hand the nuclear deal with the United States had been concluded by the government, the Left Front parties despite making their opposition known in strong words, had not supported the opposition parties demand for a discussion in Parliament under Rule 184 which entailed voting.

Shri Rajnath Singh criticized the hypocritical stand of the Left Front parties for indulging in another round of pretentious shadow boxing with the government. Over the last three years the Left Front parties have clearly shown that they are only willing to engage in high decibel verbal duels with the government without displaying the resolve to strike. It was high time that the Left Front parties stopped performing the role of an opposition party and simultaneously enjoy the benefits of power, he added.

Shri Rajnath Singh said that the people of the country expected Shri Prakash Karat to answer the question that "if the nuclear deal is against the nation, then will the Left Front parties now allow this government to continue functioning?" **The Left Front Parties should decide between the trappings of power and the interest of the nation, he said.**

The BJP President said that the entire mood in the country was against the deal. All opposition parties and the Left Front had also clearly indicated that there was **no national consensus or broad political acceptability on the Indo-US nuclear deal in its present form** which would not only bind but also compromise the long term strategic interests and independence of the country.

Shri Rajnath Singh pointed out that ideological differences cannot be larger than the nation. If the Left Front parties honestly and genuinely believed that the Indo-US Nuclear Deal was not in the interest of the nation, then a time had come for all parties to go beyond ideological differences and display

solidarity against the government on issues of national importance by taking the matter to its logical end.

## APPENDIX - XVII

### **Press Release of the Bharatiya Janata Party containing remarks of Leader of the Opposition in the Lok Sabha L. K. Advani in regard to the Indo-US Nuclear Agreement at the BJP Parliamentary Party Meeting.**

**New Delhi, August 30, 2007.**

My interview\* with the *Indian Express* at Hyderabad<sup>1</sup> about the Indo-US Nuclear Deal is sought to be projected as the party's u-turn from its earlier position. Actually it was intended to clarify how the BJP's opposition to the agreement stems from considerations of pure national interest, and not from any kind of anti-Americanism which may be motivating the leftist parties.

The position of the BJP on this vital question has been stated consistently and unambiguously in a series of statements over the last two years. Each of the statements has been fully deliberated upon and approved by the senior most leaders of the party under the guidance and in the presence of Shri Atal Bihari Vajpayee. These are the statements that my colleagues, Yashwant Sinha and Arun Shourie were asked to release to the media. These statements embody the Party's considered view on every aspect of the deal. There is no change in that position.

In my interview, I sought to emphasise that the provisions of the Hyde Act militate against India's sovereignty - in particular, in regard to the conduct of our foreign policy. When enforced, they will seriously impair our nuclear weapons programme, and thereby jeopardize our strategic objectives.

The 123 Agreement is the first step towards operationalizing the Hyde Act, and other US laws. Several of the requirements of those laws have been built into the 123 Agreement. Moreover, the Agreement specifically provides that, in implementing it, the party concerned - the US in this case - shall be

---

1. Please see footnote to Appexdix-xv.....

governed by its national laws. Hence, provisions of the Hyde Act and other relevant laws shall apply with full force.

These facts are indisputable - and just as unacceptable. They push the country not into a 'strategic partnership' with the USA but a 'strategic subservience' to the USA, which the BJP cannot accept.

A suggestion has been made recently that, as the domestic laws of the US are the ones that are causing the problem, we should examine whether we can alter our laws, such as the Atomic Energy Act, 1962 in such a way as to insulate our strategic objectives. If that can be done, we should strengthen our laws, and, on the basis of those altered laws, renegotiate the 123 Agreement.

## APPENDIX - XVIII

### **Statement issued by the National Democratic Alliance on Indo-US Nuclear Agreement.**

**New Delhi, September 5, 2007.**

Even as the Parliament was fully seized of the Indo-US Nuclear Agreement and was awaiting a full discussion on it the Government constituted a parochial and partisan committee, outside the Parliament, to examine fully the implications of both the Henry J. Hyde US-India Atomic Energy Cooperation Act of 2006, and the commonly called 123 Nuclear Cooperation agreement.

This is a deliberate and blatant violation of the Parliament's rights, prerogatives and privileges. This setting up of a private committee is a total negation of the opposition's rights and role in Parliament. It trivializes the high importance of a vital national issue impacting on our national security and the country's strategic autonomy for the next half century.

The Government has voluntarily handed over decision making to the CPI (M) and the Left Front. There is now apparently no Central Government effectively holding the reins of office; the Communists have been handed over power to decide the future of India but without any responsibility. This abdication by the Government, of its responsibility is a betrayal of their oath.

The NDA cannot accept this. Even now the Government must recognize the perilous path on which they are obstinately set.

The NDA demands that our voice in Parliament must be paid heed to. The NDA's demand of a JPC on the issue must be accepted. This is what we expect.

## APPENDIX - XIX

**Press Statement issued by L. K. Advani, Leader of the Opposition in Lok Sabha, Shri Rajnath Singh, President of the Bharatiya Janata Party and Jaswant Singh, Leader of the Opposition in the Rajya Sabha on the Civil Nuclear Energy Cooperation with the United States.**

**New Delhi, November 7, 2007.**

Over the last few days several persons including Mr. Henry Kissinger, the U.S. Ambassador Mr. David Mulford, Mr. M.K. Narayanan, National Security Adviser and Dr. Anil Kakodkar have called on the three of us to discuss various aspects of the Nuclear Deal. The B.J.P's position was put across and is briefly reiterated here:

1. The B.J.P. has been and continues to be of the view that the UPA Government has made a significant strategic blunder by turning this deal into a kind of an icon of India's relations with the U.S.
2. The BJP has consistently stood for close Indo-U.S. cooperation and strategic partnership as between two equal sovereigns.
3. We stand opposed to the deal because in our view it compromises long term strategic programmes of India, vital for country's security, neither will it help meet our energy needs of future.
4. Therefore, the BJP strongly recommends that this deal must be renegotiated and not hustled through as the UPA Government is attempting to.

## **MEDIA EDITORIALS**

## APPENDIX - XX

### **Editorial Comments in *The Hindu* on the 123 Agreement on the Civil Nuclear Energy Cooperation with the USA.**

**Chennai, August 6, 2007.**

#### **A sound and honourable 123**

A close reading of the text of the civil nuclear cooperation agreement between the United States and India, which was made public on August 3, confirms this newspaper's editorial endorsement of the deal. It is a sound and honourable agreement and the assurances provided to Parliament by Prime Minister Manmohan Singh in 2006 have been fulfilled virtually in their entirety. When the government went into the last round of the '123' negotiations, three issues were unresolved: the country's right to reprocess American-origin spent fuel, guarantee the uninterrupted running of its reactors, and ensure the application of only International Atomic Energy Agency safeguards and not additional American inspections. Another key challenge before the Indian negotiating team was to ensure that the country's nuclear power sector would not be disrupted in the event of a nuclear explosive test. Termination of American cooperation, likely under such circumstances, would not be a serious problem but for Washington's insistence, citing the requirements of domestic law, on incorporating a clause giving itself the 'right' to demand the return of all nuclear equipment and material exported to India.

Article 14 is the core of the 123 from India's standpoint. It spells out the procedures the U.S. must follow before any nuclear material provided by it can be removed from the territory of India. Aside from specifying multiple layers of consultation, Article 14 lays down that the U.S. "must ensure that the timing, methods and arrangements for return of nuclear items are in accordance with" the requirement of "uninterrupted operation of nuclear reactors" in India, as well as safety (as laid down by Indian national regulations) and the payment of compensation reflecting "fair market value" and "the costs incurred [by India] as a consequence of such removal." While this seriously limits the U.S. 'right of return,' the cross-reference in the same clause to the fuel supply assurances contained in Article 5.6 boxes it in completely. There is, finally, this clarification in Article 14.8 "it is not the purpose of the provisions ... regarding cessation of cooperation and right of return to derogate from the rights of the Parties under Article 5.6." In other words, the

U.S. has agreed to treat its obligation to help develop a strategic fuel reserve for India - and the "corrective measures" India will build into its safeguards agreement with the IAEA - as Indian "rights," from which derogation is not allowed even after the U.S terminates cooperation.

In fact, the measure of protection provided by Article 14 read with Article 5.6 is as cast-iron as one can hope to get in a bilateral international text. The BJP's objection that this protection is worthless because the Hyde Act disallows the provision of fuel guarantees beyond normal reactor operating requirements misses the point by a mile. A more favourably drafted Act would offer, at best, illusory protection, since a U.S. administration or Congress could change its provisions at any time. To believe that a good 'mother Act' or 123 agreement by themselves will guarantee India its rights is to demonstrate shocking naivete about the nature of international politics. The Manmohan Singh government has won for India the keys to unshackle its nuclear programme from the unfair restrictions it has been subjected to for the past 33 years. Further, it has secured a measure of legal protection in the event of the relationship with America souring. But true protection will come only when the country uses the new opportunities for nuclear commerce to build a stockpile of fuel - light-enriched and natural uranium - to run a vastly expanded nuclear power programme.

As for the other BJP objection that the 123 agreement will cripple India's strategic programme, the less said the better. A non-hindrance clause incorporated in Article 2.4 ensures that the development of India's unsafeguarded or military nuclear facilities will not be hindered or interfered with in any way. There is nothing in the 123 that takes away India's sovereign right to conduct nuclear explosive tests, or enlarge its nuclear arsenal should it choose to do so. The problem, if anything, is the opposite of what the BJP suggests: thus accommodated in a U.S.-led unequal global nuclear bargain, India may be even less inclined than it is today to pursue the goal of universal disarmament.

Realism demands that we recognise the limitations of the 123 agreement in three respects. The first is that the U.S. will not lift its embargo on the sale of components or even dual use items intended for the safeguarded Indian reprocessing plant. Secondly, there is some uncertainty over the nature of the arrangements and procedures to be agreed upon before India can reprocess spent fuel. The first limitation, on the supply of reprocessing and enrichment equipment, will be overcome if the Nuclear Suppliers Group does not introduce new discriminatory clauses when it changes its guidelines. If it

does that, India will have serious problems about going forward. As for reprocessing the spent imported fuel, the prudent course will be for India to request consultations as soon as the 123 enters into force.

A separate but related concern is the quid pro quo the U.S. will surely expect and try to hold India to in the strategic affairs, foreign policy, and commercial arenas. The present government led by the Congress has followed the same policy as the predecessor BJP-led regime - of compromising foreign policy independence and aligning the country with the U.S. in the name of a 'strategic partnership.' We must not allow the 123 to become new leverage to pull India deeper into the U.S. strategic embrace, especially in the military and political spheres. While the Manmohan Singh government deserves full credit for negotiating a 123 agreement that is indisputably to the advantage of India's nuclear programme and energy sector, it needs to be reminded that its breakthrough will count for little if it turns out that the hidden cost is a further erosion of external independence.

## APPENDIX - XXI

### **Editorial Comments of the *Times of India* on the Civil Nuclear Energy Cooperation Agreement with the USA.**

**New Delhi, Augusts 6, 2007.**

The recently concluded US-India agreement for civilian nuclear cooperation has provoked controversy over its potential damage for the non-proliferation regime. In the process, however, critics may have overlooked the larger political implication of the deal: The agreement marks a strategic shift in US policy not dissimilar to Nixon opening to China in 1972. By designating India a virtual guest member of the official nuclear club, the Bush administration has reaffirmed to the world its willingness to pay a large price for a strategic partnership with Asia's second biggest nation.

Of course, the deal has yet to be consummated. In the coming months, the agreement will undergo scrutiny of a sceptical Congress and still requires endorsement by the International Atomic Energy Agency (IAEA). Also, the 45-member Nuclear Suppliers Group (NSG) must reach consensus on a huge exception for the world's second nuclear weapon state that never joined the NPT. US experts expect bruising scrutiny but eventual

acceptance. The door to civilian nuclear technology and fissile material, shut so long to India, would reopen, giving the US access to Indian markets for both reactor technology and military hardware.

More than 30 years after India's first test of a "peaceful nuclear device", US opinion for the country's nuclear programme has come full circle - from treating New Delhi as nuclear pariah to embracing it as a "responsible" member of the international atomic club. The single most influential catalyst for this radical shift has been an American president who raised US security in the post-9/11 world above all else, reinforcing his scant regard for the NPT or, for that matter, other international rules that may constrain his pursuit of America's national interest. Concerned by growing terrorism and the rise of China, George Bush has been eager to find a reliable long-term partner. Democratic and secular India with its growing economy and military power fit that bill.

Although US-India economic and technology ties have grown at a rapid pace since the launch of the 1991 reforms under Manmohan Singh, political ties have been constrained by the central disagreement over India's nuclear-weapons programme. Indian officials privately admit they were stunned to hear Bush's message that the US was ready to remove the "irritant" nuclear issue in order to build a strategic relationship with India.

India's long-standing three-stage nuclear power plan required it not only to build a number of civilian nuclear power plants, assuring the supply of nuclear fuel, but to develop the ability to reprocess spent fuel.

Plutonium, retrieved from spent fuel, is key to India's goal of securing energy independence. Plutonium could be reused with thorium, abundant in India, to operate fast-breeder reactors to generate power as well as make full use of the nuclear fuel cycle. Scientists contend that reprocessed fuel, though expensive, yields 30 times more energy than conventional nuclear plants. Currently, nuclear power generates barely 4 per cent of India's electricity.

India's plan, however, ran up against US law forbidding supply of technology or fuel to a non-NPT member and undeclared weapons state. More importantly, US law strictly forbade reprocessing by just about anybody. A path around these obstacles was found in 2005 when Bush described India as "a responsible state with advanced nuclear technology".

The 2006 Hyde Act endorsed Bush's approach of making an exception by opening the door to transfer of technology and fuel to India's safeguarded

civilian nuclear programme. But New Delhi objected to the legislation's preamble confirming the US non-proliferation goal and its injunction against selling reprocessing technology. It took Indian and US negotiators two years to reconcile Bush's promise of "full cooperation" with India's civilian programme on the one hand and US law restricting such assistance on the other.

Domestic critics in India, who feared loss of sovereignty, appear mollified. Although critics in Congress have already criticised the Bush administration for sidestepping US law and not respecting the spirit of the Hyde Act, administration sources express confidence that Congress will give assent after seeing the full text of the agreement. The main challenge, sources suggest, is for India to secure specific safeguard agreements with IAEA and specific NSG waivers. Scepticism from Chinese and Nordic members will place considerable demands on India's diplomats seeking to achieve consensus from NSG.

Washington sources suggest the earliest the agreement can be delivered for a vote in Congress is spring 2008. Political exigencies could narrow the likelihood of approval during a presidential election year, and some US officials privately hope that the clout of the wealthy Indian-American lobby will ensure that lawmakers cast votes in favour of the deal. When and if the agreement is finally approved, Bush can take credit for one major diplomatic success in deepening US ties with India. The nuclear agreement will also remove the last remaining shadow over the bilateral relationship and, as undersecretary Nicholas Burns was not shy in pointing out, would likely lead to increased defence cooperation and sales of US military technology. According to the US-India Business Council, the expansion of India's civilian nuclear-energy programme would generate \$150 billion in commercial opportunities for American companies over the next 30 years.

## APPENDIX - XXII

### **Editorial in the *Hindustan Times* on the Civil Nuclear Energy Cooperation with the United States**

**New Delhi, August 6, 2007.**

SINCE THE nuclear Non-proliferation Treaty came into force in 1967 and India's nuclear tests in 1974. India has been offered a stark choice. It can have a legitimate civilian nuclear power programme, complete with international technology and fuel, or it can have a nuclear weapons arsenal. But it cannot have both. To add insult to injury, the US and other nations applied layers of technology sanctions against India in an attempt to pressure India into surrendering its nuclear arsenal. The Indo-US civilian nuclear cooperation agreement is a remarkable attempt by Prime Minister Manmohan Singh and US President George W. Bush to allow India to have a viable civilian nuclear programme and maintain its military arsenal. The published text of the 123 agreement, which spells out the details of bilateral nuclear cooperation, makes it clear the two sides have succeeded.

There is nothing in the text that compromises India's nuclear arsenal. If anything, the agreement has a clause which explicitly states that bilateral nuclear cooperation must not be allowed to interfere in each other's military nuclear activities. However, India's military nuclear accomplishments are an established fact. The real forward movement is the opportunity that now exists for ramping up the production of electricity from nuclear power: India is desperately short of power and energy is rapidly becoming the primary drag on its economic rise in the coming decades.

Almost all the concerns raised about the 123 agreement have been focused on the fine print. They reflect the suspicion that years of US nuclear finger wagging have engendered in the New Delhi establishment. India's negotiators have incorporated a remarkable array of guarantees against such concerns. If the US is compelled to break the agreement for whatever reason, including an Indian decision to carry out a nuclear test, it has agreed that other countries can continue to supply atomic fuel and technology to India. If India wishes to reprocess spent fuel at some later point, it has been granted the right. Many of these clauses cover hypothetical scenarios. If Indo-US relations maintain their present trend, they will never be invoked or be superseded by more ambitious

proposals. If the relationship falls apart, then India has ensured it will not be damaged by the fallout. The 123 agreement spells the end of nuclear discrimination.

## APPENDIX - XXIII

### **Editorial of the daily *Deccan Herald* on the India - US Nuclear Cooperation Agreement.**

**Bangalore. August 7, 2007.**

The final text of the Indo-US civil nuclear energy cooperation agreement, released last Friday, represents a significant diplomatic accomplishment for the Manmohan Singh government. The 14-day delay in unveiling the final text had aroused considerable public curiosity in the country about its contents. That was understandable since the Hyde Act - the law passed by the US Congress last December to authorise the Bush Administration to negotiate the bilateral agreement, better known as 123 agreement - contained several clauses unacceptable to India. So much so, the government itself had found it compelling enough to convey its concerns to Washington over at least three crucial aspects of the Hyde Act.

The foremost area of concern arose from the Hyde Act's emphasis on strangulating India's nuclear weapons programme, preferably also by getting India to convert its unilateral moratorium on nuclear tests into a binding bilateral commitment. However, if there is one most important success for the Indian officials who negotiated the 22-page final text, it is about completely insulating the nuclear weapons programme and the nuclear doctrine of credible minimum deterrent. Indeed, crucial clauses under Article 14 of the text effectively meant that the US has acknowledged the Indian strategic rationale for possessing nuclear weapons. While the Hyde Act requires US Administration to terminate the 123 agreement if India conducted nuclear tests in future, the text has nevertheless made an important distinction between what can be termed a trigger-happy test and a test undertaken in response to a deteriorating security situation or tests by other countries.

Second, in view of the Hyde Act's emphasis on America's non-proliferation goals, it sought to deny India the right to reprocess spent fuel from the civil nuclear facilities offered to be placed in the civilian sector. That is because

reprocessing produces plutonium which is also the main route for the country's nuclear weapons programme. The final text has, however, granted India "consent to reprocess" and the two sides will work out details of a dedicated reprocessing facility under IAEA safeguards in due course. A far more satisfactory outcome in the final text is for the third most contentious issue encountered during the final stages of negotiations. That related to India's demand for a foolproof arrangement to ensure that there won't be any disruption in fuel supplies. While the outcome is quite satisfactory, the celebration over this successful outcome ought to wait until the deal gets the mandatory endorsement from the 45-Member Nuclear Suppliers' Group and the US Congress.

## APPENDIX - XXIV

### **Editorial' in the *Hindu*: "Put the nuclear deal on hold".**

**Chennai, August 20, 2008.**

For a mild-mannered Prime Minister who leads a government dependent on external support for survival, Manmohan Singh is demonstrating obduracy of a strange and unreasonable kind. His current posture of 'I-must-have-the-nuclear-deal-or-I-go' suggests that the political objective of completing the elected term of the United Progressive Alliance regime has been subordinated to the greater goal of seeing the deal through. And herein lies a fatal contradiction. The guaranteed way of sinking the civilian nuclear deal, which this newspaper has editorially endorsed with some caveats, is for the government to go down, taking the 123 with it. What should be clear to anyone who is not on a high horse, with blinkers, is that given the deep political polarisation there is little chance of any other Prime Minister or government making a go of this deal in the conceivable future.

- 
1. The above editorial comments are to be read with the first editorial of the paper on August 6 (See Appendix-xx). A couple of days later on August 22, the Editor-in-Chief N. Ram explained the rationale of the change of mind and said:  
 "While several readers agree that the Indo-U.S. civilian nuclear cooperation deal should be put on hold under the present politically murky and changing circumstances, some readers have raised questions about what they perceive to be changes and even a 'contradiction' in *The Hindu's* editorial position on the deal. One reader has specifically asked: "What has changed" between August 6, when the newspaper published the leader "A sound and honourable 123," and August 20, when it published the leader "Put

For at least two years now, Dr. Singh has been passionate in his conviction that the civilian nuclear deal he initiated with President George Bush in July 2005 was not just in the interest of India's nuclear programme, which had suffered from a harsh international regime of sanctions and technology denial; it was a supreme national necessity because "nuclear power is critical to our energy security if we want to be a world power" (as he put it in a recent interview). This conviction has been, by the Prime Minister's own admission, linked to the ideological belief that the United States wanted to help India become a great power; that "of all the U.S. Presidents," George Bush was "the friendliest towards India"; and that "in a globalised world,

---

the nuclear deal on hold"? We welcome this kind of serious public debate, which we believe will help clarify the key issues and their implications in a changing political context. Here is our response:

1. The Hindu has endorsed, and continues to endorse, the 123 deal as "a sound and honourable agreement," which reflects the fact that "the assurances provided to Parliament by Prime Minister Manmohan Singh in 2006 have been fulfilled virtually in their entirety." The newspaper's editorial assessment of the key provisions of the 123 agreement is that they do provide adequate protection for both fuel supply to the nuclear power reactors and for the strategic programme. However, some uncertainties and challenges lie ahead, especially in relation to how the Nuclear Suppliers Group will respond when it is asked to change its guidelines to accommodate India to India's satisfaction.
2. The editorial of August 6 took realistic note of a couple of limitations of the 123. They related to the United States ruling out supply of reprocessing and enrichment equipment and also "some uncertainty over the nature of the arrangements and procedures to be agreed upon before India can reprocess spent fuel." Our assessment was that these problems could be managed given the safeguards built into the 123. The major caveat made in the August 6 leader was this: considering that the United Progressive Alliance government was continuing the same policy as the predecessor National Democratic Alliance government of "compromising foreign policy independence and aligning the country with the U.S. in the name of a 'strategic partnership,'" the country should not allow the 123 to become "new leverage to pull India deeper into the U.S. strategic embrace." The editorial concluded on the note that "while the Manmohan Singh government deserves full credit for negotiating a 123 agreement that is indisputably to the advantage of India's nuclear programme and energy sector, it needs to be reminded that its breakthrough will count for little if it turns out that the hidden cost is a further erosion of external independence."
3. While this remains our considered editorial assessment of the 123, the leader of August 20 addresses the murky and complex political situation that will determine the fate of the nuclear deal. The reality is that the UPA government finds itself in a hopeless minority on this issue. The main opposition party, the Bharatiya Janata Party, and its NDA allies have aggressively attacked the deal as a sell-out of national interests and of the strategic nuclear programme, and look forward to making this a major election issue. All the constituents of the 'third force' bloc, the United National Progressive Alliance, are strongly opposed. The biggest supporting bloc, the Left parties with 61 MPs in the Lok Sabha, has demanded that the government should not go forward even with the next step (going to the IAEA) to operationalise the deal. The simple point is that a regime that finds itself in a hopeless minority in Parliament on a highly sensitive issue cannot act like a majority

Indo-U.S. relations were the key and we needed to give them the highest importance." But the UPA government finds itself in a hopeless minority in Parliament on this critical issue. There is also considerable opposition outside Parliament, with the community of scientists and the intelligentsia divided down the middle and the public mood uncertain.

"A Country is Not a Company," argued Paul Krugman in a celebrated 1996 paper published in the Harvard Business Review. He made the point that "the style of thinking necessary for economic analysis is very different from that which leads to success in business" and further that a failure to understand this can lead to disastrous mistakes. The economist in Dr. Singh needs to realise that arguments drawing from 'decarbonising the economy' exercises done in the Planning Commission combining with ill-founded ambitions of becoming a great power by becoming the sole superpower's camp follower are likely to flop in the democratic political arena. It may be perfectly true that the Bharatiya Janata Party is the co-progenitor of this nuclear deal. But the reality is that the principal opposition party has

---

government! Economic and technical arguments do not necessarily score in politics, especially when they ride on the back of non-independence in foreign policy and non-transparency for much of the time the nuclear deal was in process. In the present political circumstances, the only way to resolve the crisis facing the Manmohan Singh government is to put the nuclear deal on hold and to meet all the objections and doubts democratically. Business leaders and economists might not be able to understand or appreciate this political necessity. "A Country is Not a Company" argument was brought in precisely to make this point.

4. Because that section of the Congress which is determined to go ahead with operationalising the nuclear deal is on a high horse, with blinkers, it does not appear to have grasped what is self-evident: "The guaranteed way of sinking the civilian nuclear deal, which this newspaper has editorially endorsed with some caveats, is for the government to go down, taking the 123 with it ... given the deep political polarisation there is little chance of any other Prime Minister or government making a go of this deal in the conceivable future." In other words, Prime Minister Manmohan Singh's current posture of 'I-must-have-the-nuclear-deal-or-I-go,' if not reversed, will inevitably lead to the nuclear deal self-destructing, aside from other serious political consequences. This is the reality check our August 20 leader offers.

5. These reasoned propositions are the basis of our editorial recommendation that the nuclear deal should be put on hold and that the government could "pursue the deal by scheduling an earnest round of all-party discussions" to take in "objections, apprehensions, reservations, and questions relating to the nuclear deal that have come in from all serious quarters." There is nothing sacrosanct about the timeline the Indian and U.S. governments have in mind. The outcome of the all-party discussions might seem uncertain. There is of course a risk of the nuclear deal falling by the wayside. But if the Congress party realises that the risk is to be weighed against the virtual certainty of the deal being buried if the UPA government goes down, it will make the right political choice. This is our editorial assessment and it can be seen that there is no contradiction between the leaders of August 6 and 20.

aggressively attacked the deal as a sell-out of national interests, and specifically of the country's ambition of developing "a minimum credible nuclear deterrent." Its leaders are salivating at the thought of this Congress-led regime falling on so sensitive an issue. As important politically is the nature of opposition from the Communist Party of India (Marxist) and its left partners whose bloc of 61 MPs provide life support for the UPA government. The CPI(M) has made it clear that it has serious problems with some of the specifics of the 123 read along with the Hyde Act and has asked the government not to go ahead even with the next step towards operationalisation. But its larger political objection is that the nuclear deal is part of a strategic alliance with the U.S. encompassing political, economic, and military aspects; and therefore has "adverse consequences for an independent foreign policy, sovereignty, and the economic interests of the people." And the Manmohan Singh regime knows it will get no quarter from the recently formed 'third force' bloc, the UNPA.

So for reasons analogous to why a country is not a company, this minority government must understand the difference between economic and technical analysis - which, in the eyes of critics, basically relies on showing how nuclear power's 3 per cent contribution to India's overall energy production can be raised to 7 per cent by 2020 - and what makes for sustainable political success. Non-transparency, which has been in evidence for much of the time this nuclear deal has been in process, has taken its toll of political and public support; and unprincipled compromises such as the U.S.-coerced ganging up against Iran in the governing board of the International Atomic Energy Agency and deepening military relations with the U.S. have had their influence on political perceptions of the 123 agreement.

The way to resolve the present political crisis is for the UPA government to put the 123 on hold, and for the Congress party and its allies to persuade Prime Minister Singh, who continues to command wide respect in India and abroad, not to be inflexible. The government can pursue the deal by scheduling an earnest round of all-party discussions, which must take in objections, apprehensions, reservations, and questions relating to the nuclear deal that have come from all serious quarters. False notions of prestige and credibility, within India and internationally, must not be allowed to come in the way of this larger political necessity. There is nothing sacrosanct about the timeline indicated for the final three steps in the nuclear deal. President Bill Clinton did not resign or even go into a deep sulk when one of his key projects, the Comprehensive Test Ban Treaty, was rejected

51-48 by the U.S. Senate in October 1999. The CTBT - which opened for signature more than a decade ago and has been signed by 177 countries and ratified by 139 of them - has not yet been enabled to enter into force but there are hopes of reviving it. Heavens will not fall if the 123 agreement is put on hold and all the issues opened up for discussion. There is a risk that it may fall by the wayside but that is clearly worth taking, especially if the risk is measured against the virtual certainty of the nuclear deal being buried if the UPA government falls.

## MISCELLANEOUS

## APPENDIX - XXV

### **Press Conference of United States Under Secretary of State for Political Affairs Nicholas Burns on the Civil Nuclear Energy Cooperation Agreement between India and the United States.**

**Washington (D. C), July 27, 2007.**

**Under Secretary Burns:** Good morning. As you know, President Bush just issued a statement commending the work done to complete the U.S.-India Civil Nuclear Accord, the so-called 123 Agreement. And as you also know, about 90 minutes ago, Secretary of State Rice and the Indian Minister of External Affairs Pranab Mukherjee issued a joint statement attesting to the fact that the United States and India have completed successful negotiations on this bilateral agreement. This is also known as the 123 Agreement.

I'd like to say a few words today about the agreement. I'd like to try to put it into context for you, as to why it's important in the development of our relationship, and then try to sketch out the outlines of that relationship.

In my view, this is perhaps the single most important initiative that India and the United States have agreed to in the 60 years of our relationship. It is indeed historic. It's already become the symbolic centerpiece of a growing global partnership between our two countries. And it reaffirms the commitment to cooperate in civil nuclear trade that was first agreed by President Bush and Prime Minister Singh on July 18th, 2005, here in Washington, and then reaffirmed by them at their summit in New Delhi on March 2nd of 2006.

I'd like to commend our counterparts on the Indian side. The Foreign Secretary of India Shiv Shanker Menon and his very able predecessor, Ambassador Shyam Saran. I made eight trips to India over the last two years. It was two years and two days of negotiations. They are exemplary professionals and I think that in building this partnership through a civil-nuke accord we've also built a relationship of trust between the United States and India.

On the U.S. side, our superb team of expert negotiators was led by Dick Stratford, who is a great resource for our government. He is someone with an unparalleled expertise on this issue for over 20 years, and I want to thank Dick and his team for all of their efforts.

In this agreement, the United States commits to full civil nuclear cooperation with India. And that includes research and development, nuclear safety, commercial trade in nuclear reactors, in technology and in fuel. And the agreement essentially provides a legal basis for the two countries to cooperate in this fashion.

We have also reaffirmed in this agreement the fuel supply assurances that President Bush and Prime Minister Singh agree to in March of last year. And we do so by supporting the creation of an Indian strategic fuel reserve and for committing to help India gain access to the international fuel market. Both of us -- the United States and India -- have granted each other consent to reprocess spent fuel. To bring this reprocessing into effect requires that India would first establish a new national facility under IAEA safeguards dedicated to reprocessing safeguarded nuclear material.

Our two countries will also subsequently agree on a set of arrangements and procedures under which reprocessing will take place. And for those of you who are steeped in this, you know that that's called for by Section 131 of the Atomic Energy Act of 1954.

In this agreement, India has committed to safeguard in perpetuity all civil nuclear material and equipment and also committed that all items under this agreement will only be used for peaceful purposes.

Those are the major features of what we have agreed upon, and it represents a tremendous and historic step forward for both of us. If we look back at the past decades of our relations with India, we know that our differences over nuclear issues have constituted the most significant divisive element in this relationship. The agreement that we announced today removes that fundamental roadblock and will bring us much closer together as two countries as a result.

And that is something that we Americans see as vital to our national interest, not only today but for the decades to come. And that is the first and most important strategic benefit of this agreement.

There are four other related benefits to this agreement as well. The first concerns nonproliferation. Some critics have said that this arrangement undermines the international nonproliferation regime and the NPT. We think that is absolutely incorrect. We think that the U.S.-India agreement strengthens the international nonproliferation regime. For 30 years, India has been on the outside of that system. It has been sanctioned and

prevented from taking part in civil energy trade. With this agreement, India will open up its system to international inspection and it puts the majority of its civilian reactors under IAEA safeguards. This deal now brings India, soon to be the world's largest country, back into the nonproliferation mainstream in a way it was not before. And that is a tangible gain for India, as well as the United States and the rest of the world.

The agreement also sends an important message to nuclear outlaw regimes such as Iran. It sends a message that if you behave responsibly in regards to nonproliferation and you play by the rules, you will not be penalized, but will be invited to participate more fully in international nuclear trade. India has not proliferated, unlike North Korea in the past. India is willing to subject itself to full IAEA safeguards, unlike Iran today. And India has not violated its nuclear obligations, as Iran has and continues to do. Iran, of course, has reneged on its most important international commitments.

An additional related benefit is something we're all growing more concerned about everyday, and that is clean energy. We need to find alternatives to the polluting fossil fuel sources that the world has become so dependent upon. And India looks poised to continue its very substantial economic growth. It will require energy to sustain that growth. And with this deal, India will be in a greater position to increase the percentage of its energy sources and energy mix coming from clean nuclear power. That will help in the fight against global climate change.

The agreement also gives India greater control and security over its energy supplies, making it less reliant on imports from countries in the future, like Iran. That's currently a major problem for India; the fact that it needs these external supplies. And so India wants to find a way to resolve this problem, and so do we. And we believe this agreement can contribute to that cause.

The final benefit will be that American firms will be, for the first time in three decades, able to invest in India's nuclear industry. American companies have the finest nuclear technology in the world, and we are looking forward to American firms having the opportunity to bring their latest technology to the Indian market. We are confident that American companies will have equal access to this huge market and that they will succeed there.

So in all respects, we believe this agreement is in the unquestioned national interest of the United States. To put it into effect, there are three remaining steps that need to be taken: first, India will now have to negotiate an IAEA safeguards agreement, and we hope that can happen as soon as possible;

second, we will work together, along with many other countries in the Nuclear Suppliers Group, to help India gain access to civil nuclear trade with all the countries of the world; and third, when we have finished those two steps, President Bush will send this agreement to Congress, as he has promised to do, for a final vote by the United States Congress.

We hope that this can happen in the next several months. We are looking forward to it and we spent the greater part of this week briefing the leaders of the Congress and their staffs about the details of all this arrangement. We believe this great, historic civil nuclear agreement will become part of a new strategic partnership between our countries. We are ready to build that relationship with India. And by removing the real barrier that had separated us for more than 30 years, we're about to liberate our two countries for a new engagement.

Now, I would anticipate a series of high-level meetings between the Indian and American leaderships over the next several months. And I think now that we've consummated the civil nuclear trade between us, if we look down the road in the future, we're going to see far greater defense cooperation between the United States and India: training; exercises; we hope, defense sales of American military technology to the Indian armed forces.

Second, we know that both of us are victims of terrorism, and unfortunately we'll continue to be victims of terrorism, and so expanding our counterterrorism cooperation is a high priority for both of our governments.

Third, we want to work together to have a greater measure of global cooperation between us. We already are working together with India in South Asia on Bangladesh, on Sri Lanka, on Nepal, in trying to form a better functioning relationship between India and Pakistan. We're working together in a way we never have before.

This can become a global partnership where we work together in East Asia, in Africa, as the two -- well, as the largest democracy in the world and the oldest democracy in the world. So we think this agreement today unlocks the promise that we've known for 60 years is in the India-U.S. relationship, and now we can make that promise a reality.

So with that, I'll be very happy to take your questions, Carol.

**Question:** In the Hyde Act, Congress made it very clear that if India were to test a nuclear weapon, that U.S. cooperation with India should cease. If you

are giving India assurances that there will be no interruption in its fuel supplies, regardless of what happens, how does that comply with the law? And why does that advance your efforts to try to persuade India not to test again?

And on the reprocessing issue, the President has said enrichment and reprocessing is not necessary for a country to move forward with nuclear energy. Doesn't this repudiate that statement by him? And -- well, I just thought --

**Under Secretary Burns:** Two questions. Thank you. (Laughter.) And I expect more.

First of all, we were very careful when we began these -- the latest phase of these negotiations to remind the Indian Government that since the President and Prime Minister had their two agreements of July '05 and March '06, something else had happened: The Congress had debated over six, seven months those agreements and the Congress has passed the Hyde Act. And so we had to make sure that everything in this U.S.-India civil nuclear agreement, the 123 Agreement, was completely consistent with the Hyde Act and well within the bounds of the Hyde Act itself.

When we briefed Congress this week, we said we were confident that was the case. And it pertains to both of your questions. And I'll take them one at a time.

On the issue of so-called right-of-return that, of course, the American President under our Atomic Energy Act has the right to ask for the return of nuclear fuel and nuclear technologies if there is a test. That right-of-return has been, of course, preserved as it must be under our law, and there has been no change in how we understand the rights of the American President and the American Government. It has been fully respected by this.

Now in March '06, when the President met with Prime Minister Singh in Delhi, he did -- President Bush offered four specific assurances to the Indian Government that we wanted to help it try to achieve a continuity of fuel supply. And those assurances are built in. The ones that we announced publicly in March 2, '06, are now built into the 123 Agreement. And they are very much consistent with the fact that we have a positive view of our future civil nuclear cooperation with India. We expect it to continue in a positive direction.

But, you know, when you write an agreement the way we have, and when you have legions of lawyers on both sides of the table, you also build in

protection -- both sides do -- to meet your legal obligations. And so if there's ever any reason for the United States to have to invoke the right-of-return, we could certainly do so.

On the second question, on reprocessing consent rights, this was a major issue, in fact the principal major issue, in this last phase of negotiations over the last few months. The United States has committed in the past, in these 123 agreements, to confer reprocessing consent with Japan and with EURATOM.

We thought very hard about going down this road with the Indian Government. We decided to for two reasons. First, in late May, early June, the Indians came to us and said that they were ready to build a new state-of-the-art reprocessing facility that would be under IAEA safeguards and that any reprocessing of spent fuel would be done in conjunction with that new facility, fully safeguarded, fully transparent to the IAEA and to the United States and to the international community. That was a significant development in the negotiations.

Second, Section 131 of the Atomic Energy Act, of course, calls for subsequent arrangements in reprocessing, arrangements in procedures, that would need to be agreed upon before the reprocessing could actually take place. So with the new facility promised by India under IAEA safeguards and with the subsequent arrangements and procedures, we believe it's a deal that makes sense to the United States. It allows India to go forward in a way fully within the Hyde Act, to complete the kind of activities that it wants to undertake, but it allows us to do so in a way where we're fully protected, not only by our law, but also by the IAEA provisions for this facility.

This was -- these were two factors that were not in place a year ago. There was no talk of a new reprocessing facility a year ago. It has just been in the last two months that this has materialized. We looked at it very carefully and decided that, on that basis, we should go ahead, that it was in our interest to go ahead. And that is, as you'll see as we brief this more -- in more detail, that is fully written into the new agreement.

**Question:** Can I just follow up? You're convinced, you're confident, that safeguards will prevent any diversion of fuel from this new facility to India's weapons program?

**Under Secretary Burns:** Yes. As you know -- yes, we are.

**Question:** I mean, because there are some people who think that that's not possible.

**Under Secretary Burns:** We are convinced and we've written -- of course, both sides have committed, and of course the Indian Government has committed, to continuous safeguards.

Now, we had our eye on this question that you ask about a year and a half ago. And as you remember, the big development on March 2, '06 was the agreement of a separation plan that the Indian Government wrote that was built into the March 2 agreement that allows us with some confidence, Carol, to say that from the beginning, the agreement was always about civil nuclear cooperation, the agreement does not speak to India's strategic program. And of course, we cannot aid in the development of India's strategic program, but we can separate that program from the civil side and we can help India to take its country from a 3 percent reliance on nuclear power to something substantially greater in the future. And that will have economic benefits, technological and very strong environmental benefits for India. And that's in our interest.

**Question:** Just to clarify, I mean, does this reprocessing deal go against the terms of the congressional approval that was given in December?

**Under Secretary Burns:** No, it doesn't.

**Question:** And why -- and if it doesn't, then why was this only just -- because just two months ago and the deal was only -- the agreement was in December?

**Under Secretary Burns:** Well, as you know, we've been negotiating this for two years and two days. It's been a long time coming. And of course, in any negotiation like this, there has been a cycle, there's been an evolutionary cycle to the discussions. It became clear following the passage of the Hyde Act that India wanted to see if we could reach an agreement on reprocessing consent rights. We wanted to see that there were developments involved or inherent in the agreement that would allow us to do so, but allow us to do so on a basis that was consistent with the Hyde Act. That was our obligation to the Congress.

And this promise by India to construct a new reprocessing facility, state of the art, safeguarded by the IAEA, I think was the fundamental positive turning point. But the Hyde Act -- what we are doing on reprocessing is fully consistent with the Hyde Act and, very importantly, with the Atomic

Energy Act of 1954. And we wouldn't have agreed to it otherwise. That's been a very important framework for us that we already have, not only in the law from 1954, we have the Hyde Act. And we kept reminding the Indian side, and they were good enough to negotiate on this basis that anything we did had to fall within and respect the legal guidelines that Congress had set forth.

**Question:** Nick?

**Under Secretary Burns:** Yes, Aziz.

**Question:** Nick, piggy-backing on the question on testing that was asked, the fact that the U.S. has in a sense assured India of sort of permanent fuel supplies, even if it were to test, isn't India only better because that the fuel supplies would still be assured even if the U.S. does withdraw its supplies a la Tarapur. So in a sense, India is assured that there won't be another Tarapur in future.

**Under Secretary Burns:** Well, you know, it's hard for me to deal in hypotheticals. I learned when I was spokesman here ten years ago never to answer hypotheticals. But I think I understand the drift of your question, and it's consistent with where Carol was going with her question.

The fact is that American law insists that the right of return be preserved, and we have preserved that in this 123 Agreement with India. The fact is also that we hope and trust that it won't be necessary for India to test in the future, and we hope and trust that we can go ahead with full civil nuclear cooperation. And so the basis of this agreement is the positive affirmation that we seek to build full civil nuclear cooperation. But in the event of any kind of hypothetical disruption of supply, and there is lots of different hypothetical examples that might lead to an interruption of supply, we know it's important for the Indians to have a continuous supply of fuel. And that's why a year and a half ago President Bush offered the four fuel assurances that have been written into this law.

But none of that contradicts or conflicts with the legal right of any American President in the future to insist on the right of return. That's preserved. That's preserved. But that's preserved for the worst case hypothetical event in the future. What we expect is that we'll have full civil nuclear cooperation, that these hypothetical scenarios will not come into play over the next several years, and that we'll be able to build the kind of positive cooperation that these fuel assurances will help to bring about.

**Question:** And you did say that this dedicated reactor was sort of a turning point.

**Under Secretary Burns:** It was.

**Question:** So it was during these negotiations that the real turning point -  
-

**Under Secretary Burns:** It was during -- Dick Stratford and I were in Delhi on June 1, 2 and 3 of this year, and it was a very intensive three days. And it was during those three days that the Indian Government approached us and said that they felt that they were willing to commit to this new facility. They knew that they had to do that in order to earn the reprocessing consent that we have subsequently given. And I think it was the fundamental turning point in these negotiations, and our experts took some time to look through the Indian proposal, and I think it did make a great, positive difference that allowed us to go ahead.

And the fact that it's going to be safeguarded by the IAEA, I think gets back to Carol's question that we can be assured that there is a separation and that when the United States does deliver nuclear fuel to India, we'll know what is going to happen to that fuel when it goes through the fuel cycle.

**Question:** This is like an India-specific deal. There'll be no similar deal offered to any other country?

**Under Secretary Burns:** This is complicated enough, I can assure you, that the United States is not going to suggest a similar deal with any other country in the world. We've always felt of India as an exception. We've made the argument that India has not proliferated its nuclear technology; that India, in effect, outside the system, has played by the rules and that the system would be strengthened by bringing it in. But we're not anticipating, in any way, shape or form, a similar deal for any other country.

**Question:** But how --

**Under Secretary Burns:** And that, I think, is important for the countries, the 45 countries, of the Nuclear Suppliers Group. Once the Indian Government succeeds with Mohamed ElBaradei in completing a safeguards agreement, then the action -- September, October, I hope, November -- will turn to the NSG. And I think it's important for the NSG countries to be assured that we're all going to be make, on an international basis, an exception for India, but we're not going to have -- it won't be a precedent to

bring other countries in under the same basis, because India is unique in its history of its civil nuclear program, and we think that we're going to strengthen the NSG by having the international community take the same decisions that the United States has taken in leading this initiative.

**Question:** But how can you prevent other countries, such as China and Pakistan, from making similar deals?

**Under Secretary Burns:** Well, there's a very high bar in the Nuclear Suppliers Group. It's consensus. Every single one of the 45 countries has to agree. Now, we've been talking to every country in the NSG since 2005 about India. And I think we and some of the European countries will take the lead in arguing in the Nuclear Suppliers Group that this kind of treatment to liberalize the international regime and bring India into full civil nuclear cooperation should be given by every country. I don't think there's any other country out there who could be brought -- who's not in the NSG who could be brought into the NSG at this point and given the type of treatment that we hope India will be given.

**Question:** To talk about the reprocessing, would America consider selling or sharing reprocessing technology with India? Is that planned?

**Under Secretary Burns:** Well, as you know, there are significant restrictions and major restrictions in American law that prevents the transfer of enrichment reprocessing technology to any country.

There are two exceptions listed in the Hyde Act, and on that basis we will work -- if India is interested, we will work to see if we could meet the tests of those exemptions in the Hyde Act, but obviously, under congressional purview.

It's important to remember that the Congress has the final say on all of this. When we get through the -- when India gets through the IAEA safeguards agreement, when and if the Nuclear Suppliers Group acts, and we hope it will, this thing goes back to the Congress for a final vote.

It's important also to note that when we begin to build this reprocessing initiative, the new state-of-the-art facility will be constructed by India, and then the subsequent arrangements and procedures will be agreed to by the U.S. and India, as we did with Japan, as we did EURATOM. Congress has the right to review that particular subsequent arrangements and procedures.

And so we have been briefing Congress this week. In fact, I will tell you that when we came -- when Ambassador Stratford and I came back from India

on the 3rd of June, he and I spent a considerable amount of time on Capitol Hill, just making sure that everything we were doing was well within the Hyde Act before we made the final commitments to India last week when the Foreign Secretary and the National Security Advisor were here for those very intensive four days.

So the Congress has the right to review this and to approve it every stage, and that's only proper because this is a major initiative and a major departure from three decades of American practice.

**Question:** You talk about how this will strengthen the nonproliferation regime and then you also talk about how this is totally separate, the civil and the military --

**Under Secretary Burns:** Military.

**Question:** -- nuclear arsenal.

**Under Secretary Burns:** Yeah.

**Question:** Could you just explain in kind of layman's terms how this strengthens the nonproliferation regime because this really has only to do with civil nuclear power, not to do with the kind of issue of India as a nuclear -- as a nuclear -- military nuclear power?

**Under Secretary Burns:** Well, the United States is a strong supporter of the Nonproliferation Treaty and of the international nonproliferation regime, the agreements that make up that regime. And, you know, it's -- as you know, there are a lot of inconsistencies that have now developed in that regime. You have countries inside the regime, like Iran, that are cheating. They have been cheating for the better part of the last 20 years.

In the case of Iran, they withheld information from the IAEA for 18 years. In the case of Iran, they haven't -- if you look at Mohamed ElBaradei's report to the Security Council of May 24th, they haven't answered major questions about what they're doing at Natanz, what they're doing with the Arak heavy reactor. So you've got this inconsistency of some countries inside cheating and of soon-to-be the largest country in the world, one of the largest energy consumers in the world -- India --on the outside, but not cheating.

And so we felt when Secretary Rice went to New Delhi in March of 2005, she talked to the Prime Minister, Prime Minister Singh. And she said we felt that over the long term, this nonproliferation system would be strengthened if India were brought into it, and if India would commit to

inspection of the majority of its nuclear reactors by the IAEA for the first time. And that's essentially what we've worked out over the last two and a half years since her visit.

We are bringing India into the system. It's going to strengthen it in that respect. And I do think that the message to countries like Iran is, if you're not willing to answer questions from the IAEA, if you're not willing to be transparent about exactly what's happening at Natanz at that enrichment facility, then there's no chance whatsoever that the international community is going to treat Iran and give it the kind of benefits that we're certainly willing to give the Indian Government. So I think that's the fundamental lesson for the nonproliferation regime.

And on separation, we have been clear from the beginning, and we were after July '05, that we could not go forward -- we, the United States -- unless there was a clear separation between how we would work with India on the civil nuclear side and then separate that completely from what India does on the strategic side. And it was the separation plan written by the Indian Government, agreed upon on March 2, '06, that it is a fundamental basis of the entire project.

**Question:** If I may just quickly follow up, these are -- these are not -- these kind of safeguards that they're agreeing to are through the agreement with you, but not -- they're not legally -- these are voluntary as -- according to the international nonproliferation regime.

**Under Secretary Burns:** No, India has committed to safeguards in perpetuity; and India has committed that, at this point, 14 of its 22 nuclear power plants will come under international safeguards; and that all -- as we talked about a year and a half ago, all future breeder reactors will come under safeguards. And so these are IAEA safeguards, and when this new reprocessing facility is constructed, that will be under IAEA safeguards. And so we're -- I think someone asked before, how can you be assured of continuous safeguards? Ambassador Stratford and his team were very keen to make sure that in the writing of this agreement, those safeguards will be in place in a way that we can be confident in.

**Question:** Just very quickly one more time. But what I'm saying is, I understand what you're saying about the separation that they can't use one for the other, but their military nuclear arsenal, or anything, is not under international safeguards.

**Under Secretary Burns:** No, I didn't suggest that. There's a complete

separation. We work with India on the civil side; that is safeguarded. What India does on the strategic side is India's business. This agreement doesn't aid that program and it doesn't have an effect because we've cleanly separated what we do to be only focused on the civilian side, not on the military side.

**Question:** Thank you. One specific question and one more general one. Specific one: On -- you talked about -- you will subsequently agree to the programmatic consent. So does -- is that within a specific timeframe or contingent on some other event taking place, or is it just a commitment to engage in negotiations that might lead to this?

**Under Secretary Burns:** The way I would describe it, and the way that Dick and I talked to the Indians about this, is that to put into effect the consent rights requires the two things that I mentioned: the development of this safeguarded -- IAEA safeguarded reprocessing facility; and the subsequent arrangements and procedures that the two governments would negotiate. And, of course, that is the way we conducted the reprocessing agreement with Japan and with EURATOM.

So I think it's a very important -- the agreement is a very important signal to the Indian people that their country is being respected, that their country will gain the kind of rights that only a few countries have -- Japan and EURATOM -- with the United States, but it'll be done in such a way that will be fully consistent with American law and with our practice, as we've dealt with our ally, Japan, and our allies in Europe in decades past. We felt it was important to have that consistency and I'm confident it's been written into the agreement.

**Question:** And the second more general question: As you said in the past, there's been a lot of divisiveness, and part of that was because the two sides interpreted the same provision and agreement differently. So is everything in this agreement so crystal clear that there is no ambiguity about it and that the Indian Government would endorse everything that you've said today as to how we should interpret it?

**Under Secretary Burns:** Yes, I believe that is the case that you're going to find a consistency of presentation by both governments and a consistency of explanation of what we've agreed to. Now, what we'll both need to do -- I know the Indian parliament, the monsoon parliament, will come into session, I think, on the 6th or 7th of August. Our Congress, of course, will want to see this agreement and every detail of it, as it should. And so,

when we're able to make the text available to the Indian parliament and the American Congress, we will, and at that point we'll make it public as well. The reason we can't do that right now is because we've got to complete our congressional consultations, but also, our President needs to -- we have a procedure here where the President needs to authorize the sending of the text to Congress. And so we'll do that.

But you can be assured that what we did once we got very close to an agreement last week -- the Indian Government was here from Tuesday through Friday at 2 o'clock, and we had nonstop, round-the-clock negotiations with Foreign Secretary Menon and the National Security Advisor M. K. Narayanan. Once it became clear that we knew what the elements would be, we actually did spend a lot of time together -- Foreign Secretary Menon and I -- in saying, okay, now, are we fully agreed on what each of these elements means, on what they are, on how they're linked to our law, and will we fully be able to then make sure that we're consistent in applying it?

And I'm confident we've reached that point. I've talked to the Foreign Secretary, I think, every day this week, including this morning, and he and I were very keen to make sure that when we presented this, we did it in way that was clear where American law kicked in, or Indian law, and what our respective obligations would be.

**Question:** Nick, you have portrayed this deal as a savvy decision and as worth undertaking, basically on, it seems to me, on two premises: one, that India has never represented a proliferation risk with respect to nuclear technology; and secondly, that it helps draw a useful distinction with a country like Iran. And yet I would like to introduce into the record of this briefing three facts which might tend to challenge those premises and have you respond to them.

First is that over the last two and a half years, the State Department has issued at least -- sanctions on at least seven separate Indian entities for transferring strategic weapons-related technology or goods to Iran, specifically. One of those entities was sanctioned last year for selling Iran chemicals critical to manufacturing rocket fuel. And finally, no less a figure in India than the former chairman of its state-run civilian nuclear program remains under State Department sanction for visiting Iran's nuclear establishment several times and reportedly transferring technology to extract tritium, which, as you probably know, is a material necessary to make smaller, more efficient missile-deliverable nuclear warheads.

And that -- all of what I've just said -- ignores the burgeoning military-to-military ties between India and Iran. So why should anyone view this deal as one that is savvy for the United States to make when, in fact, India under -- or entities in India remain under State Department sanction for sharing nuclear technology with Iran, and is, in fact, also expanding its military cooperation with Iran?

**Under Secretary Burns:** Well, as you know, there is an American law that speaks to the prohibition on trade by any company or any government around the world with the Iranians. We apply that law. And it is true that some Indian firms have become subject to that law and we intend to apply the law, and there'll be no exceptions to it. And so we'll go forward on that basis.

But there's no indication that I am aware of that the Indian Government has been involved in any illicit activity and trade of nuclear materials with India. These are Indian firms that we've sanctioned. But we will apply the law and make no exceptions. That is our obligation.

I would disagree with you that somehow there's a burgeoning military relationship. Now, India -- like most of its neighbors, like all of our European allies, like all of our Asian allies, and like the Gulf states -- has a diplomatic relationship with Iran, has a commercial and trade relationship with Iran. Our advice to the Indian Government has been the same advice that we give to Japan or to France or to the United Arab Emirates. We think Iran is an outlaw state. We think the international community should sanction Iran through the Security Council, as we've done twice over the last nine months, and also through independent sanctions taken by individual companies -- countries, excuse me. We don't want to see a strong relationship between any country and Iran because we think the signal to Iran should be one of isolation. So our message to India is very much consistent with our message to all of our other friends and allies around the world.

Now, I know there is some connection between India and Iran militarily, as there is between other -- some of the other countries that I mentioned. We would obviously -- our advice, consistent with the Security Council sanctions, would be to diminish a country's military relationship with Iran. But I'm not sure, as an objective observer, I would say that there's a burgeoning relationship.

I remember when Secretary Rice testified before the Senate on behalf of the India civ-nuke deal, in the spring of 2006, and there was a flurry of

stories in the press about an Iranian ship visit to India and that it was an example of burgeoning defense ties. And it turned out it was a ship -- you know, one of these mast -- one of these clipper ships with 16- and 17-year-old cadets learning how to sail.

I think, actually, the direction that India is turning into is to closer military cooperation with the United States. And as I said in my prepared statement, I think that is going to be one of the very significant horizons of this relationship.

**Question:** May I follow up, please? First on the military ties, India has helped Iran complete a major naval facility and has conducted joint exercises with the Iranian navy. Whether you want to characterize that as burgeoning or not is your decision, but the follow-up question I wish to ask is: even if one is prepared to assume, charitably, that the Indian Government had no idea about the transfer of those technologies to Iran on the part of, for example, the former head of its civilian state-run nuclear program, what does it say for Indian end-use or export controls that those exchanges took place, and how trustworthy a partner does it make them for the kind of benefits that you're proposing?

**Under Secretary Burns:** Well, two points. First, we have sanctioned, as you know, a number of firms from a number of countries around the world for illicit, and we believe prohibitive, transactions with Iran in the nuclear field. Second, when we approached the Indians in the spring of 2005 with this -- Secretary Rice did -- with this big idea to break through three decades of separation and to make this big strategic move to engage in civ-nuke cooperation, we did say to the Indians, you know, every country that's in the mainstream has to have a significant set of export control laws. And so you saw the Indian parliament pass such laws, I believe in June/July, if I'm not mistaken, of 2005, before Prime Minister Singh came to Washington.

And in part, we urged India to do that -- its government and parliament -- because we did perceive some weaknesses in their export control regime. But we believe that India has a counter for that. We believe India is committed to it. India has been a responsible country for a very long time, and if there are problems in the system, we believe the Indian Government will feel compelled to fix those problems.

**Question:** Thank you.

**Under Secretary Burns:** Thank you.

**Question:** Mr. Secretary, as far as this development is concerned, the credit also goes to you and Secretary Rice. My question is that -- and you have been briefing the U.S. Congress. You think from the briefings that Congress is now satisfied, number one?

And number two --

**Under Secretary Burns:** It's a big Congress. There are lots of people in it. (Laughter.)

You know, I think what's going to happen is this. Congress has a right and obligation to ask questions. Congress is going to want to see the fine print. Congress is going to want to have detailed briefings from myself, from Ambassador Stratford and his team. That's the way our system works.

We were very pleased that after a six or seven month debate -- on the op-ed pages, in testimony on the Hill in 2007 -- '06, excuse me -- Congress passed the Hyde Act by very large margins in the House and Senate with strong bipartisan support. And we hope to be able to earn that same vote -- and we'll have to earn it -- when the 123 Agreement comes back to Congress, hopefully by the end of this calendar year.

We know that we have to convince Congress that we've been attentive to the concerns that Congress clearly expressed in all those hearings that Secretary Rice and I did. We know that the Hyde Act is American law and we have to be inside the Hyde Act in every respect. And I'm confident we are, and I'm confident we'll be able to put that case forward.

But I don't want to speak for the Congress. It's an independent branch of government. This is a very big step, and Congress is going to look at it very closely. And so -- but I'm confident and I know Secretary Rice is confident that we've done the job that we had to do and that we think we can earn that support and trust from Congress.

**Question:** Something just to follow quick, Mr. Secretary. I will say this agreement came into effect during Prime Minister announcing and President Bush. Indians and India were feeling that they will have little cooler summers soon. How soon can they feel now that this agreement will make effect on Indians and India?

**Under Secretary Burns:** Well, I think the point of this is that we know India is a rising power in the world. We know it has major energy needs that

have to be met as its economy expands by 8 to 9 percent a year, which is quite extraordinary. And we know it needs to diversify its energy sources.

Now, this is a very complicated agreement. As I said, I think the chronology is that we're probably, probably not going to see this agreement go to the Congress until the IAEA and NSG steps are taken, hopefully by the end of this year. Once the Congress -- if the Congress approves it, and we hope it will, then at that point American companies can begin to, for the first time in decades, compete for contracts, for nuclear weapon -- nuclear reactor - - excuse me -- design and construction for nuclear fuel. (Laughter.)

And then if we're going to take the reprocessing forward, that's going to take some time because this new facility will be constructed. We'll have to agree on a subsequent set of arrangements and procedures. So there is a long timeline to this, but the benefit is going to be quite substantial in the future.

**Question:** On the strategic reserve that you will be supporting in this agreement, how does that square with the statement of policy in the Hyde Act which says that the U.S. will not really encourage other countries to supply fuel to India if, in fact, they do revoke the fuel?

And secondly, in the NSG, would the U.S. be amenable to an agreement whereby other countries would still be able to provide fuel to India if the U.S. did, in fact, revoke fuel?

**Under Secretary Burns:** Well, first of all, you know, you write an agreement and you negotiate an agreement because you have a positive view that the full cooperation is going to take place and that we're not going to have these extreme hypothetical situations develop in the future. You write from that basis. In that spirit, the President offered the fuel assurances on March 2, 06 and they're written into the agreement.

But you also negotiate -- you also negotiate from a legal perspective with the worst case in mind. And so, of course, the worst case would be that the right of return would have to be invoked. And we had to protect that on a legal basis, and we have done so. I don't see an inconsistency there. There isn't an inconsistency.

What I presume will happen over the next four or five years is that we'll go full speed ahead with India and the United States. If, in the future, some hypothetical situation arises that should knock that off course, then we have the legal protection that the Hyde Act demands and that American law demands.

**Question:** Has the Pakistani Government shared any concern vis-à-vis this agreement with you? Because some Pakistani nuclear experts have shared the concern that this will allow the freeing up of its own nuclear technology and resources of India towards the weaponization and acceleration of its nuclear weapons program. So do you think it will further lead to the nuclearization of South Asia?

**Under Secretary Burns:** The what of South Asia?

**Question:** The nuclear -- the acceleration of the nuclear arms program in South Asia?

**Under Secretary Burns:** No, we don't expect that to be the case and we hope that's not going to be the case. You know, Secretary Rice made a fundamental judgment in the spring of 2005 that she felt it was important to, in effect, dehyphenate our relationship with India-Pakistan. For decades, the United States had tried to carefully balance every step with India and determine its impact on Pakistan and vice versa.

We have singularly important relationships with both countries, but they're very different. The relationship with India is based on this extraordinary growth of trade and investment between our private sectors. The fact that India has the greatest number of students here, 75-80,000, and the fact that we're going to do things with India - civil nuclear trade, democracy promotion worldwide, HIV/AIDS cooperation --that are going to be unique.

I testified on Pakistan the other day and said Pakistan was the most indispensable country in the entire world to the United States in our number one global priority, fighting al-Qaida, fighting the Taliban, fighting radical extremist terrorists groups. And so that relationship rests on that kind of cooperation which is very important to the internal stability of Pakistan and of Afghanistan.

And so we -- you know, we're going to proceed with very strong relationships with both countries. And both countries are going to look to the United States in different ways. And I think it's important to mention that as a way to answer your question, because obviously Pakistan has a past, in terms of nuclear proliferation which, with the A.Q. Khan network, was very troubling. India has a very different past, and therefore we construct a different future on that basis, on that particular activity, civil nuclear cooperation.

**Question:** (Inaudible) new reprocessing facility and when you do you expect it to be finished? Is this a U.S. --

**Question:** (Inaudible.)

**Under Secretary Burns:** It's India's responsibility. Yeah. No, no, we didn't --

**Question:** There's no contribution from the U.S.?

**Under Secretary Burns:** Dick and I didn't agree to pay anything towards this facility. This is an Indian facility. And the safeguards are going to be from the IAEA. And so just as the United States would pay for any facility that we built in our country, we expect the Indian Government will cover that expense, and I assume the Indian Government believes it's worth it.

**Question:** And when do you expect it to be finished?

**Under Secretary Burns:** I don't know. I mean, you'll have to ask the Indian Government. This is going to be a major facility. It's going to be state of the art. It's going to be very new. So I don't know that the timeline will be on that.

**Question:** (Inaudible) your timetable for Congress here?

**Under Secretary Burns:** No. Let's take this -- that's -- thank you for asking that question. No. To get this agreement, the one we announced today, to the Congress requires IAEA safeguards and Nuclear Suppliers Group action. Then it goes to the Congress. To exercise the reprocessing rights will be subsequently worked out by the development of the new Indian facility and by the arrangements and procedures that the U.S. and India would agree to. So that would be subsequent to the passage, hopeful passage, by Congress of the 123 Agreement.

**Question:** But do you expect that Congress would put in some sort of provision that in case this facility doesn't materialize, the deal is off?

**Under Secretary Burns:** Oh, I don't know. I can't anticipate what the Congress will do, but --

**Question:** Do you want such a provision?

**Under Secretary Burns:** Our hope is that Congress will look at this agreement and say well done, good agreement -- (laughter) -- we fully agree with the Bush Administration and let's go forward. That's our hope. Let's see what happens.

**Question:** Well done. Good briefing.

**Under Secretary Burns:** Thank you very much.

**Question:** Allow me. Could the U.S. business get into it before this facility is completed and get a piece of the pie?

**Under Secretary Burns:** Well, let's -- again, I mean, that's a very good question. If the Congress, and we hope it will, approves the 123 Agreement, then that would allow American companies to begin to engage in civil nuclear trade and investment and nuclear reactor design with India.

**Question:** Because India --

**Under Secretary Burns:** It's the reprocessing that depends on the other two factors, and I believe that's going to be subsequent. So the American companies will be able to go in and we're very anxious to have that happen because, as you've seen with our trade with China and with other countries around the world, American firms are doing very well in competing against other countries' firms for contracts.

**Question:** Do you think --

**Question:** (Inaudible.)

**Mr. Casey:** Guys, excuse me a second. Let's just wait.

**Question:** (Inaudible) NSG countries supply fuel to India, would India be expected to house that in the proposed IAEA facility?

**Under Secretary Burns:** Well, I think that -- I think that's a very good question.

**Mr. Casey:** I let you get by one. (Laughter.)

**Ambassador Stratford:** The answer is, is if anybody else sold material to India --

**Under Secretary Burns:** I want Mr. Stratford to come up here. You should have a look at him. He is a person who has been negotiating these agreements for 20 years. He's our best national resource and expert. Take the floor.

**Ambassador Stratford:** I interpreted the question to mean if other countries transfer fuel to India, would it be reprocessed in the same facility. And the answer is, is if they were to give permission for reprocessing, it has to be done under IAEA safeguards. That's a given. If there's only one IAEA

safeguarded facility -- namely, the new one -- that's where it would take place. This facility has to be dedicated to safeguards forever and for everything that passes through it. It does not have to be only dedicated to U.S.-origin material. It could be used for everybody else's as well.

**Under Secretary Burns:** Great. Thank you.

**Question:** In the negotiations with the Indians so far, have the Indians showed any willingness to accept any further notifications if Congress adds or changes something?

**Under Secretary Burns:** That's a hypothetical question. We'll have to see what the Congress does.

Thank you.

## APPENDIX - XXVI

### Telephonic Press Conference of American Ambassador David C. Mulford from USA.

July 30, 2007.

**Ambassador Mulford:** Good evening, everybody. I'm very happy to have the chance to speak with you today.

I wanted to be available to the press a few days after the announcement of the 1-2-3 Agreement and the original press conferences so there would be time for you to digest your thoughts and so on, and if you had any lingering questions I'd be happy to try to deal with those today.

I do think it's important to go back a little bit and put the entire deal in perspective. Everybody knows that it's two years and two days since the deal was first announced, but in fact it goes back further than that. It goes back to the early part of 2005 because as you'll remember when Secretary Rice visited in March of '05, that was when the proposal was made to engage in this negotiation. I've been involved in this process from the very beginning, right from the very beginning of the ideas, and so I remember very clearly the effect that that visit had, the excitement it created, and then it led to the negotiation which culminated in the July '05 visit by the Prime Minister to Washington.

So again, one has to go back in time and remember the statement made by the President of the United States, namely that the United States wished to assist India in its desire to fulfill its vision to become a world power, and this judgment was coupled with the proposal that we should address what would appear to be one of India's most serious challenges as it sought to realize that vision, namely to address the energy situation in India on a very broad basis. That is exactly what this proposal has done.

The reasons were, just to review those, first of all to address a real problem in India that would help India resolve its long-term challenge; and secondly, to address this major energy source, reduce India's dependence on outside energy, a clean source of energy, and so on. So this launched what is, as we look back, one of the most complex negotiations ever conducted in fully transparent fashion by two major democracies with both the Congress and the Parliament consulted and involved and the media fully involved and informed at every stage. And the outcome, of course, was never going to be perfect for all shades of opinion in each country, but the test is whether the outcome is broadly acceptable; and secondly, whether it is going to work as an agreement; and finally, whether it is the basis for a deepening strategic relationship between our two countries.

I think the answers to those questions are all yes. And as I said in my Op-ed piece this morning, there are two future challenges. One is to get the balance of the process accomplished; and secondly, to build immediately on the strategic relationship and begin to accomplish things between us as quickly as we can.

So I'd be happy to answer questions that anybody might have. Thank you very much.

**Seema Guha, *DNA* [New Delhi]:** Ambassador, how confident are you of getting the 1-2-3 Agreement passed in the U.S. Congress?

**Ambassador Mulford:** I think we're confident that we can get it through Congress but there are certain considerations that need to be borne in mind. One of those is the passage of time. [Inaudible] before the Congress the easier it's going to be because next year we move fully into an election year. This is probably going to make things somewhat more complex as the year goes on. So we hope very much that we can recreate the strong bipartisan support that was enjoyed at the time the House and the Senate both acted on the legislation. This would mean that we would hope that India would accomplish its IAEA Safeguards Agreement quickly, hopefully

with a period of a month or two; then we move to the Nuclear Suppliers Group where that group is convened and gives a clean change of rules; and then we go to the Congress where there is a requirement that a certain number of congressional business days are supposed to pass before the vote takes place. That is in the hands of the leadership, and our hope is that we could encourage the leadership to move that timetable quickly so that before too many months go by we actually get the vote.

Obviously that's probably the single most important consideration at this point in time. I think there is broad bipartisan support for India, and I think this agreement, although it will have its critics, broadly will once again be supported.

**Ranjit Kumar, *Navbharat Times* [New Delhi]:** Ambassador, The possibility of a nuclear test by India remains a contentious issue between the two countries in case either Pakistan or China conducts a nuclear test and India also conducts a nuclear test in reaction; what will be the U.S.'s reaction to that?

**Ambassador Mulford:** First if all, these are all speculative questions and I don't wish to engage in trying to answer who does what when somebody else has done something and so on. The agreement is very clear. It preserves the right of return which is required by U.S. law in this case. The President would have the discretion to require the return of fuel and other nuclear equipment in such circumstances. That has been clearly preserved in line with the Hyde Act.

India has itself declared that it does not intend to test. It has its own self-declared moratorium. I think if India decides to change that policy it understands that there would be political repercussions because we have our laws and they've acknowledged that, so I think they'd have to make that judgment on the basis of the situation at that time.

**Ishani Dutta Roy, *Anandabazar Patrika* [Kolkata]:** Mr. Ambassador, actually [inaudible] the question of India's relation with Iran. Mr. Nicholas Burns has just told a couple of [inaudible] that the U.S. would like to help India so that India will not need any energy from Iran. So is that the reason in [inaudible] when you seek the nodding from the Congress?

**Ambassador Mulford:** First of all, this agreement will permit India to develop its own nuclear, civil nuclear industry. The negotiation on this agreement was entirely concerned with normalizing civil nuclear relations

between the United States and India and also between India and the rest of the world, ending 30-some years of India's isolation. The development of India's civil nuclear sector will be a matter for India to address, as well as the government, and I suppose also private industry. There will be heavy participation in this process by industries in the United States and in other countries.

In my opinion this will be one of the civil nuclear industry's [inaudible] and therefore it's a very, very big development for India's future. I do not believe that India is considering using nuclear energy from Iran. I don't believe that's on the agenda at all. And Iran really didn't figure into these negotiations, strictly speaking, on the civil nuclear industry of India.

I think the only relevance of Iran here is that India's relationship with Iran will be very carefully reviewed and scrutinized by members of Congress as they approach the final vote on the 1-2-3 Agreement. This is one of Congress' concerns, but the administration is supporting this agreement and supporting its passage through Congress.

So I believe that fully answers the question.

**Manisha Singhal, DNA [Mumbai]:** Sir, if the treaty emphasizes on the civil nuclear trade, who will be the major beneficiaries? And can you further clarify more on India's concessions?

**Ambassador Mulford:** The most immediate beneficiary of the agreement is India, which as I said before, its isolation over the last 35 years comes to an end when this process is completed. It is brought into the non-proliferation system of the world on its present basis, and this is an extremely historic breakthrough for India. It will also serve as the basis, as I said before, for a major civil nuclear industry development in India. It will be, in my view, the largest in the world probably.

As to the concessions that were made, the whole point of the negotiation over the past two years has been to find the basis, a workable basis for both countries to recreate normalized civil nuclear relations. This has involved compromises and concessions on both sides. That's what these negotiations have been about.

There's been some very, very important concessions made by the United States, for example, one of which is the consent right for reprocessing. India has made concessions on its side.

So by and large, that's the definition of a successful agreement and negotiation.

**Kumar Chellappan, *Deccan Chronicle*: [Chennai]** Sir, in the supreme national interest, if India decides to go for a nuclear test, will the nuclear cooperation be with the donors for the Hyde Act? And I would like to ask one more thing, will there be full civil nuclear cooperation which includes supply of technology, equipment, components and so on in the area of uranium and enrichment reprocessing of spent fuel and heavy water technology?

**Ambassador Mulford:** Addressing the last part of your question first, I think the best thing is that you should consult the text when it's released, because these are very, very complex issues. The consent right for reprocessing is a major breakthrough for India. It is something that we were able to agree by virtue of the fact that India proposed to create and designate a specific reprocessing facility which would reprocess safeguarded fuel under IAEA safeguards. That basis of cooperation was enough to reach the agreement that we would grant the consent right and we now both have to engage in creating certain arrangements and procedures to bring that reprocessing activity to reality.

So I think that is a very, very important element.

As to the supply of nuclear technology, et cetera, that you referred to, that is an item that is dealt with under the Hyde Act. There are a couple of exceptions there which are made available, and if India wishes to move in that direction it would be possible to seek one of those amendments to move forward. But that was not one of the prime issues of the negotiation... *interruption*

U.S. law is very clear on this point. As I said, the possibility remains open there on that issue. And you should read the text of the agreement when it comes out.

As to the testing, testing by India was not dealt with in the agreement. The law in the United States is very clear, and India knows what that law is. The right of return, as I've said, has been preserved for the discretion in the event that something like that should happen. So that is a futuristic event which I believe is very probable. And there are efforts made in the agreement to conduct consultations and deal with these issues.

**Srinjoy Chowdhury, *Times Now* [New Delhi]:** Ambassador, how confident are you that China, which is a member of the NSG, will not veto the supply of fuel to India?

**Ambassador Mulford:** Well, until now they haven't said anything along those lines, but we have committed with India to seek the consensus in the Nuclear Suppliers Group, and we will work that issue as soon and as aggressively as we can once the IAEA safeguards arrangements have been negotiated by India and the IAEA.

Our consultations up until this time show that the NSG in general is favorable to this agreement, but of course they're going to want, like everybody else, to look at the agreement itself and reflect on it. But we're confident that we can move this forward.

**Aditi Phadnis, *Business Standard* [New Delhi]:** My question is you were there throughout the negotiations. The negotiations took two extra days to complete. Were there times during the negotiations when you felt like knocking a couple of heads? Were there people who walked out? Just tell us some of the stories there.

**Ambassador Mulford:** I've been present in all of the negotiations right back to the beginning, including those that took place in Washington at the time of the Prime Minister's visit, those that took place in New Delhi at the time of the President's visit, and all subsequent negotiations except a couple of contact points in Washington when I was still in Delhi. But for the most part I've been present at all the negotiating sessions.

At all times the atmosphere was friendly and constructive. Obviously there were periods when there was a certain frustration on both sides by virtue of the fact that it was taking a very long time and a lot of effort to work through this material. But I think everybody realized at the same time that we were dealing with something that was highly complex technically, and very, very politically sensitive on both sides. We were making a new path, as it were, in the non-proliferation architecture of the world, and therefore this was an extremely delicate and complex process.

So I would say during these negotiations at all times there was good will and good humor and earnest and good faith negotiations going on. Obviously both parties negotiated with strength and conviction so it wasn't always easy.

I think the most difficult time probably was the period late May/June at the time of Mr. Burns' last visit to India because that was the time when the final bottom line on both sides really began to be visible, and we could sort of get a feel for what was really going to break the deal or not. Therefore

when we convened in July after a certain amount of preparation on both sides, we both knew, both sides knew that this was the time to conclude the deal because if we didn't then there was some likelihood that the deal would languish.

So we engaged, as you know, very fully, senior people empowered to reach an agreement on both sides. The meetings were again, friendly. They took time. Not really because of any particular antagonism or difficulty along that line, but because the final problems that had to be resolved were very, very complex and they took repeated efforts at language and concepts and so on to reach the final workable arrangement.

I don't recall at any time that anybody walked out in a huff or that there was any strong feelings beyond one or two points where people said look, this is something we just have to have. But that's a sort of bottom-line discussion. It's not unfriendly. It's just the nature of a very difficult negotiation.

So all in all, I would say the entire process was conducted in a state of friendly and constructive engagement. I think this agreement really is historic for both of us, and for the world incidentally. It is an agreement that fits within the international architecture but has modified the position for India in a unique way on a one-time basis and will, as I've said, generate a unique future for India. And incidentally, serve in my view as the basis for a deepening strategic relationship between the United States and India.

**Parul Malhotra, CNN-IBN [New Delhi]:** As you know, the text of the agreement has not been made public as yet, but in the case of a test we're made to understand that the U.S. will help India source alternative fuel supplies from other countries before it takes back its fuel, material, technology, et cetera. Could you confirm that for us? That's one.

Second, is there a distinction in the way that the U.S. will react in the scenario that India tests voluntarily versus India tests say after an American test? Is there a distinction in the way the U.S. would react to these scenarios, sir?

**Ambassador Mulford:** Well, as I said before, one has to go back to the point that the testing issue is not mentioned in this agreement. This was a civil nuclear agreement, exclusively concerned with India's civil nuclear industry. It was not a negotiation over India's strategic nuclear capabilities. And that was the case from day one, and that was carried through the entire negotiation.

As I said before, there is U.S. law on this matter and the U.S. law was observed and accepted by India as something that was not going to change. The right of return, as I've explained before, which is a discretionary right the President has under certain circumstances, has been preserved.

The question of what happens "if" is purely speculative. It's impossible to lay out in any very concrete way what might happen; the circumstances that might bring about a situation of the type that you asked about. We are assuming and operating on the basis that that situation will not occur, and that India's commitment to its unilaterally declared moratorium on testing will hold up. And that this is a problem we won't have to face.

But as you noticed and as you will see in the agreement, there were certain assurances provided by the President in negotiation actually with the Prime Minister back in March of '06, when the four points were laid out with regard to assurances on the supply of fuel. Those have been incorporated word for word in the agreement, so you will see those there. They will be laid out very very clearly.

The United States has indicated a willingness to help India create a strategic fuel reserve and in that reserve the U.S. fuel might conceivably be recallable, but fuel from other sources would not be, for example.

So the United States delineated this position very, very carefully. We also pledged to engage other countries in the supply business under certain circumstances to assist in the continuation and continuity of supply.

So I think you'll find there that the arrangements are pretty concrete and they're based really on principles and not on a particular event which nobody can foresee. So in my judgment, India has come out of this with a very, very secure position and it will have to be India's judgment as to whether or not that's adequate. In the negotiation it was judged to be so, and it's been accepted by the Government of India, and therefore, I'm assuming that this is a workable proposition and we will all abide by it.

**Kumar Chellappan, *Deccan Chronicle* [Chennai]:** I missed the answer on my first question on testing, if India conducts a nuclear test what will happen to the deal? And another question I would like to ask is, why United States and India have deliberately come to an understanding not to make public the text of the 1-2-3 Agreement? Do you have anything to hide?

**Ambassador Mulford:** The public release of the text is something that was agreed in Washington, that we would freeze the text for the time being

and that we would agree on the subsequent announcement which we've done and made, and on the release of the text. The text will be released when both governments have decided it is the appropriate time.

On the Indian side, I think their concern is they would like to release the text to the Parliament. When they decide to do that I think is not fully decided, but my guess is it will be very, very soon. And on the U.S. side, we will release the text when India releases the text. Because we are not at this moment under a compulsion to release the text because we do not have legislation put before the Congress. So the text will be released in both capitals at the time agreed, and I suspect that will be a matter of a few days. And there is nothing to hide as a result of this at all.

**Smita Sharma, *IBN7* [New Delhi]:** Mr. Ambassador, any update on the possible visit of the Secretary of State?

**Ambassador Mulford:** No. I think she very much wants to visit, but is really thinking about sometime this autumn, but there is no date set at this time.

## APPENDIX - XXVII

### **Support from the Corporate Sector of India to the Nuclear Energy Cooperation Agreement with the United States.**

**New Delhi, August 14, 2007.**

A Hindu report on August 15 suggested that an impressive 79 per cent CEOs of top-of-the-line companies in India gave the thumbs up to the India-U.S. civil nuclear deal which they consider would go down in history as one of the most important achievements of Prime Minister Manmohan Singh.

An ASSOCHAM Business Barometer (ABB) quick survey of 389 corporate heads revealed that a vast majority of the CEOs polled lent a strong support to Dr. Singh who, they said, had shown "extraordinary resolve" to take India to the front-ranking nations by ensuring that the country got its fast growing energy requirements met from various sources.

"We cannot have a situation where we aspire to become a global economic powerhouse but get bogged down in political ideologies," ASSOCHAM president Venugopal Dhoot said.

As many as 72 per cent of the ABB respondents agreed with the assessment of the country's top scientists that India needed access to international technology which was possible if the Nuclear Suppliers Group agreed to India's commerce in civil nuclear energy.

Many of scientists said it was time nuclear power generation was stepped up substantially to India's energy generation, using Fast Breeder Reactors.

Estimates suggest that the 123 Agreement would open up investment opportunities worth \$ 40 billion over the next 15 years to step up nuclear power generation, with leading U.S. firms willing to forge joint ventures with the Indian firms - both in the private and public sectors.

However, after the agreement is operationalised, India would need to amend its Atomic Energy Act, which limited nuclear energy within the domain of the Nuclear Power Corporation.

The company heads felt that once India was able to do global nuclear commerce it would not only enhance the country's indigenous programme with imported fuel but also help accelerate nuclear power with the best of the imported power plants. As many as 86 per cent of the CEOs, polled by the ABB across different segments, believe that India-U.S. relations have been scaling a new high. They also feel that better economic relations will lead to improved political ties.

To a question whether the Prime Minister should compromise on the civil nuclear energy deal with the U.S. under political pressure, 68 per cent of the CEOs wanted Dr. Singh to show the resolve of a strong leader.

They wanted the Prime Minister to remain firm and were confident that those opposing it in the U.S. would also come round to the mutual benefit that the deal offered.

"We agree with the Prime Minister that it was important to maintain the current GDP growth rate of 8 to 10 per cent per annum if we have to eradicate poverty," the ASSOCHAM chief said.

As many 83 per cent ABB respondents said the country should not be seen as divided when it came to foreign policy issues. The government of the day deserves full support on this key agreement from different sectors of society - politics, academia, intellectuals, scientific community and the business houses.

## APPENDIX - XXVIII

### **Media Briefing by Spokesperson of the Pakistan Ministry of Foreign Affairs on India - US Nuclear Energy Cooperation.**

**Islamabad, August 20, 2007.**

When her attention was drawn to the debate in India over nuclear tests after the Indo-US nuclear deal and her views were sought as to how this was viewed by Pakistan with reference to her prior comments about the Indo-US nuclear deal having a negative impact on the security and safety of the whole region, and also asked for comments on Australian refusal to sell Uranium to Pakistan even though it was willing to sell it to India, the Spokesperson said:

We are following closely the controversy reflected in the statements emanating from Washington and Delhi about India 's right to conduct nuclear test within the context of the US-India nuclear deal. We take seriously the assertions by Indian leadership about the possibility of renewed nuclear testing. This should be a source of concern not just for Pakistan but also for the international community especially when Indian weapons capability would be augmented by the agreement as well as by India 's access to technology and fissile material.

On its part, Pakistan continues to adhere to its unilateral moratorium on testing. We had also proposed to India a bilateral nuclear test ban agreement. Resumption of nuclear tests by India would create a serious situation, obliging Pakistan to review its position and to take appropriate action consistent with its supreme national interest.

As regards, the comments we have already issued a statement regarding the unwarranted and uncalled for statement. We have already made a statement about that. Therefore, I do not need to go into that.

Like the US-India agreement, decision by Australia to sell uranium to India is a matter to which warrants close attention. Any development that can impinge on the strategic balance in South Asia is a matter of vital concern to us. Pakistan does not want an arms race in South Asia but at the same time, we are determined to maintain a credible minimum deterrence in the interest of strategic balance which is indispensable for peace in the region.

I would like to repeat what we have been emphasizing consistently that Pakistan also has energy needs and its future energy procurement plans include development of civil nuclear power plants. We want to develop civil nuclear power generation under international safeguards. We hope and expect that the NSG member countries would be sensitive to our needs.

Pakistan is fully committed to nuclear non-proliferation. For the effectiveness of global nuclear non-proliferation regime, Pakistan must be viewed as a partner.

Asked, if as stated that Pakistan would like to have a deal with US on the patterns of the Indo US nuclear deal, did that also mean that Pakistan would like a similar deal with Australia , the Spokesperson said:

We are not talking about any specific country. We are saying that NSG should adopt criteria based approach and as expanding and growing economy we have our energy requirements.

We also want to build and develop civil nuclear power plants to meet our energy requirements. Asked, with reference to various US Presidential candidates comments regarding direct strikes inside Pakistan , how long Pakistan would continue to tolerate those threats and how long it would continue to kill its own nationals at the behest of the US , the Spokesperson said:

When you say we had our people killed at the US behest, you are insulting yourself and your own country. We are not doing anything for anyone else's sake. As regards the statements, we do not want to get dragged into the election debates in the US . These are statements by individuals. We have to look at what the US officials have to say. There have been some statements and we have responded to them.

Asked, for comments regarding Pakistan-China civil nuclear agreement, the Spokesperson said:

We have a long standing cooperation with China. This question has been asked umpteen times and I have already responded to it<sup>1</sup>.

Asked for information regarding the Pakistan-US Strategic Dialogue, its

---

1. Along with the Pakistan denial, the Chinese Foreign Ministry on August 20 too denied reports that Beijing and Islamabad were in the process of negotiating a civilian nuclear energy agreement along the lines of the Indo-U.S. deal. "There is no such deal in the making," said a statement from the Foreign Ministry spokesperson's office in response to a question posed by *The Hindu*?. *The Hindu* story on August 22 from its Beijing

agenda and when it would start as well as the purpose of Mr. Negroponte's visit, the Spokesperson said:

The response to your second question is in your first question. Mr.

---

Correspondent Pallvi Iyer makes an interesting reading in this context: "Having been rebuffed by the United States in its attempts to secure a nuclear energy deal for Pakistan similar to the Indo-U.S. one, Islamabad has been actively seeking Beijing's assistance instead. The matter was reportedly broached during Pakistan President Pervez Musharraf's visit to China early last year as well as during Chinese President Hu Jintao's return visit to Islamabad later in the same year. However, on neither occasion was any formal deal announced although Beijing reassured its "all-weather ally" of its continuing support on all strategic matters including energy cooperation. China has already provided Islamabad with assistance in installing two nuclear power plants at Chashma in the past. Pakistan has reportedly asked for assistance with the building of a number of further such plants. China's official media has been scathing in its response to the Indo-U.S. deal. Last week, the main Chinese Communist Party newspaper, the *People's Daily* accused the deal of "double standards," adding that it was likely to "damage the existing non-proliferation system." To China, the 123 Agreement has, from its inception, represented a potent strategic alliance between the United States and India aimed at counter-balancing China's rise in the region. The ongoing political controversy in India engendered by the 123 Agreement has been discussed in detail in the official Chinese media with hopes being expressed that opposition from the Left parties will scupper the deal. It is the United States that is identified in outright negative terms in these commentaries, with the *People's Daily* accusing the U.S. of "hegemonic ideas" and being unconcerned about "others' opinions." The newspaper went on to assert that the U.S. clearly intends to draw "India in as a tool for its global strategic pattern. "India, on the other hand, is not directly criticised and is instead described as "wanting to seize the opportunity to rise as a big power," out of "practical political considerations." *The People's Daily* commentary ended with the hope that "India's DNA doesn't allow itself to become an ally subordinate to the U.S., like Japan or Britain." China's support for the Indo-U.S. deal will be crucial at the Nuclear Supplier's Group (NSG). While Beijing has been ambiguous about its intentions if the deal is put before the NSG, some analysts have stated that China may attempt to force through an exception for Pakistan as well, as a precondition to its acquiescing to the agreement. Most experts, however, feel that if push comes to shove, China will not risk the international censure it will face for entering into a nuclear deal with a known proliferator such as Pakistan. "China and Pakistan already have some cooperation in nuclear energy. That cooperation will continue but I do not see any special deal like the U.S.-India agreement emerging" says Professor Rong Ying, a South Asia analyst at the China Institute for International Relations. He concludes, "I think China realises such a deal with Pakistan would not be good for China." When Indian Prime Minister's Special Envoy Shyam Saran visited China in August to seek Beijing's understanding as a member of the Nuclear Suppliers' Group, he noticed certain amount of reservation. China "envisaged bilateral cooperation" with India in "the peaceful uses of nuclear energy," Beijing conveyed this message to Mr. Saran. This was stated by Shyam Saran in Singapore on August 30th. China, however, maintained that "such cooperation [with India] should not, in any way, undermine the [international] non-proliferation regime," he said. Commenting on Beijing's "wish" to engage New Delhi in this fashion, Mr. Saran said: "It is our stand that the India-U.S. nuclear deal, by no means, undermines the non-proliferation regime. Our view is: it even strengthens the international non-proliferation regime. But, what China's own stand would be on this issue will be apparent when this matter comes up before the Nuclear Suppliers Group, of which China is an important member. So, just wait and see what China says."

Negroponte is coming here for the second round of the Strategic Dialogue. Strategic Dialogue entails review of the full range of bilateral relations and our bilateral cooperation in a number of areas e.g. education, science and technology, Reconstruction Opportunity Zones, bilateral trade, energy and political relationship. As Mr. Boucher had already mentioned he will be here around the 11-12 September, 2007.

Asked, for comments regarding the US role in the much talked about deal between President Musharraf and Benazir Bhutto and the recent comments of Chaudhry Nisar, the Spokesperson said: I have no information and I have no comments.

Asked with reference to her earlier response that if India conducted a nuclear test, Pakistan would have to revise and review its own policy, if Pakistan had discussed this issue with the global community, the Spokesperson said: We have made our position known.

Asked if Australia provided Uranium to India , what would be the situation of Dr Abdul Qadeer, the Spokesperson said: What is the link?

## APPENDIX - XXIX

### **Statement by a group of intellectuals in opposition to the India - US Nuclear Cooperation Agreement.**

**Chennai, August 23, 2007.**

A group of prominent intellectuals has urged the United Progressive Alliance (UPA) Government to "not be in a hurry to take the next steps in the India-U.S. bilateral nuclear cooperation agreement.

"A statement signed by Aijaz Ahmad, Amiya Bagchi, Utsa Patnaik, Nirmal Chandra, Sunanda Sen, Prabhat Patnaik, Javeed Alam, Jayati Ghosh, C.P. Chandrashekhar , M.K. Bhadrakumar, K.N. Harilal, Anuradha Chenoy, Madhura Swaminathan, V.K. Ramachandran, Geeta Hariharan, Mohan Rao, Ritu Dewan, Praveen Jha, Vikas Rawal, Ayesha Kidwai, Archana Prasad, Smita Gupta, Dinesh Abrol, Rahul Roy, C.P. Narayanan, Kamal Mitra Chenoy, and Prabir Purkayastha has urged the Government of India "not to be in a hurry to take the next step in the India - US bilateral nuclear cooperation agreement. They said:

"We call upon the UPA government not to be in a hurry to implement the India-U.S. Bilateral Nuclear Cooperation Agreement. A majority in the Indian Parliament is opposed to this 'Deal'. Meanwhile, the U.S. Congress itself has passed extensive legislation, known as the Hyde Act, which specifically circumvents the assurances Prime Minister Manmohan Singh gave to our Parliament before that Act came into force in the US. Supreme legislatures of the two countries evidently hold positions that are irreconcilable.

"Considering that a majority of the Indian Parliament is opposed to the 'deal' as it currently stands, it is outrageous and despicable to suggest that a section of this opposition is taking its cue from China or Iran or elsewhere, or that foreign policy is being 'communalised'. No one needs a certificate of patriotism from the communal forces and their friends in the media. As always, and especially in matters of foreign policy, we want the nation to speak in one voice. Foreign forces can wait while we build such a consensus within our own democracy.

"This 'deal' is part of a strategic design that began evolving with the secret Jaswant-Talbot negotiations and has been pursued by the NDA and UPA governments alike. India is fast becoming a member of a military alliance that includes not just the U.S. but also other countries such as Australia, Japan and Singapore. This has far-reaching implications for our sovereignty, independent foreign policy and relations with other Asian countries.

"We need time for a national debate on all such issues. The Left Parties have acted in a most responsible fashion in refusing to join the BJP-inspired moves to bring down this government. They have not demanded that the agreement be repudiated as such. We support the contention that the government not be in a hurry to take the next step that the U.S. side is demanding of us, and that it initiate comprehensive mechanisms for all-sided discussions with a view to developing a national consensus<sup>1</sup>."

---

1. At an international conference organised in New Delhi on September 8 by the Coalition for Nuclear Disarmament and Peace, Heinrich Boll Foundation, and Popular Education and Action Centre, experts and activists from the U.S., Germany, Pakistan, Nepal and India analysed the deal's strategic dimensions and its implications for security and India's energy future. In his keynote address, economist Jean Dreze stressed the immorality of nuclear weapons, the irrationality of nuclear deterrence and the dangers of a "nuclearised" South Asia. He said the deal violates various international norms, treaties and United Nations resolutions. Other speakers warned against the harmful consequences of this collusive strategic arrangement between India and the U.S., which is pursuing global

---

military dominance. Andrew Lichterman (U.S.) said the deal is part of a larger project of integrating the two countries' elites - at the cost of peace and people's welfare. Other panelists said the deal was related to the U.S. push towards Empire through building a global alliance system. There was unanimity that the deal would aggravate the nuclear arms race in South Asia and the Asian continent and further weaken the already feeble momentum for regional and global disarmament. The present moment poses new, unique dangers in a world that has greatly changed since the end of the Cold War. Contrary to the claim that the deal will cap India's nuclear arsenal, it will allow India to greatly increase weapons-grade plutonium production, sufficient for as many as 40 bombs every year, in addition to India's estimated inventory of 100-150 bombs. Speakers, including Kanak Mani Dixit (Nepal), A.H. Nayyar (Pakistan), Praful Bidwai (India), and Oliver Meier (Germany), spoke on serious misgivings about the deal in Pakistan, Bangladesh and Nepal and Europe, and the grave dangers of a regional nuclear arms race initiated through it. In response to it, Pakistan was greatly accelerating its fissile material production. As regards nuclear power, the speakers argued that the deal was being wrongly promoted in the name of energy security. Experience from the world over, especially India, showed that nuclear power could not be the route to energy security. It is environmentally unsound, highly accident-prone and generates radioactive waste that remain hazardous for tens of thousands of years. Speakers, including Felix Matthes (Germany), Sudha Mahalingam, Sanghamitra Gadekar and M.V. Ramana (India), said nuclear power was two to three times more expensive than conventional or renewable energy. Its rapid growth was infeasible. It cannot make a significant contribution to tackling climate change and was inappropriate for India's specific needs. Besides, there were commercially viable, environmentally sustainable, strategies such as increased efficiency and promotion of renewable energy sources.

## APPENDIX - XXX

### **Statement by a group of former Scientists of the Bhabha Atomic Research Centre on the Civil Nuclear Energy Agreement with the United States.**

**Mumbai, August 30, 2007.**

Noting that the India-U.S. nuclear deal was in the interest of the country, former scientists of the Bhabha Atomic Research Centre (BARC) have said that the agreement should not be hijacked by political parties.

"With the country's ever-increasing energy needs and with a view to ending the 33-year-long nuclear isolation, the importance of the deal has to be understood by the people of India and should not be hijacked by the Opposition and the parties supporting the government," the scientists said in a statement.

They condemned the Opposition and the Left parties for questioning the integrity of Prime Minister Manmohan Singh over the civilian nuclear agreement.

"India-U.S. Cooperation on the Civilian Nuclear Programme and the Agreement is now being called a 'deal' and our Prime Minister is being targeted as if he has made some underhand 'deal' with the U.S.," the statement said.

"Some political parties, including ones supporting the government, are doubting the integrity of the Prime Minister and this is a matter of national shame," said the statement signed by A.K. Anand, former Director, Reactor Projects Group and Director Technical Coordination and International Relations Group, and others.

"The Opposition is talking of the Hyde Act and saying that if India carries out a nuclear test in future, all nuclear cooperation will end. But we do not even know if at all and when, in the distant future, a test will be required by the nation," it said.

The statement, which has been widely circulated among the nuclear scientists and industries, pointed out that the whole agreement is about the civilian nuclear cooperation and in no way will it hamper the weapons programme.

"Our weapons programme will continue as it always has been, with our own reactors, reprocessing plants, enrichment plants and heavy water plants.

"We are not going to be giving the design and technology to any one; why, then are we pointing out that the U.S. will not give these technologies as part of the civilian agreement?"

Dwelling on the past tests and India's strengths, they said, "We had been isolated because of sanctions since 1974. The DAE [Department of Atomic Energy] scientists, engineers and technologists took up the challenge and after more than 30 years' efforts have brought the nation to this stage of strength and pride which has made the western countries shake hands with us."

The politicians should not think about scuttling the whole process of integration, they added. "But after all the recognition, why should we go back to isolation as we fear that future isolation may be more severe," they cautioned.

## PPENDIX - XXXI

### **Report on the Conference of Intellectuals on the question of Civil Nuclear Energy Cooperation Agreement between India and the United States.**

**New Delhi, September 8, 2007.**

Intellectuals and energy analysts from different countries criticised the Indo-U.S. nuclear deal on the ground that it is bad for peace, draw India into Washington's strategic orbit and promote nuclear power, which is hazardous, accident-prone and costly.

At an international conference organised by the Coalition for Nuclear Disarmament and Peace, Heinrich Boll Foundation, and Popular Education and Action Centre, experts and activists from the U.S., Germany, Pakistan, Nepal and India analysed the deal's strategic dimensions and its implications for security and India's energy future.

In his keynote address, economist Jean Dreze stressed the immorality of nuclear weapons, the irrationality of nuclear deterrence and the dangers of

a "nuclearised" South Asia. He said the deal violates various international norms, treaties and United Nations resolutions.

Other speakers warned against the harmful consequences of this collusive strategic arrangement between India and the U.S., which is pursuing global military dominance. Andrew Lichterman (U.S.) said the deal is part of a larger project of integrating the two countries' elites - at the cost of peace and people's welfare.

Other panelists said the deal was related to the U.S. push towards Empire through building a global alliance system. A lively packed auditorium disagreed with a Pakistani panelist's (Ejaz Haider) contention that it would not be right for a Pakistani to comment on the deal.

There was unanimity that the deal would aggravate the nuclear arms race in South Asia and the Asian continent and further weaken the already feeble momentum for regional and global disarmament. The present moment posed new, unique dangers in a world that has greatly changed since the end of the Cold War.

Contrary to the claim that the deal would cap India's nuclear arsenal, it allowed India to greatly increase weapons-grade plutonium production, sufficient for as many as 40 bombs every year, in addition to India's estimated inventory of 100-150 bombs.

Speakers, including Kanak Mani Dixit (Nepal), A.H. Nayyar (Pakistan), Praful Bidwai (India), and Oliver Meier (Germany), spoke on serious misgivings about the deal in Pakistan, Bangladesh and Nepal and Europe, and the grave dangers of a regional nuclear arms race initiated through it. In response to it, Pakistan greatly accelerated its fissile material production.

As regards nuclear power, the speakers argued that the deal was being wrongly promoted in the name of energy security. Experience from the world over, especially India, showed that nuclear power could not be the route to energy security. It was environmentally unsound, highly accident-prone and generated radioactive waste that remain hazardous for tens of thousands of years.

Speakers, including Felix Matthes (Germany), Sudha Mahalingam, Sanghamitra Gadekar and M.V. Ramana (India), said nuclear power was two to three times more expensive than conventional or renewable energy. Its rapid growth was infeasible. It could not make a significant contribution to tackling climate change and was inappropriate for India's specific needs.

Besides, there were commercially viable, environmentally sustainable, strategies such as increased efficiency and promotion of renewable energy sources.

## APPENDIX - XXXII

### **Press Report on the meeting between the Congress Party and the Left Parties on the India-US Nuclear Energy Cooperation.**

**New Delhi, September 19, 2007.**

The United Progressive Alliance-Left committee on the nuclear deal with the United States, at its second meeting on September 19. It discussed a “number of issues” and decided to hold talks again on October 5. (The first meeting took place on September 11.)

Describing the talks as constructive, External Affairs Minister Pranab Mukherjee said these were largely based on the notes exchanged.

(Last week, the Left parties submitted a note to the government and the latter gave its reply on September 17. In reply the Left parties came out with a 12-page note.)

“We covered some ground and the discussions mainly focussed on the Hyde Act and its implications on the country’s self-reliant nuclear programme and the 123 agreement,” Communist Party of India (Marxist) general secretary Prakash Karat told *The Hindu* after the two-hour meeting. Both sides explained their positions, said Communist Party of India national secretary D. Raja. “Discussions are progressing; there is no need for showing any hurry,” CPI general secretary A.B. Bardhan said when asked about Mr. Karat’s warning to the government on Tuesday to put on hold operationalisation of the deal at least for six months<sup>1</sup>.

1. On the same day the U.S. Ambassador to India David Mulford called on Prime Minister’s Special Envoy on the nuclear deal, Shyam Saran, to discuss the future of the pact. According to media reports, he sought to assess the stance the government might take in the light of the demand by the Left parties to hold it in abeyance for six months, said informed sources. Mr. Mulford met Mr. Saran a day after he urged India to take the “last steps” towards operationalising the deal. This runs counter to the plea, on the same day, of Communist Party of India (Marxist) general secretary Prakash Karat to the United Progressive Alliance (UPA) government not to buckle under U.S. pressure and let

Union Ministers Lalu Prasad, T.R. Baalu, Kapil Sibal and Saiffudin Soz were present at the meeting.

The Left Parties felt many provisions of the Hyde Act were contrary to the promises made by Prime Minister Manmohan Singh in August 2006. In the Left's perception, under the terms set out by the Act, it was clear that the cooperation would not cover the entire nuclear fuel cycle. It denied cooperation or access in any form whatsoever to fuel enrichment, reprocessing and heavy water production technologies. The Left reportedly said: "The denial extends to transfer of dual use technology and covers items that could be used in fuel enrichment, reprocessing or heavy water production facilities. The contentious provisions remain in the Hyde Act Section 102 (13) and Section 103 (a)(6), Section 104g (2) E(i) and a few other Sections to which we object and want a clarification."

---

Parliament debate the deal first. According to media reports the Ambassador also discussed the steps that should be taken to implement the deal within a few months. Piqued by the reports of Mulford's activities, the CPI(M) Polit Bureau said "the UPA government should tell the country whether it plans to adhere to this [Mr. Mulford's] time frame or examine the serious objections raised to the agreement." The CPM sought to remind the UPA that the majority in Parliament was against proceeding with the agreement. "More importantly," pointed out the CPI(M), "by talking of moving from '123' to '456', the U.S. Ambassador has set out the contours of the 'comprehensive relationship' being forged with the U.S. which encompassed defence, economic and strategic collaboration."

## APPENDIX - XXXIII

### **Report on the discussion between the UPA Coalition Partners and the Left Parties supporting the Government on the Civil Nuclear Energy Agreement with the United States.**

**New Delhi, October 19, 2007.**

The ratification of the bilateral Indo-US 123 civil nuclear agreement by the American Congress would render infructuous the domestic US law, the Hyde Act, which the Left fears would impinge on India's sovereignty and strategic growth.

The government on 17<sup>th</sup> September dispatched a 12-page note to the leaders of the four Left parties arguing why India's nuclear agreement is better than the ones signed by China and Japan with the US. The note point-by-point answered the questions that the Left had raised in an earlier note sent to UPA representatives in the Left-UPA political committee set up to resolve differences on the deal. Both CPI (M) general secretary Prakash Karat and his counterpart in the CPI, AB Bardhan said the government's answer would be discussed when the committee meets for the second time on September 19. But Bardhan was categorical about the Left's stand on the nuclear issue, "We are against the 123 agreement because of the impact of the Hyde Act (on the agreement)."

The Left had posed the question on how the Hyde Act and other US domestic laws would apply to the agreement. "The government has interpreted the US laws in its own way. In the note, it said that US domestic laws would have no bearing on the agreement once US Parliament passes it," Forward Bloc's Debabrata Biswas said.

The Left had also questioned the cost effectiveness of nuclear power. The government, according to Biswas, has argued that it would be both cost effective and viable. It also said that nuclear power was the only answer to India's energy demands. "Our point is how are you saying this when there are so many other sources, like hydel power. Nuclear power should be our last option," Biswas said.

The note, pointed out that once the deal is ratified, India would come out of nuclear isolation and uninterrupted fuel supply would be guaranteed. "We know from earlier experience, what the US can do. The Prime Minister had

also assured the Parliament about fuel supply. But our stand is that they can terminate the supply any time," Biswas added.

Describing the talks as constructive, External Affairs Minister Pranab Mukherjee said these were largely based on the notes exchanged. "We covered some ground and the discussions mainly focussed on the Hyde Act and its implications on the country's self-reliant nuclear programme and the 123 agreement," Communist Party of India (Marxist) general secretary Prakash Karat told *The Hindu* after the two-hour meeting. Both sides explained their positions, said Communist Party of India national secretary D. Raja. "Discussions are progressing; there is no need for showing any hurry," CPI general secretary A.B. Bardhan said when asked about Mr. Karat's warning to the government on September 18, to put on hold operationalisation of the deal at least for six months. Union Ministers Lalu Prasad, T.R. Baalu, Kapil Sibal and Saiffudin Soz were present at the meeting. The Left parties apparently maintained that under the terms set out by the Act, it was clear that the cooperation would not cover the entire nuclear fuel cycle. It denied cooperation or access in any form whatsoever to fuel enrichment, reprocessing and heavy water production technologies, Left sources said. "The denial extends to transfer of dual use technology and covers items that could be used in fuel enrichment, reprocessing or heavy water production facilities. The contentious provisions remain in the Hyde Act Section 102 (13) and Section 103 (a)(6), Section 104g (2) E(i) and a few other Sections to which we object and want a clarification."

## APPENDIX - XXXIV

### Interview of Former Chairman of the Atomic Energy Commission M. R. Srinivasan with *the Hindu*.

**Chennai, November 2, 2007.**

[M.R. Srinivasan: "We do expect a significant improvement in uranium mining in the next, say, three or four years." The debate over the 123 agreement with the United States has generated much heat. The former chairman and present Member of the Atomic Energy Commission (AEC), M.R. Srinivasan, believes India is growing in strength and economic independence and that such a deal will accelerate the several positive gains made by the country. Excerpts from an interview with Dr. Srinivasan in Kochi:]

#### **Could you tell us what is the way out of the current impasse over the nuclear deal with the U.S.?**

It looks as though that, one option is that the government manages to convince the Left that their concerns on compromises to India's foreign policy and sovereignty are not well founded. If that were to happen, then, there will be a way forward. On the other hand, if, while looking at Mr. Brajesh Mishra's [former National Security Adviser] reported interview where he said he personally is in favour of the agreement if there is no compromise on the strategic programme and if that were to be the view of the BJP, then perhaps the BJP could support the agreement. But this seems to be contradicted by what Mr. Rajnath Singh [BJP president] said recently. So we do not quite know whether they have made up their mind and [if] Mr. Singh's position is the final one.

If neither the BJP nor the Left want to support this agreement, and with the clearly stated position of the UPA, which is against this, I really see that it appears to be a case of a stalemate.

#### **Do you think the U.S. government will wait till the ruling party here convinces the Left about the urgency of the deal, at least by December?**

Well, they have to wait. What else can they do? They cannot set up a deadline and say that if you do not conclude the deal by so-and-so date, the deal is off. They can't say that. Their problem is, they have a time table. If the approval of the U.S. Congress is not secured sometime around the spring of 2008, then they get busy with their electoral process. In that sense, there is a timeline. Otherwise they really cannot indicate a timeline and say stick to it.

**There are several people who want the country to use its abundant thorium resources to generate nuclear power. Is it possible to go to the third stage bypassing the first and second stages?**

No, it is not possible at all. Technologically it is not possible; we have to have plutonium to start the Fast Reactors which can convert thorium into uranium 233. Now there is another situation, also called 'sub critical assemblies' with accelerated driven systems, but even for that we require fissile material, say plutonium, in addition to thorium. So, that is not possible. We still require this two to three decades of initial time.

**If the deal does not come about, what will be the impact on India's power-generation programme? Can we make do with coal, imported oil and gas, wind, solar energy?**

Yes we have to do that. We have no choice in the matter. If the deal does not come through, we have to have a higher emphasis on coal, gas, hydro, and also intensify efforts on solar and wind. In any case, they need to be intensified. I would say, notwithstanding what happens in this deal, we should intensify our efforts to tap solar and wind and other non-conventional sources of energy. That must be done as a matter of priority. And we will have to do it even stronger. Although, they cannot, in the near-term, take the place of nuclear power, which in the near-term could be significant, if they have access to outside technology and fuel.

**Now that the capacity factor of nuclear stations has fallen from 90 per cent to almost 50 per cent, what is the way out? Can we go in for mining of natural uranium in the North-East?**

Yes, action is now being taken to open up new mines, and to add new mills, notwithstanding the difficulties of local opposition and so on. They are all being resolved. So, we do expect a significant improvement in uranium mining in the next, say, three or four years.

**You have been talking about a 300 megawatt Advanced Heavy Water Reactor. When is it likely to become operational?**

Construction is going to start next year. It will take about four to five years. This will be the first of its kind in the country. Though it is only a 300 MW reactor, it is very important in that it is the technology of the future that we want to work on. In that sense, it is very important.

## APPENDIX - XXXV

### **Full Text of an open letter sent by former military chiefs, bureaucrats and scientists to Members of Parliament on the eve of the Winter Session of Parliament.**

**New Delhi, November 14, 2007.**

Parliament is about to debate what is known as the Indo-US Nuclear 'deal'. We, the undersigned, who venture to claim some experience in serving our country's national security interests, venture also to suggest that, in considering the issues involved, you view them in the one perspective which we believe transcends all others: that of India's evolution as one of the principal powers in the community of nations.

It has been generally expected ever since our Independence that India's size, strategic situation, civilisation, not least the talents of its people, were bound to make us one of the most significant influences in the shaping of the modern world. A major obstacle to our full achievement of that position has been the denial of the high technologies, particularly those related to security needs, which have enabled some self-selected powers to forge well ahead of us. We will continue to be denied access to such technologies unless the international community agrees to remove the existing sanctions. In opening the way to such an outcome, what is formally a bilateral agreement between us and the USA is actually the basis for agreement with the international community.

That community, including friends who have previously helped us, combines to impose crippling constraints not only on our nuclear programme but, by withholding so called dual-use technologies, on a wide range of possibilities for improving the lives of our people. We cannot, for instance, get Russian reactors without proceeding with the Indo-US agreement. We are also left facing the question of how else to develop the nuclear energy which, howsoever small a percentage of our enormous needs, can meet them significantly. Existing constraints can only be removed through an agreement with those who impose them, which this accord makes possible.

Nobody can claim the deal is perfect, or gives us everything we would have liked. But all international agreements require movement away from one's first preferences. All too often in our history we have suffered by insisting on the ideally desirable and rejecting what is attainable. The key questions are: can we do better without the agreement, or, can we get a better one?

The answer to the second question is surely no. The agreement has given us as much as it has because of a most particular combination of circumstances which can hardly come again. To the contrary, there are forces at work internationally that will only complicate our position - eg. the growing pressure for a Comprehensive Test Ban Treaty, or the growing potential of American opponents of the agreement.

As for holding out for something better, we must examine dispassionately the two main charges against the present deal: that it binds us not to test, and that it 'caps' our nuclear arsenal. It is perhaps not sufficiently realised that even under the Non-Proliferation Treaty - from which we are being exempted - a state can opt out and conduct a test if it feels that is vital to its security, provided it is prepared to face the consequences. Nothing in the Indo-US agreement prevents us from doing likewise. Rights are not bestowed by others: they are what one is capable of exercising. The fear that the agreement negates our sovereign right to test is to overlook our sovereign right to abrogate. The real issue is facing the consequences, which is entirely a matter, not of laws and agreements, but of our self-confidence. What is called the international community has long sought to stop our testing by threatening penalties. We faced those when we thought necessary; we can do so again. The point of relevance is that if we ever decide to end our unilateral moratorium on testing, the international reactions can be no worse if we complete this deal than if we forego it.

Similarly, our right to produce as many weapons as we want is not abstract. We have adopted a self-limiting doctrine - to confine our arsenal to provide a credible minimum deterrence. If circumstances arise obliging us to change that doctrine and produce more weapons, we are as free under the agreement as we are without it. The Prime Minister has clearly stated that we cannot agree to fissile-material cut-off unless they allow for our security concerns.

We realise that there are many Indians, no less concerned about our security interests than ourselves, who disagree with us. Democracy demands and thrives on differences of opinion. We only urge that opinion be shaped by facts and reality.

One other objection to the agreement has lately been raised: beyond its specific provisions is the charge that the agreement makes us subservient to a particular foreign power. Without entering into the rights and wrongs of this view, we would draw attention to an objective fact: international relationships are shaped by strength, the stronger you are the greater your

freedom of action. We believe India is more vulnerable to foreign pressures without this agreement than we would be by increasing our strength through an intelligent use of it to put through various development programmes which currently falter. To revert to our initial point, this agreement should be viewed as an instrument for making us that stronger power, confident of itself and of the respect of others, that counts more and more in the world, and can do more for its people.

Issued in New Delhi on November 14, 2007

### **THE SIGNATORIES**

**Marshal of the Air Force Arjun Singh**, former Chief of Air Force

**Air Chief Marshal O P Mehra**, former Chief of Air Force

**General V N Sharma**, former Chief of Army Staff

**General V P Malik**, former Chief of Army Staff

**Admiral Ram Tehliani**, former Chief of Naval Staff

**Admiral Madhvendra Singh**, former Chief of Naval Staff

**Dr M R Srinivasan**, former Chairman of Atomic Energy Commission

**Dr Kasturirangan**, former Chairman of Space Commission

**K Subrahmanyam**, former Founder/Director of IDSA, former Secretary, Defence Production, former Convener, NSAB

**Dr Roddam Narsimha**, former Director of National Institute of Advanced Studies & Director National Aeronautical Laboratory

**Dr R Rajaraman**, former Professor of School of Nuclear Sciences, JNU

**K Santhanam**, former Senior Scientific Advisor to Ministry of Defence

**B G Deshmukh**, IAS, former Cabinet Secretary and Principal Secretary to Prime Minister

**Abid Hussain**, IAS, former Member of Planning Commission, former Commerce Secretary and Ambassador to the US

**N N Vohra**, IAS, former Principal Secretary to Prime Minister, former Home Secretary and former Defence Secretary

**Naresh Chandra**, IAS, former Governor of Gujarat, former Cabinet Secretary, former Secretary, Home and Defence

**Narendra Sisodia**, former Secretary, Defence Production and Ministry of Finance

**M K Rasgotra**, former High Commissioner to the UK, former Ambassador to France and former Foreign Secretary

**K S Bajpai**, former Ambassador to Pakistan, China and the US, former Secretary, External Affairs

**K Raghunath**, former Ambassador to the USSR, former Foreign Secretary

**Lalit Mansingh**, former Ambassador to the US, former Foreign Secretary

**S K Lambah**, former Ambassador to Pakistan, Germany, Russia

**Arundhati Ghose**, former Ambassador to the Conference on Disarmament

## APPENDIX - XXXVI

### **Outcome of the meeting between the United Progressive Alliance and the Left Parties on the Nuclear Cooperation Agreement between India and the United States.**

**New Delhi, November 16, 2007.**

At the Sixth meeting of the United Progressive Alliance and the Left Parties it was agreed that India would approach the International Atomic Energy Agency for negotiating the working text of the India-specific Safeguards Agreement. It was also agreed that before the draft is finalized for signatures by the Parties, it will be placed before the UPA – Left Committee on India – US Nuclear Cooperation<sup>1</sup>.

---

1. Meanwhile, on November 16, nuclear scientists welcomed the government decision to approach the International Atomic Energy Agency for safeguard talks, after the green signal by the Left, as a positive step towards international cooperation. The government could now apply for formal discussions with the IAEA on India-specific safeguards for its future civilian nuclear power plants so that an agreed text could be prepared as early as possible, according to Department of Atomic Energy officials. As the country is already having 'item-specific' (for facility and for material) safeguards which are generic in nature, India-specific safeguards for all its civilian nuclear plants (as per the separation plan) could be on the

The External Affairs Minister Pranab Mukherjee announced at the press conference immediately after the meeting. He said: "The committee has discussed the implications of the Hyde Act on the 123 Agreement, on foreign policy and security matters. After further discussion, it was decided that the impact of the provisions of the Hyde Act and the 123 Agreement on the IAEA Safeguards Agreement should also be examined. This will require talks with the IAEA Secretariat for working out the text of the India-specific

same lines. According to Scientists all future civilian nuclear plants could be placed under the IAEA safeguards mechanism almost on a par with that for the five declared nuclear powers. Media reports quoted IAEA sources to say that without creating India-specific safeguards, they could in all probability be placed under the Agency's safeguards system called Information circular (INSCIRC) of 1966.. This is in contrast to INSCIRC 153, which is meant for nations which signed the Non-Proliferation Treaty and non-weapon countries. That means India can benefit from the safeguards mechanism which is reactor-specific and utility-specific and will be closer to the five nuclear weapon (P-5) countries and not as a non-weapon state. This could be essentially on the same lines of the safeguards arrangement made between India and the IAEA for the two units of the Tarapur atomic power plant set up in 1969 and two units in Rajasthan in 1971. Asked how long the process would take to make the agreed text and the final text on safeguards for future civilian nuclear plants, A.N. Prasad, former director, Bhabha Atomic Research Centre, and IAEA special envoy, said the main agreement should not be very difficult. "But since India has to island our strategic programme, we should insist on Hybrid Safeguard Arrangement." Meanwhile, India had been assured of lifetime fuel supply for two 1000 MW nuclear reactors, being built with Russian assistance at Koodankulam in Tamil Nadu, Minister of State in the Prime Minister's Office Prithviraj Chavan said in the Rajya Sabha on November 29. "Two light water reactors of 1000 MW each are now under construction at Koodankulam. The lifetime fuel supply for them is covered through a sovereign guarantee of the Russian Federation," he said. However, fuel for the proposed four reactors of 700 MW each would depend on India getting the nod from the Nuclear Suppliers Group (NSG) and the International Atomic Energy Agency (IAEA). The government was negotiating an India specific safeguards agreement with the IAEA and a NSG waiver was necessary to carry out nuclear commerce. Units 1 and 2 of Koodankulam were expected to begin operation in 2009. (Atomstroyexport, Russia's nuclear power equipment and service export monopoly, had been building the Koodankulam plant since 2002 in line with a 1988 agreement between India and the erstwhile Soviet Union and an addendum signed in 1998.)

The US position was clarified once again by US Chief negotiator saying that the United States did "not foresee" its civil nuclear energy agreement with India "being reopened by either side." U.S. Under Secretary of State for Political Affairs Nicholas Burns said this in Singapore on December 3 in an interaction with a select group of journalists. "The 123 Agreement is finished, it's done; it's completed. It just stands to be approved finally by both governments." The U.S. would "now need to wait for India to make a final decision on putting the safeguards agreement forward." He was referring to the ongoing talks between India and the International Atomic Energy Agency. Noting that it was entirely up to the Government of India to navigate the "internal politics" over the issue, he emphasised that Washington had "always felt that this civil nuclear deal is in the best interests of both countries." Mr. Burns said: "It is part and parcel of a new effort to try and elevate the U.S.-India relationship to a strategic partnership. We are confident that this deal should go forward." Tracing the dynamics of the potential process at the Nuclear Suppliers Group "to support international change[s] to treat India in a more fair and effective manner," he

Safeguards Agreement. The government will proceed with the talks and the outcome will be presented to the committee for its consideration before it finalises its findings.”

He said that “the findings of the committee will be taken into account before the operationalisation of the nuclear cooperation agreement.” The meeting was attended by all members except Railway Minister Lalu Prasad, who was out of the capital.

(Talking to reporters, Communist Party of India (Marxist) General Secretary Prakash Karat, who is also a member of the committee, said the outcome of the talks with the IAEA would be brought before the panel. “The text will not be initialled by the government negotiators. The government will come back to the committee which, in turn, will examine the text and it will form part of its findings.”)

---

expressed the hope that a final vote in the U.S. Congress could take place sometime at the beginning of 2008. He said: “Then, this deal will be finished. It will be a start, because it will deliver India from its isolation in the civil nuclear field for the last 35 years. It will give India extraordinary economic and technological benefits. It will allow us to have a more equal relationship with India, all of us in the international community, not just the United States but all of us. “In that respect, it is a fundamentally important agreement. We hope and trust it will go forward, but I don’t want to comment on the internal politics of India. That is up to the Indian Government, not for me.” The government was not contemplating backing out of the Indo-U.S. civil nuclear deal, External Affairs Minister Pranab Mukherjee told the Lok Sabha on November 21. When India completed negotiations for an India-specific safeguards agreement with the International Atomic Energy Agency and for adjustment of guidelines with the Nuclear Suppliers Group, the deal would be sent to the U.S. Congress for approval for operationalisation, he said in a written reply. Mr. Mukherjee said India and the U.S. agreed on the text of an “Agreement for Cooperation” that had received Cabinet approval. Replying to a query on the use of thorium for generation of atomic energy, the Minister of State in the PMO Prithviraj Chavan said India needed to have international cooperation to acquire uranium technology and fuel, which was insufficient in the country. “The government is trying for international cooperation in this sector and also trying to convince the House to allow it to obtain uranium to speed up the process of atomic nuclear fuel.” Mr. Chavan said. Pointing out that all countries had uranium-based nuclear programmes, he said India was deficient in natural uranium and whatever reserves existed would be exhausted after some time. “If the government is allowed to go for international cooperation, there will be enough uranium available that will speed up our nuclear programme much faster,” the Minister said. He sought to scotch the impression that the government was not exploiting thorium, available in sufficient quantity, to develop the nuclear programme. “India’s thorium utilisation technology is more advanced than anywhere in the world,” the Minister said, adding it did not need international cooperation to develop this. “We will not delay by even one day ... having some kind of energy independence, if the House permits international cooperation.”

## APPENDIX - XXXVII

### Media Briefing by Spokesperson of the U. S. State Department on India – US Civil Nuclear Energy Cooperation Agreement.

Washington, December 6, 2007.

**QUESTION:** Second, if I may, on India. As I was last week in India and before the lefts were against the U.S.-India Civil Nuclear Agreement and last week, actually, they agreed and the Congress Party of the — Prime Minister Manmohan Singh, they had a meeting already on November 22nd and I think this agreement is going to be fully implemented between the two countries and also Ambassador Murtha also said that this will go through. So my question is if the Secretary has received any words from New Delhi or any conversation or she has spoken with anybody in India on this issue?

**MR. CASEY:** Well, I don't — I'm not aware of any recent contacts between the Secretary and senior Indian officials on this subject. But certainly — I certainly hope you're correct. We would very much like to see this agreement move forward and be finalized. We continue to believe it's something that's in the best interests of the United States, of India, and of the broader international community in efforts to inhibit the proliferation of nuclear technology and nuclear weapons. So we certainly hope that it does move forward and does go through.

As we've said, though, we understand that the Indian Government has its own political process that it needs to work through and we fully expect that, regardless of the outcome or the timing of this agreement, that we are going to continue to expand our relations with India, because it is an increasingly important player on the world's stage and it's a country with which we have much in common and for too long, weren't working with in the way we are now. So we want to make sure that not only we see this nuclear agreement move forward, but that more importantly our broader relations with India continue to develop and grow.

**QUESTION:** If I may just quick follow that? I had a visit to also Kashmir earlier and spoken to so many Indians there. Most Indians are for this agreement and they support it. And while the lefts were against this agreement because of their contacts with the Chinese, but now Chinese also supporting this agreement. So that's what I'm saying, that how far you think Secretary is now pushing this since the Indian Government is ready?

**MR. CASEY:** Well, look, we want — and I think you've heard Nick say this before too. We certainly want to see this agreement move forward. We hope it will. But ultimately, in terms of the decisions within the Indian political system, we respect the needs and the rights of their political leaders to work this through themselves, but we're ready and able to move forward whenever they would like us to.

Thank you.

## ASEAN & EAST ASIA SUMMITS

**120. Press Briefing by Secretary (East) N. Ravi on the visit of Prime Minister Dr. Manmohan Singh to Cebu (Philippines) to attend 5th India-ASEAN Summit and 2nd East-Asia Summit.**

**New Delhi, January 10, 2007.**

**OFFICIAL SPOKESPERSON (Shri Navtej Sarna):** Good evening everybody and apologies for keeping you waiting. We have with us once again Secretary (East) Shri N. Ravi who will be briefing you on the Prime Minister's forthcoming visit to Cebu city in the Philippines. After Secretary has spoken, we will take a few questions.

**Secretary (East) (Shri N. Ravi):** Friends, you may be aware that the Fifth India-ASEAN Summit and the Second East-Asia Summit which were originally scheduled for the middle of December in Cebu city had to be rescheduled because of an approaching typhoon. Now the Fifth India-ASEAN Summit and the Second East-Asia Summit would be held on 14th and 15th of January, 2007 at the same location, that is Cebu city in Philippines.

Prime Minister would be accompanied by Mrs. Gursharan Kaur and a high-level delegation. He would be reaching Cebu city on the evening of 13th of January. On the 14th of January would be the Fifth India-ASEAN Summit. On the same day some bilateral meetings are being scheduled. In the evening after the Summit is held a gala dinner is being hosted by Her Excellency President Gloria Macapagal Arroyo in honour of the Heads of State and Government and spouses of the 12th ASEAN Summit and related Summits. It will be a gala dinner and depending on the number of leaders present, about 16 leaders would be there.

On the 15th of January, there would be the East-Asia Summit. It is now being scheduled at the newly constructed Cebu International Convention Centre. The opening session of the Second East-Asia Summit would be in the morning followed by a retreat soon after the main inauguration. All this will take up to 11 AM in the morning on the 15th of January. After the break the retreat will continue.

According to the programme that we have with us, the President of the ADB would be presenting a report on the East-Asia Regional Economic and Financial Situation. After that presentation is made, there will be signing

ceremony on the Cebu Declaration on Energy Security. You may be aware that when the last Summit was held in Kuala Lumpur, President Arroyo said that energy is a very important topic for all of us and that the Cebu Declaration would be related to energy. This Declaration was finalized at the officials' level and now it is being finalized at the Ministerial and in all likelihood it will be signed on the second day. After a working lunch in the afternoon around 4 o'clock the event will come to a close on the 15th of January.

Ahead of Prime Minister's visit, External Affairs Minister would be arriving late in the evening of 10th January, that is tomorrow, in Cebu to attend the ASEAN-India Ministerial meeting. All the Foreign Ministers of ASEAN would be meeting with our External Affairs Minister. During this meeting some of the projects of cooperation between India and ASEAN under various programmes would be discussed. This would be followed by a dinner hosted by the Foreign Minister His Excellency Mr. Alberto Romulo for the ASEAN and six other Foreign Ministers.

On the 12th of January in the morning, External Affairs Minister would be participating in the Mekong-Ganga Cooperation meeting. In 2001, the Mekong-Ganga Cooperation Group was formed with India, Myanmar, Laos, Vietnam, Cambodia and Thailand. This envisages cooperation in tourism, education, culture and transportation and a variety of other fields. We have been extending scholarships to some of the students from these countries mostly in the area of Buddhist studies and in certain other areas also. In this Ministerial meeting, India would most likely be accepting the Chairmanship - it goes by rotation - but we would be accepting the Chairmanship of the Mekong-Ganga Cooperation Group at the meeting on the morning of 12th of January.

This would be followed by a working lunch for the East-Asia Summit Foreign Ministers. As you know East-Asia Summit comprises 16 countries - ten from ASEAN and then Japan, China, Republic of Korea, India, Australia and New Zealand. This would be a working lunch after which External Affairs Minister's programme is complete.

Overall, the basic agenda for the India-ASEAN Summit would be to review ongoing cooperation in different fields like entrepreneurship development, English language training, IT cooperation and extension of economic assistance to what we call the CLMV countries - Cambodia, Laos, Myanmar and Vietnam - which among the ten ASEAN countries are slightly less developed as compared to the other six. We would also be reviewing cooperation in sectors like tourism, transport, infrastructure and any new

proposals that the ASEAN side might like to put up, we will certainly respond to that. Of course, there would be discussions or some references regarding the ongoing India-ASEAN FTA negotiations.

As regards the East-Asia Summit, the main theme on the agenda would be energy security. It would also include other items like finance, financial cooperation among East-Asia Summit countries, education, and then two other important subjects - one is Avian Influenza and the other is natural disasters management or mitigation. Essentially in both cases we intend to take forward the process of integration that was begun at the end of 2005. The Declaration on Energy Security, we are confident, will focus attention not only on looking at alternative sources of energy but also more efficient uses of energy and at a cost that is affordable to all the developing countries that form part of this Group. Other areas of cooperation which I mentioned would also be included in this like finance, Avian Influenza, and all.

If I am not mistaken, when Avian Influenza broke in 2005-06 in India too there was some news that it had affected some of our poultry too but then we dealt with it in a way that has been accepted in most of the export markets where we export our poultry. I am sure we will be able to share some of our experiences and some of our knowledge in this area.

**Question:** Could you tell us something about the progress of the Mekong Delta project and how it is going to be taken up there?

**Secretary (East):** The Mekong-Ganga cooperation is what we call an area of cooperation where we target soft areas like tourism, culture, education and we have added transportation and communications too. Under the Mekong-Ganga Cooperation there is a proposal to have a kind of a study on a railway line from Delhi up to Hanoi. If I am not mistaken, RITES have even completed a preliminary study on that and we would be sort of considering among other subjects this one also but transportation and bringing the people closer together is very important. One other aspect which we might like to focus on is the opening of the second Friendship Bridge over the Mekong connecting the town of Savannakhet in Laos with Mukdahan in Thailand. With the completion of this bridge, it is possible to travel by road from anywhere in India right up to Danang which is a major port on the Vietnam coast. In fact this bridge is part of what the ADB calls the East-West Economic Corridor. The basic portion of the road covers the two cities of Danang in the east to the port of Mawlamyine in Myanmar.

**Question:** Since Declaration on Energy Security is the key thing in the

East-Asia Summit, what is India looking forward to come out of it? Would it be renewable energy? What are we focusing on in that Declaration?

**Secretary (East):** India's approach towards energy security has been on three things. One is, of course, the question of conservation, in the sense that we use the energy available with us in a more efficient manner and wastages are reduced. The second is the question of alternative sources of energy. Alternative can be either solar energy or wind energy or things of that nature or it could also mean things like bio-diesel and items of such kind which are just now at the experimental stage. The third aspect is the question of energy security that is applicable to a particular region, in the sense that in the ASEAN itself they have a storage plan which has a system by which if the energy reserve in a particular country comes below a certain percentage then other countries consult so that they can then share their energy reserves with other countries. We, of course, approach this mostly in terms of petroleum and petroleum products but it can also take the shape of some kind grid which can supply electricity from one country to the other. These would be the areas of discussion.

**Question:** There were reports in December of threats of terrorist strikes. Now again there are some reports that terrorist groups like Al-Qaeda are planning to strike the Convention Centre. Will counter-terrorism be one of the important themes at this Summit?

**Secretary (East):** I have not seen any reports to that effect right now.

**Question:** Who are the leaders with whom the Prime Minister will have bilateral meetings?

**Secretary (East):** Right now the decisions are being taken. The scheduling is taking place. We will convey it to you soon. Perhaps before you leave we should be able to have some idea.

**Question:** Would the PM be presenting any plan on the Nalanda University to the East-Asia Summit partners?

**Secretary (East):** I am sure you have heard the Prime Minister elaborate on this particular aspect in the Pravasi Bharatiya Divas speech day before yesterday. He has already shared it with Singapore because it is an initiative from Singapore. So, this information has already been conveyed at the senior officials' level to all the members interested in this particular project.

**121. Press Release of the Ministry of External Affairs on bilateral meetings of External Affairs Minister Pranab Mukherjee on the sidelines of the ASEAN — India Ministerial Meeting and the East Asia Foreign Ministers' Luncheon.**

**Cebu (Philippines), January 12, 2007.**

External Affairs Minister Shri Pranab Mukherjee visited Cebu, the Philippines, from January 10 to 11, 2007, to participate in the ASEAN-India Ministerial Meeting and the East Asia Summit Foreign Ministers' Luncheon. On the sidelines of these meetings he met with the Foreign Ministers of New Zealand, Singapore, Thailand, Indonesia, Vietnam and Philippines.

2. During the meeting with Mr. Winston Peters the Foreign Minister of New Zealand, the two Foreign Ministers reviewed the progress of bilateral relations between the two countries and expressed satisfaction at the progress made in different areas. External Affairs Minister Shri Pranab Mukherjee stressed the importance India attached to her 'Look East' policy, to the potential and benefits of regional economic integration and regional cooperation in Maritime Security, Counter Terrorism and Energy Security. The two leaders also discussed the importance of strengthening bilateral cooperation in exploring non-conventional sources of energy. The External Affairs Minister introduced to the New Zealand Foreign Minister India's proposal for developing a revived Nalanda University as an International seat of Learning with Public and Private partnership countries of South and Southeast Asia. Minister Winston Peters expressed interest in the proposal and observed that it would promote international and inter-cultural understanding.
3. The External Affairs Minister and the Singapore Foreign Minister Mr. George Yeo expressed satisfaction at the rapid growth of bilateral ties. The two leaders discussed regional economic integration and bilateral defense and security cooperation. The External Affairs Minister expressed appreciation for Singapore's role in furthering India's Dialogue Partnership with the ASEAN.4. External Affairs Minister and the Foreign Minister of Thailand Mr. Nitya Pibulsonggram expressed satisfaction at the close relations between India and Thailand and the progress made in diverse areas in the recent period. The two leaders

noted that 2007 marked the 60th Anniversary of the establishment of diplomatic relations between India and Thailand and agreed that this important anniversary should be celebrated in a fitting manner.

5. During the meeting with the Foreign Minister of Indonesia Mr. N Hassan Wirajuda, the two Foreign Ministers reviewed the progress of the 'New Strategic Partnership' established during the State Visit of the President of Indonesia to India in November 2005. The two leaders agreed to focus on the expansion of trade and investment ties, develop closer cooperation in coal, petroleum, IT, Space, counter-terrorism and to learn from each other's experience in these and other areas. Cooperation, including training, The area of institution building was also stressed during the meeting as an area of immense promise for strengthening bilateral relations. It was agreed to convene the next meeting of the India-Indonesia Joint Commission in Indonesia at an early date.
6. At the meeting with the Deputy Prime Minister and Foreign Minister of Vietnam Mr. Pham Gia Khiem, the close and cordial nature of bilateral relations between India and Vietnam was reviewed. The important contribution of high level visits to the relations between the two countries was also stressed, at the meeting.
7. At the conclusion of the EAS Foreign Ministers' luncheon meeting, the Secretary for Foreign Affairs of the Philippines H.E. Alberto G. Romulo met with the External Affairs Minister. He conveyed his appreciation for the successful conduct of the India - ASEAN Ministerial meeting held on 11 January, 2007. Recalling the visit of the Hon'ble President Dr A.P.J. Abdul Kalam to the Philippines in February 2006, the Philippines Secretary for Foreign Affairs emphasized that the exchange of high level visits would contribute to the further strengthening and diversification of bilateral relations. He also identified future areas of cooperation between the Philippines and India. He said that the pharmaceutical, biotechnology, information technology sectors and cooperation in energy matters including the manufacture of bio-diesel were areas of promise. He said that the immense goodwill created by the visit of the Hon'ble President to Philippines should be utilized to strengthen bilateral relations.

**122. Press Release of the Ministry of External Affairs on the visit of External Affairs Minister Pranab Mukherjee to Cebu (Philippines) for the annual India - ASEAN Ministerial meeting.**

**Cebu (Philippines), January 12, 2007.**

Hon'ble Shri Pranab Mukherjee, External Affairs Minister (EAM) visited Cebu (Philippines) from 11-12 January, 2007 for the annual India-ASEAN Ministerial meeting. He was assisted by Shri N. Ravi, Secretary (East) and other senior officials.

2. EAM and Dr. N. Hassan Wirajuda, Indonesian Minister for Foreign Affairs co-Chaired the India-ASEAN Ministerial Meeting held on 11 January. The meeting reviewed India-ASEAN relations and discussed the future direction of the relationship. The two sides also exchanged views on regional and international issues.
3. The Ministers expressed satisfaction with progress made since the 4th India-ASEAN Summit that was held in Kuala Lumpur in December 2005. They took note of the establishment of Entrepreneurship Development Centers in Cambodia and Vietnam during the course of 2006, the Technology Summit jointly organized by India and ASEAN in New Delhi in November 2005 and the training provided to ASEAN diplomats at the Foreign Service Institute in New Delhi in August-September 2006. Ongoing projects relating to the establishment of Centers for English Language Training in Cambodia, Laos, Myanmar and Vietnam (CLMV), satellite connectivity between India and the CLMV countries for tele-medicine, tele-education applications and the organization of an IT Industry and Ministerial Forum were also discussed.
4. The ASEAN Ministers expressed appreciation for India's support for the Initiative for ASEAN Integration (IAI) that is aimed at bridging the development gap between the CLMV and other ASEAN member countries. They also emphasized the potential for further expansion of cooperation, given the strengths of the Indian economy and Indian expertise in scientific and technological fields, including information technology. EAM agreed that the two sides would consider joint flagship projects that would capitalize on the complementary strengths of India and ASEAN.

5. A Mekong Ganga Cooperation (MGC) Ministerial Meeting was held on 12 October. Thailand, as Chair of the MGC, proposed that India be elected as Chair of the grouping. The proposal was accepted by acclamation.
6. EAM said that it was an honour for India to assume the Chairmanship of MGC. He also said that India would endeavour to revive the ancient cultural, commercial and other ties between the MGC countries. The Ministers thanked India for its assistance in the ongoing project for setting up a MGC Museum of Traditional Textiles in Siem Reap in Cambodia, the extension of the on-going 10 MGC scholarships for each member country and the offer to host 100 pilgrims from MGC countries in 2007. The meeting also accepted India's offer to hold a Ministerial Meeting of the MGC in New Delhi in 2007.

**123. Statement by Prime Minister on his departure for Philippines for the 5th India-ASEAN Summit and the 2nd East Asia Summit.**

**New Delhi, January 13, 2007.**

I will be visiting Cebu, Philippines, for the 5th India-ASEAN Summit and the 2nd East Asia Summit. Our participation in both these summits is a reflection of the increasing significance of the eastern orientation of India's foreign policy and our quest for closer engagement with countries of South-East Asia and East Asia.

In Cebu, I will participate in the 5th India-ASEAN Summit on January 14th, which will be followed by the 2nd East Asia Summit the next day. At the India-ASEAN Summit I will have an opportunity to review, with leaders of ASEAN countries, the progress that has been achieved over the last year in India's economic dialogue with the ASEAN region. We will also consider new initiatives that can be undertaken to accelerate this process of engagement. I believe that the India-ASEAN FTA is an important initiative to promote this greater economic synergy and I shall use this opportunity to explore steps that both sides can take to hasten the conclusion of this important agreement.

The 2nd East Asia Summit on 15th January will provide an opportunity to

take forward, a process that was initiated last year to put in place a regional architecture for greater cooperation and economic integration amongst countries of East Asia. The East Asia Summit agenda includes energy security, stability of the regional financial system, mitigating natural disasters, environment, and other subjects of common interest that can only be tackled effectively within a broad inclusive framework.

On the sidelines of the Summit meeting I will have the opportunity of meeting my counterparts from other countries including President Arroyo of Philippines who is our host, Premier Wen Jiabao of China, Prime Minister Nguyen Tan Dung of Vietnam among others.

I am looking forward to this visit and to utilizing it to elevate India's engagements in South-East Asia and East Asia to qualitatively new levels.

#### **124. Address by Prime Minister Dr. Manmohan Singh at the 5th India-ASEAN Summit.**

**Cebu (Philippines), January 14, 2007.**

Your Excellency, Madam President, Your Majesty, Excellencies,

Madam President, I thank you for your warm words of welcome and for your gracious hospitality. I am very happy to be here in the Queen City of the South Philippines.

It is always a pleasure to be with friends. With ASEAN countries, we have special bonds of kinship as well as age-old cultural linkages. I, therefore, value this opportunity to be at this distinguished gathering once again for the annual India - ASEAN Summit.

India's "Look East" policy, when it was initiated a decade and a half ago, marked a strategic shift in our perspective. It coincided with the beginning of our economic reform process and provided an opportunity for significantly enlarging our economic engagement. At the same time, it was also a renewal of time-tested linkages with our neighbours in South East and East Asia. Our zeal and determination to pursue this renewal and reach our goal of fashioning the Asian Economic Community, remains unshaken.

This is amply demonstrated by the intensification of political dialogue and

the steadily enlarging people-to-people contact encompassing all the countries of the region. Our bilateral cooperation with the countries of ASEAN has myriad facets and covers cooperation in diverse areas such as agriculture, fisheries, health, information technology, space technology, energy, defence and combating international terrorism.

The results of India's "Look East" policy are also amply demonstrated in our growing economic interaction with the region. India's trade with ASEAN has risen from US\$ 2.4 billion in 1990, to US\$ 23 billion in 2005. Our trade with the countries of the East Asia Summit has, similarly, risen from US\$ 8 billion in 1990, to US\$ 67.6 billion in 2005. This accounts for nearly 30% of our external trade. At the same time, the period has also seen an increase in FDI flows, both from India to the region and from the region into India.

Today, India is very different from the India of 1991. It is now a vibrant market-place. Our entrepreneurs are aggressively investing overseas. India has also emerged as a productive and profitable investment destination. We have a US\$ 700 billion economy that is growing at 7 - 8% every year. In the first half of the current year, economic growth reached 9.1%. We have actively pursued external liberalization by cutting down customs duty rates. The current peak rate, at about 12.5% is quite close to ASEAN levels. We have a policy objective of aligning our duty rates with ASEAN levels.

While India has seen many changes, so has the region. The most significant has been the process of ASEAN economic integration, and a similar process for deepening economic integration between ASEAN and its dialogue partners. The convening of the East Asia Summit last year was a historic development. We acknowledge ASEAN's valuable contribution in being the driving force for this positive development and for inviting India to be there at the start.

In the present phase of our "Look East" policy, we in India seek to deepen our economic integration by entering into Free Trade or Comprehensive Economic Partnership Agreements, both with ASEAN as a whole and with individual countries of the region. Such agreements are already under different stages of discussion or implementation with Singapore, Thailand, Malaysia and Indonesia. This web of mutually beneficial partnerships can, we believe, be brought together in a Pan Asian FTA that could light up the future of this region.

India - ASEAN trade recorded an impressive growth of 30% last year. This leaves us in little doubt about our ability to achieve, and even surpass, the target of US\$ 30 billion by 2007.

I believe that the India-ASEAN FTA will impart even further momentum to this growth in trade. We are strongly committed to its early conclusion and implementation. I am glad to note that at the India-ASEAN Trade Ministers' meet a few days ago, progress has been made on resolving outstanding issues relating to exclusion lists and tariff concessions. We should direct our Trade Ministers to expedite the negotiations so that the FTA can be finalised, as agreed, by July 2007.

Greater connectivity is also central to the idea of regional economic integration. The initiative taken in 2003 to liberalize air services has led to a significant increase in flight connections between India and ASEAN, with concomitant benefits in trade and people-to-people contact. I recall, at our last Summit, the Prime Minister of Singapore had proposed that we now look at an open skies policy. We have examined this proposal and I am happy to announce that we would be willing to engage ASEAN authorities in a discussion on such a policy.

Excellencies,

Science & technology is an area in which cooperation between India and ASEAN has added much substance to our relationship. The Technology Summit jointly organized by India and ASEAN, in New Delhi in November last year has been an important milestone in this cooperation. It shows that we can pool our knowledge, and together add to it, to create wealth and improve the well - being of our peoples.

The Technology Summit discussed the establishment of an India - ASEAN Science & Technology Development Fund. I propose that we take steps for the early operationalization of the Fund. The Fund should support the development of strategic alliances between Indian and ASEAN researchers and lead to further collaborative R&D by our countries. Our officials should be mandated to deliberate and decide upon the details of the structure and financing of the Fund. I would also like to use this opportunity to re-iterate that India remains committed to continuing its support for the Initiative for ASEAN Integration. We are happy, in this context, that the India - Cambodia and India - Vietnam Entrepreneurship Development Centres became operational last year. The India - Laos Centre has been operational since November 2004. We also have a wide ranging programme of cooperation with Myanmar, which is our gateway to ASEAN. Such cooperation is, indeed, heartening as it demonstrates the benefits that the India - ASEAN relationship can bring to common people.

Human resource development is central to bridging the development gap. I am happy that cooperation in this area has proceeded well during the course of this year. We are particularly gratified with the positive response to the 1st training course for ASEAN diplomats, that was organized by the Foreign Service Institute in New Delhi recently. I propose that such cooperation be institutionalized on an annual basis.

The year 2007 marks the 40th anniversary of the founding of the ASEAN and the 60th anniversary of India's attainment of independence. Together the anniversary numbers total 100, a perfect square. I would like to offer our young friends from ASEAN countries an invitation to visit India. We will host 10 students from each of the 10 member countries of ASEAN on a trip of the sights and sounds of modern and ancient India. Centres of IT excellence in India will figure prominently in the itinerary.

The age-old India - ASEAN linkages have been about our peoples mingling and interacting with each other. This dimension has been given a renewed thrust with the impressive growth of connectivity and the ever-increasing flows of tourism between India and ASEAN. This should, I believe, remain a priority area of cooperation and, in fact, be given even further impetus. We would, in this context, be launching special tourism campaigns in ASEAN countries during the course of this year. We would also be happy to facilitate similar campaigns in India from ASEAN countries.

Excellencies,

This is my 3rd Summit Meeting with ASEAN colleagues. I have always been struck by the warmth and friendship that all of you bear for my country and me. I am personally committed to the deepening of the India - ASEAN relationship. I look forward to working closely with all of you for the shared vision of well being and prosperity for the peoples of our countries.

I thank you.

## 125. CEBU Declaration on East Asian Energy Security.

**Cebu (the Philippines), January 15, 2007.**

**WE, the Heads of State/Government of the Member Countries of the Association of Southeast Asian Nations (ASEAN), Australia, People's Republic of China, Republic of India, Japan, Republic of Korea and New Zealand,** on the occasion of the Second East Asia Summit on 15 January 2007 in Cebu, Philippines;

**RECOGNISING** the limited global reserve of fossil energy, the unstable world prices of fuel oil, the worsening problems of environment and health, and the urgent need to address global warming and climate change;

**RECOGNISING** that our energy needs are growing rapidly, and will necessitate large-scale investments in the coming decades;

**ACKNOWLEDGING** that fossil fuels underpin our economies, and will be an enduring reality for our lifetimes;

**RECOGNISING** that renewable energy and nuclear power will represent an increasing share of global supply;

**ACKNOWLEDGING** the need to strengthen renewable energy development such as in biofuels, and to promote open trade, facilitation and cooperation in the sector and related industries;

**HIGHLIGHTING** the fundamental need of countries in East Asia for reliable, adequate and affordable energy supplies which are essential for strong and sustainable economic growth and competitiveness;

**CONSIDERING** further that the First East Asia Summit had agreed to enhance cooperation by promoting energy security;

**RECOGNISING** the need to pursue energy policies and strategies best suited to each country's national circumstances, which will lead to sustainable development;

**NOTING** that biofuel and hydropower resources are renewable and as such harnessing these resources is an important aspect of our national energy policies;

**REAFFIRMING** our collective commitment to ensuring energy security for our region;

**HEREBY DECLARE:**

To work closely together towards the following goals:

1. Improve the efficiency and environmental performance of fossil fuel use;
2. Reduce dependence on conventional fuels through intensified energy efficiency and conservation programmes, hydropower, expansion of renewable energy systems and biofuel production/utilisation, and for interested parties, civilian nuclear power;
3. Encourage the open and competitive regional and international markets geared towards providing affordable energy at all economic levels;
4. Mitigate greenhouse gas emission through effective policies and measures, thus contributing to global climate change abatement; and
5. Pursue and encourage investment on energy resource and infrastructure development through greater private sector involvement.

**And to achieve these goals, through the following measures:**

1. Promote cleaner and lower emissions technologies that allow for the continued economic use of fossil fuels while addressing air pollution and greenhouse gas emissions;
2. Encourage the use of biofuels and work towards freer trade on biofuels and a standard on biofuels used in engines and motor vehicles;
3. Take concrete action toward improving efficiency and conservation, while enhancing international cooperation through intensified energy efficiency and conservation programmes;
4. Set individual goals and formulate action plans voluntarily for improving energy efficiency;
5. Increase capacity and reduce costs of renewable and alternate energy sources through innovative financing schemes;
6. Encourage collective efforts in intensifying the search for new and renewable energy resources and technologies, including research and development in biofuels;

7. Ensure availability of stable energy supply through investments in regional energy infrastructure such as the ASEAN Power Grid and the Trans ASEAN Gas Pipeline;
8. Encourage recycling of oil revenues and profits for equity investments and long term, affordable loan facilities for developing countries in the region;
9. Explore possible modes of strategic fuel stockpiling such as individual programmes, multi-country and/or regional voluntary and commercial arrangements;
10. Promote clean use of coal and development of clean coal technologies and international environmental cooperation towards mitigating global climate change;
11. Pursue regional or bilateral cooperation through research and development, sharing of best practices, and financing of energy products; and
12. Assist less developed countries in enhancing national capacity building in achieving the above goals.

The necessary follow-up actions to ensure implementation of the above measures, including appropriate reporting, will be undertaken through existing ASEAN mechanisms in close consultations among EAS participants.

**Cebu, Philippines**

**126. Statement by External Affairs Minister Pranab Mukherjee at the lunch hosted for the Foreign Ministers attending the East Asia Summit.**

**Manila, July 31, 2007.**

**Your Excellency**

**Dr. Alberto G. Romulo,  
Secretary of Foreign Affairs of Philippines,**

**Distinguished Colleagues,**

**Ladies and Gentlemen,**

I would like to express my gratitude as well as that of our delegation, for the warm hospitality and excellent arrangements.

We view the forum of East Asia Summit as an opportunity to establish a regional architecture for cooperation and deeper integration. We feel that the scope for enhancing regional cooperation within the framework of the EAS is immense and we expect that the EAS initiatives would lead us to beneficial avenues of cooperation in various areas.

Mr. Chairman, while we look forward to cooperating with other partners to synergise our respective strengths, we also expect that the East Asia Summit would help us to work towards the vision articulated by Prime Minister Dr. Manmohan Singh of an Asian economic community, that would stretch from the Himalayas to the Pacific, linked by efficient road, rail, air and shipping services. Such a community would constitute an "arc of advantage" across which there would be large scale movement of people, capital, ideas and creativity.

Mr. Chairman, we hope that the renewed interest in Asia's Buddhist heritage will rekindle ancient links between East and South Asia and will help us come closer together. We welcome the interest of our EAS partners in the revival of the Nalanda University and are willing to work with them towards this endeavor. I am happy to report that the Nalanda Mentor Group formed under the chairmanship of well-known economist and Nobel Laureate Dr. Amartya Sen and comprising many distinguished scholars, has begun its work.

India proposes to hold a meeting of the EAS countries on Disaster

Management in November 2007. We also look forward to the participation of our EAS partners at the Asian conference on Avian Influenza likely to be organized in New Delhi this year.

Mr. Chairman, we stand ready to cooperate and contribute in ways that can impart substantive content to the East Asia Summit.

Thank you.

### **127. Opening Statement by External Affairs Minister Pranab Mukherjee at Press Briefing in Manila.**

**Manila, July 31, 2007.**

Good Afternoon

I arrived here yesterday. My current visit is focused on the East Asia Summit Foreign Ministers' Meeting, the ASEAN Post Ministerial Conference Meeting and the ASEAN Regional Forum Meeting. I will also be convening a meeting of the Mekong Ganga Cooperation during my stay in Manila since India is the current Chair of the MGC.

Today, I had the pleasure of participating in the East Asia Summit Foreign Ministers' Meeting. The EAS forum is an opportunity to create a regional architecture for cooperation and deeper integration in the Asia-Pacific region.

India feels that the scope for enhancement of current levels of regional cooperation within EAS is immense. Prime Minister Dr. Manmohan Singh has spoken of his vision of an Asian Economic Community stretching from the Himalayas to the Pacific, which would be an "arc of advantage" and would facilitate free flow of people, ideas, trade and investment across the region.

At the EAS Summit in Cebu in January 2007, PM had proposed a project for the revival of the Nalanda University. I informed my EAS colleagues today of the progress in developing the project. A Nalanda Mentor Group has been appointed under the chairmanship of Prof. Amartya Sen. The Foreign Minister of Singapore, Mr. George Yeo, is a member of the Group, which had its first meeting in Singapore from July 13-14, 2007. The Nalanda University Project will reinforce the soft linkages between India and countries of the Asia-Pacific region. I also announced a proposal to hold the EAS

meeting on Disaster Management in November 2007 in New Delhi. Disaster Management was one of the areas identified for cooperation amongst EAS countries at the Summit held in Cebu.

Today, I also met with the Foreign Ministers of Lao PDR, Malaysia and Australia on the sidelines of the EAS meeting. In my meeting with the Deputy Prime Minister and Foreign Minister of Lao PDR, I reaffirmed our friendly relations and reiterated India's commitment to assist Lao PDR with her development needs.

During my meeting with the Malaysian Foreign Minister, I discussed important issues in bilateral relations and cooperation between the two countries in multilateral fora. Malaysia is India's second largest trading partner in the ASEAN and home to the largest Indian community in the region. The two countries are also engaged in discussions on bilateral and regional economic integration.

I met Australian Foreign Minister Alexander Downer immediately prior to this press briefing. We expressed satisfaction that India-Australia cooperation was making rapid strides in many areas. Australia is becoming an important source for resources for the rapidly growing Indian economy. Our defence and security cooperation is focused on the challenges posed by counter-terrorism and maritime security. We are also strengthening the framework for legal cooperation through negotiations on a Mutual Legal Assistance Treaty in Criminal Matters and an Extradition Treaty. The Australian Foreign Minister informed me that the Australian Cabinet will soon be considering the issue of the sale of uranium to India. We also agreed that the Foreign Ministerial Framework Dialogue between India and Australia should be scheduled in Canberra in the near future.

We also discussed about the case of Dr. Haneef. The Australian Foreign Minister told me that investigation is still on. Once the investigation is over then his case relating to visa will be finally disposed off.

**128. Press Release of the Ministry of External Affairs on the Intervention by External Affairs Minister Pranab Mukherjee at 14th ASEAN Regional Forum (ARF) meeting in Manila.**

**New Delhi, August 2, 2007.**

Shri Pranab Mukherjee, Minister for External Affairs, led the Indian delegation to the 14th ASEAN Regional Forum (ARF) meeting in Manila today. The ARF brings together the ten ASEAN countries, their ten Dialogue Partners such as India, China, the United States, EU and Russia, as well as seven other countries including the latest entrant Sri Lanka.

2. The meeting, chaired by Philippines Foreign Minister, Secretary Romulo, discussed the regional and international security situation as well as the future programme and direction of ARF activities. In his intervention, Shri Mukherjee noted with satisfaction that ARF is helping consolidate efforts to address issues such as terrorism, transnational organized crime, maritime security<sup>1</sup>, natural disaster

---

1. Media reports said India on August 2 unveiled a maritime security package for the benefit of the ASEAN Regional Forum (ARF) comprising of the United States, China, Russia, Japan, India and the European Union, besides the 10-member Association of Southeast Asian Nations (ASEAN). It also has among other countries Australia, Pakistan, Bangladesh, and Sri Lanka. At the meeting External Affairs Minister Pranab Mukherjee said: "India will design and conduct a training module on maritime security, specifically for the ARF member-states, with themes of anti-piracy, search-and-rescue [missions], offshore and port security, anti-smuggling and narcotics control and anti-poaching operations." The nucleus of the module would be "capacity-building" for these and related aspects of maritime security. On terror-related issues, he said all states should abide by their commitments under the Global Counter-Terrorism Strategy that was adopted by the United Nations General Assembly last September. All states must take practical measures to ensure that their territories were not used for terrorist installations or training camps or for preparation or organisation of terrorist acts against other states or their citizens, he said. India would also, in quest of a global peace agenda, "conduct a regular training programme on U.N. peace-keeping, specifically for the ARF member-states." Mr. Mukherjee emphasised that nuclear non-proliferation and disarmament "are mutually reinforcing" and they "go hand in hand." Condemning the killing of South Korean hostages by the Taliban in Afghanistan, he pointed out that some Indians engaged in humanitarian and reconstruction activities in that country had fallen victim to the Taliban's "violent and destructive agenda." The Minister called upon the international community to "contribute with sincerity" to the Afghan Government's efforts to usher in peace and development. The ARF meeting was punctuated by informal brainstorming sessions at a "retreat." Philippines Foreign Secretary Alberto G. Romulo, who chaired the meeting, told *The Hindu* that both India and China were seen as "positive" role-players for regional stability.

management, peacekeeping and energy security while continuing its basic task of promoting confidence building and mutual trust in the Asia-Pacific region. Condemning the killing of the South Korean hostages by the Taliban, he outlined India's perspective on developments in Afghanistan and pointed out that Indians engaged in humanitarian and reconstruction activity in Afghanistan too have fallen victim to the Taliban's violent and destructive agenda. He emphasised that all states should contribute with sincerity to Afghanistan's efforts to bring peace and development to all its regions. All states must also abide by the commitments that they have made in the Global Counter Terrorism Strategy, adopted by the UN General Assembly last September by consensus and to take practical measures to ensure that their territories are not used for terrorist installations or training camps or for the preparation or organisation of terrorist acts against other states or their citizens.

3. Noting the progress of ARF activities in area of counter-terrorism, Shri Mukherjee announced that India shall be co-hosting in the coming year, along with Indonesia, the ARF Inter-sessional Meeting on Counter Terrorism and Transnational Crime. He offered India's help to ARF member states in building capacity to ensure the safety and security of sea lanes passing through the region. In this regard he announced that India would be designing and conducting a training module on maritime security specifically for the ARF Member States, with the themes of anti-piracy, search & rescue, offshore and port security, anti-smuggling and narcotics control and anti-poaching operation. In the same vein India would be conducting a regular training programme on UN Peacekeeping specifically for ARF Member States.
4. In the discussion on non-proliferation issues, Shri Mukherjee said that India has a longstanding commitment to the objective of non-proliferation and believes that all States should transparently live up to the non-proliferation commitments that they have undertaken voluntarily. India is also of the view that disarmament and non-proliferation are mutually reinforcing and go hand in hand.
5. Recalling the emerging importance of energy security for the ARF region, he said that ARF could explore cooperative approaches to energy security. ARF efforts could cover technology cooperation both for renewable energy and for efficient utilization of energy. He pointed

out that a renaissance in nuclear energy, a clean and sustainable source of energy, is underway. Innovative approaches to civil nuclear energy cooperation should therefore also be explored.

6. In discussions on the future direction of ARF, Shri Mukherjee welcomed the growing focus on non-traditional security threats which helps smoothen the transition from the stage of confidence building to preventive diplomacy. He hoped that the decisions taken at the 14th ARF inter alia on mechanisms to strengthen the institution of the ARF Chair would lead to a more efficient ARF that delivers value to all the participants.
7. ARF has come to occupy a unique position as a forum which brings together partners in the Asia-pacific region and beyond for a broad-based and useful dialogue on political and security issues. ARF has made significant contribution to promoting dialogue and forging cooperation in the region on issues of peace and security. For its part, India will continue to contribute to efforts to build peace, security and prosperity in the ARF region.

**129. Briefing by Secretary (East) of the Ministry of External Affairs N. Ravi, on Prime Minister's visit to Singapore to attend the East Asia Summit and India-ASEAN Summit.**

**New Delhi, November 19, 2007.**

**Official Spokesperson:** Good afternoon. We have requested Secretary (East), Shri N. Ravi to kindly brief you on the first leg of Prime Minister's visit to Singapore for the East Asia Summit and the ASEAN Summit. I first request Secretary (East) to make his opening remarks and then we will take a few questions.

**Secretary (East):** Good evening to all of you. As you know, Prime Minister would be leaving tomorrow to attend the Sixth India-ASEAN Summit. The forenoon of 21st would be taken care of by the India-ASEAN Summit and in the afternoon it will be the East Asia Summit where 16 countries - 10 of ASEAN, New Zealand, Australia, India, China, Republic of Korea and Japan – are represented.

India-ASEAN Summit is an ongoing one. During the Summit the leaders

will meet, exchange views and review the progress that has been achieved in the last one year since the last summit which was held in Cebu. Many programmes in the field of capacity-building, institution-building are going to be covered. Some new initiatives may be put forward by other leaders and responded to, or may even be put forward by us.

In the East Asia Summit, which is in the afternoon of the 21st, the leaders will now take a review of the focused area of pursuit in the field of building regional architecture, common issues and common experiences which they can share with each other. Just to elaborate a little, you are aware of the tsunami that struck the Indian Ocean countries in December 2004. After that, natural disaster mitigation has become a very important topic and subject of interest to all the countries which were affected. Recently we held the Second Asian Disaster Management Mitigation Conference in Delhi. The first one was held in Beijing last year.

Then we also have the issues of energy, education, finance, health. These are topics that would be covered in the East Asia Summit and as part of the joint initiative which covers many countries. Of course, here it is a kind of overlap between East Asia Summit and the ASEAN.

In Delhi, in the first of week of December we are holding the Asian Conference on Avian Influenza and we expect participation from different countries where we could share our experiences with them. The essential focus would be on sharing the experiences on common problems and common issues whereby optimum solutions are evolved for different developmental issues that are being faced. In the India-ASEAN summit no document is likely to be issued. But in the East Asia Summit, negotiations are going on with respect to a document covering climate change, energy and environment. That would be a document that is likely to be signed by the leaders.

As far as Prime Minister's one other major event during his stay is concerned, you may be aware that there is an exhibition on in Singapore called 'On the Nalanda Trail - The Buddhist Experience in India, China and South East Asia'. This exhibition was actually inaugurated I think on the 2nd of November in Singapore. The Prime Minister would also be visiting the exhibition on the evening of 21st. That would be one of the major events in his visit.

Since there are many leaders from different parts of Asia getting together, there would be occasion when they will have some time to meet with each other on the sidelines of the Summit. I am sure you will get the detailed programme by evening or by tomorrow morning latest. There you can have a little more detail time-wise. That is about all.

**Question:** Can you tell us the status of FTA?

**Secretary (East):** The India-ASEAN FTA is still under negotiation. The information that I have is that there is likely to be another meeting of the Tariff Negotiation Committee. Some indications are there that they might be meeting at a high level, at the Ministerial level, in Singapore and we have to wait and see where we move from there.

**Question: Is that likely to figure during the Summit?**

**Secretary (East):** At the end of the India-ASEAN Summit, normally a kind of a Chairman's Summary is circulated which looks at the discussions that take place in the Summit between our Prime Minister and leaders of ASEAN countries. That would reflect what they have discussed on this.

**Question:** On the sidelines of the East Asia Summit, is our PM meeting someone in particular?

**Secretary (East):** Quite a few leaders have asked but as you also understand there is the Commonwealth Summit that is following this. So, on one day that PM is there some meetings are being arranged but scheduling is still being finalized. I think by tomorrow morning only we will know exactly who he is meeting. But all the important leaders again would have a chance to meet with each other.

**Question:** FICCI put out a report recently...(inaudible)...India's trade with ASEAN countries and China's trade with ASEAN countries both in their volume at the moment and in...(inaudible)... Can you comment on it?

**Secretary (East):** Two things have become evident. India-ASEAN trade has more or less been balanced till about the last year. Just in the last year in particular, our exports to ASEAN were about 12 billion dollars and their exports to us were close to 18 billion dollars. Quite a bit of this was contributed to by the increased imports of crude oil from some of the countries in the region and also increases in palm oil prices. The price of crude oil being what it is, it also got reflected in that. In terms of competitiveness, yes there are many areas where India still has to compete. But then it is a very complicated package in the sense that input costs in some of the South-East Asian countries, for let us say automobile components, are very very competitive when you compare the same input costs in India. So that is one area where India can really move forward. There are other areas where we have certain competitive edge, in some of the food-processing areas and some of the manufacturing areas. I would

just give you this piece of information. Indian private investment into South-East Asian countries has become quite visible now. It totals just about 600 million dollars in three different fields, in the last year and a half. That goes to show that Indian private industry is taking steps to invest in the South-East Asian countries to improve their own, shall we say, balance sheets and so on.

**Question:** Besides ASEAN, we also have operationalised an FTA with Singapore and also in advanced stage with Thailand. Since the Prime Minister would be meeting these leaders there, would he be talking about the progress of the new deal and the performance of this FTA? Specially, when you talk about India-ASEAN trade I think the operationalisation of Singapore FTA would have some impact, or would have played some role in the ...(inaudible)... trade volume.

**Secretary (East):** We have what is called a Comprehensive Economic Cooperation Agreement (CECA) with Singapore which covers a variety of measures that enhance the investment and trade like Double Taxation Avoidance Agreement and Bilateral Investment Protection Agreement, and on mutual basis certain items have been identified for which certain tariff concessions are given to Singapore. But this is part of a Comprehensive Economic Cooperation Agreement. Likewise with Thailand, the FTA that you have just now referred to is still under negotiation. It will take a while to get finalized as far as India and Thailand are concerned.

**Question:** Will the PM be meeting the leaders of Myanmar? Why is he coming back to India and then going to Uganda?

**Secretary (East):** As far as meeting with leaders is concerned, the list is still being scheduled. Various leaders have asked for meetings and some meetings are still to be finalized. Whether he meets the leader from Myanmar or not, I am not in a position to confirm right now. As regards his programme of coming back and touching down and going back, I guess some other persons would be responsible for that decision. I would really do not know anything about it.

**Question:** During his meeting, will the Prime Minister raise the issue of our labourers being jailed in Malaysia with the leaders of Malaysia?

**Secretary (East):** Recently there were some reports. If an occasion rises, issues of mutual interest are always raised with other leaders.

**Question:** Is he going to meet the leaders of Malaysia there?

**Secretary (East):** As I said just now, the schedule is still being finalized. So, I am unable to confirm that.

**Question:** You talked about the Indian private entrepreneurs investing in the Asian countries. Has the investment of Asian countries into India in fields other than automobile industry increased phenomenally?

**Secretary (East):** If my memory serves me right, Malaysia has invested in some infrastructure projects in India close to three billion dollars in 32 road projects. Then we have got investment from Singapore-based firms. Now, we are informed that in the field of automobile components, certain investors are looking at India. That is the other news that we have.

**Question:** Are there any other countries who want to join the East Asia Summit, especially from our neighbourhood?

**Secretary (East):** Right now the membership of East Asia Summit is 16, as I mentioned. So far we have not heard of any additions to that.

### **130. Statement of Prime Minister Dr. Manmohan Singh before his departure for Singapore for 6th India-ASEAN Summit and 3rd East Asia Summit.**

**New Delhi, November 19, 2007.**

I will be visiting Singapore from November 20th to 21st , 2007 to attend the 6th India-ASEAN Summit and the 3rd East Asia Summit.

Ever since India became a Sectoral Dialogue Partner of ASEAN, our engagement with the ASEAN has grown manifold. We are actively implementing the ASEAN-India Partnership for Peace, Progress and Shared Prosperity. I will inform ASEAN leaders about the several initiatives that India has taken since the last Summit in Cebu in different areas of our cooperation.

Our trade with the ASEAN countries has grown rapidly, and surpassed our expectations. It today stands at US \$ 30 billion. I will discuss with the ASEAN leaders new measures to expand the horizons of our cooperation to include

not just greater economic integration, but also people-to-people contacts, science and technology, health, transport, human resource development, and information and communication technology.

I will also attend the third East Asia Summit later in the afternoon of November 21. This Summit is one of the most ambitious exercises of community building and integration ever attempted in Asia.

The East Asia Summit has identified five areas of cooperation – energy, education, finance, avian influenza and national disaster mitigation. India has taken and is ready to take many initiatives in these areas. The Summit is likely to adopt a Declaration on Climate Change, Energy and the Environment. The Summit is also expected to discuss regional and international issues, and future directions for cooperation.

East Asia is home to some of the fastest growing economies of the world. The creation of a cooperative framework in East Asia will have a profound impact on the global economy and international relations. India's role in the success of this enterprise is crucial.

The project for the revival of the Nalanda University as an international centre of excellence has received the support of East Asian countries. I will attend a reception being hosted by Prime Minister Lee of Singapore on the occasion of a special Exhibition on Nalanda. Many ancient and priceless artefacts have specially been flown in from India for this Exhibition.

On the sidelines of both Summit meetings I will have the opportunity to meet leaders from other countries, including Premier Wen Jiabao of China, Prime Minister Yasuo Fukuda of Japan, Prime Minister Badawi of Malaysia and Prime Minister Thein Sein of Myanmar amongst others.

India's 'Look East' policy is now blossoming and showing results on the ground. I consider our participation in the India-ASEAN Summit and EAS to be essential pillars of this policy, and vital for the qualitatively enhanced engagement which India seeks with the region.

**131. Statement by Prime Minister Dr. Manmohan Singh at the 6th India – ASEAN Summit.**

**Singapore, November 21, 2007.**

**Your Excellency Prime Minister Lee**

**Your Majesty,**

**Excellencies,**

I thank you for your warm welcome, the friendly atmosphere and your generous hospitality. I am very happy to be here in Singapore, a country that epitomizes the qualities of courage, strength and excellence.

It is always a pleasure to be among friends. India is privileged to be part of a process that is contributing to ever widening circles of prosperity. Our relationship with the ASEAN countries is the pillar of our “Look East” policy. Ever since we became Sectoral Dialogue partners of ASEAN 15 years ago, we have taken substantial strides in integrating our economies, societies and institutions. We are determined to take this process forward because we are convinced that it is a win-win formula for both of us.

India is now on a new growth trajectory, where sustained economic growth of 9 – 10% per year seem possible. Our expanding market, human resources and strengths in S&T and the knowledge economy are what we contribute to the process of economic integration.

Since our last Summit we have made concrete progress.

The most striking achievement of our engagement so far is that the target of bilateral trade of 30 billion US dollars that we had set for ourselves for the year 2007 has already been achieved.

Exports of ASEAN member countries to India have grown at a phenomenal rate of over 65% last year. This shows that India is a willing partner in the integration of our economies, and is committed to free trade. Our officials have been engaged in active negotiations to conclude the India-ASEAN Free Trade Agreement. I have no doubt that we all share a common political will to reach an agreement at the earliest. I want to assure you that on its part India has shown, and will continue to show, the necessary flexibility and determination to achieve this

objective. We will work together with you to conclude the negotiations, as agreed, by March next year<sup>1</sup>.

We have achieved progress in the key area of connectivity. Today, there are over 215 direct and indirect flights every week between India and Singapore, 115 flights with Thailand and 50 with Malaysia. But we seek much more from our Open Skies Policy with ASEAN. We are also keen to join the Open Skies regime amongst the ASEAN countries, when it is finalized.

I would like to commend our hosts for organising the exhibition “On the Nalanda Trail: Buddhism in India, China and Southeast Asia” and a conference on the subject “Early Indian Influences in Southeast Asia”. We would welcome proposals that revive interest in our ancient civilisational links and common heritage.

In Cebu, I had proposed the early operationalisation of the India-ASEAN Science and Technology Fund. I am happy to announce that we have created this Fund with an initial corpus fund of 1 million US dollars. This Fund should be used to encourage collaborative R&D and technology development so that we can harness knowledge for the creation of wealth.

Our exchange programmes for students and diplomats from ASEAN have received enthusiastic responses. I am happy to announce that we will make the training courses for ASEAN diplomats a yearly feature. I would further suggest that we organize seminars for such trainees with their peer groups from India in ASEAN capitals.

This year we have concluded Memorandums of Understanding for the establishment of Centres for English Language Training in Cambodia, Lao PDR and Vietnam. Together with Entrepreneurship Development Centres in these countries, this initiative will contribute to capacity building and empowerment of youth in these countries.

As we look ahead, we need to closely monitor the implementation of the ASEAN-India Partnership for Peace, Progress and Shared Prosperity. I seek your support.

---

1. The Commerce Secretary G.K. Pillai later said that the work on hammering out an FTA was more or less finished, with the two sides agreeing to devise a fourth category of “lists” — highly sensitive list — to tide over disagreements, and perhaps, distrust, over tariff reductions on various items of trade. The new category would consist of tea, coffee, and pepper (mostly traded with Vietnam) and crude palm oil and refined palm oil (mostly from Malaysia and Indonesia).]

Given the results so far, I propose that we set a bilateral trade target of 50 billion US dollars by the year 2010.

To facilitate this, we should agree on a process to simplify the visa regime for businessmen to travel from India to ASEAN and vice-versa. I propose that our authorities in consultation with industry representatives formulate simple criteria for issue of visas to bona fide businessmen the same day.

India-ASEAN cooperation in the important area of health has focused on the challenge posed by Avian influenza. India will be hosting an International Conference on the subject in December. I propose that the India-ASEAN Working Group dealing with health be directed to prepare a "India-ASEAN Health Care Initiative". The focus will be on providing basic drugs at low cost to our public health systems through steps such as joint production of medical formulations. A second focus could be to develop a framework for cooperation in traditional medicine systems, which are popular in all our countries.

Climate change has emerged as a major challenge, especially for developing countries. We can gain from a knowledge partnership in this area. Our individual approaches to this global issue must be based on strong scientific foundations and on our respective local experiences and needs. In India we are already in the process of identifying a center of excellence for climate change. I would propose the setting up of an India – ASEAN Network on Climate Change that would pool and share expertise, exchange best practices and submit recommendations for common positions taking into account national priorities.

To give a boost to this cooperation, I propose to set up an India-ASEAN Green Fund with an initial contribution of US\$ 5 million for pilot projects to promote adaptation and mitigation technologies. Once the Fund is established I invite other countries to make contributions as well.

In the final analysis, if the India-ASEAN process is to take root, it must become a peoples movement. Encouraged by our success with exchange programmes for students and diplomats, I propose that we have a Special Programme for Regular Exchanges among our Parliamentarians.

I am happy that our tourists are increasingly looking eastward and more than 2 million tourists from India are expected to travel to ASEAN holiday destinations this year. The number of tourist arrivals from ASEAN countries to India has gone up to 280,000 but it is evident that there is huge scope for

expansion. I would therefore propose that we agree to work towards a target of one million tourist arrivals from ASEAN to India by the year 2010.

On earlier occasions, I have shared with you India's vision of an Asian economic community consisting of an integrated market and linked by efficient road, rail, air and shipping services. The creation of this "arc of advantage" will be possible if we can successfully create a robust institutional architecture for regional cooperation and action. The elements I have outlined earlier are the building blocks of this architecture.

I am extremely optimistic about the future of our partnership. The multi-sectoral approach towards our cooperation is the right one. I want to assure you that you will find an enthusiastic partner in India.

India has a stake in ASEAN's stability and prosperity just as we believe ASEAN has a stake in the transformation that India is experiencing.

Thank you.

### **132. Singapore Declaration on Climate Change, Energy and the Environment.**

**Singapore, November 21, 2007.**

**WE**, the Heads of State and Government of the Member Countries of the Association of Southeast Asian Nations (ASEAN), Australia, People's Republic of China, Republic of India, Japan, Republic of Korea and New Zealand, on the occasion of the Third East Asia Summit (EAS) in Singapore on 21 November 2007;

**Welcoming** the regional commitment demonstrated in the Cebu Declaration on East Asian Energy Security adopted on 15 January 2007, the APEC Leaders' Declaration on Climate Change, Energy Security and Clean Development adopted in Sydney on 8 September 2007, the ASEAN Declaration on Environmental Sustainability and the ASEAN Declaration on the 13th Session of the Conference of Parties (COP) to the United Nations Framework Convention on Climate Change (UNFCCC) and the 3rd Conference of Parties Serving as the Meeting of the Parties (CMP) to the Kyoto Protocol adopted in Singapore on 20 November 2007;

**Affirming** our commitment to the UNFCCC as the core mechanism for addressing climate change at the global level, and for relevant countries, the Kyoto Protocol as well;

**Welcoming** the Fourth Assessment Report of the Inter-governmental Panel on Climate Change (IPCC);

**Concerned** about the adverse impact of climate change on socio-economic development, health and the environment, particularly in developing countries and thus emphasising the need to enhance their adaptive capacities, as well as for the international community to urgently act to address the growth of global greenhouse gas emissions;

**Recognising** that rapid economic development, while contributing to sustainable development and poverty eradication in the region, poses new challenges in dealing with greater energy consumption, regional and global energy security concerns; and that growing urbanisation increases the need for environmental management, given the projected doubling of Asia's 1.7 billion urban population between 2000 and 2030;

**Reaffirming** the need to take an effective approach to the interrelated challenges of climate change, energy security and other environmental and health issues, in the context of sustainable development and that the pursuit of climate change and energy security policies must avoid introducing barriers to trade, investment and socio-economic development;

**Cognisant** that EAS participating countries are at different stages of economic development and that our economies have varying and in many cases, heavy dependence on fossil fuels, any actions to tackle global environmental issues should take into account diverse national and regional circumstances in accordance with the principle of common but differentiated responsibilities, as well as our respective capabilities;

**Appreciating** the efforts of various East Asia Summit participating countries, including Australia, China, India, Indonesia, New Zealand, Japan and the ROK, which have contributed to the global debate to address climate change; and

**Emphasising** the important role that the EAS can play in carrying out collective action to address these challenges for mutual benefit and the common good;

**HEREBY DECLARE TO:**

1. **Stress** that all countries should play a role in addressing the common

challenge of climate change, based on the principles of common but differentiated responsibilities and respective capabilities; and that developed countries should continue to play a leading role in this regard;

2. **Commit** to the common goal of stabilising atmospheric greenhouse gas concentrations in the long run, at a level that would prevent dangerous anthropogenic interference with the climate system;
3. **Support** the work to achieve a common understanding on a long-term aspirational global emissions reduction goal to pave the way for a more effective post-2012 international arrangement;
4. **Acknowledge** that adaptation is a critical issue for the region and as such, emphasis has to be put on both mitigation as well as adaptation measures, and recognize that sustainable development facilitates adaptation;
5. **Carry out** individual and collective actions, in a broad range of sectors, to address climate change, including greenhouse gas emissions, considering the principles of equity, flexibility, effectiveness, and common but differentiated responsibilities and respective capabilities, as well as reflecting our different social and economic conditions;
6. **Participate** actively in the process of developing an effective, comprehensive, and equitable post-2012 international climate change arrangement under the UNFCCC process; and in this context, reiterate our support for the successful outcome of the 13th session of the COP to the UNFCCC and the 3rd MOP to the Kyoto Protocol to be held in Bali, Indonesia in December 2007;
7. **Deepen** our understanding of the region's vulnerability to climate change and implement appropriate mitigation and adaptation measures, including through:
  - a. Mobilising financial support and cooperating to build capacity for the developing countries in the EAS region;
  - b. Encourage the deployment of clean technology in the region through various means, such as investment, technical and financial assistance, and technology transfer ;
  - c. Exchanging of scientific and technical expertise in partnership with international experts, and enhancing cooperation towards

- joint research and development of appropriate adaptation measures to minimize the impact of climate change;
- d. Commissioning of national and where appropriate, joint studies to assess the impact of climate change and environmental protection efforts within the region;
  - e. Promoting public awareness of the impacts of climate change and enhancing participation in efforts to mitigate the effects of climate change; and
  - f. Supporting the development and expansion of policy and measures, including innovative instruments and financing mechanisms for environmental management, to promote sustainable patterns of consumption and production.
8. **Intensify** ongoing cooperation to improve energy efficiency, and the use of cleaner energy, including the use of, renewable and alternative sources, based on the Cebu Declaration and the Joint Ministerial Statement of the 1st EAS Energy Ministers' Meeting on 23 August 2007 by:
- a. Working towards achieving a significant reduction in energy intensity;
  - b. Implementing the measures recommended by the EAS Energy Ministers, including formulation of voluntary energy efficiency goals by 2009, supporting cooperation in developing reference benchmarks for environmentally and socially-sustainable biofuels and energy market integration; and utilising, where appropriate, regional research bodies, where appropriate, such as the ASEAN Centre for Energy (ACE) and the Economic Research Institute for ASEAN and East Asia (ERIA);
  - c. Encouraging research, development, deployment and dissemination of technologies to enhance energy efficiency and conservation in key economic sectors, including buildings, industrial equipment and processes, vehicles and appliances;
  - d. Enhancing regional cooperation to develop cost effective carbon mitigation technologies, cleaner fossil fuel technologies including clean use of coal, and to produce environmentally-friendly and sustainable biofuels; and

- e. Cooperating for the development and use of civilian nuclear power, in a manner ensuring nuclear safety, security and non-proliferation, in particular its safeguards, within the framework of the International Atomic Energy Agency (IAEA), for those EAS participating countries which are interested.
9. **Promote** cooperation on afforestation and reforestation, and to reduce deforestation, forest degradation and forest fires, including by promoting sustainable forest management, combating illegal logging, protecting biodiversity, and addressing the underlying economic and social drivers, through, among others:
- a. Encouraging environmentally sustainable planning and management of the region's forests, while strengthening forest law enforcement and governance to combat illegal logging and other harmful practices;
  - b. Work to achieve an EAS-wide aspirational goal of increasing cumulative forest cover in the region by at least 15 million hectares of all types of forests by 2020;
  - c. Renewing support for global and regional avoided deforestation, afforestation and reforestation efforts such as reforestation funds and, as appropriate, debt-for-nature swap arrangements;
  - d. Continued support for UNFCCC work to stimulate action to reduce emissions from deforestation in developing countries, including through appropriate international incentives and assistance; and
  - e. Expressing appreciation for regional forest initiatives such as the ASEAN Peatland Management Initiative; the "Heart of Borneo" conservation plan, the Asia Forest Partnership and the Asia-Pacific Network for Sustainable Forest Management and Rehabilitation, as well as global efforts such as the Global Initiative on Forests and Climate, and Indonesia's Forestry Eleven Forum initiative.
10. **Continuing** support for the implementation of United Nations Convention to Combat Desertification (UNCCD) and the Convention on Biological Diversity (CBD) at regional and global levels;

11. **Promote** co-benefit approaches, which addresses global environmental challenges through taking measures for national development concerns, including preventing environmental degradation;
12. **Strengthen** cooperation on management capacity and measures for natural disaster risks raised by climate variability and change and other environmental challenges;
13. **Encourage** the development of adaptation strategies to mitigate weather-related calamities caused by water;
14. **Foster** the conservation and sustainable management of coastal and marine ecosystems and call on the regional and international communities to participate in efforts to avoid marine pollution, such as marine litter, and the destruction of protected and vulnerable areas such as coral reefs, mangroves, seagrass beds, wetlands and seamounts, and welcome the “Coral Triangle Initiative on Coral Reefs, Fisheries, and Food Security” as one of these efforts;
15. **Enhance** access to safe drinking water and basic sanitation and promote integrated water resource management through initiatives such as the 1st Asia-Pacific Water Summit in December 2007, the Singapore International Water Week in June 2008, the International Yellow River Forum and the International Year of Sanitation 2008;
16. **Encourage** the well-coordinated and sustainable national management of mineral resources and promote environmentally-sound and efficient mining practices;
17. **Promote** environmental education to enhance human resource capabilities to address the challenges of ensuring sustainable development in EAS participating countries;
18. **Address** the environmental challenges posed by rapidly growing urbanisation in the region, by, among other measures:
  - a. Pooling our experiences, expertise and technology in areas such as urban planning including transportation, green building, water management, urban greenery and urban biodiversity conservation, sanitation and waste management, 3Rs (Reduce, Reuse and Recycle) and air, noise, water, and land pollution control;

- b. Appreciating initiatives such as “Low Carbon Society”, “Compact Cities”, “Eco-Cities” and “Environmentally Sustainable Transport”; and
  - c. Welcoming Singapore’s proposal to convene an EAS Conference on Liveable Cities in June 2008 to address the interrelated issues of urbanisation, climate change, energy, and the environment.
19. **Task** our relevant Ministers to follow up and act on our discussions on this Declaration, and in this regard:
- a. Commend the work of the inaugural EAS Energy Ministers’ Meeting in Singapore on 23 August 2007, and welcome Thailand’s offer to host the 2nd EAS Energy Ministers’ meeting in 2008; and
  - b. Welcome Viet Nam’s proposal to host the inaugural EAS Environment Ministers’ Meeting in the fourth quarter of 2008.

**Done** in Singapore, this Twenty-First Day of November in the year Two Thousand and Seven.

### **133. Press Release issued by the Prime Minister's Office containing Dr. Manmohan Singh's statement on ASEAN – India Free Trade Area.**

**Singapore, November 21, 2007.**

The Economic Ministers of ASEAN and India held an informal consultation on November 20, 2007 at the sidelines of the 13th ASEAN Summit in Singapore. They reviewed the progress of negotiations for the Trade in Goods Agreement of the AIFTA<sup>1</sup>.

1. The media reports said that the chances of India signing a Free Trade Agreement (FTA) with ASEAN (Association of Southeast Asian Nations) appeared rather dim even as Prime Minister Manmohan Singh headed for Singapore to attend an India-ASEAN summit because of unreasonable "demands" that were being made on "some sensitive agricultural products." According to media reports the Prime Minister when traveling to Singapore told the media accompanying him that the demands from the ASEAN nations could "adversely affect our subsistence farmers and certain crops." (Even as the pressure was building up on the Prime Minister to sign the FTA, there was opposition from within the government on this count.) Despite difficulties the Prime Minister told journalists that he was personally in favour of expanding and deepening the ASEAN process. However, Union Commerce

The Economic Ministers noted with satisfaction the progress made since the last meeting at Cebu. While the main elements of the modalities have been agreed upon, a few issues relating to preferential access for a few products remain. Both sides have agreed to settle these issues by March 2008 with a view to concluding the AIFTA Trade in Goods Agreements by the ASEAN Economic Ministers (AEM) Retreat in May 2008.

---

Minister Kamal Nath said India and ASEAN, which held informal consultations on the margins of the ongoing ASEAN-organised summits, decided to settle all outstanding issues by March next year. Indicating this after holding talks with the ASEAN Economic Ministers, Mr. Kamal Nath told journalists that he was “optimistic about the agreement being finalised in terms of India’s policy of economic engagement in the (East Asian) region.” Asked about the intractability of the outstanding issues, Mr. Kamal Nath said differences pertained mainly to the commodities basket — palm oil, tea, coffee, and pepper. On petroleum products, he said the issue related mainly to Brunei. India’s tariff line on these products was only five per cent and, as a major importer of petroleum products, India did not see the issue with the ASEAN in this domain as a “real market access” question. “I see convergence happening,” he said. As the ASEAN Chair, Singapore Government echoed Mr. Kamal Nath’s optimism and indicated that only a few issues relating to preferential access for a few products still remained to be sorted out. A view in ASEAN circles was that India’s willingness to settle the FTA issue “in terms of a policy of economic engagement” in East Asia was a code for new flexibility. [However, Commerce Secretary G.K. Pillai announced that the work on hammering out an FTA was more or less finished, with the two sides agreeing to devise a fourth category of “lists” — highly sensitive list — to tide over disagreements, and perhaps, distrust, over tariff reductions on various items of trade. The new category will consist of tea, coffee, and pepper (mostly traded with Vietnam) and crude palm oil and refined palm oil (mostly from Malaysia and Indonesia).]

### **134. Press Release of the Ministry of External Affairs on the visit of students from ASEAN countries.**

**New Delhi, December 14, 2007.**

India is hosting a group of one hundred students from the ASEAN member countries during 9-17 December 2007. This follows an announcement made in this regard by Hon'ble Prime Minister at the India-ASEAN Summit in Cebu, Philippines in January 2007. The purpose of the visit is to strengthen student exchanges between India and ASEAN countries. All expenses on travel, boarding and lodging of the students are being borne by the Ministry<sup>1</sup>.

---

1. The Prime Minister while making the offer at the Cebu Summit had said: "The year 2007 marks the 40th anniversary of the founding of the ASEAN and the 60th anniversary of India's attainment of independence. Together the anniversary numbers total 100, a perfect square. I would like to offer our young friends from ASEAN countries an invitation to visit India. We will host 10 students from each of the 10 member countries of ASEAN on a trip of the sights and sounds of modern and ancient India. Centres of IT excellence in India will figure prominently in the itinerary." For full text of the Prime Minister's speech Please see Document No. 124

## COMMONWEALTH

### **135. Press Release of the Ministry of External Affairs on the Visit of Commonwealth Secretary General.**

**New Delhi, March 22, 2007.**

Mr. Don Mckinnon, Commonwealth Secretary General (CSG) will pay an official visit to New Delhi from 21-23 March, 2007. CSG's visit is a part of his regular exchange of views with Government of India. He last visited India in February, 2006. CSG will call on Rashtrapatiji and Prime Minister, meet Finance Minister, Minister of Commerce and Industry and Minister of State for External Affairs, Shri E. Ahamed who will also host a dinner in CSG's honour. CSG will participate in the International e-Partnership Summit of the Commonwealth Connects Programme, which will be inaugurated by Rashtrapatiji on 23 March and deliver a lecture on "21st Century Challenges" at the Indian Council of World Affairs.

India has a fruitful partnership with the Commonwealth. Some illustrative facts are:

- India will host the 53rd annual Commonwealth Parliamentary Association Conference in September 2007; it had previously hosted this event in 1957, 1975 and 1991. India will also organise the conference of Commonwealth Speakers and Presiding Officers in 2010. India will host the Commonwealth Youth Games in Pune in 2008 and the Commonwealth Games in New Delhi in 2010.
- India is playing an active role in the Commonwealth Connects programme launched at the last CHOGM in Malta in November, 2005. India had pledged the single largest contribution of Euro 1 million to this programme, out of which Euro 3,50,000 has already been paid.
- The convening of the International e-Partnership Summit in New Delhi is a reaffirmation of India's strong commitment to bridging the digital divide within the Commonwealth.
- There has been a steady increase in India's contribution to the Commonwealth Fund for Technical Cooperation, which would amount to Pound Sterling one million in 2009-10.
- At the Commonwealth Foreign Ministers' meeting during UNGA in New York in September 2006, Shri Pranab Mukherjee, then Raksha

Mantri, had announced an increase in India's contribution to the Commonwealth Small States' Office in New York from US \$ 35,000 to US \$ 100,000 per annum w.e.f. 2007-2008. Shri Mukherjee had also announced an offer of 50-75 slots in select courses under MEA's ITEC Programme through the Commonwealth Secretariat, which are in addition to the slots being offered bilaterally to various Commonwealth countries.

- A programme to train 125 SME managers from the Commonwealth countries in Africa and South Asia started at the Administrative Staff College of India, Hyderabad in February, 2007.

**136. Briefing points by Official Spokesperson on the announcement of candidature of Ambassador Kamalesh Sharma for the post of Commonwealth Secretary-General.**

**New Delhi, June 5, 2007.**

- The Government of India has decided to put forward the candidature of Ambassador Kamalesh Sharma, who is currently India's High Commissioner to the United Kingdom, for the post of the Commonwealth Secretary-General.
- The Commonwealth Secretary-General is the Chief Executive Officer of the Commonwealth Secretariat, which is the main inter-governmental agency of the Commonwealth. The Secretary General is elected by Heads of Government for no more than two four-year terms. The second term of the current Secretary-General is coming to an end in March 2008 and his successor will be elected at the Commonwealth Heads of Government Meeting in Kampala in November this year.
- The Government of India believes that Ambassador Sharma is eminently equipped to undertake this responsibility by virtue of the great interest he has shown in multilateral global affairs and in both South-South and North-South relations and the experience he has gained in these areas in the course of his distinguished diplomatic career, as well as the assignment which he has undertaken on behalf of the United Nations.

- As a Foreign Service officer, Ambassador Sharma served with great distinction in many assignments. At headquarters, all three of his assignments dealt with human resource and skills development in the developing world and a wide range of development related issues, and specifically also the areas of trade, finance and technology.
- As India's Permanent Representative to the United Nations in Geneva, Ambassador Sharma was spokesperson for developing countries in UNCTAD during the Uruguay Round of multilateral trade negotiations. As Permanent Representative in New York, he chaired the Working Group on Financing for Development and the successful consensus building that he achieved led to the conference yielding the 'Monterrey Consensus' in the conference in Mexico. He was closely engaged in the process which led to the formulation and adoption of the Millennium Development Goals. Advancement of women's rights and the challenge of poverty eradication have been Ambassador Sharma's special concerns.
- As the first Special Representative of UN Secretary-General to independent East Timor, Ambassador Sharma was directly engaged in all aspects of nation building and safeguarding its security and his contribution was widely recognised. His contribution and experience therefore extends to discharging practical responsibility on behalf of the international community in an important and complex assignment and goes beyond the conference room.
- In his current position as a member of the Board of Governors of Commonwealth Secretariat and the Commonwealth Foundation since 2004, Ambassador Sharma has taken very keen interest in the activities and advocacy of the Commonwealth, and guided the Government in India's close engagement with the Commonwealth during this period. He has represented India at the meetings of the Commonwealth Ministerial Action Group in February and November 2005 and led India's delegation at the pre-CHOGM Foreign Ministers Meeting in Malta.
- Ambassador Sharma has often spoken on the challenges of globalization and the facets of both opportunity and threat that developing societies are confronted with in this era of rapid transformation. He has edited a book on this theme entitled 'Rethinking the Global Challenge'.

### **137. Speech of President Smt. Pratibha Devisingh Patil inaugurating the 53rd Commonwealth Parliamentary Conference.**

**New Delhi, September 26, 2007.**

I consider it a privilege to participate at the inaugural function of the 53rd Commonwealth Parliamentary Conference. It is after a gap of sixteen years that we, in India, have the opportunity once again to welcome Parliamentarians from the Commonwealth nations to our country. On behalf of the people of India and on my own behalf, I take this opportunity to wish you all, a pleasant stay and a successful Conference.

I am particularly pleased that the Conference has chosen to address the theme "Delivering Democracy and Sustainable Development", a very relevant topic on which undoubtedly Parliamentarians can provide very useful insights. I am equally pleased about the Commonwealth Women's Parliamentary Conference that was held yesterday. Women constitute nearly half of the world population and their participation in elected bodies is fundamental for the effective functioning of a democracy. Similarly, there can be no doubt that a woman's perspective is indispensable for a broad-based and a balanced development process. Women should be fully involved and brought to the forefront of sustainable development efforts. Harnessing their wisdom and expertise in various fields, could be of immense value particularly to the developing countries. Development programmes should be gender-sensitive and should specifically address issues and concerns of women in different sectors. Women continue to face the challenge of breaking through the "glass ceiling" but they have made some inroads and have proved to be highly successful professionals, in varied fields, as astronauts, doctors, lawyers, bankers, entrepreneurs etc. However, the fact remains that women's participation needs to be increased whether in public life or in economic activities or indeed in society itself. I hope that this Conference will focus on these issues in depth.

The Commonwealth is a family of sovereign states, representing more than two billion people, with diverse languages, cultures and customs spread over several continents. But they are all held together by a common allegiance to the basic values of democracy, faith in the rule of law and cooperation among nations for peace and prosperity. Speaking about India's decision to join the Commonwealth, Jawaharlal Nehru, our first Prime Minister, said in 1949 and I quote, "it is necessary that we touch upon the

world's problems, not with passion and prejudice ?. but in a friendly way and with a touch of healing ?. We have begun this new association with a touch of healing.” In our contemporary world, full of strife and conflict, there is an acute need for a healing touch, where the stronger helps the weaker and the developed, the less developed.

India is one of the oldest members of the Commonwealth Parliamentary Association and represents the world's largest democracy with an electorate of more than 670 million. In India, the roots of democracy are firm and deep. The path that we traveled since our independence has sometimes been difficult but we have always had unwavering faith in democracy. There have been 14 general elections to our National Parliament and each time the verdict of the people has been respected. Irrespective of whether the vote was for continuity or for change, the transition of Government has been smooth. Moreover, we have been successful in taking democracy to the grassroots level both in the villages and in towns. We have a network of some 250,000 elected institutions of local self-government, to which we have elected some 3.2 million representatives, about 1.2 million of whom are women. This is by far the largest number of elected representatives ever in history, or anywhere in the contemporary world.

Democracy means power of the people. In a democratic set up, with universal suffrage, the various interests and concerns of the people find expression through the voice of their elected representatives. In India, the issues of poverty eradication, overall development and strengthening the social sector infrastructure have been the primary focus of parliamentary debates and discussions. Mahatma Gandhi said and I quote, “Democracy in essence means the art and science of mobilizing the entire physical, economic and spiritual resources of all the various sections of the people in the service of the common good of all.” Democracy is surely a better means to achieve sustainable development.

In a globalized and inter-dependent world, the good of all becomes a common global endeavour. Our planet belongs to all of us and to sustain it as well as to preserve it for future generations requires action by all of us. The sustainable development agenda enunciated at the Earth Summit in Rio in 1992 and at the Sustainable Development Summit in Johannesburg in 2002, provided a blue print of how to make development economically, socially and ecologically sustainable. The global partnership established, at these Summits, sought to protect the environment while addressing development needs. Many of the development issues that confront the

world -poverty, hunger, disease and ignorance - all require collective action. Indeed, poverty anywhere is a threat to prosperity everywhere. Sustainable development cannot be achieved by individual nations. It is a collective enterprise. Recognizing this, world leaders at the Millennium Development Summit held in 2000, spoke of their vision of a shared future. They adopted the Millennium Development Goals that seek to eradicate poverty and hunger, promote education, empower women, improve maternal health, reduce child mortality, combat HIV/AIDS, malaria and other diseases and ensure environmental sustainability. 2015 was agreed to as the deadline for delivery.

While some progress has been made to achieve the Millennium Development Goals, we cannot either have a sense of satisfaction or an attitude of complacency.

On the environmental aspect, there is growing evidence of the impact of climate change. It calls for energy efficient technologies, pollution control, water conservation, waste management etc., as also fulfillment by countries of their respective international obligations. In India, we have a tradition to consider man as an integral part of the eco-system and therefore, inseparable from nature. To protect the environment as well as prevent pollution and degradation of natural resources, India has adopted effective national policies and is also engaged with the international community in finding solutions to the challenges of climate change.

As per UN estimates, one fifth of the world's population lives in hunger and extreme poverty with an income of less than one dollar a day; 72 million children of primary school age are not in school; half a million women die every year due to complexities during pregnancy and child birth; 2.1 million people die from AIDS; 1.6 billion people lack access to basic sanitation. I cite these figures only to highlight the magnitude of the task that lies ahead. Firm political will is required to meet the 2015 target date. Financial resources and technologies need to be made available to developing countries for meeting the Millennium Development Goals. At the Doha Round of trade talks, the concerns of the developing countries should be taken on board. In the international financial institutions, the developing countries should have a greater role in the decision-making processes so as to better address the issues of development at the global level. The global partnership now needs to deliver.

India has made tremendous progress since the last meeting of the Commonwealth Parliamentary Association held here in 1991. Some of you

who may be returning here must have noticed the changes. A new, confident and young India is emerging. ICT and knowledge-based industries have become for us the tools of advancement. The Indian economy is growing at an impressive rate. With a growing economy and a stable democracy, India has reason to be optimistic that it would be able to deliver both democracy and development to its citizens.

Though, itself a developing country, India has sought to extend support to other developing countries, particularly through its technical and economic cooperation programmes, under which it has so far provided over US \$ 2 billion worth of technical assistance to developing countries. We seek to build friendship among nations and will continue to work with regional bodies and the international community for peace, progress and prosperity in the world.

Before I conclude, I would like to mention the serious threat emanating from the disruptive activities of terrorists who are using modern technologies to set up extensive networks and are killing innocent people. Terrorism has no justification whatsoever and no cause can be served by shedding the blood of innocent people. It is imperative that we all take a firm and unequivocal stand against terrorism in all its forms and manifestations. India will continue to work to further strengthen international co-operation against terrorism.

Distinguished delegates, you have a heavy and wide-ranging agenda. Your deliberations will be a powerful message about the fight against global poverty, a more equitable world, the sustainable development agenda and democratic values and path. With these words, I have great pleasure in inaugurating the 53rd Commonwealth Parliamentary Conference.

### **138. Media Briefing by Foreign Secretary Shivshankar Menon on Prime Minister's visit to Kampala to attend the CHOGM meeting.**

**New Delhi, November 19, 2007.**

**Official Spokesperson:** Good afternoon everybody and welcome to this briefing. I would request the Foreign Secretary to brief you on Prime Minister's visit for CHOGM to Kampala. Thereafter we will have some time for questions.

**Foreign Secretary:** Good afternoon. We thought we would give you a preview of the Commonwealth Heads of Government meeting to which Prime Minister will be going. It will be preceded by a meeting of Commonwealth Foreign Ministers for which Mr. Pranab Mukherjee will be leaving tomorrow. On 21st and 22nd will be the Foreign Ministers meeting and that will be followed by the Heads of Government meeting in Kampala.

I believe we have circulated to you a brief on India and the Commonwealth from which you get some idea of the extensive engagement that India has with member states of the Commonwealth, not just through the Commonwealth but also bilaterally. What I thought I would do is to give you an outline of what we expect to have over the next few days. Then, maybe, you could ask me questions about whatever you like.

The theme of the Kampala CHOGM is "Transforming Societies to Achieve Political, Economic and Human Development". The way the Commonwealth goes about its business, I think, is unique. It is much more informal, much more consultative, much less of the formal statements prepared beforehand which you are used to in such international meetings. So, what is likely to happen is that the two-day meeting of the Foreign Ministers will go through most of the agenda, prepare that. When Heads of Governments meet there will be a brief inaugural session followed by an executive session. Then there will be three retreat sessions where they will meet alone or with one, or maximum two aides, at a time, and then there will be a concluding session. So, most of it is really in the informal surroundings where they sit among themselves. It is not a formal structure where they make all these prepared statements and so on and they go through the agenda.

The programme in Kampala itself, as I said, is largely of three sessions of informal retreats, the inauguration, the executive session and the closing session. The agenda that they will be covering in these meetings, I think, is

also available with you. Simultaneously, there will be bilateral meetings arranged on the sidelines both for the Foreign Minister and for the Prime Minister. There will be a Joint Business Delegation from FICCI, CII and ASSOCHAM to the Commonwealth Business Forum which will be taking place in Kampala from the 20th to the 22nd, which will be led by Minister of State for Industry, Mr. Ashwini Kumar.

At the same time, there will be the inauguration on the 19th of November, that is today, in Kampala of the 'Hole in the Wall' Project, which is something that NIIT has done for us in certain selected African countries who are Commonwealth members where they take computers and install them really in underprivileged neighbourhoods or in a village. It is a form of education for children who otherwise do not have access to computer education. It is a model that they have tried out in India - it has worked out very well - where they actually install touch screens connected to computers in the middle of a village or in the middle of a mohallah, in the neighbourhood, and then let the children interact with it. Through the process of interacting they developed over time software which responds to what children actually want out of it. So, for the children its play but it is also learning at the same time. It is a project which we think has tremendous potential because it has developed over time into something that evokes quite a response from children around the world. So, we are looking forward to doing that.

The formal agenda of the CHOGM begins with the report by the Secretary-General and then the presentation of the Commonwealth Ministerial Action Group report. This I think will be dominated by the issue of Pakistan. At their last meeting on the 12th, the Commonwealth Ministerial Action Group had looked at the situation in Pakistan after the imposition of emergency.

It is their job to review Pakistan's transition to democracy and to come to a view. They had decided at that meeting on the 12th to meet again on the 22nd on the eve of CHOGM and then to make a recommendation to the Heads of Government. We are not members of the Ministerial Action Group (CMAG). We were, for the first two terms. Then we thought it is better left to somebody else from other countries who have not been members. So, we will see what they come up with on the 22nd and we have to consider that.

The meeting will then consider global economic developments including climate change. Certainly, international trade issues like the Doha Round and so on will be discussed. But as I said, this is done in an informal setting between the Heads and it is really a chance to exchange ideas rather than to take formal decisions.

There will also be a discussion, this is I think very unique to Commonwealth, on development in small states because so many of the Commonwealth states are small states. I think about 33 out of 53 regard themselves as small states. The special needs of small states is something that we are looking forward to discuss because from our point of view we have very active programmes for technical cooperation, economic development for projects in small states. It is a place which we find very useful. We find it as a useful occasion for us to test what we think against what is expected and what is needed.

Thereafter, the CHOGM also discusses mandates from the last CHOGM. There are four mandates which came from the Malta CHOGM two years ago in the meeting in Valetta. One was, there was a report of the Committee on Commonwealth Membership. Since there was an interest in membership among other countries, there was a Committee which was asked to go through what the criteria for membership should be and how this should be handled. That is one report that they would be considering.

The second mandate was, in Valetta they had established the Commonwealth Commission on Respect and Understanding which is chaired by Prof. Amartya Sen about respect and understanding between cultures, civilizations, nations and so on. He will be making a presentation to the Heads at the Summit.

There is also the report of the Committee on the Commonwealth Connects Programme which is an attempt by the Commonwealth to bridge the digital divide to which we as India have made a fairly substantial contribution of a million Euros. So, we will be going to this meeting and trying to explain what we have done and what we hope to do, and to review the programme.

Lastly, one of the mandates was that the Secretariat had been asked to do a paper on networking the Commonwealth on trade, sustainable development and aid architecture. So, that will also come up to the Heads.

The Heads will also this time elect the next Secretary-General of the Commonwealth. As you know, we have a candidate. It is Asia's turn now. There has never been an Asian Secretary-General since the Commonwealth Secretariat was set up in 1965. Mr. Kamlesh Sharma, who is presently our High Commissioner in London, is our candidate. We think his qualifications are excellent. We also attach importance to this because, as I said, for us the nature of the Commonwealth, its potential contribution to development, its importance and centrality to our engagement with partners in Africa, all

this make Commonwealth for us an important and significant organization. We do hope that the other members will agree with us that Kamlesh Sharma would be the best, perfect Secretary-General.

If there are any questions which you might have on CHOGM or on any other issue, I will be very happy to answer them.

**Question:** When you said earlier that you are not members of Commonwealth Ministerial Action Group, which you have been for the past two terms, did India rescue itself after all of this stuff going on in Pakistan?

**Foreign Secretary:** No, not really. In fact, when we were on the CMAG, Pakistan was on the agenda. We were on the CMAG almost till 2005. It is just that we made way for other people.

**Question:** Do you feel that Pakistan is exporting instability to the region at the moment?

**Foreign Secretary:** I think that is a very broad question. We know that Pakistani territory is used by groups which engage in all sorts of activities, whether it is terrorism or drugs. But that is a different thing from saying that Pakistan is doing it. There are groups within Pakistan which certainly export various forms of instability.

**Question:** What is our view on Pakistan in the Commonwealth? Suppose they say that Pakistan should not attend because of lack of democracy. What will be our position? Will they be expelled?

**Foreign Secretary:** I think CMAG itself had laid down settled criteria on the 12th when we met, and they even said that if Pakistan were to do 1,2,3,4,5 - I think five things - by the 22nd, then they would come to one kind of recommendation; otherwise they would consider what action to take. Until they come to a conclusion and tell us what they think, I think it would be premature for us to say this is what the Commonwealth should do about Pakistan's place in the Commonwealth. On our attitude to what happens in Pakistan, I think we have made that quite clear. We hope for a stable, peaceful Pakistan at peace with itself. We want a peaceful periphery for our own interests and we want to have friendly neighbours who we can work with. That is what we would like to see, a transition to that situation. We will work with anybody who we can in order to achieve that transition. But frankly, that is a different issue from what will happen to the issue of Pakistan in the Commonwealth. This is the position today until we know what recommendation CMAG has come to make. Then we

will see.

**Question:** What are the bilateral meetings that are going to be held?

**Foreign Secretary:** We are still setting them up. We will let you know there because we are still working out the schedules.

**Question:** Is the Prime Minister likely to meet his Pakistani counterpart?

**Foreign Secretary:** As I said, the whole issue of Pakistan's participation in the meeting is an issue. So, we have to see.

**Question:** Have the developments in Pakistan affected the peace process or is this going on as usual? Have any dates been changed for the Composite Dialogue?

**Foreign Secretary:** I think the Fourth Round of the Composite Dialogue has been largely completed. All the scheduled meetings were held on time. What is left now is to hold the concluding round at the Foreign Secretaries' level. We have not set a date for it earlier either. So, we have not postponed or changed any meetings. But certainly, I think, we would be guided in our pace of meetings and what we do next when we do it by the fact that both sides have to be comfortable and ready to do these things.

**Question:** Since emergency was imposed in Pakistan, has the Government come up with an assessment on whether terrorism and drug trafficking nexus has been on the rise? Has there been any change in the trend? Secondly, how is Mr. Sharma's campaign coming up?

**Foreign Secretary:** Frankly, I do not agree that cross-border terrorism, or issues like drug trafficking can be seen over two days, three weeks, or four weeks. This has been a longstanding problem and I think you need to look at it over the longer time frame. If you take the longer view, certainly the situation today is better than it was say four years ago. But there will be periodic ups and downs. I do not want to start drawing immediate conclusions about what this reflects of the situation in Pakistan or not. We will work with all those who work with us to stop cross-border terrorism, to stop drug trafficking. This is irrespective of the interim situation in countries. This is an absolute must. We need to stop these things. So, I would rather not get into this kind of conclusion that you were hinting at.

On the candidate, we think it is going well. We have got assurances of support from several countries. We would like all the countries to agree with us and it to happen by consensus. We will keep working at it.

**Question:** How many candidates are there?

**Foreign Secretary:** There are two official candidates. One is the Foreign Minister of Malta and the other is Mr. Sharma. I believe that somebody called Mr. Kaul has also put his name forward. He is from the Commonwealth Business Forum. I do not think he is supported by a State.

**Question:** Is Mr. Kaul not a worry because he is of Indian origin?

**Foreign Secretary:** We are a democracy. The world is open.

**Question:** Just wanted to check as to what is going to happen as far as talks with IAEA are concerned.

**Foreign Secretary:** We will be talking to the IAEA very soon.

**Question:** Before the annual conference? Have you set deadlines for that?

**Foreign Secretary:** The general conference is next September, certainly before next September.

**Question:** Before the Board meeting?

**Foreign Secretary:** We will be talking to the IAEA very soon.

**Question:** What is your projection on how long the discussions with the IAEA will take?

**Foreign Secretary:** I do not want to guess what is going to happen. Luckily, I am not an astrologer and I do not have to do that.

**Question:** Can you give us a date when the team will be going?

**Foreign Secretary:** No.

**Question:** There is a lot of speculation about the timeline being reworked about the IAEA negotiations. Are you in the process of reworking the timelines?

**Foreign Secretary:** Have I ever given you a timeline?

**Question:** Not to me.

**Foreign Secretary:** Not to any of you. So, as far as I have not given you a timeline, there is no timeline to be reworked. This is exactly why we do not get into this because it then becomes, "What was your timeline? Have you changed it? Have you rewound it? Has it been advanced? Has it been

delayed?" We have always said the next step is to do an India-specific IAEA Safeguards Agreement which is what we are about to do and we will now do. After that, it then has to go to subsequent stages even before we start opening up civil nuclear cooperation with the rest of the world including with the US.

**Question:** Would that be in time, before the Bush Administration actually gets into the election mode?

**Foreign Secretary:** You want a timeline in other words?

**Question:** Is the Prime Minister coming back from Singapore and then going to Uganda the day afternoon?

**Foreign Secretary:** He would be, yes.

**Question:** There was some story that there are security problems in Uganda and the Prime Minister may not go and somebody else may go in his place. Is that correct?

**Foreign Secretary:** The PM is going to Uganda. He is going to CHOGM. I think I started by saying that. Obviously, we will take whatever precautions we can but it is ultimately the host Government's responsibility to take care of security. The PM is going to Uganda.

**Question:** But are there no security worries and concerns?

**Foreign Secretary:** We have been assured that security will be taken care of and we will do whatever we can as well.

**Question:** I would like to seek a clarification on the IAEA and SG process. Do you have to sign the safeguards agreement before you go to the IAEA or you just have to have a final text?

**Foreign Secretary:** Can I ask you a counter question? How does it matter? Frankly, these are levels of detail which we will work our way through as we come to them. I do not see how it contributes very much right now to say that this is where we will dot the i's and cross the t's. We will work it through. We know we need to finalize an IAEA safeguards agreement and we will do that with the IAEA, with the Secretariat. Thereafter, there are other steps that need to be taken before civil nuclear cooperation with other countries is operationalised, before we can actually start cooperating with other countries. We will take those steps as and when we come to them.

**Question:** Is there a constraint that you feel in terms of having to report back to the mechanism before you come to next steps? Is that a problem?

**Foreign Secretary:** I think it is a known process in any negotiation, and this is an unprecedented negotiation. I do not think anyone has any experience certainly among ourselves of doing this. We will try and build as broad a consensus as possible within India for a major step like this. So, I see both these processes as being necessary. Our engagement with the rest of the world, whether it is with the US, with other partners, with the IAEA, with the NSG, we do that process. At the same time we also do a domestic process of consensus building, of talking about the issues concerning civil nuclear cooperation with the rest of the world. I do not see one as being a constraint on the other. In fact, I think both are necessary and you need to do both. So, I would rather look at it positively that this is part of the process of our internalizing something that is a big thing. It does represent a very significant step, I think, that everyone recognizes. It is a part of the process of both internalizing and externalizing it as well while we talk with the rest of the world.

**Question:** On the subject of ASEAN and on what the Indonesian Trade Minister said either yesterday or this morning ...(inaudible)...the ASEAN-India Free Trade Agreement...(inaudible)...

**Foreign Secretary:** I think Secretary (East) is coming to talk to you about that. He will deal with issues relating to the ASEAN, the EAS, etc.

Thank you.

**139. Statement of Prime Minister Dr. Manmohan Singh before his departure for Kampala to attend CHOGM – 2007.**

**New Delhi, November 21, 2007.**

I am leaving for Kampala to attend the Commonwealth Heads of Government Meeting (CHOGM) that begins tomorrow.

CHOGM 2007 has a rich agenda before it. This includes a review of global developments, including Climate Change, the Millennium Development Goals, Human Rights and Terrorism. The special theme of the Meeting is "Transforming Societies to achieve Political, Economic and Human Development". Issues relating to the 32 Small States which are members of the Commonwealth will also be taken up.

India is strongly committed to the Commonwealth's role of nurturing a sense of belonging to a shared past and a shared destiny based on common values. The Commonwealth is a forum that is uniquely placed to harness the strength and diversity of its membership in cooperating with each other and addressing the global challenges of trade, sustainable development and social advancement.

India has consistently played an active role in the Commonwealth. We have several technical assistance and cooperation programmes in place, particularly for the developing countries in Africa and the Small States, which we will seek to enhance.

I look forward to meeting a large number of leaders and having a constructive dialogue with them on both bilateral and international issues. I will use the opportunity to highlight the major socio-economic transformation that is underway in India, and the opportunities this provides for the emergence of a new world order.

#### **140. Statement by Prime Minister on the election of Kamalesh Sharma as the next Secretary General of Commonwealth.**

**New Delhi, November 24, 2007**

I am delighted that the Commonwealth Heads of Government have selected Kamalesh Sharma as the next Secretary General of the Commonwealth. His long record of public service in the international community has been capped by this recognition of his capability and his inclusive vision of the Commonwealth. I am confident that he will acquit himself well in his higher responsibilities as the first servant of the entire Commonwealth.

#### **Statement by External Affairs Minister Pranab Mukherjee.**

I extend my warmest congratulations to Shri Kamalesh Sharma on his election as the next Secretary General of the Commonwealth. I also take this opportunity of conveying my thanks to all the countries that supported his candidature. I would like to point out that Shri Sharma may have been the candidate of India, but he will be the Secretary General of the entire Commonwealth community.

#### **Curriculum Vitae of Ambassador Kamalesh Sharma Secretary General-designate of the Commonwealth.**

Ambassador Kamalesh Sharma is High Commissioner of India to the United Kingdom and India's representative on the Board of Governors of the Commonwealth since 2004.

He was educated in St. Stephen's College, Delhi (1957-62), and King's College, Cambridge (English Literature). He has been a member of the Indian Foreign Service (1965-2001) and has wide-ranging diplomatic experience culminating in five ambassadorial assignments. Ambassador Sharma served as Permanent Representative of India to the United Nations in Geneva, where he was spokesman for developing countries in United Nations Conference on Trade and Development (UNCTAD) during the Uruguay Round (1988-1990). He later became Permanent Representative of India to the United Nations. During his tenure in New York, he chaired the Working Group on Financing for Development, the success of which led to the 'Monterrey Consensus' between the North and South. He was also closely involved in the formulation of the Millennium Development Goals.

Throughout his career, Ambassador Sharma has shown a strong commitment to all facets of equitable global relationships, enlightened governance, gender equity and engagement with issues of global regimes involving trade, technology and finance. He was instrumental in focussing consideration within the UN on the issue of youth unemployment and in the continuing initiative known as 'YES' (Youth Employment Summits). Ambassador Sharma is a frequent speaker on and advocate of the need to strengthen human solidarity and the conviction that collective challenges of the 21st century require collective engagement and solutions, as well as on the theme of the challenges and opportunities created by the era of globalisation and rapid change.

Ambassador Sharma has held senior appointments in the Government of India. He was head of the economic diplomacy and multilateral diplomacy divisions of the Ministry of External Affairs and served as chief of policy planning. He also developed and thrice administered the Indian Technical and Economic Cooperation Programme, which primarily supports human resource and skills development in fellow developing countries. On assignment to the Treasury, Ambassador Sharma was responsible for the hydrocarbon sector of the Indian economy and the administration of development assistance from Europe.

Ambassador Sharma was the first Special Representative of UN Secretary General to independent East Timor (2002-2004) with the rank of Under Secretary General. In this capacity he was responsible for internal security and for laying the foundation for all areas of public administration, including those of justice, financial administration, policing and protection of human and women's rights.

In his capacity as India's Governor in the Commonwealth Secretariat and the Commonwealth Foundation, Ambassador Sharma has taken very keen interest in the activities and advocacy of the Commonwealth, significantly enhancing India's active engagement with it. He has guided India's increased contributions to the CFTC, Commonwealth Connects, the youth programme and the Commonwealth Small States Office in New York. He represented India at the meetings of the Commonwealth Ministerial Action Group in February and November 2005 and led India's delegation at the pre-CHOGM Foreign Ministers Meeting in Malta.

Ambassador Sharma edited 'Imagining Tomorrow – Rethinking the Global Challenge', and 'Milles Fleurs-Poetry from around the World', both released on the occasion of the Millennium Summit in New York. He has honorary

doctorates from De Montfort and Middlesex universities in the UK. He was a Director of the Peace Academy, New York. He is recipient of the medal of the US Foreign Policy Association of the US, is a Fellow of Harvard University, and is a Governor of Ditchley Foundation.

Ambassador Sharma is married and has two children. His interests include literature, cosmology, spiritual traditions, cricket, Indian classical music, opera and jazz.

### **India and the Commonwealth**

India is the largest member state of the Commonwealth, with nearly 60% of the total population of the association. It was instrumental in the formation of the modern Commonwealth in 1949. It is the fourth largest contributor to Commonwealth budgets. It provides the largest number of technical experts funded by the CFTC extending assistance to developing Commonwealth countries after UK.

2. India is a member of key Commonwealth bodies, including the Steering Committee on Commonwealth Connects (earlier Commonwealth Action Programme for the Digital Divide), the Standing Committee on Terrorism, Commonwealth Advisory Board on Sports, Grants Committee of Commonwealth Foundation as well as the Executive and Accreditation Committees of the Commonwealth Secretariat's Board of Governors. India/ eminent Indians have been members of important special committees set up by the Commonwealth from time to time, for instance, Intergovernmental Group on Criteria for Commonwealth Membership set up following the 1995 CHOGM; Mandates Committee set up in 2003 to review the mandates of Commonwealth organisations; Commonwealth High Level Review Group constituted at 1999 CHOGM to review the role of Commonwealth and advise on how best it could respond to challenges of the new century; and Commonwealth Expert Group on Democracy and Development set up following Coolum CHOGM. Nobel Laureate Prof. Amartya Sen Chaired the Commission on Respect and Understanding set up as a follow-up to the Malta CHOGM. Shri Yashwant Sinha, former EAM was a member of the Committee on Commonwealth Membership.
3. India has consistently and significantly contributed to various Commonwealth activities and has stepped up its engagement in recent times, as illustrated by the following initiatives:

- India announced a contribution of Euro 1 million to the Commonwealth Connects Programme/ Commonwealth Action Programme for Digital Divide at Malta CHOGM. The amount will be disbursed over three years starting 2006-
- India has increased its contribution to the Commonwealth Fund for Technical Cooperation (CFTC) to £ 800,000 in 2005-06 and £850,000 in 2006-07 and will enhance it by £ 50,000 each year for the next three years to reach £ 1 million in 2009-10.
- India has proposed to undertake the responsibility for upgrading the physical infrastructure of the Commonwealth Youth Programme (CYP) Asia Centre in Chandigarh and the Rajiv Gandhi National Institute of Youth Development, Sriperumbudur, as a part of the proposed expansion of the activities of CYP Asia Centre, including its networking with RGNIID and other institutions with similar objectives.
- India has increased its contribution to the Commonwealth Joint office for Small States' Permanent Missions in New York to USD 100,000 p.a. from 2007-08.
- India supported and followed up approval of US \$ 260,000 by the UN Democracy Fund(UNDEF) through its Advisory Board to the Commonwealth Local Government Forum for its project on Councillor training for local democracy and good governance in South Asia.
- India has offered 50-75 ITEC slots in select courses through the Commonwealth Secretariat. These are in addition to the sizeable number of slots given to Commonwealth countries bilaterally. We have also offered to provide up to five ICT experts for periods upto six months under the Commonwealth Connects Programme.
- India is training SME Managers from Africa and South Asia within the Commonwealth framework.
- India has announced its decision to increase its contribution to the Commonwealth of Learning from Rs.24 million to Rs.40 million at the 16<sup>th</sup> Commonwealth Education Ministers Meeting, held in Cape Town in December 2006.

- India has hosted several Commonwealth events. These include, in March 2007 alone, the Commonwealth Connects International e-Partnership Summit, Sixth Commonwealth-India Small Business Competitiveness Development Programme in Kochi and the Commonwealth Study Conference organised by CII. India also hosted the 53rd annual Commonwealth Parliamentary Association Conference in September 2007, and will host the 2008 Commonwealth Youth Games in Pune, 2010 Commonwealth Games in New Delhi, and the Conference of Commonwealth Speakers and Presiding Officers in 2010.
- India has presented the candidature of Shri Kamalesh Sharma, High Commissioner to U.K for the post of Commonwealth Secretary General.

#### Commonwealth's Significance to India

4. India has a natural partnership with the Commonwealth. It is a community of English speaking countries. It has a preponderance of developing countries who want to promote South-South cooperation. It is an association which puts a premium on democracy and good governance, where India has so much to share with others.  
  
It provides a platform to interact and build consensus with a very diverse group of countries, including G-8 countries like the UK and Canada, developing countries as well as Small States.
5. The Commonwealth is a unique international grouping with bulk of its membership coming from 32 Small States. There is a great degree of genuine appreciation among these States for India as the largest and a vibrant democracy and for the high-tech advancement and economic progress India has achieved in the past decade and a half. India has a growing profile of development cooperation with these states.
6. A large number of Commonwealth countries also have a sizeable Indian population. The promotion, maintenance and strengthening of healthy democratic institutions and rule of law in these countries is in our interest.
7. Though the UN remains the principal forum for multilateral action, the Commonwealth is eminently placed in addressing many issues

through its unique style of functioning which is consensus-building, informality and goodwill. The informal ways in which dialogue is conducted and decisions arrived at in the Commonwealth bodies provide a very good basis for addressing common concerns.

The CHOGM Summits provide, through the Retreat, an opportunity for the leaders to interact informally in a relaxed atmosphere.

#### **141. Final Communique issued at the end of the Commonwealth Heads of State/Government Meeting.**

##### **Kampala, November 25, 2007.**

1. Commonwealth Heads of Government met in Uganda from 23 to 25 November 2007. Of the 48 countries that attended the Meeting, 36 were represented by their Heads of State or Government.
2. The Opening Ceremony of the Meeting included an address by Her Majesty Queen Elizabeth II, Head of the Commonwealth.
3. Heads of Government conveyed their sincere appreciation to the Government and people of Uganda for the warm hospitality extended to them and for the excellent arrangements made for the Meeting. They also congratulated President Museveni for his leadership in chairing the Meeting.

##### **Fundamental Political Values**

4. Heads of Government reiterated their commitment to the Commonwealth's fundamental political values of: tolerance; respect; international peace and security; democracy; good governance; human rights; gender equality; rule of law; the independence of the judiciary; a balance of power between the Executive, Legislature and Judiciary as recognised in the Commonwealth (Latimer House) Principles; freedom of expression; a political culture that promotes transparency and accountability; and sustainable development.
5. They also reaffirmed that the responsibility to protect populations from genocide, war crimes, ethnic cleansing and crimes against humanity is a fundamental Commonwealth value, and reiterated their

commitment to work together to ensure that the responsibility to protect is carried out by the international community, in accordance with the United Nations Charter.

6. Heads of Government reiterated their full support for the good offices role of the Secretary-General in conflict prevention and resolution, and post-conflict reconstruction and development. They also expressed their continuing commitment to the Commonwealth Secretariat's work to strengthen democratic institutions, processes and culture including through election observation, provision of technical assistance and training and other activities, upon the request of the countries concerned. Heads of Government acknowledged the value of the Commonwealth's strategic partnerships with other international and regional organisations and encouraged the Commonwealth Secretariat to further develop these links so as to enhance co-operation in areas of common interest.
7. Heads of Government welcomed the Secretariat's collaboration with the Commonwealth Parliamentary Association (CPA), the Commonwealth Local Government Forum (CLGF) and other relevant organisations to promote best democratic practice. They commended the CPA for providing assistance to Commonwealth Parliaments for capacity-building and promoting awareness about the respective roles of the Government and Opposition in democracies, and took note of the outcomes of its 2007 New Delhi Conference. They reaffirmed their support for the Aberdeen Principles on Good Practice for Local Democracy and Good Governance and encouraged member states to implement the Auckland Accord: Delivering Development through Local Leadership. They urged the CLGF to continue its work in strengthening the role of local government in Commonwealth societies.

#### **Commonwealth Ministerial Action Group on the Harare Declaration (CMAG)**

8. Heads of Government endorsed the Report of the CMAG covering the Group's deliberations in the period since the Malta Commonwealth Heads of Government Meeting (CHOGM) in November 2005. They commended CMAG's work, which has contributed significantly to the promotion of the Commonwealth's fundamental political values in member countries.

9. Heads took note of CMAG's suspension of Fiji Islands from the Councils of the Commonwealth on 8 December 2006 following the military takeover of Fiji's democratically elected Government. They reiterated CMAG's call for the restoration of constitutional rule and democratic government as soon as possible and not later than the March 2009 deadline which the military Government has committed itself to. They welcomed the dialogue which had been opened with the interim Government and the engagement by the Chairperson of CMAG and the Secretary-General with Fiji Islands.
10. Heads took note of CMAG's suspension of Pakistan from the Councils of the Commonwealth on 22 November 2007 following the Government of Pakistan's failure to implement a series of measures requested by CMAG in response to the imposition of a state of emergency and the abrogation of the Constitution by President Musharraf on 3 November 2007. They expressed their serious disappointment that President Musharraf had failed to implement the decision of Heads at their last CHOGM in Malta that the offices of Head of State and Chief of Army Staff be separated at the end of the Presidential term in 2007. They acknowledged his announced intention to separate the roles in the future and called on him to do so as soon as possible. While welcoming the announcement of the elections on 8 January 2008, they stressed the need for the Government to move rapidly to create the conditions that would allow the elections to be free, fair and credible. They endorsed the decision by CMAG to review progress following the conduct of the scheduled elections in January 2008 and called on the Government of Pakistan to respond positively to the Commonwealth's desire to remain engaged and support the return of democratic government and the rule of law in Pakistan.
11. Heads of Government reconstituted the membership of CMAG for the next biennium as follows: Ghana, Malaysia, Namibia, New Zealand, Papua New Guinea, St Lucia, Sri Lanka, United Kingdom and Uganda (as Chairperson-in-Office).

### **Belize**

12. Heads of Government noted the recent developments in the ongoing efforts of Belize to seek a just, peaceful and definitive resolution to Guatemala's territorial claim, under the Agreement on a Framework for Negotiations and Confidence Building Measures between Belize

and Guatemala signed by the two parties and the Secretary-General of the Organisation of American States (OAS) on 7 September 2005 and in particular, the recommendation of the Secretary-General of the OAS, Jose Miguel Insulza, on 19 November 2007 that Belize and Guatemala should submit the issue to the International Court of Justice.

13. Heads of Government expressed their satisfaction that the process of the relocation of the Guatemala settlement of Santa Rosa, from Belizean to Guatemalan territory is under way and will be completed shortly.
14. Heads of Government reiterated their firm support for the territorial integrity, security and sovereignty of Belize.
15. Heads of Government mandated the Secretary-General to convene the Ministerial Committee on Belize whenever necessary.

### **Cyprus**

16. Reaffirming their previous Communiqués on Cyprus, Heads of Government expressed their support for the sovereignty, independence, territorial integrity and unity of the Republic of Cyprus. They expressed their support for a lasting, just and functional settlement based on the principles of the UN Charter, the relevant UN Security Council resolutions and the principles of the Commonwealth.
17. Heads of Government called for the implementation of UN Security Council Resolutions on Cyprus, in particular Security Council Resolutions 365 (1974), 541 (1983), 550 (1984), 1250 (1999) and all subsequent resolutions. They reiterated their support for the respect for the human rights of all Cypriots, including the right to property, the implementation of the relevant decisions of the European Court of Human Rights and for the accounting for all missing persons.
18. Heads of Government further agreed on the importance of supporting the efforts of the UN Secretary-General to bring about a comprehensive settlement of the Cyprus problem in line with relevant UN Security Council Resolutions.
19. Heads of Government welcomed the principles and decisions enshrined in the 8 July 2006 Agreement and stressed the need to

start the process as described in UN Under-Secretary-General Gambari's letter of 15 November 2006, without delay and without preconditions, in order to prepare the ground for full-fledged negotiations, leading to a comprehensive and durable settlement.

Guyana

20. Heads of Government noted that the Commonwealth Ministerial Group on Guyana, which was established in 1999 to monitor developments in respect of the existing controversy between Guyana and Venezuela, met recently in September 2007. They expressed satisfaction at the cordiality which had characterised relations between Guyana and Venezuela in recent years and recognised the instrumental role of dialogue at the highest levels in facilitating the commitment to a peaceful settlement of the controversy under the aegis of the United Nations Good Offices Process and to enhanced co-operation at the bilateral, regional and multilateral levels. Heads however took note of the incursions by Venezuelan military personnel and aircraft into Guyana's territory and airspace on 15 November 2007 and reiterated the need for the controversy to be resolved by peaceful means.
21. Heads of Government reaffirmed their unequivocal support for the maintenance of Guyana's territorial integrity and sovereignty, including its unrestricted right to development of the entirety of its territory for the benefit of its people. Heads of Government mandated the Secretary-General to continue to convene meetings of the Ministerial Group on Guyana whenever necessary.

### **Promoting Respect and Understanding**

22. Heads of Government noted the Report of the Commission on Respect and Understanding chaired by Professor Amartya Sen and adopted the Munyonyo Statement on Respect and Understanding.

### **Disarmament and Non-Proliferation**

23. Heads of Government acknowledged the threats posed by weapons of mass destruction and in this regard reaffirmed their commitments towards the attainment of general and complete disarmament, including nuclear disarmament. They also reaffirmed their commitment to the non-proliferation of weapons of mass destruction. They reiterated that these objectives should be achieved in accordance with the UN Charter and international law.

### **Small Arms and Light Weapons**

24. Heads of Government expressed their deep concern over the illicit manufacture, illegal trade, and uncontrolled availability of small arms and light weapons, including man-portable air defence systems and their ammunition. They also highlighted the nexus between the proliferation of such weapons and terrorism, increased drug trafficking, other criminality and armed violence. Heads of Government also reaffirmed their concern at the threat this posed to national, regional and global peace and security by prolonging conflicts and hindering development.
25. Heads of Government expressed their support for the UN Firearms Protocol, and encouraged all member states to become parties to the Protocol. They also expressed their support for the 2001 UN Programme of Action to Prevent, Combat and Eradicate the Illicit Trade in Small Arms and Light Weapons in All Its Aspects, and action to identify and trace illicit Small Arms and Light Weapons. They also expressed support for the ongoing Secretariat assistance to member states in dealing with the issue of illicit trade in small arms and light weapons.

### **Arms Trade Treaty**

26. Heads of Government noted the ongoing discussions towards a comprehensive Arms Trade Treaty (ATT) in respect of all conventional weapons.

### **Cluster Munitions**

27. Heads of Government recognised the danger which cluster munitions can pose to civilians and welcomed efforts to negotiate a proposal to address humanitarian concerns arising from their use.

### **Landmines**

28. Heads of Government recalled the progress made by States party to the Ottawa Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on their Destruction in addressing the global anti-personnel landmines problem through the Comprehensive Framework for Mine Action provided by the Convention. They urged all countries which are in a position to do so, to accede to the Convention and fully implement

their respective obligations. They recognised the importance of the continuation of the international community's assistance for affected countries aimed at achieving the goals established by the Ottawa Convention beyond 2009.

### **International Co-operation in Criminal Matters**

29. Heads of Government acknowledged that it is critical that States have the ability and capability to co-operate with each other, and with relevant international organisations, in action on criminal matters and against drug trafficking. They therefore urged all member states to support the full implementation of those UN Conventions that address international co-operation in criminal matters. They further encouraged the Secretariat to continue to provide technical assistance and targeted capacity-building activities in consultation with member states.

### **Combating Corruption and the Tracing and Recovery of Assets of Illicit Origin**

30. Recognising that extortion, bribery and corruption undermine good governance, respect for human rights and economic development, Heads of Government reaffirmed their commitment to combat systemic corruption at both national and international levels. Heads of Government urged member states which had not already done so to consider becoming parties to the UN Convention against Corruption (UNCAC). They acknowledged the ongoing activities of the Secretariat designed to build institutional capacity and awareness in member states so as to assist them with its implementation and enforcement. They encouraged member states to consider implementing the recommendations of the 2005 Commonwealth Expert Working Group on the Recovery and Repatriation of Assets of Illicit Origin. They also recognised the resolutions of the First Conference of the States Parties to UNCAC, which address asset recovery and international co-operation and affirm those twin pillars among principal objectives of the Convention.

### **Human Trafficking**

31. Heads of Government expressed their abhorrence at increasing levels of human trafficking, which deprives people of their human dignity. Heads of Government urged member states to put in place a framework to prevent human trafficking, protect and support victims

of human trafficking and prosecute human traffickers. Such a framework would include all necessary criminal measures and investigative and international co-operation tools to combat human trafficking. Heads of Government also affirmed the principle of solidarity and burden-sharing with regard to assistance of refugees and their host communities.

32. Heads of Government urged member states to comply with all obligations arising under international law and to consider becoming party to the UN Convention against Transnational Organised Crime and the Protocols thereto, in particular the 2000 Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children. Heads of Government also expressed concern about the difficulties faced by millions of refugees in protracted situations and their particular vulnerability to situations of human trafficking, and emphasised the need to redouble international efforts and co-operation to find practical and comprehensive approaches to resolving their plight and to realise durable solutions for them.

### **Terrorism**

33. Heads of Government reaffirmed their strong condemnation of terrorist acts in all their forms and manifestations and recognised that terrorism continues to present a serious challenge to international peace and security. They emphasised that targeting and deliberate killing of civilians through acts of terrorism cannot be justified or legitimised by any cause or grievance. Heads of Government stressed the continuing need for comprehensive efforts at local, national, regional and international levels, to counter terrorism, which also take into account the conditions conducive to the spread of terrorism. In this context they commended the various initiatives to promote dialogue, respect and understanding among civilisations. Heads of Government highlighted the need to conclude a Comprehensive Convention on International Terrorism during the Sixty-Second Session of the UN General Assembly.
34. Heads of Government recalled the Commonwealth Plan of Action on Terrorism (CPAT) adopted in Abuja in 2003 following the meeting of the Commonwealth Committee on Terrorism (CCT). In this context, Heads of Government welcomed the offer made by Sri Lanka to host a ministerial meeting next year of all member states on the issue.

35. Heads of Government reiterated their call for all states to accede to and implement the UN Counter Terrorism Conventions and Protocols and relevant Security Council Resolutions, to prevent the use of their territories for the support, incitement or commission of terrorist acts. They emphasised in particular, the need to implement the necessary legal framework for the suppression of terrorist financing. They commended the capacity-building work of the Secretariat in collaboration with the United Nations Office on Drugs and Crime (UNODC), the Counter Terrorism Committee of the Security Council and other relevant UN bodies, in assisting member countries and regional bodies to implement their international obligations.
36. Heads of Government highlighted the need to protect the rights of victims of terrorism while emphasising that any measures taken to counter terrorism must comply with their obligations under international law, in particular international human rights law, refugee law and humanitarian law. They reaffirmed that the promotion and protection of human rights for all and the rule of law should be an integral part of the approach to countering terrorism.

### **Human Rights**

37. Heads of Government expressed their appreciation for the Secretariat's work in advancing human rights in the Commonwealth and for its support to the work of national and regional mechanisms in protecting and promoting human rights. In this context they confirmed their commitment to support further the various initiatives undertaken by the Secretariat in raising awareness and respect for human rights in member countries and assisting them to meet their human rights obligations. They recognised the facilitating role that the Secretariat could play in strengthening dialogue on and raising awareness of human rights in member countries, and through the UN Human Rights Council.
38. Heads of Government recalled that 2007 marked the 200th anniversary of the abolition of the transatlantic slave trade and commended activities undertaken in observance of the bicentenary. They also noted that 2008 will mark the 60th anniversary of the adoption of the Universal Declaration of Human Rights. They reaffirmed their commitment to promote respect for and protection of fundamental human rights and freedoms in the Commonwealth without distinction of any kind. They urged all countries to consider acceding to all the major international

human rights instruments, especially the twin 1966 Covenants (International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights) which, along with the Universal Declaration of Human Rights, form the International Bill of Human Rights. They also called for the implementation of the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW).

39. Heads of Government welcomed the adoption by the UN General Assembly of the UN Convention on the Rights of Persons with Disabilities on 13 December 2006 and encouraged all Commonwealth countries to consider ratifying and implementing the Convention without undue delay.
40. Heads of Government agreed that the Commonwealth should increase its efforts to promote respect for human rights through public awareness and training for police, the judiciary, prison officers and security forces across the Commonwealth.

#### **International Criminal Court and Tribunals**

41. Heads of Government stressed the importance of ending impunity for the perpetrators of genocide, crimes against humanity and war crimes, and took positive note in that context of the work of the international criminal tribunals. Heads of Government called on states to consider further contributions to the valuable work of the Special Court for Sierra Leone. Heads of Government of those member countries that have ratified the Rome Statute of the International Criminal Court emphasised their support for the Court and urged those states that have not yet done so to accede to the Rome Statute at the earliest opportunity.

#### **Digital Divide**

42. Heads of Government expressed their appreciation for the work of the Steering Committee of the Commonwealth Action Programme for the Digital Divide (Commonwealth Connects) and endorsed the recommendations in the Committee's 2007 Report to the Secretary-General. They also welcomed the Secretariat's work in assisting member countries to address the persisting digital divide and the challenges of using information and communication technology (ICT) for national development. They commended India, Malta, Mozambique,

and Trinidad and Tobago for their support to the Programme, and urged member countries to promote and support continuing initiatives for sharing the ICT knowledge and experience of the Commonwealth, including through transfer of technology. They expressed appreciation for the successful convening of the International e-Partnership Summit in New Delhi in March 2007, co-ordinated for Commonwealth Connects by the Commonwealth Business Council (CBC), and the launch of the 'Hole in the Wall' Pilot Project in Kampala in November 2007. Heads of Government noted the need to ensure that the Commonwealth Connects programme is closely co-ordinated with other efforts in this field by organisations such as UNESCO, UNDP, ITU as well as region-specific donors so as to enhance effectiveness.

43. Heads of Government commended the work of the Commonwealth Telecommunications Organisation (CTO) and its contribution to assisting member countries to bridge the digital divide. They also commended the CTO's Programme for Development and Training around the Commonwealth.

#### **Commonwealth Fund for Technical Co-operation (CFTC)**

44. Heads of Government noted that capacity-building is a fundamental component of sustainable development and aid effectiveness, and a key element in achieving the Millennium Development Goals (MDGs) especially for small states and Least Developed Countries (LDCs). They commended the CFTC for recognising the critical importance of country ownership and leadership in its programmes, and noted the importance of aligning CFTC programming with national plans.
45. Heads of Government welcomed the augmentation by many member governments of their respective CFTC contributions by 6 per cent per annum in real terms, for each of the five years following the Malta CHOGM. They urged other member countries to do likewise. They also welcomed the continued efforts by individual member countries to extend technical assistance to others, including South-South co-operation, within and outside the framework of the CFTC.

#### **Trade**

46. Heads of Government reiterated their commitment to an urgent and successful conclusion to the Doha Development Agenda (DDA)

negotiations. The negotiations remain at a critical stage and are vital for the global economy and development, including the attainment of the MDGs. Heads expressed their commitment to constructive and meaningful engagement and called on all World Trade Organisation (WTO) members to demonstrate goodwill and flexibility.

47. Heads of Government recognised the fundamental contribution of international trade to global prosperity, sustainable development and to the elimination of poverty. They acknowledged the core role of the WTO and emphasised the need to give priority to fuller participation of all Commonwealth members in multilateral trade as well as the critical importance of all countries obtaining a fair and equitable share of the gains of trade. Heads reaffirmed their commitment to:
  - the fundamental principles and rules of the multilateral trading system;
  - the well sequenced and appropriately paced liberalisation of international trade;
  - the goals of development and equity through greater responsiveness of the international trading system to the concerns and interests of developing countries;
  - the strengthening of coherence between development and trade policies for the enhancement of market access, trade and technological transfer; and
  - the fuller integration in the global trading regime of low income states, particularly LDCs and small vulnerable economies taking into account their specific development challenges, including those resulting from the erosion of their long-standing trade preferences for which both trade and non-trade solutions are needed at the multilateral level.
48. Heads of Government noted that a strongly development-oriented outcome would involve: elimination of export subsidies and substantial reduction in domestic support; reduction, where appropriate, in tariffs and other trade-distorting measures; provision of Special and Differential Treatment for developing countries, especially LDCs; and strengthening of supply-side capacity and trade-related infrastructure through Aid for Trade and other mechanisms.

They recognised that in developing countries, agriculture is closely intertwined with food security, livelihoods and development and that the Non-Agricultural Market Access (NAMA) negotiations should provide sufficient flexibility for the developing countries to implement their development strategies whilst the Services negotiations should open up areas of interest to developing countries.

49. Heads called upon developed countries that have not already done so and developing countries in a position to do so to implement their 2005 WTO Hong Kong Ministerial commitments on providing predictable duty free and quota free market access on a lasting basis on products from LDCs.
50. Heads of Government encouraged Commonwealth members, in a position to do so, to extend Aid for Trade support to Commonwealth developing countries and called for the honouring of commitments by development partners, made at G8 Summits and elsewhere, and for an increase in support for Aid for Trade initiatives, such as the Enhanced Integrated Framework.
51. Heads of Government acknowledged the contribution that regional trading arrangements can make to the gradual and beneficial integration of developing countries into the multilateral trading system. They called upon the European Union and the African, Caribbean and Pacific Group of States (ACP) to put in place Economic Partnership Agreements (EPAs) that constitute effective tools for poverty eradication and sustainable development and contribute to the achievement of the MDGs. They urged that EPAs take due account of capacity constraints, the need for adequate accompanying measures to be provided on a predictable basis to meet, inter alia, adjustment costs and other potential vulnerabilities and the safeguarding of policy flexibility. They considered the European Commission's (EC) unilateral denunciation of the Sugar Protocol as very regrettable and urged that the new trading arrangements enhance and improve effective market access to deliver long-term economic benefits to ACP sugar exporters. Heads of Government called for improved delivery of transitional assistance to make the necessary adjustments.

### **World Economic Situation**

52. Heads of Government welcomed the continued global expansion of output and the improved growth performance of some developing

countries in recent years. However, they noted that a significant number of developing countries, including many small states, have not been part of this trend and called for measures to address the special vulnerabilities of these economies. They also noted the risk factors that could affect future growth performance: the sub-prime crisis and the resulting reduction in available credit; high and increasing oil prices; the prospect of increasing food prices; global macroeconomic imbalances; lack of progress in multilateral trade negotiations and increasing protectionism; and demographic changes in developed countries. They also highlighted the complex relationship between environmental factors and economic growth. Heads called for individual and collective efforts to address these risk factors.

53. Heads of Government acknowledged the need to strengthen the voice and participation of developing countries in international economic decision-making and norm-setting and, in this regard, stressed the importance of continuing efforts to reform the international financial architecture, including the Bretton Woods institutions.

### **Reform of International Institutions**

54. Heads of Government expressed concern that the current architecture of international institutions, which was largely designed in the immediate aftermath of the Second World War, does not reflect the challenges in the world of the 21st century. This undermines the legitimacy, effectiveness and credibility of the whole international system. Heads requested the Secretary-General to establish a small representative group of their number that would build on the considerable work that has already been done to undertake advocacy and lobbying in support of wide-ranging reforms. In doing so, the group would take particular cognisance of the special needs of LDCs and small states. This group would report back to the next Heads of Government Meeting in Trinidad and Tobago in 2009.

### **Debt Relief**

55. Heads of Government welcomed the progress made in implementing debt relief under both the Heavily Indebted Poor Countries (HIPC) Initiative and the Multilateral Debt Relief Initiative (MDRI). They, however, expressed concern that many countries are still faced with large and unsustainable debt burdens. They stressed the need for

donors to honour their commitments to compensate the International Financial Institutions (IFIs) for their share of MDRI relief on an ongoing basis so that their financial capacity is protected and their ability to assist low-income countries is not impaired. They also reiterated the need to sufficiently address the debt problems of middle-income countries taking into account their debt sustainability and financial gaps.

### **Investment**

56. Heads of Government noted the valuable role of productive investment in contributing to economic growth and the eradication of poverty. They recognised that improvements in the business environment and overall regulatory framework which reduce investor costs are crucial to promoting private investment. They also called for an increased focus on developing domestic financial markets and providing opportunities for domestic investors. Heads of Government encouraged the use of home country incentives to promote investment in LDCs, small states and other developing countries. Heads recognised that improving access to financial services for the poor and vulnerable is an essential element in the fight against poverty and called for continued efforts to integrate them into the formal financial system. They recognised in this regard the importance of micro-finance and micro-credit in providing access to capital and inclusive financial services for people living in poverty. They also called for innovative and market friendly interventions that mobilise official development assistance (ODA) to share investment risks.

### **Strengthening Financial Systems**

57. Heads of Government commended the Commonwealth Secretariat for its continued role in facilitating the dialogue between the Organisation for Economic Co-operation and Development (OECD) and Commonwealth countries on the issue of a global level playing field and transparency and information exchange in tax matters, and called for constructive engagement on the outstanding issues.

### **Climate Change**

58. Heads of Government adopted the Lake Victoria Commonwealth Climate Change Action Plan.

### Challenges Facing Small States

59. Heads of Government reaffirmed the enduring and new challenges facing small states as set out in the 2005 Gozo Statement on Vulnerable Small States. They expressed concern at the recent increase in frequency and intensity of natural disasters and their often devastating social, economic and environmental impact, particularly on small island developing states. Heads of Government encouraged small states to continue to implement outward-oriented development strategies that would assist them to overcome their vulnerabilities. Heads welcomed the recent advocacy work of the Secretariat on behalf of small states in the area of debt, youth unemployment, improving the quality of international assistance, building resilience mechanisms to offset economic vulnerabilities, and diversification into new economic activities. Heads of Government further welcomed the newly formed Small States Network for Economic Development, set up under the auspices of the Government of Malta and the World Bank, and expressed the hope that the Network would be an effective tool in fostering sustainable economic development in small states. Heads agreed that the Secretariat should explore the possibility of establishing a Commonwealth Small States Office in Geneva, modelled on the Office in New York.
60. Heads of Government stressed the need for small states to build their economic resilience by making appropriate interventions in four areas: macroeconomic strategy; microeconomic market efficiency; good governance; and social cohesion. They recognised that an important element in development strategies for small states is the operation of the labour market. They urged small states to implement measures on both the demand and supply sides of the labour market to address youth unemployment and the migration of the highly skilled. Heads urged the international community to provide all possible support to assist small states in the pursuit of their development strategies, and in particular, small island developing states in line with their commitments under the Barbados Programme of Action for the Sustainable Development of Small Island Developing States and the Mauritius Strategy for the Further Implementation of the Programme of Action for the Sustainable Development of Small Island Developing States.

## Education

61. Heads of Government reaffirmed the fundamental role played by education in facilitating social and economic transformation. They commended the efforts made by Commonwealth countries in seeking to achieve the MDGs of universal primary education (UPE) and the elimination of inequity in education, particularly gender inequity. They affirmed the need to prioritise support to member countries at risk of not achieving the education MDGs. Heads supported the invitation of Education Ministers to increase public spending on education at all levels to facilitate achievement of the MDGs and develop effective school curricula to complement the implementation of UPE.
62. Heads committed to redoubling their efforts to deliver education for all, with a particular focus on enrolling the 30 million primary school aged children out of school across the Commonwealth; eliminating gender disparity in primary and secondary education; and strengthening education systems in countries affected by conflict. Donor countries committed to significantly increase aid for education – including through the Education for All Fast Track Initiative (FTI), which provides a framework for supporting education planning and donor harmonisation in developing countries. They noted that several Commonwealth countries were already working on credible long-term education plans, some of them already endorsed by FTI. They aimed to have at least 20 such plans prepared by the end of 2008.
63. Heads also undertook to place a renewed emphasis on education quality at all levels, and the measurement and improvement of learning. They undertook to examine how to make demonstrable progress on vital literacy and numeracy outcomes for primary aged children.
64. Heads committed to increase the flow between countries of training, IT resources, knowledge exchange, innovation and partnerships, including programming for youth and adults, and to further supporting Commonwealth institutions adding value in these fields. Heads welcomed the expansion of the Commonwealth Scholarship and Fellowship Plan (CSFP) and the commitment by Education Ministers to expand further the number of awards available in the lead up to the 50th anniversary of the Plan in 2009. They noted the proposal for a new facility to encourage scholarships to be hosted in a greater range of Commonwealth countries.

65. Heads undertook to work to harness the expertise of the private sector and non-governmental and civil society organisations to complement state provision, particularly in training and skills development as key drivers of growth and development.
66. Heads welcomed the offer by the Government of Malaysia to host the 17th Conference of Commonwealth Education Ministers in Kuala Lumpur in June 2009, and agreed to explore the strengthening of online tertiary education and access for youth to such education, for consideration at that meeting.

### **Health and HIV/AIDS**

67. Heads of Government reaffirmed their commitment to the attainment of the health related MDGs, especially improving maternal and child health; and combating HIV/AIDS, malaria, tuberculosis and other diseases. They acknowledged the need to invest in services and prevention tools, including vaccines and microbicides, to contribute towards the goal of universal access to HIV/AIDS prevention, treatment, care and support by 2010. They urged implementation of the political declaration on HIV/AIDS adopted at the 2006 UN General Assembly High Level Meeting on HIV/AIDS.
68. They recognised that the crisis in human resources available to the health sector is a major challenge to achieving the MDGs; acknowledged the role of the Commonwealth Code of Practice for the International Recruitment of Health Workers; supported the health systems strengthening approach of the International Health Partnership; and urged the Secretariat to continue supporting primary health care systems.
69. They noted the rising burden of chronic diseases on health systems and welcomed the Action Plan on Non-Communicable Diseases adopted by the Caribbean Community (CARICOM) in their 2007 Port of Spain Declaration. They also acknowledged the need for accessible, affordable appropriate medicines and action to combat counterfeit drugs.

### **Gender**

70. Heads of Government reaffirmed that gender equality and women's empowerment, including greater progress in their economic empowerment, are fundamental for the advancement of human rights

and the achievement of MDGs, development, democracy and peace. They welcomed the priority given by Women's Affairs Ministers, at their 8th Meeting in Kampala in June 2007, to financing gender equality, and endorsed their call for implementation of international, regional and national commitments to achieve gender equality and women's empowerment. Heads of Government also endorsed their call for the effective monitoring and tracking of resources for gender equality and women's empowerment through gender responsive budgeting and other gender analysis tools, and through strengthening aid effectiveness to improve accountability and the impact on gender equality. They also supported the call made by Finance Ministers in Guyana in October 2007, to specifically incorporate a focus on gender equality in the aid effectiveness agenda during the Third High Level Forum on Aid Effectiveness in September 2008.

71. Heads of Government stressed the need to allocate adequate resources to: strengthen national women's machineries, public sector and civil society organisations; increase access for women to markets, property rights, credit and productive resources; and to improve women's participation, leadership and representation in decision-making at all levels including in peace, conflict resolution and post-conflict reconstruction processes. Heads of Government condemned the continuing high levels of violations of the rights of women and girls in conflict and post-conflict situations. In this context, they also called for the full and consistent implementation by all states of UN Security Council Resolution 1325 (2000) on women, peace and security. They welcomed the agreement at the 8th Women's Affairs Ministers Meeting to establish a Commonwealth Working Group on Gender, Peace and Security. In particular, Heads requested the Secretariat to continue assisting member countries to implement the Commonwealth Plan of Action for Gender Equality 2005-2015.

## **Youth**

72. Heads of Government reaffirmed their strong commitment to the young people of the Commonwealth and their priorities and needs. They stressed the important role that young people can continue to play in strengthening and supporting the Commonwealth's fundamental values, and called in particular for further efforts to include young people in democratic institutions, such as bodies of elected representatives, and in democratic processes, such as election observation. Heads

also noted the contribution of young people to Commonwealth efforts to achieve the MDGs, and requested that options be explored for drawing Commonwealth young people in practical ways into efforts to support the recommendations of the Civil Paths to Peace report as well as the work of the Alliance of Civilisations.

73. Heads endorsed the Plan of Action for Youth Empowerment (PAYE) adopted by the 6th Youth Ministers Meeting, and took note with appreciation of the Communiqué of the 6th Commonwealth Youth Forum held in Entebbe in November 2007. Heads noted the importance of developing national youth policies and also of including young people in all possible aspects of national planning and budgeting.
74. Heads reaffirmed their commitment to the Commonwealth Youth Programme (CYP) as a longstanding and unique instrument for promoting youth empowerment and development. They endorsed efforts to strengthen the CYP's four Regional Centres to become centres of excellence, and in this regard, they appreciated India's support to develop the CYP Asia Centre as a focal point for co-operation and learning in the field of youth and local governance.
75. Heads noted with concern the severe shortfall in funding for the CYP which is seriously constraining its capacity to deliver its current mandates or fresh initiatives in support of Commonwealth youth priorities and needs. They therefore agreed that countries should not only live up to their financial commitments to the budget to the CYP, but that a new assessed contributions formula be developed for the CYP, while also allowing for additional voluntary contributions. The new financial arrangements should take effect from 2008/09.

### **Commonwealth Functional Co-operation**

76. Heads of Government took note of the various aspects of Commonwealth Functional Co-operation presented to the Committee of the Whole (COW). They requested the Secretary-General to bring to the notice of Heads of Government any proposed mandates arising from ministerial meetings that have significant implications for the Secretariat's work programme and resources. Heads of Government also acknowledged in particular the contribution of the Commonwealth intergovernmental agencies and Commonwealth organisations which reported to the COW and to Foreign Ministers.

### **Civil Society**

77. Heads of Government welcomed progress involving civil society in all aspects of the Commonwealth's work. They noted that a number of ministerial meetings now included provision for dialogue with civil society and called for this to be extended where possible.
78. They took note of the outcome of the Commonwealth People's Forum and agreed with civil society that political, economic and human transformation should recognise and respect the right to freedom of association and assembly, as well as freedom of expression and the media, and access to information, and requires the active participation of all social groups in making decisions that shape their destiny in accordance with international and domestic law. They noted civil society concerns that poverty, climate change, HIV and AIDS and rapid urbanisation as well as risk of failure to meet the MDGs by 2015, pose serious threats to transformation.
79. Heads acknowledged that the Commonwealth's vision of development and democracy cannot be achieved without realising people's full potential, requiring significant investments in good governance, social capital, including gender equality and empowerment, youth opportunity and decent work, along with support for innovation in ICTs, science and technology. Heads urged civil society to support partnerships and linking for progress in health systems, education for all and sustaining the environmental resource base. They also recognised the role of civil society in achieving Commonwealth objectives, including democracy, good governance, development and respect for cultural diversity.

### **Commonwealth Foundation**

80. Heads of Government received the report of the Commonwealth Foundation and commended its work on culture, governance and democracy and sustainable development. They recognised the work of the Foundation in providing leadership on the Commonwealth's engagement with civil society at ministerial meetings and through regular consultations. They welcomed Antigua and Barbuda and South Africa into the membership of the Foundation.
81. They noted the challenges identified by the Foundation in building partnerships for transformation between government and civil society,

including the need for regulatory environments at the national level that encourage and enable the participation of all stakeholders in processes of democracy and development as well as improved opportunity and capacity of non-State actors to demonstrate their accountability.

82. Heads expressed support for the Foundation in strengthening the 'People's Commonwealth' through programmes and grants and facilitating dialogue between governments and civil society. They also encouraged the Foundation to continue to increase the impact of its work through its partnerships and networks and by increasing membership and voluntary contributions.

### **Commonwealth of Learning (COL)**

83. Heads of Government expressed satisfaction with the achievements of COL in the 20 years since its creation by the 1987 Vancouver CHOGM. They commended COL's focus on the development agenda in its 2006-2009 Plan, Learning for Development, and progress in implementing the Virtual University for Small States of the Commonwealth, in which 29 countries are participating. Heads of Government requested COL to support member countries in enhancing access to quality higher education, encouraging member governments to enhance their contributions, as appropriate, to the budget of COL to enable it to carry out these programmes.

### **Commonwealth Business Council (CBC)**

84. Heads of Government commended the CBC's work to increase trade and investment in partnership with governments and the private sector over the past ten years, since its establishment by Heads of Government in 1997. They welcomed the contribution of the CBC to the growth of Commonwealth trade and investment in that period through a number of initiatives. They also welcomed the dialogue with the private sector through the Commonwealth Business Forum and requested the CBC to carry forward its work in collaboration with governments.

### **Commonwealth Partnership for Technology Management (CPTM)**

85. Heads of Government took note of the activities of the CPTM in co-operative networking and its partnership activities in facilitating application of technology management for development.

### **Commonwealth Institute/Commonwealth Education Trust**

86. Heads of Government noted with satisfaction that the capital released from the Commonwealth Institute property had been secured in a successor charitable trust fund, the Commonwealth Education Trust (CET), the income from which will be used to advance education in the Commonwealth. They stressed the importance of maintaining the liaison, facilitated through the Secretariat, between the education-oriented Commonwealth bodies including the COL, the Commonwealth Foundation and the CET.

### **Commonwealth Membership**

87. Heads of Government reviewed the recommendations of the Committee on Commonwealth Membership and agreed on the following core criteria for Membership:
- (a) an applicant country should, as a general rule, have had a historic constitutional association with an existing Commonwealth member, save in exceptional circumstances;
  - (b) in exceptional circumstances, applications should be considered on a case-by-case basis;
  - (c) an applicant country should accept and comply with Commonwealth fundamental values, principles, and priorities as set out in the 1971 Declaration of Commonwealth Principles and contained in other subsequent Declarations;
  - (d) an applicant country must demonstrate commitment to: democracy and democratic processes, including free and fair elections and representative legislatures; the rule of law and independence of the judiciary; good governance, including a well-trained public service and transparent public accounts; and protection of human rights, freedom of expression, and equality of opportunity;
  - (e) an applicant country should accept Commonwealth norms and conventions, such as the use of the English language as the medium of inter-Commonwealth relations, and acknowledge Queen Elizabeth II as the Head of the Commonwealth; and
  - (f) new members should be encouraged to join the Commonwealth Foundation, and to promote vigorous civil society and business

organisations within their countries, and to foster participatory democracy through regular civil society consultations.

88. Heads of Government also agreed that, where an existing member changes its formal constitutional status, it should not have to reapply for Commonwealth membership provided that it continues to meet all the criteria for membership.
89. Heads endorsed the other recommendations of the Committee, including a four-step process for considering applications for membership; new members being required to augment the existing budget of the Secretariat; and countries in accumulated arrears being renamed 'Members in Arrears'. They also agreed with the Committee's recommendations on Overseas Territories, Special Guests and strategic partnerships.

#### **Submissions to CHOGM**

90. Heads of Government noted the submissions of the COL, Commonwealth Foundation, CBC and civil society representatives, which reported to Foreign Ministers. They also received submissions from the Commonwealth Youth Forum, People's Forum and Business Forum and other Commonwealth civil society organisations which met in Uganda on the eve of CHOGM. Heads of Government noted that some of the issues raised in these submissions had been covered in their Communiqué. They requested the Secretary-General to take their recommendations into account, where possible, while implementing CHOGM mandates. Commonwealth Secretariat Governance
91. Heads confirmed that the terms and conditions of service of the Secretary-General should be in accordance with the recommendations made to them in 2005 and 2007. Heads decided that a troika of leaders – being the past, present, and future Chairs-in-Office – should continue to review the terms and conditions of service of the Secretary-General every four years at least.
92. Heads of Government recalled that, at their Meeting in Coolum in 2002, they had adopted the report of the Commonwealth High Level Review Group which included a direction to the Secretary-General to streamline and simplify the Commonwealth Secretariat's structure, along the lines proposed in the Draper and Change Management Reports of 2001 and 2000 respectively. They also recalled that

flexibility in recruitment and staffing was seen as an important element of such changes, including a mix of contract arrangements for staff, as well as providing the Secretary-General with the managerial authority to make staffing decisions as he/she determines the work and service delivery priorities of the Secretariat. Heads reaffirmed the importance they attached to these earlier decisions in order to achieve greater cost-effectiveness and a more productive synergy between programmes in the Secretariat.

93. Heads acknowledged that the scale of assessments for the Commonwealth Secretariat budget had not been revised since 1989, and agreed that regular reviews and adjustments to the scale should occur in future on a five yearly basis. They agreed that the scale should continue to be based on the principles of capacity to pay, equitable burden sharing, and shared ownership and responsibility for the Secretariat. Heads decided to have a revised scale implemented with effect from the 2008/09 financial year, and with the changes phased in over a three-year period.

#### **Commonwealth Secretary-General**

94. Heads of Government unanimously selected HE Mr Kamalesh Sharma to succeed Rt Hon Don McKinnon as Commonwealth Secretary-General, for a four-year term beginning on 1 April 2008. They paid warm tribute and deep appreciation to Rt Hon Don McKinnon for his dedicated and exceptional service to the Commonwealth over the eight years of his tenure in office. They believed that his contribution to the strengthening of the Commonwealth and its fundamental values would be long remembered.

#### **Next Meeting**

95. Heads of Government reaffirmed their decision to meet in Trinidad and Tobago in 2009 at the invitation of the Government of that country.
96. They also took note of the offer from the President of Sri Lanka for the 2011 CHOGM to be held in that country.

25 November 2007

## EUROPEAN UNION

### 142. Briefing by Secretary (West) Nalin Surie of the Ministry of External Affairs on President's visit to Strasbourg and Greece.

**New Delhi, April 23, 2007.**

**Official Spokesperson:** Welcome to this briefing by Secretary (West) on the President's visit, which begins tomorrow, to Strasbourg and Greece. After Secretary has made his opening remarks, if there are any questions he will take those.

**Secretary (West):** Thank you Navtej. Thank you all for coming this afternoon. Rashtrapatiji will be visiting Strasbourg to address the European Parliament on 25 April 2005 and will thereafter pay a State visit to Greece from 25-28, April 2007. Rashtrapatiji's visit to Strasbourg is taking place in response to an invitation he received from the former President of the European Parliament Mr. Josep Borrell Fontelles last autumn. The current President is Mr. Hans-Gert Poettering, a senior German politician.

This will be the first ever address by an Indian President to the European Parliament. Its significance lies in the fact that the Head of State of the largest democracy in the world will address the largest union of democratic States in the world. The European Union together comprises almost half a billion people and through the medium of the European parliament our President's views and thoughts would reach out to the entire European populace. Rashtrapatiji will speak on "Dynamics of Unity of Nations". You would all recall that the European Union today, which comprises 27 nation States is increasingly becoming multi-cultural, multi-linguistic, multi-ethnic and multi religious. Not unlike India.

Prior to the address to the European Parliament and soon after arrival in Strasbourg tomorrow, Rashtrapatiji will address the International Space University in Strasbourg. He will speak on "Creative leadership for future challenges in space".

The State visit to Greece comes after a gap of 21 years and will help consolidate the recent development of India's relations with Greece in a cross sectoral manner. Our two countries are linked by ancient bonds of civilization and history. Our bilateral relations have traditionally been warm

and friendly. Greece has been supportive of India's interests on a variety of regional and international issues. It is an important member of the European Union with which India has a strategic partnership. Both countries are seeking to add greater content to this age old and traditional relationship. Trade and cultural exchanges are growing well. During the visit, we expect to sign three important Agreements viz., on Bilateral Investment Promotion and Protection, Science and Technology and between the Foreign Service Institutes of our two countries.

Rashtrapatiji will be accorded full State honours and will meet with his counterpart Dr. Karolos Papoulias. He will also meet with the Prime Minister of Greece and the President of the Parliament.

The latter will award him a Gold Medal of the Hellenic Parliament. The Mayor of the city of Athens Nikitas Kaklamanlis will honour him with the Gold Medal of Merit of the city of Athens.

Rashtrapatiji will also meet with other distinguished personalities including the leader of the Opposition Mr. George Andreas Papandreou, who is also currently the President of the Socialist International. He had earlier this year attended the Satyagraha Conference.

The President will make two important public speeches in Greece. The first at the prestigious think tank the Hellenic Foundation for European and Foreign Policy [ELIAMEP]. He will speak on the "Dynamics of peace and prosperity". He will also address the National Council for Scientific Research where he will speak on "Convergence of Technologies". Rashtrapatiji will visit the Commonwealth War Cemetery and pay tribute to the Indian servicemen who lost their lives during the Second World War. A particularly poignant moment during the visit will be his visit to the Rehabilitation Centre for Children with Cerebral Palsy (KASP).

The State visit will help add substance to our growing relations with Greece. Thank you.

**Question:** What is Greece's stand on India's candidature for UN Security Council membership?

**Secretary (West):** Greece supports India's membership on an expanded UN Security Council.

Thank you.

**143. Address by President A. P. J. Abdul Kalam at the luncheon hosted by the President of the European Parliament.**

**Strasbourg, April 25, 2007.**

Your Excellency, President of the European Parliament, Mr. Hans Gert Pottering,

President of European Commission, Mr. Jose Manuel Borroso,

Minister Dr. Frank-Walter Steinmeir,

Commissioner for External Relations, Ms. Benita Ferrero Waldner

Chairman of the Foreign Affairs Committee, Mr. Jacek Sarayusz-Wolski,

President of the Delegation for Relations with India, Ms. Neena Gill,

Hon'ble Members of the European Parliament,

Ladies and Gentlemen,

I am delighted and honoured to have been invited by the President of the European Parliament and to be present among such a distinguished gathering. I would like to thank Mr. Pottering for his hospitality. This is my first visit to the European Parliament and indeed the first ever visit by a President of India to the European Parliament and is a reflection of the ever-intensifying partnership between India and the European Union.

The European Union has become an example for connectivity among nations, probably with no possibility of war, leading to lasting regional peace and eventually a lasting global peace. India, the world's largest democracy and home to a multi-ethnic, multi-religious, multi-lingual population of over one billion, prides itself on its steadfast commitment to rule of law, human rights and fundamental freedoms.

India and the European Union radiate a clear message to the world that regional cooperation and inter-regional cooperation will lead to a win-win situation for all. Both India and EU must realize that past meets the present and creates the future. The environment I witnessed during my address the EU Parliament is a beautiful environment. In the midst of beautiful environment definitely creativity will blossom and creativity in turn will lead

to generation of various forms of technology and leadership qualities to humanity. On behalf of India and its billion people, my greetings and best wishes to five hundred million people of EU.

Ladies & Gentlemen, may I request to you to join me in raising a toast

- to the health and well being of His Excellency Mr. Hans Gert Pottering, President of the European Parliament
- to the continued prosperity of the friendly people of the European Union
- to the continued success of the European Union and the European Parliament
- to the growing friendship, cooperation and strategic partnership between India and the EU.

May God bless you.

#### **144. Address by President A.P.J. Abdul Kalam to the European Parliament.**

**Strasbourg, April 25, 2007.**

#### **Dynamics of Unity of Nations**

***"Confluence of civilizations  
is definitely possible"***

Good morning, Ladies and Gentlemen.

I am delighted to be with the Honourable Members of European Parliament on the occasion of the Golden Jubilee year of the European Union. When I am with you friends, I was thinking, what thoughts I can share with you. India as a democratic nation has the experience of providing leadership to over one billion people with multi-language, multi-culture and multi-religious systems. I wish to share this experience with you.

### **European Union for peace and prosperity**

European civilization has a unique place in human history. Its people were valiantly engaged in the adventure of exploring the planet earth resulting in the discovery of many ideas and systems. Europe has seen the birth of pioneers in science leading to technologies. Europe was the theatre of conflicts for hundreds of years among and between the nations including the two world wars. Now with this backdrop and dynamics, you have established European Union with a vision for peace and prosperity for the entire region. European Union has become an example for connectivity among nations, probably with no possibility of war, leading to lasting regional peace.

### **Inter-connectedness**

Before I started out on my journey to Europe, I was thinking, why are Europe and India unique and natural partners? Do we share a common history and heritage, possibly in future, a common destiny? What I found was astonishing: the depth and vitality of our inter-connectedness, by language, by culture, by ancient beliefs, ideologies and the movement of people have stood the test of time. This has matured into a very strong bond through a sustained trade and intellectually satisfying collaboration in many areas of science and technology. For example on 23rd APR 2007, the Italian scientific satellite AGILE was launched by Indian Polar Satellite Launch Vehicle (PSLV-C8) into a very precise orbit. Scientist from India and Europe are excited and let us congratulate them.

### **Unity in Diversity**

India is a country, which has over the years learnt to evolve and maintain a unique unity amongst diversity. Similarly, the greatest contribution of European Union is that, you have demonstrated to the world, that it is possible to build a strong union of nations without compromising national identities. It has become an inspirational model and an example to emulate for every region in the world. The European Union and India support a social form of economic development and encourage a model of growth with equity. Both are conscious of the need for growth to respect the environment and make it sustainable for future generations. With this valuable experience of centuries behind India and European Union, we can bring together a doctrine of global cooperation built over the foundation of regional collaborations and core competencies of nations.

With this background, I have brought from India, a message, a message to start three important Indo-European missions, which can contribute to global peace and prosperity. These missions, I am putting forth based on India's experience and the dynamics of European Union.

1. **Evolution of enlightened society** - for evolving a citizen with value system and leading to prosperous and peaceful world.
2. **Leading to Energy Independence** - A three dimensional approach for energy choice towards realizing clean planet earth.
3. **World Knowledge Platform** - for synergizing the core competence of European Union and India in certain areas for providing solutions to critical issues like water, healthcare and capacity building.

### **Towards a cohesive society**

When nations join together to build a cohesive society, it is necessary to ensure that benefits of development encompass all sections of the society. World over, poverty, illiteracy, un-employment and deprivation are driving forward the forces of anger and violence. These forces link themselves to some earlier real or perceived historical enmities, tyrannies injustice, inequities, ethnic issues and religious fundamentalism flowing into an outburst of extremism worldwide. Both India and European Union have witnessed and are witnessing the unsavory acts of certain misguided sections of society. We have to jointly address ourselves to the root causes of such phenomena for finding lasting solutions for promoting peace.

### **Righteousness is the beginning**

What we need is a carrier of eternal goodness and wholesomeness in human conduct, which is "Righteousness".

As we say in India:

#### **Righteousness**

*Where there is righteousness in the heart*

*There is beauty in the character.*

*When there is beauty in the character,*

*There is harmony in the home.*

*When there is harmony in the home.*

*There is an order in the nation.*

*When there is order in the nation,*

*There is peace in the world.*

This is true, for the whole world. When we need peace in the world, we need order in the nation; we need harmony in the home, whether in Europe or in India or in any part of the world, the origin is righteousness in the heart. How do we evolve righteousness, in the hearts of every citizen of the world?

## **I. Evolution of Enlightened Society**

With this spirit of righteousness in the heart, dear Honorable Members, I would like to put forth to this important gathering, a methodology for evolving a happy, prosperous and peaceful society in our planet, which I call as "Evolution of Enlightened society". I have shared these thoughts with many intellectuals in national and international spheres. How do we create such an enlightened society, which will have three components (a) Education with value system (b) Religion transforming into spirituality and (c) Economic development for societal transformation. Let us discuss.

### **a. Education with value system**

We have seen that the seeds of peace in the world have their origin in the righteousness in the heart of every individual. Such righteous citizens lead to the evolution of enlightened society. Education with value system has to be so designed that the righteousness in the heart is developed in young minds. That should be the mission of education. The prime learning environment is five to seventeen years of age. This reminds me of an ancient Greek teacher's saying, "Give me a child for seven years; afterwards, let God or devil take the child. They cannot change the child". This indicates the power of great teachers and what they can inculcate in the young minds. Parents and teachers must inculcate moral leadership amongst children. It requires the ability to have insights into the uniqueness and universality of human consciousness. True education is the acquisition of enlightened feelings and enlightened powers to understand daily events and to understand the permanent truth linking man, to his environment, human and planetary.

While I was in college, I remember the lectures given by the highest authority of a Jesuit institution Rev Father Rector Kalathil of St. Joshep's college, Tiruchirappalli, Southern India. Every week on Monday, he will take a class

for an hour. He used to talk about good human beings present and past and what makes a good human being. In this class he used to give lectures on personalities such as Buddha, Confucius, St. Augustine, Califa Omar, Mahatma Gandhi, Einstein, Abraham Lincoln and moral stories linked to our civilizational heritage. In the moral science class, Father Kalathil used to highlight the best aspect of, how the great personalities have been evolved as good human beings through parental care, teaching and companionship of great books. Even though these lessons were given to me in 1950's during my college days, they inspire me even today. It is essential that in the schools and colleges, lectures are given by great teachers of the institution once in a week for one hour on civilizational heritage and derived value system. This may be called as Moral Science Class that will elevate the young minds to love the country, to love the other human beings and elevate them to higher planes. I have suggested this methodology to educationists in my country. European Union may like to consider evolving a system that would enable a student to imbibe these fundamental traits for the benefit of all.

Now, let me take up the area that is transforming religion into spiritual force. Many in the world believe, it is a difficult mission. I would like to share an experience that I have witnessed which has convinced me that it is possible.

### **b. Religion Transforming into Spirituality: Universal Mind**

Religion has two components, theology and spirituality. Even though theology is unique to every religion, the spiritual component spreads the value to be inculcated by human beings for promoting a good human life and welfare of the society, while pursuing the material life. I would like to share an experience how the religion and science came together in a big mission. It was during early 1960's, the founder of Indian Space Research Programme Prof. Vikram Sarabhai with his team, had located a place technically most suited for space research after considering many alternatives. The place called Thumba in Kerala, was selected for space research as it was near the magnetic equator, ideally suited for ionospheric and electrojet research in upper atmosphere. I was fortunate to work with Prof Vikram Sarabhai for about eight years.

The major challenge for Prof Vikram Sarabhai was to get the place in a specific area. As was normal, Prof. Vikram Sarabhai approached the Kerala Government administrators first. After seeing the profile of the land and the sea coast, the view expressed was that, thousands of fishing folks lived there, the place had an ancient St Mary Magdalene Church, Bishop's House and a

school. Hence it would be very difficult to give this land and they were willing to provide land in an alternative area. Similarly the political system also opined that it would be a difficult situation due to the existence of important institutions and the concern for people who were to be relocated. However there was a suggestion to approach the only person who could advise and help. That was the Bishop "Rev Father Peter Bernard Pereira". Prof Vikram Sarabhai, approached the Bishop on a Saturday evening, I still remember. The meeting between the two turned out to be historical. Many of us witnessed the event. Rev Father exclaimed, "Oh Vikram, you are asking my children's abode, my abode and God's abode. How is it possible?" Both had a unique quality that they could smile even in difficult situations. Rev Father Peter Bernard Pereira asked Prof. Vikram Sarabhai to come to church on Sunday morning at 9.00 AM. Prof. Vikram Sarabhai went to the church again on Sunday with his team. At that time the prayer was progressing with the recitation of Bible by Father Pereira. After the prayer was over, the Bishop invited Prof. Vikram Sarabhai to come to the dais. The Rev Father introduced Prof Vikram Sarabhai to the mass, "Dear children, here is a scientist, Prof. Vikram Sarabhai. What do sciences do? All of us experience, including this church, the light from electricity. I am able to talk to you through the mike which is made possible by technology. The treatment to patients by doctors comes from medical sciences. Science through technology enhances the comfort and quality of human life. What do, I do, as a preacher? I pray for you, for your well being, for your peace. In short, what Vikram is doing and what I am doing, are the same - both science and spirituality seek the Almighty's blessings for human prosperity in body and mind. Dear Children, Prof Vikram says, he would build within a year, near the sea-coast, alternative facilities to what we are having. Now dear children, can we give our abode, can we give my abode, can we give the God's abode for a great scientific mission?" There was a total silence, a pin drop silence. Then all of them got up and said 'Amen' which made the whole church reverberate.

That was the church where we had our design centre, where we started rocket assembly and the Bishop's house was our scientists' working place. Later the Thumba Equatorial Rocket Launching Station (TERLS) led to the establishment of Vikram Sarabhai Space Centre (VSSC) and the space activities transformed into multiple space centers throughout the country. Now this church has become an important centre of learning, where thousands of people learn about the dynamic history of the space programme of India and the great minds of a scientist and spiritual leader. Of course, the Thumba citizens got the well equipped facilities, worshipping place and educational centre in an alternate place at the right time.

When I think of this event, I can see how enlightened spiritual and scientific leaders can converge towards giving reverence to the human life. Of course the birth of TERLS and then VSSC gave the country the capability for launch vehicles, spacecraft and space applications that have accelerated social and economic development in India to unprecedented levels.

Today, among us, Prof Vikram Sarabhai is not there, Rev Peter Bernard Pereira is not there, but those who are responsible for creation and making flowers blossom will themselves be a different kind of flower as described in the Bhagwat Gita: "See the flower, how generously it distributes perfume and honey. It gives to all, gives freely of its love. When its work is done, it falls away quietly. Try to be like the flower, unassuming despite all its qualities". What a beautiful message, to the humanity on the purpose of life reflected the spiritual component. Can we bridge the spiritual component of the religions to bring peace to nations and to the world?

I would like to recall one incident, which commonly occurs in many parts of my country. I have witnessed this event when I was a young boy (10 yrs). In our house, periodically I used to see three different unique personalities meet. Pakshi Lakshmana Shastrigal, who was the head priest of the famous Rameshwaram temple and a vedic scholar, Rev Father Bodal, who built the first church in Rameshwaram Island and my father who was an Imam in the mosque. All three of them used to sit and discuss the islands problems and find solutions. In addition they built several religious connectivities with compassion. These connectivities quietly spread to others in the island like the fragrance from the flowers. This sight always comes to my mind whenever, I discuss with people on Dialogue of religions. India has had this advantage of integration of minds for thousands of years. Throughout the world, the need to have a frank dialogue among cultures, religions and civilizations has been felt now more than ever. These two instances, what I have narrated give me confidence that religions definitely can be bridged through spiritual components. Whenever I meet the young and experienced in my country. I have narrated these two experiences. Many in my country and world over may have such experiences. We have to spread such "Glad Tidings" to every part of the world.

Now let us discuss the third important component of enlightened society, which is to achieve economic development for societal transformation. Let me take my country India as an example, it may be true to many parts of the world.

### **c. Economic development for societal transformation**

Indian Economy is in an ascent phase. There is considerable growth in the

manufacturing and service sectors. We have a mission of spreading this economic growth throughout the country including the rural sector. Nearly 220 million people have to be lifted by upgrading their quality of life in both rural and urban areas. Even though the GDP growth indicates our economic growth, people's participation is essential for achieving the required targets. It is essential to ensure that the citizens are empowered with good quality of life encompassing nutritious food, good habitat, clean environment, affordable healthcare, quality education and productive employment, integrated with our value system drawn from civilizational heritage leading to the comprehensive development of the nation that will bring smiles in one billion people. These are indicators for the growth of the National Prosperity Index. To achieve that growth rate, we have identified five areas where India has a core competence for integrated action: (1) Agriculture and food processing (2) Education and Healthcare (3) Information and Communication Technology (4) Infrastructure development such as power, transportation, communication and including Providing Urban Amenities in Rural Areas (PURA) and (5) Self reliance in critical technologies. We propose to realize the vision of transforming India into a developed nation before 2020 by energizing and igniting the minds of all the 540 million youth of the nation.

So far we have discussed the three dimensional approach of providing value based education, religion transforming into spiritual force and economic development for societal transformation leading to the evolution of an enlightened society. This integrated three dimensional methodology of evolution of enlightened society, will pave the way for peaceful, prosperous, happy nations and thereby a world, free from extremisms and further seeds of extremism. In my website [www.presidentofindia.nic.in](http://www.presidentofindia.nic.in), I have given how an empowered world body is essential to evolve the nations of enlightened citizens. I will be very happy to exchange thoughts and ideas and action related to this mission with the Honorable members of European Parliament.

Let me now discuss the second mission "Leading to Energy Independence".

## **II. Leading to Energy Independence**

When we analyze the critical problems facing the planet earth today, two important issues come to our minds. First one is the continuous depletion of fossil-material-derived, oil, gas and coal reserves as predicted by World Energy Forum. The second one is the continuous degradation of environment primarily due to extensive use of fossil materials for generating energy. The solution to these problems can be found through energy

independence, which I have presented to my country. It may be applicable to many nations.

**Energy Independence in India - A Perspective:** India has 17% of the world's population, but only about 0.8% of the world's known oil and natural gas resources. Based on the progress visualized for the nation during the next two decades, the power generating capacity has to increase to 400,000 MW by the year 2030 from the current 130,000 MW in India. This takes into consideration of energy economies planned and the design and production of energy efficient equipments and systems. Energy independence has got to be achieved through three different sources namely renewable energy (solar, wind and hydro power), electrical power from nuclear energy and bio-fuel for the transportation sector. Energy independence throws very important technological challenges to the world: The solar cell efficiency has to increase from the present 20% to 55% through intensified research on CNT (Carbon Nano Tube) based solar cells. For thorium reactors, as it is known, thorium is a non-fissile material. It has to be converted into a fissile material using Fast Breeder Technology. In the Bio-fuel area, the challenge is bio-fuel plantation for higher yield, esterification technologies for the higher output and the modification to automobile power plants. These three research areas definitely need intensive cooperation between European Union and India. I would suggest setting up of an "Indo-EU Renewable Energy Development programme" for taking up advanced R&D in all forms of renewable energy leading to the availability of commercial class large scale power plants within the next decade.

Let us now discuss the third mission, called "World Knowledge Platform".

### **III. World Knowledge Platform**

With the Indian experiences of two successful international cooperative ventures from concept to realization and marketing, I would suggest evolution of "World Knowledge Platform" for bringing together the core competence of multiple nations of EU and India in science and technology leading to the development of unique systems for Global applications. "World Knowledge platform" will enable joint design, development, cost effective production and marketing of the knowledge products, systems and services in various domains based on the core competence of partner nations to international market. World knowledge platform is a meeting place for science, technology, industry, management and marketing.

Missions of World Knowledge Platform: The convergence of Bio, Nano and IT is expected to touch every area of concern to the humanity. The "World Knowledge Platform" will take up the missions, in some of the areas discussed further, which are of utmost urgency to all of us to make our world a safe, sustainable, peaceful and prosperous place to live:

1. **Water:** Desalination of sea water using solar energy, channelization, networking of rivers, cost effective safe drinking water.
2. **Healthcare:** Diagnosis, drug delivery system, development and production of vaccines for HIV/TB, malaria and cardiac diseases, detection and cure of diabetics.
3. **Agriculture and Food processing:** Increased production of food grain in an environment of reduced land, reduced water and reduced manpower; preservation of food; food processing; cost effective storage and distribution.
4. **Knowledge products:** Hardware, Software and Networking and Storage Products including handheld micro and nano electronic devices.
5. **Transportation systems:** Fossil fuel free transportation systems using renewable energies safety systems, hardware and embedded software integration.
6. **Habitat:** Energy efficient, water efficient, pollution free habitat.
7. **Disaster Prediction and Management:** Earth quake forecasting, assessing in advance the quantum of rain for particular cloud condition.
8. **Capacity Building:** Quality human resource development for all the above areas including the development of personnel with world class skills.

European Union represents a wealth of scientific potential with rich culture for research. India has emerged as a leading country with its demonstrated scientific and technological potential in many societal missions and is now in the growth path. Combined strengths of the nations can be utilized for the mutual advantage of both India and EU by joining together as partners in creating the world knowledge platform.

## Conclusion

Honorable Members of European Parliament, as we have seen, there is a

visible common thread of our dreams and problems. When I am with you, I have a feeling; that there are beautiful solutions from beautiful minds. Beautiful minds generate creativity. This is the common heritage of both India and Europe. Dear Honourable Members of European Union, I have presented three missions: (a) Evolution of enlightened society, (b) Leading to Energy Independence (c) Creating World Knowledge Platform. These Indo-EU missions will definitely reinforce further our strategic partnership and become the foundation for making the change in the life of 1.5 billion people, ultimately leading to confluence of civilizations.

For meeting the challenges of these missions, we can draw the inspiration from the saying of Maharishi Patanjali, about 2,500 years ago "When you are inspired by some great purpose, some extraordinary project, all your thoughts break their bounds. Your mind transcends limitations, your consciousness expands in every direction, and you find yourself in a new, great and wonderful world. Dormant forces, faculties and talents come alive, and you discover yourself to be a greater person by far than you ever dreamt yourself to be."

Dear Honorable Members, I have great admiration for the European Union. In this context, I have composed a poem, which I would like to share with you. The title of the poem is "Message from Mother Earth"

### **Message from Mother Earth**

1. Beautiful Environment leads  
To beautiful minds  
Beautiful minds generate,  
Freshness and creativity
2. Created explorers of land and sea  
Created minds that innovate  
Created great scientific minds  
Created everywhere, why?
3. Gave birth to many discoveries  
Discovered a continent and unknown lands  
Ventured into unexplored paths  
Created new highways
4. In the minds of the best  
Worst was also born  
Generated seeds of battle and hatred  
Hundreds of years of wars and blood;

5. Millions of my wonderful children  
Lost in the land and sea  
Tears flooded many nations  
Many engulfed in ocean of sadness
6. Then, then came, the vision of European Union,  
Took the oath,  
"Never to turn human knowledge,  
Against ourselves or others".
7. United in their thinking,  
Actions emanated,  
To make Europe prosperous and peaceful,  
Born, the European Union.
8. That "Glad Tidings", captivated,  
The people of the planet of my galaxy.  
OH! European Union, let your missions,  
*Spread everywhere, like the air we breathe.*

Dear friends, Let me convey my greetings of one billion people of my country to all the Hon'ble Members of European Union and through you to all the citizens of European Union countries.

May God bless you.

## **145. Press Release of the Ministry of External Affairs on the launch of India-EU Civil Society Internet Forum.**

**New Delhi, May 1, 2007.**

The India-EU Civil Society Internet Forum was launched today by Shri. Anand Sharma, Minister of State for External Affairs in New Delhi. Mr. Dimitris Dimitriadis, EU Co-Chair of the India-EU Round Table & President, European Economic and Social Committee (EESC) and Shri N.N.Vohra, India Co-Chair of India-EU Round Table were among those present.

The setting up the India-EU Civil Society Internet Forum was envisaged in the India-EU Joint Action Plan adopted at the 6th India-EU Summit in September 2005. The site has been prepared by NASSCOM Foundation and is conceived as a simple and user friendly website. The primary objective of the internet forum is to give greater visibility to India-EU Round Table, to disseminate information on its work and to facilitate networking with civil society.

The address of the website is

**[www.india-eu.org](http://www.india-eu.org)**.

The India-EU Round Table provides a forum for civil society cooperation meant to contribute to the enhancement of bilateral relations between India and the EU. The decision to set up the India-EU Round Table was taken at the Lisbon Summit of June 2000. Shri.N.N.Vohra, PM's Special Representative to J&K is Indian Co-Chair of the Round Table. The first meeting of the India-EU Round Table was held in New Delhi in January 2001. The recommendations of the meetings of the Round Table are forwarded to the European Institutions and to the Government of India for consideration. The 10th meeting of the India-EU Round Table was held in Vienna on June 7-8, 2006. It focused on energy and social development issues. The next India-EU Round Table meeting will take place next month June 5-6 at New Delhi.

**146. Briefing Points by Official Spokesperson on External Affairs Minister's meeting with the Heads of Mission in EU member countries.**

**New Delhi, May 30, 2007.**

- External Affairs Minister Shri Pranab Mukherjee chaired a day long Conference of India's Heads of Missions in EU States in Brussels today. Twenty-one Heads of Missions attended the Conference.
- Addressing the Heads of Missions, EAM underlined the importance of the Strategic Partnership between India and the EU, which is now India's largest trade partner. EU is also the source of one-fifth of India's FDI as well as an important destination for Indian investment. The Strategic Partnership is underpinned by an extensive Joint Action Programme adopted in 2005. Summits have been held annually since 2000 and the next Summit is expected to be held in New Delhi late in 2007. Our effort is to increasingly move the relationship beyond trade and economic relationship into areas such as S&T, cooperation in Counter Terrorism, access to new energy and renewable energy technologies, space, environment etc. Negotiations are also expected to begin on a wide-ranging Free Trade Agreement between India and EU soon.
- The Heads of Missions briefed the EAM on aspects of the Indo-EU Strategic Partnership, principal issues of bilateral relations between India and countries of their accreditation as well as important developments in Europe/EU and NATO.

**147. Press Release of the Ministry of External Affairs on the opening remarks by External Affairs Minister at Joint Press Conference, India-EU Ministerial Troika Meeting.**

**Berlin, May 31, 2007.**

Good Afternoon, Ladies & Gentleman,

I am happy to be here in Berlin today for this India-EU Troika Meeting at the Ministerial level. This has provided us as a useful opportunity to review the entire gamut of our strategic partnership and prepare for the Summit level interaction later this year in India. We were also able to exchange views on regional and international issues of mutual interest such as the fight against terrorism, Afghanistan, Iran, energy and climate change issues.

India the world's largest democracy and the European Union, the largest union of democracies, share common values. The Strategic Partnership between India and EU is underpinned by these shared values of democracy, pluralism, celebration of diversity, human rights, an independent judiciary and a free press.

The European Union, with which India has a strategic partnership since 2004, is important to India collectively and individually. It is an important trade, technology and investment partner. The EU is also home to a large Indian diaspora.

It has been a little over seven months after the very successful 7th India-EU Summit held in Helsinki in October 2006 and it was a good time to take stock of the progress made since then. The major areas of cooperation under the Joint Action Plan have seen progress. The dialogue and consultation mechanisms have been strengthened. Our President addressed the European Parliament last month in Strasbourg, the first such address by an Indian President.

At the Helsinki Summit both sides had agreed to launch negotiations on a broad based trade and investment agreement. We have noted that the Council of the EU has recently approved the mandate for the European Commission to launch negotiations on the trade and investment agreement with India. We look forward to an early launch of the negotiations.

Cooperation in the fields of science & technology, research and energy are among the important areas of our strategic partnership. In February, we had in New Delhi an important India-EU Ministerial Science meeting, which

identified area of future cooperation in the fields of S&T such as drug development, clean energy and infectious diseases. India and the EU are cooperating on the ITER nuclear fusion energy project. Steady progress is also being achieved in the context of the India-EU Energy Panel that is focusing on cooperation in the fields of clean and renewable energy, coal and petroleum and natural gas.

The day before yesterday, I attended the ASEM Ministerial Meeting in Hamburg. We had a most interesting and productive exchange of views at that gathering which virtually brings together the continents of Asia and Europe.

India and the EU are partners working together in addressing global challenges such as terrorism; promoting development which is economically, socially and environmentally sustainable; ensuring energy security and in the effective management of globalization. Together we believe we can make a difference.

I am thankful to Foreign Minister Steinmeier for arranging this interaction. The presence of the Foreign Minister of Portugal is particularly important for the next India-EU Summit which will be held during Portugal's presidency of the EU. We are convinced that the Summit will mark a new phase in our Strategic Partnership.

## **148. Press Release of the Ministry of External Affairs on the India – European Union Summit meeting.**

**New Delhi, November 29, 2007.**

The 8th India-EU annual Summit will take place on November 30 2007 in New Delhi. The EU will be represented by José Sócrates, Prime Minister of Portugal, in his capacity as President of the European Council, accompanied by the President of the European Commission, Mr Jose Manuel Barroso; European Commissioner for Trade Mr Peter Mandelson and Mr. Joao Gomes Cravinho, Portuguese Minister of State for Foreign Affairs and Cooperation.

Prime Minister Dr. Manmohan Singh will lead the Indian side. He will be accompanied by the Sh. Pranab Mukherjee, External Affairs Minister, Sh. Kamal Nath, Commerce & Industry Minister and Shri M. K. Narayanan, National Security Advisor.

The 6th Summit at New Delhi in 2005 saw the adoption of an ambitious and comprehensive India-EU Joint Action Plan (JAP) to implement the strategic partnership launched at the fifth India-EU Summit at The Hague in November 2004.

The 7th India-EU Summit held in Helsinki in 2006 accepted the recommendation of the High Level Trade Group, set up under the Joint Action Plan, to launch negotiations on a broad based Trade and Investment Agreement. Negotiations for an India-EU broad based Trade and Investment Agreement have since started and are taking pace in a constructive manner and the second round took place in New Delhi in October 2007.

The 8th Summit takes place under the Portuguese Presidency of the EU. The member states of the EU are important to India individually as well as collectively. The EU 27 is an important trade, technology and investment partner for India. The EU is also home to a large Indian diaspora.

The Summit is part of India's ongoing dialogue with the EU for discussions on areas of mutual interest and to build on the strategic partnership with them.

The EU is India's largest trading partner (1/5th of India's total external trade).

Bilateral trade has steadily grown between 2001 and 2006 at over 10% on average and crossed • 46 billion in 2006 (Indian exports • 22.3 billion;

Indian imports • 24 billion). India and the EU are also important investment partners. Total FDI inflow from the EU to India is US\$ 10.86 billion (24% of total FDI inflows - Aug 1991-Feb 2007). The total Indian investment in EU in 2005-06 and first 6 months of 2006-07 was US \$ 3.5 billion.

The summit is preceded by an India-EU Business Summit and a CEO Round Table on November 29 2007.

Parliamentary exchanges are growing. On the invitation of the European Parliament's President, our Rashtrapatiji visited Strasbourg, France in April 2007 and addressed the European Parliament. This was the first ever visit and address by an Indian President to the European Parliament. The EU also attended the 14th SAARC Summit held in New Delhi in April 2007, for the first time as an observer.

An Agreement for Scientific & Technological Cooperation and a MoU on Multi-Annual Indicative Programme 2007-2010 in development cooperation will be signed between the two sides during the summit.

### **149. Joint Statement issued after the 8th India-EU Annual Summit.**

**New Delhi, November 30, 2007.**

The eighth India-European Union Summit was held in Delhi on 30 November 2007. The Republic of India was represented by Prime Minister Dr Manmohan Singh, Shri Pranab Mukherjee, External Affairs Minister, Shri Kamal Nath, Minister for Commerce and Industry, Shri M K Narayanan, National Security Adviser. The EU was represented by Mr José Sócrates, Prime Minister of Portugal, in his capacity as President of the European Council, by Mr José Manuel Barroso, President of the European Commission, Mr Peter Mandelson, European Commissioner for Trade, and Mr João Gomes Cravinho, Portuguese Minister of State for Foreign Affairs and Cooperation.

The following message was jointly issued:

1. In the 60th year of India's independence and the 50th anniversary of the Treaty of Rome, India and the EU, as the two largest democracies of the world and global actors in a multipolar world, underscored

their commitment to the Strategic Partnership launched at The Hague in November 2004. They reaffirmed that the Strategic Partnership flows from a shared conviction in the values of democracy, fundamental freedoms (including religious), pluralism, rule of law, respect for human rights and multilateralism in the international political architecture as the means to tackle global challenges effectively. They expressed their determination to further strengthen the Strategic Partnership and to cooperate at the global level for the cause of peace, security and sustainable development for all.

2. India and EU welcomed the signing of a Memorandum of Understanding on the Country Strategy Paper for India for 2007-2010, which with a total budget of Euro 260 million, will support India's efforts to achieve the Millennium Development Goals and to implement the India-EU Joint Action Plan.
3. The two sides reviewed the Joint Action Plan, adopted at the sixth India-EU Summit at New Delhi in September 2005, welcomed the progress in its implementation, and looked forward to further advances. The two sides are to make an overall assessment of the Joint Action Plan in 2008 and, on this occasion, will assess ways and means of further upgrading the overall framework of EU-India relations.
